Russia: Owing to her form of government, Russia's position is radically different from that of other nations. Little, almost no, Russian money has been allowed to go outside the boundaries of Russia. Her foreign trade is carried on by the Government itself, which ultimately owns all of the commodities produced in Russia. She can sell those commodities in whatever country best enables her to acquire the products she needs. Hence, Russia will probably take relatively little interest in the settlement of the money question, except that she will be anxious to have gold retain its value because of her own mine production, which probably will not be used as money at home but in settling any adverse balances of trade abroad.

Continental Europe: It is quite certain that present German paper money will be worthless. The nations under the Russian sphere of influence—Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, and Yugoslavia—have seen their paper moneys also become practically worthless. Probably an utter distrust of inconvertible paper money and a desire for gold and silver will force the use of as much gold and silver as can be obtained. These countries are less likely to tie their currencies to the English pound than are the other countries of Europe.

Denmark, Holland, Belgium, France, Greece, Italy, Spain, and Portugal will be very likely to tie to the English pound and go on a managed-currency system, until at least the United States makes known its own definite policy. After their bitter lessons in paper moneys, these countries would prefer a gold and silver base for their currencies; but if they cannot get an adequate amount of either metal, it will be impossible for them to do otherwise than go to a managed-currency system.

Asia: Japan has been issuing the paper money necessary to carry on the war. It, like that of Germany, probably will be utterly worthless when the war is over.

China has financed its war on paper money. Its issue is so vast that a new currency will have to be established. An article in the New York Herald Tribune of October 29, 1944, says:

"The flood of paper money has created a physical problem. Businessmen in some sections hire coolies to carry the bulging bags of legal tender as they go about keeping appointments. Shoppers tuck loads of it under their arms as they go to market."

India: The people of India, as in the First World War, are demanding silver. Both gold and silver are selling at a premium in India. The great mass of her people has always required silver, and it is quite probable that in the relations that will exist between England and India after the war the needs and desire of the Indian people for a greater use of silver and for the stabilization of its price will be met.

United States: The United States owns nearly 60 percent of the world's monetary gold and over half of its monetary silver. It is a large mine producer of both metals. Obviously, its interests will be furthered by the retention of both gold and silver as money in the future world. Private ownership of gold except in fabricated form is now not allowed. Government-owned gold is not sold except under severe restrictions, and then only to other governments or their central banks. While the United States buys all gold that may be offered at $35 per ounce, it makes no effort to peg the price of gold, since it will not freely sell it at the same price or, for that matter, at all except under very limited restrictions. Gold is now selling at the equivalent of over $35 per ounce in many nations.

How far the other nations of the world can resume the monetary use of gold and silver after the war will depend upon the action of the United States. It is impossible for them to go back to a gold standard when owning only about one-third of the total monetary gold of the world, while the remaining two-thirds are held locked up in the United States. This is a most important fact not generally realized. And in the case of silver, while one-half of the monetary silver is held in the United States, it is difficult to see how the world can return to silver to the extent many of its people will desire. It seems certain that if the United States wishes gold and silver to continue to be used as money, it must find some way in which its excess gold and silver can be utilized by the remaining nations of the world. How can this be done?

The former gold standard broke down several years prior to the beginning of the present war, mainly because of the physical insufficiency of gold to meet the demands of the enlarged volume of world trade. Also, what gold there was became concentrated too much in one nation—the United States.

But the physical insufficiency of gold can be met by fixing or pegging not only the price of gold but also that of silver, so that the price of both metals would be pegged just as the price of gold was pegged in the days of the supremacy of the gold standard. The value of silver, thus stabilized, would be, in effect, an addition to the supply of gold Such a system is just as workable as is the single gold standard and under existing conditions far more advantageous. It in no way impairs or diminshes the full use of gold. On the contrary, it continues to use all gold as much as under the single gold standard, and so retains every advantage of the gold standard, plus the additional advantage of curing its physical scarcity.

Under such conditions, either gold or silver, or both, could be used as best fitted the necessities of each individual and each nation. Each metal would be a standard measure of value. Each would have a constant, fixed, pegged price. Any fluctuation in the market price of both metals would become impossible, regardless of increases or decreases in their production. Gresham's Law would have no chance to operate, because the prices of both metals could not move out of line, either with the mintage ratio or the ratio of each to the other. The world would then have the equivalent of a larger supply of gold and the added benefits of a monetary metal with the traditions of thousands of years behind it, one which is more widely distributed than gold today, and one which seems to be necessary to satisfy the monetary needs of much the larger part of the world's population in Asia, Africa, Latin America, and parts of central Europe. These people would like to use silver as the chief medium of exchange. They have few or no banks and could not use them if they had, because their transactions are too small. Paper money cannot meet their requirements, not only because they have no confidence in it, but also because it is subject to loss by fire, perspiration, disintegration in a warm, moist climate, etc. Coins of the equivalent of from 10 to 50 cents and having that intrinsic value are necessary, and silver is and always has been best suited for such needs, since gold coins of such values would be too small for use. Unless such coins have a fixed, constant value, confidence in them becomes impaired, a condition which, as we have seen, greatly lessened the use of silver as money.

Some way should be found under which Great Britain and the United States will agree upon the use of gold and silver, fixing and pegging the price of each. The United States can well afford to make the necessary loans of gold and silver to bring this about. It would be calamitous for these two great nations to engage in a serious and prolonged battle over monetary systems.

But if Great Britain and the United States fail to agree upon a monetary plan, what then? Obviously, the United States cannot afford to see the use of gold and silver abandoned. She must fight for their retention. The United States alone should undertake to fix and peg the price of both gold and silver. For nearly 10 years she has pegged the minimum price of both gold and silver, and during that time bought an amount equal to the total new production of each metal and, in addition, much of the previously mined supply of both. The United States has actually demonstrated its ability to peg the price of both metals at the same time. Should the United States adopt the system of pegging the price of both gold and silver, it would have the best currency in the world. It should then freely coin and circulate its redundant gold and silver. Latin America, Asiatic nations, most of those nations whose currency has been ruined by the present war, would much prefer to tie to such a money rather than tie to a "managed currency" system of England, assuming England does not join in the plan. In short, the then money of the United States would give it the same advantage that the action of England, in pegging the price of gold after the Napoleonic wars, gave to it. The United States would become the financial and banking center of the world, for, like England in the nineteenth century, it would become the world clearing house because of being the nation having the best and most stable money in the world.

All other nations would want to avail themselves of that money.

In concluding, I venture the opinion that, however much the statesmen and leaders of nations harassed by debt, shortage of gold and silver, and overissues of paper money may wish to work out some system of "managed currency," such currency will not command the confidence of the people, as would gold and silver. The fundamental demand of the overwhelming majority of mankind, based upon its age-long experience, accented, even multiplied, by that of the two World Wars of this century, ultimately will compel again the use of both gold and silver. Paper money will continue to be used, but tied to gold and silver and convertible thereto. This cannot be done so long as the United States locks up nearly two-thirds of the world's gold and one-half of its silver. Our country now has the opportunity to win both commercial stability and international leadership by establishing the soundest monetary system the world has known.

Wages Should Meet the Cost of Living

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. LYNCH. Mr. Speaker, under unanimous consent granted me to extend my remarks, I am placing in the RECORD a resolution relative to wage adjustments, passed by the council of the city of New York on December 21, 1944.

War-production workers in New York City are doing an extraordinary job of meeting the needs of our armed forces for war materials. Most of the war plants in New York City are small establishments employing less than 1,000 workers. These firms, for the most part, do not pay adequate wage rates and have, therefore, experienced difficulty in obtaining a sufficient number of skilled workers. In one instance that has come to my attention, the Army has released 50 skilled workers to a plant on furlough so that war-production schedules may be met.

It is well known that the cost of living in New York City has made it very difficult for workers whose wages have been frozen at 15 percent above the levels of January 1, 1941, to support their families, maintain an adequate diet, buy necessary clothing, and pay the rent. Surveys indicate that the cost of living is now 45 percent above the levels of January 1941. Although some official figures have indicated a smaller rise in the cost of living, the Bureau of Labor Statistics, the source of all estimates of the cost of living, has admitted that "the index does not show the full wartime effect on the cost of living of such factors as lowered quality, disappearance of low-priced goods, forced changes in housing, and eating away from home. It does not measure changes in total living costs—that is, in the total amount families spend for living. Income taxes and bond subscriptions are not included."

Mr. Speaker, I think it is high time that the Government carry out the intent of the price-control law of October 1942, which was supposed to stabilize prices, wages, and salaries. Reduction of working hours, elimination of overtime pay and wartime bonuses will cut workers' take-home by at least 33 percent in the reconversion period. Coupled with the workers' present inability to meet current cost of living with their wages frozen, this situation can result in a loss of purchasing power that may paralyze our economic system.

The only practical remedy, as the council of the City of New York, has pointed out in its resolution, is to permit wages to advance sufficiently to meet the present cost of living.

The resolution follows:

Whereas wage earners engaged in the production of front-line war materials, principally steel, planes, tanks, machines, and electrical and radio instruments, have petitioned the National War Labor Board for an increase in wages to meet the increased cost of living; and

Whereas these wage earners have achieved unprecedented records of production for our victorious armed forces by personal sacrifice and by scrupulously living up to the no-strike policy in the interests of a United Nations victory; and

Whereas the compensation of wage earners in other fields has also lagged considerably behind the increase in the cost of living; and

Whereas the rise in the cost of living has been seriously felt by our workers in the city of New York; and

Whereas without a wage rate adjustment, the reduced buying power of these wage earners will affect their welfare and the welfare of their families; and

Whereas it must also be recognized that it is vital for the welfare of all in this country that further inflation be prevented: Now, therefore, be it

Resolved, That the Council of the City of New York does record itself as favoring the application of the aforesaid workers for a wage adjustment to meet increased living costs now pending before the National War Labor Board to the fullest extent that such increase can be granted without inducing a further rise in the cost of living and stimulating the menace of inflation; and be it further

Resolved, That the view of this council be conveyed to the Members of Congress from the city of New York, to the National War Labor Board, and to the President of the United States.

Adopted December 12, 1944.

COUNCIL OF THE CITY OF NEW YORK.

"John Banker" Says—

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. CRAWFORD. Mr. Speaker, in recent months, and, as a matter of fact, for the past 2 or 3 years, there has been a considerable discussion throughout the country with respect to 100-percent-reserve plan in connection with the operation of our commercial banks.

Recently an important official in the banking world made some observations which are pertinent, and which should be considered at this time in connection with the Government's fiscal policy, the placing of such fantastic sums of Treasury issues in the portfolios of the commercial banks, the enormous earnings which banks are now receiving as a result of their investment in Government issues; and altogether these matters should be borne in mind in view of the discussions and charges and comments which will be made pertaining to bank earnings and bank legislation immediately in the post-war period.

The Washington News Bureau, under the management of Mr. U. V. Wilcox, editor, calls the following to our attention:

"JOHN BANKER" SAYS—

(The following is from an official within the banking world. He is observant, analytical. His views are sincere. He has asked that he remain anonymous.)

LITTLE BANKS SAVE THE BIG BANKS?

WASHINGTON.—I have become confused in my own mind about the meaning of the 100-percent-reserve plan. Does the 100-percent-reserve plan mean that all of the banks must carry all of their reserves with the Federal Reserve banks or does it mean that the banks must carry a 100 percent reserve on all demand deposits? Or, does it mean something else?

Here is the big thing that is worrying me: The banks are full of Government bonds. The banks have purchased these bonds in an effort to help the Government finance the war. At the same time, the big banks are making a tremendous profit out of Government bonds. The big banks are making these profits largely by using the balances of the country banks by investing these balances in Government bonds.

Too many big banks have made too much money speculating in Government bonds during the last decade.

Here is what I am afraid of. After the war there will be a certain bloc of Senators and Representatives urged on by certain demagogues who will make an investigation of this affair. They will examine into the profit the big banks made out of the speculation of Government bonds. They will examine into the profit the big banks have made during the war. There will be a hue and cry go up—"Why pay the banks the interest on the national debt? Why not save this for the taxpayers?"

There will be some advocates for the nationalization of banking and it will be a beautiful time to do it because the banks will be full of Government bonds. One of the first things that will happen will be to pass a law forcing all banks to carry all their reserves with the Federal Reserve rather than with city correspondent banks. I think with this concentration of reserve in the Federal Reserve banks, it will permit the Federal Reserve banks to purchase and hold the vast volume of Government bonds. Then the Government will purchase the Federal Reserve banks from the private banks and redeem the stock to the member banks of the Reserve System. Then the profit on the Government bonds now held by the banks will go to the Federal Government itself.

The big banks will be used as the whipping post. And, in many ways the big banks are vulnerable.

There is only one thing that can save this. The little bank, the country bank, the small independent banks may be able to save the banking business from Federal nationalization because the little banks have a lot more political potency than do the big banks. If ever the big banks will need a friend that friend will be the little banks when this show-down comes.

But too many of the big banks are blind to what may happen to them after the war. Too many of the big banks are interested in the small banks for only one reason—that is the business the big bank receives from the little bank. As far as being sincerely helpful and trying to fight the little bank's battles, the big banks show only an apathetic interest.

Somebody should begin to call this to the attention of the big banks.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the Milwaukee Journal on January 14, 1945:

FLYING BOMBS ADD ARGUMENT FOR SEAWAY TO OPEN MIDWEST—PROPONENTS OF DEEP WATERWAY TO ATLANTIC POINT OUT THAT SUCCESS IN NEXT WAR MAY DEPEND ON EASIER ACCESS TO ARMS AND FOOD PRODUCED IN AREAS BORDERING GREAT LAKES

(By Lloyd Gladfelter)

National security has added a new and urgent emphasis to the demands of half the Nation's people for the St. Lawrence seaway and power development. No longer must the Congress consider only the appeals of the Middle West for a deep waterway over which to send its industrial and agricultural products to the world. No longer is it a case of cheap electric power for New England, New York, and parts of Pennsylvania. The new Congress may well decide the fate of the Nation when it votes this year on the seaway and power development.

Recent statements by responsible Army and Navy bigwigs, warning that robot bombs may soon strike at seaboard cities and their teeming war industries, has placed in proper focus the strategic value and comparative safety of the Middle West. Few believe that buzz bombs will rain on New York, Philadelphia, Baltimore, and Washington, D. C., tomorrow or next week, though that is possible, as London found out. Men wise to the ways of war are now thinking of what may happen in the next war.

They have seen the Middle West produce all of the sinews of war. They have witnessed the phenomenal production of agriculture to feed not only the American people and their Army and Navy, but multitudes of other peoples; they have watched the industrial cities of the Great Lakes region produce mountains of tanks, guns, planes, engines, ships and parts for every weapon of warfare. The prodigious productivity of the people in these States has never before been so clearly proved.

POWER AND TRANSPORTATION

They also have seen railroads staggering under the demands of war when those systems could easily have been supplemented by quick, efficient, and cheap water transportation—if the St. Lawrence seaway were completed.

"What," ask the advocates of the seaway and power development, "might not power-starved New England and New York have produced more quickly to help the war effort, if they had had access to the 2,200,000 horsepower which dams in the rapids of the St. Lawrence are capable of generating?" "Why," they also ask, "is the greatest single untapped power source in the world kept unharnessed?"

Already Representative PITTENGER (Republican, Minnesota) has introduced one bill in the House authorizing that the United States and Canadian Governments carry out the enterprise jointly. Another soon will be introduced by Senator AIKEN (Republican, Vermont), for years a leader in the fight. Whether Congress finally will be asked to pass upon the project as a treaty which would require a two-thirds vote of the Senate, or as an executive agreement, upon which a majority of both Houses would decide the issue, has not yet been determined.

KILLED IN DECEMBER

Late in December the Senate voted for the second time in the last 25 years on the seaway proposal. It killed AIKEN's maneuver to attach the seaway and power development plan to the rivers and harbors bill by a vote of 56 to 25, largely because of the Senate's jealousy over its power to approve or reject treaties. Many Senators have assured Senator AIKEN that they will support the seaway if it is submitted as a treaty. In 1934 the Senate voted, 46 to 42, for a seaway treaty, but the accord failed because a two-thirds vote was not obtained.

For nearly a century the Middle West has had a direct access by water to the sea through canals and locks of limited dimensions. The smallest locks are those in the International and Lachine Rapids sections of the St. Lawrence. They accommodate ships less than 260 feet long, 44-foot beam, and 14-foot draft. These dimensions limit the size of the ships that can enter the Lakes from the sea to approximately 1,500 tons. Others of larger rated tonnage can get through with light cargoes.

Everywhere else in the Lakes, their connecting rivers and in the St. Lawrence River, ocean-going vessels drawing 25 feet can navigate. The bottleneck is the Lachine-International Rapids sections. It is there that the United States and Canada would spend $543,000,000 to build wider and deeper canals, larger locks for navigation, and power dams to benefit the Northeastern States, New England, and Canada. The cost to the United States would be $272,000,000, that of Canada $271,000,000. But Uncle Sam's bill would be reduced by a $93,000,000 contribution from the New York Power Authority, created by the late Gov. Alfred Smith, which would take control of electric generation and distribution in the United States. Canada would share equally in the power developed.

NEW LOCKS AT SOO

Wisconsin and middle western seaway advocates point out that with the new locks at Lachine and International Rapids 859 feet long, 80 feet wide, and 27 feet deep, 92 percent of the shipping of the world could reach Great Lakes ports. The Welland Canal, completed in 1932 by the Canadian Government at a cost of $128,000,000, lifts and lowers ships across the Niagara escarpment between Lakes Erie and Ontario, a height of 327 feet, in its locks. These have approximately the same dimensions as the ones proposed at Lachine and International Rapids.

They also point to the huge new MacArthur Lock built at Sault Ste. Marie by the Army 2 years ago to help wartime delivery of iron ore from Minnesota to the steel mills in the East as the largest in the world perhaps with the exception of the new ones at Panama. In its 1,300- by 80-foot bosom the MacArthur Lock can lift or lower simultaneously two of the newest type of 18,600-ton ore carriers.

Of the 2,687 miles of waterway from Duluth to the Atlantic, only 258 miles remain to be widened and deepened to carry large ocean-going ships. Rivers connecting the lakes, harbors, and the St. Lawrence River have been dredged to such a depth that they are ready now to accept their roles in the seaway scheme.

PORT DIRECTOR'S VIEWS

Harry C. Brockel, Milwaukee's port director and one of the leaders in the seaway fight, had this to say on the national-security issue:

"The midcontinent will be relatively safer than the seaboard in any future war when enemy planes, enemy fleets, or enemy robot bombs may be expected to attack our coasts. Because of the sheltered position which the Great Lakes area enjoys, the Government must plan to locate vital industries, arsenals, and shipyards in this region."

Since the United States entered the war, Brockel said, it has built 50,000,000 tons of shipping, only 1,000,0000 tons of which was turned out in Great Lakes yards.

"The Great Lakes has the greatest concentration of steel manufacturing and the greatest reservoir of skilled workmen in the world," Brockel points out. "Our industries now build all parts used on a ship and send them by rail to coast yards. Our shipyards could build anything up to and including 10,000-ton cruisers—if we had the seaway. We have built submarines successfully at Manitowoc, escort vessels and seagoing tugs in Milwaukee and other Wisconsin yards, and many other types of vessels.

"What do we do with them? Give them their sea trials on the Lakes, take them to Chicago, where their superstructures are removed and their masts taken down. Then they are floated down the Illinois waterway to New Orleans, where they are reassembled again. The extra work of tearing apart and reassembling costs $100,000 per vessel. If we had the waterway, our Lakes-built ships could proceed to the Atlantic fully equipped and ready for service—or action, as the case might be."

SAFER ROUTE TO EUROPE

One-third of the hazardous and frequently submarine infested Atlantic crossing could be eliminated, also, he added, by assembling convoys in the Lakes or the protected headwaters of the St. Lawrence. The distance from New York to Liverpool, he said, is 3,219 nautical miles as compared with 2,647 from Quebec, far from the open sea.

Another argument also was advanced by Brockel: That during this war the Nation has depleted its sources of essential high-grade raw materials—iron, petroleum, and lumber. In another future war, it may be necessary to bring these and other raw materials from Russia, Sweden, Brazil, Cuba, and Chile. Why not have the seaway ready so they can be carried in large volumes to the protected Middle Western industries which will need them? he asks.

FOREIGN LINES PLIED LAKES

Records show that in the 6 years before the outbreak of war in Europe, Milwaukee and other Great Lakes ports experienced a revival in direct water-borne trade with western European ports. The Fjell line, a Norwegian company, built eight new vessels exclusively for the Great Lakes trade. In 1939, just before hostilities opened, Fjell was joined by a Dutch company, the Oranje line, which gave it competition with three new ships, especially designed for freight and passenger service into the Lakes.

Through 1940 the Fjell and Oranje lines operated between England and Lakes ports, but with the fall of France, the invasion of Holland and Norway, the British and Dutch placed all of them in essential ocean service. Several have been reported sunk.

These vessels carried wood pulp, cod liver oil, canned fish, Scotch whisky, tool steels, tools, chemicals, special machine parts and other commodities, and carried back grain, foodstuffs, tractors, farm machinery, refrigerators, automobiles, drugs, and motorcycles; all products of the Middle West.

SAVING IN COST SHOWN IN SHIPPING BY WATER

Direct service from the Lakes to Europe offers a shipping economy which combined rail-and-water service do not. In a recent Senate statement, Senator FERGUSON (Republican, Michigan) reported that grain shipped from Duluth direct to Liverpool would save $1.74 a ton. This saving, he argued, would be passed on as a bonus to the American farmer and would not depress the price of wheat. Other commodities, with different rates, would enjoy commensurate shipping benefits as compared with combined rail haul to the eastern seaboard and thence by water to Europe and elsewhere.

"The opponents of the seaway are trying to nullify one of the immutable laws of transportation: That shipping will always penetrate to the head of navigation, wherever it is, without transshipping cargoes," one seaway champion said recently. "Our head of navigation for oceangoing ships is the upper end of the lakes, but most of them can't get there because of the lack of a deep channel."

Brockel said study of rate schedules proves that direct service from Europe to Milwaukee costs only 10 percent more than the rate charged by Atlantic vessels carrying cargoes to the eastern seaboard. Swedish wood pulp was brought to Milwaukee and Wisconsin paper manufacturers at a cost of $6.50 a ton, which is less than the rail rate from the Atlantic seaports to Milwaukee and the Fox River Valley mills.

FACTS TOLD IN RATE FIGHT

In the fight which Great Lakes ports waged successfully to destroy the exclusive patronage contracts which north Atlantic shipping conferences forced upon midwestern shippers up to 1939, M. I. Adams, traffic manager for the Cutler-Hammer Co., testified that the Milwaukee firm could lay down a shipment of insulating material in England by using direct service, in competition with manufacturers located along the Atlantic.

Similar testimony was given before the United States Maritime Commission by representatives of other midwestern firms. After hearing many witnesses, the Commission held the contracts were coercive and invalidated them. No longer were middlewestern shippers required to ship all their products for foreign consignment by rail and water to obtain a preferential rate.

Seaway advocates do not overlook employment and business opportunities which the deep waterway will bring to the Great Lakes region. It will, they are convinced, produce new avenues for labor, with increased water front, trucking, and rail activity; broaden the horizon for customs brokers, freight forwarders, and even banks.

"In Milwaukee I look for the creation of several thousands of new jobs," Brockel predicted.

FLIGHT OF POPULATION

The seaway also would halt the ominous flight of population from the Middle West to the South, East, and Pacific areas, it is argued. Little attention has yet been paid to the United States Bureau of Census report for 1943 which showed that 20 of the 23 States tributary to the Great Lakes had lost population since 1940. The heaviest sufferer was North Dakota, with a decline of 15.5 percent. Wisconsin lost 4.1 percent in 3 years.

An economy with a definite downtrend in population is a sick economy and needs strong medicine to restore it, seaway enthusiasts claim. Only by creating greater business and industrial activity can that be achieved and the best "shot in the arm" would be the deep waterway, they claim.

The fight for the St. Lawrence project was likened to that for the Panama Canal many years ago. Railroads bucked the short cut, all-water route to the Pacific on the ground that it would ruin their business and reduce employment. Quite to the contrary the Panama Canal brought a boom to the Pacific coast and now the rails are hauling more tonnage than they ever did before the Canal was built, because of increased populations and expanding industries.

RAIL AND COAL OPPOSITION

Eastern trunk railroads, along with certain eastern public utilities, eastern and Gulf seaports, and coal-mine owners constitute the bulk of seaway opposition. They lobby diligently against every bill.

The railroads argue that the seaway would cut their tonnages, drain their revenues. Seaway adherents predict greater business for the rails, citing the experience of Panama, followed by lower rates, benefiting the public.

Coal operators and miners contend the hydroelectric development will displace coal, hurt their business, and lessen employment. Advocates of the seaway reply that whereas the T. V. A. area used only 540,000 tons of coal a year before the Tennessee hydroelectric dams were built, industrial activity increased afterward to such an extent that industry in the same area now is using 1,891,000 tons. Growing industrial activity, they contend, always means increased consumption of coal.

Southern and eastern ports fear diversion of traffic to Great Lakes harbors. While they may lose a small percentage of their foreign trade, most or all of that loss would be offset by gains in coastwise traffic out of the Lakes, waterway experts only.

POWER AT LOW COST

In reply to the utilities, they say that St. Lawrence water power can be generated and distributed for half the cost of steam power. The New York Power Authority in a recent survey estimated that consumers would save $25,000,000 a year.

The stand of the utilities was blasted by Senator LA FOLLETTE in the December seaway debate. He charged that a syndicate of eastern utilities, after studying the potentialities of the St. Lawrence for water power, offered to build all the dams, install the generating equipment, and build all the canals and locks if they were permitted to take the electric energy. Al Smith created the New York Power Authority to save a great resource for the people, LA FOLLETTE declared.

SEAWAY IDEA DATES BACK TO FRENCH EXPLORERS

When Jacques Cartier, the French explorer, sailed up the Gulf of St. Lawrence in 1534 and again in 1536 to claim the great wilderness of Canada for King Francis I, of France, he unwittingly forged the first link in the chain of events which led to the bitter fight to win for the entire Middle West, tributary to the Great Lakes, a deep-water outlet to the sea.

Cartier never saw more than the fringes of the great land which he placed under the French flag. Indeed, he believed he had reached China; hence he named one of the series of rapids Lachine. In Cartier's footsteps followed a great line of French explorers and colonizers—Champlain, Radisson. Pere Marquette, and Joliet, who landed on the shores of Green Bay in 1634, and La Salle. These men took title in the name of France to most of the North American Continent.

They early foresaw the need for a direct water route from the sea to the vast inland empire. At their suggestion the French Government, with primitive tools 300 years ago, built the first system of canals around Lachine and International Rapids. They were only 2 feet deep, not even equal to the average millstream. They were designed to carry the bateaux of the adventurous French voyageurs around the Rapids barrier.

But the idea was there. The French subsequently lost all of Canada to England by the treaty of Paris in 1763. The English soon recognized the waterway need by deepening and widening the canals and expanding the locks.

Milwaukee was only 8 years old when the first cargoes of Wisconsin hides and grain were shipped in sailing vessels direct to Liverpool. That was in 1856. Four years later 40 vessels left Milwaukee with grain, lumber, barrel staves, hides, and food products for European ports. The trade continued active until the seventies and then fell off because a lusty competitor, the railroads, improved their service.

The direct services to Europe revived again after World War No. 1, when the Scandinavian nations sought new markets and began to infiltrate to the Lakes regions. The British soon followed.

The Great Lakes are in the major leagues when water-borne commerce records are compared. In 1944 the commerce they carried in all types of bottoms exceeded 200,000,000 tons, with an estimated value of at least $3,000,000,000.

SOO OUTDOES PANAMA

The Soo locks alone handle more than 90,000,000 tons a year, mostly ore and grain. But that record puts it in the No. 1 place for all canals in the world. In fact, the Soo handles more traffic in an average year than Panama, Suez, Kiel, Manchester, Welland, and the New York State barge canal combined.

Milwaukee has a big stake in the future seaway. The Federal Government has invested $7,500,000 for a breakwater and other harbor improvements; the city, through its harbor commission, has spent another $7,500,000 in developing port works on Jones Island and in purchase of the old Illinois Steel Co. site. Private docks and shipping interests have another $30,000,000 worth of facilities.

Direct services between Europe and our own coasts would bring a shipping boom that would break the 8,000,000-ton record of 1914 for the entire port. It would benefit industry and the average citizen by lower costs of foreign and many domestic products. It would create new markets for Milwaukee industry and Wisconsin farmers. The same benefits would be spread throughout the entire Plains area from the Rockies to the Alleghenies and in the upper Mississippi Valley. What helps the Middle West helps the Nation.

Union Condemns Bioff-Browne Release

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. SMITH of Wisconsin. Mr. Speaker, in support of my original insertion in the CONGRESSIONAL RECORD of January 6 regarding the release of the thugs and panderers, Willie Bioff and George Browne, I am inserting as part of my remarks a letter received today from Harold V. Smith, business representative of the International Sound Technicians, together with a copy of two resolutions.

The Attorney General, Mr. Biddle, and the Department of Justice, who have become parties to this nefarious release, should hang their heads in shame. Truly, the Department of Justice of the United States has reached a new low. No amount of excuses can correct the record that has been made in this case. The people of the United States are the

sole judges as to whether or not a deal was made in this matter.

The letter and resolutions:

INTERNATIONAL SOUND TECHNICIANS OF THE MOTION PICTURE, BROADCAST, AND AMUSEMENT INDUSTRIES, LOCAL 695,
Hollywood, Calif., January 13, 1945.

Representative LAWRENCE H. SMITH,
House of Representatives,
Washington, D. C.

YOUR HONOR: Attached hereto find copies of resolutions adopted unanimously by the general membership of this organization under date of January 7, 1945.

We have noticed in the papers that you are quite concerned over the release of Browne and Bioff after serving such a short time. We greatly laud your fight on the subject matter, and we hope that you will be able to use the attached resolutions in your activities.

Please be assured that any way you may find it possible to aid in this matter and to bring to trial immediately the pending 2-percent-tax case in the United States Federal court in New York City will be greatly appreciated by the members of this organization and many other members of the international alliance.

We look to you to aid us in clearing up the present situation that has greatly injured the international alliance and every clean worker in American labor organizations. We need men like you to champion our cause so that men such as Browne and Bioff will be permanently restricted from further activities directly or indirectly involving labor unions. Your aid in clearing this organization of these racketeers on a permanent basis, so that union members can hold their heads up again, will be greatly appreciated.

If there is any further information that you believe would be of assistance to you, please call upon us and we will promptly supply you with the same. Thanking you on behalf of the members of this organization for your excellent activities to date, and thanking you in advance for your cooperation in aiding us as set forth herein, I am, with kindest personal regards and best wishes,

Very truly yours,

HAROLD V. SMITH,
Business Representative.

Resolution 1

Resolved, That we, the members of the International Sound Technicians' Union, Local 695, of the International Alliance of Theatrical Stage Employees and Motion Picture Machine Operators of the United States and Canada, who are employed in the motion picture studios of Hollywood, Calif., request and demand that the Judiciary Committee of the United States Senate investigate the recent actions of United States District Judge Knox, of New York, in permitting George Browne and Willie Bioff to walk the streets at liberty after serving only 3 years out of the 8- and 10-year sentences imposed upon them respectively for their crimes.

These men injured every clean worker in American labor organizations by their crooked gangster actions and associations and their equally evil conniving with certain persons.

These are the last men in America to whom any true friend of labor or justice should show clemency.

The Senate Judiciary Committee is hereby requested to find out why Judge Knox released these proven gangster scoundrels into activity again, and particularly, the Senate Judiciary Committee is asked to find out if Judge Knox has required Browne and Bioff to refrain from any activities either directly or indirectly involving the affairs of the I. A. T. S. E., and if suitable precautions were taken to prevent and/or detect any such action if attempted; and if Judge Knox did not require such an accounting or provide suitable protection for the members of the I. A. T. S. E. against their connivance or control, request is hereby made of the Judiciary Committee that these men be brought before it and that they find out such matters for the benefit of the 50,000 members of the I. A. T. S. E. and the good of all organized labor; and if Judge Knox has required as a condition of their freedom that they reveal what they did with the millions of dollars they collected by way of the 2 percent tax on earnings assessed against the members of the Alliance during their reign of terror and for which, to this day, there has never been an accounting.

This local union states that the conviction of Browne and Bioff is helping to clear the air in order to give decent leaders of union labor a chance to raise their heads again proudly. The release of such men before they have served their merited punishment is a blow to honest labor leaders and labor members, and a threat to the union which Browne and Bioff formerly exploited.

This union asks for an immediate investigation and the airing of all reasons and influences that put these gangsters back on the streets of America again, and that a copy of this resolution shall be sent to every local union of the I. A. T. S. E. and to United States District Attorney Kostelanetz, of New York City, and a copy shall be sent to all present international officers of the I. A. T. S. E. with the comment that this is their opportunity to do their duty to the members of the I. A. T. S. E. by protecting the organization from any actions or influences on behalf of these men, and to make an investigation if necessary of the disbursement of the 2 percent tax and to give a complete detailed report immediately to the members of the Alliance as to who received this money and as to what it was spent for, and if any of the current officers are concerned with or involved in such expenditures; if so this will give the international executive board a reason for expelling them for the good of the I. A. T. S. E. and the labor movement.

Resolution 2

Whereas George Browne and Willie Bioff have been recently released from prison after serving a period of only 3 years of their sentences of 8 and 10 years respectively; and

Whereas it has been alleged that George Browne and Willie Bioff are guilty of illegal expenditure and disposition of the moneys belonging to the members of the International Alliance, particularly the 2 percent assessment funds that were levied upon the Alliance membership during their reign of crookedness and corruption; and

Whereas it is to the best interests of the Alliance and the membership of the Alliance that these men be held to answer and give an accounting for such alleged expenditure and disposition of said moneys, and that all legal and proper efforts be used to recover said funds to the benefit of the injured members: Therefore, be it

Resolved, That the members of the International Sound Technicians of Local 695, of the I. A. T. S. E. & M. P. M. O. in regular membership meeting do hereby request the international executive board of the I. A. T. S. E. & M. P. M. O. to immediately take the necessary steps including all possible legal action against George Browne and Willie Bioff for not only an accounting of all the moneys expended by them or either of them out of the 2 percent assessment fund collected during their corrupt administration from the wages of all of the member workers amounting to a sum of approximately $2,000,000, but also for the return of said moneys: Further, be it

Resolved, That a copy of this resolution be sent to every local of the I. A. T. S. E. and to United States District Attorney Kostelanetz, of New York City, with the urgent request that he prosecute the case now pending in New York City on this very issue.

Post-war Highway Program

EXTENSION OF REMARKS

OF

HON. J. W. ROBINSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. ROBINSON of Utah. Mr. Speaker, under leave to extend my remarks, I am including a speech delivered by me at the annual convention of the American Road Builders' Association in Chicago, Ill., on January 17, 1945:

When this organization met about a year ago most of us believed that by this time Germany would have surrendered and that we would be much nearer the close of this terrible conflict than we appear to be at the present time. Our discussions at that time centered largely around a post-war highway program. At that time a bill had been introduced in Congress which, it was thought, would if passed provide an adequate post-war program.

Since that time the Roads Committee of the House has spent a great deal of time on hearings and in the preparation of the bill that was discussed in your convention a year ago. And after months of discussion and hearings there has been passed through the House and through the Senate and signed by the President a highway bill which should be adequate and which will provide the funds and the leadership for a post-war program that will lay the foundation of a great highway system for the future; and that will also furnish employment for thousands of people throughout our entire Nation who may not have employment during the post-war period.

I think you should all know that while this bill was introduced in the House by me, and while it had the endorsement of the Public Roads Administration and the American Association of State Highway Officials, it is not my bill, nor is it their bill. It is a law enacted by your Congress, and each member of the Roads Committee of the House and the Post Office and Post Roads Committee of the Senate has contributed largely to this legislation. The bill represents the composite views of the committees in Congress that have the prime responsibility of road legislation.

As a matter of keeping the record straight, I want you people to know that my views are in direct conflict with the views expressed by our mutual friend, Representative MOTT, of Oregon, with reference to this not being a post-war highway bill. It is true that a large majority of the witnesses who appeared before our committee testified that, in their judgment, the Federal Government should appropriate $1,000,000,000 a year for 3 consecutive years. However, there were other witnesses who appeared who thought that a half billion dollars a year was too much. The bill that was then under consideration provided that the Federal Government's share of the contributions should be 75 percent and the States' share 25 percent. Therefore the maximum amount for each year under the terms of the bill as originally introduced would be one and a half billion dollars. This

bill did not provide any money for the forest roads, nor for national-park roads, nor for parks and parkway roads, nor for Indian reservations. As the bill passed, over a hundred million dollars was appropriated for these various items. So that the legislation that finally passed has an authorization of over $6,000,000,000 per annum, and provides that the States, so far as the $500,000,000 is concerned, shall match this on a 50-50 basis. As a matter of actual money to be spent on the post-war program, there is not a great difference between the amount recommended by even the most optimistic and the amount actually appropriated. The committee took the view that this amount was all that could be economically used. This bill appropriates the largest amount of money that has ever been appropriated for peacetime operations in the history of this world so far as I can ascertain. And therefore, while some few may be disappointed in the amount, I want this organization to feel that a real accomplishment has been made through the passage of this bill.

The gentleman from Oregon also stated that he thought the committee should go to work immediately and pass a real post-war highway bill. And he also stated that the bill as passed was merely the usual Federal-aid highway bill, providing for a little larger sum of money than usual. This bill is not the usual highway bill. It differs in many, many ways from any highway bill that has ever been passed. And I am sure that, so far as the Committee on Roads is concerned, there is no thought of considering another post-war bill in the immediate future. We believe that Congress has carried the ball in this field and has done a splendid job and that it is now up to such organizations as yours and to the States to put this legislation into effect and make it workable. If as good a job is done by the States as has been done by Congress, we are sure that we will not only build great highways for the future but we will furnish employment for thousands of our veterans who return and who should be employed.

This bill has been spoken of by many as the first complete highway measure ever passed by Congress. Although during the past 30 years many Federal-aid highway bills have been passed, we now have for the first time an act which gives full recognition to all of the various classes of highways—the primary Federal-aid system, the urban extensions, and the rural feeder roads. The program of improvements it calls for will make a major contribution to safety. The streets and highways over which we operate our cars, trucks, and buses must be made as safe as it is possible for modern engineering and construction to make them. This act also calls upon the States to set apart within the primary Federal-aid system a special national system of interstate highways, which also represents an attack against the work-relief type of highway project—the type of project whose evils were so well expressed by the American Road Builders Association report on the relationship between construction and national income. It appropriates $500,000,000 per year for each of 3 years to the various States, and it is somewhat significant that this amount is almost the exact amount that was spent by the Federal Government in each of the years from 1934 through 1941 for work-relief highway projects. While in those same years the regular Federal-aid highway program, following an accepted and sound system of contract construction, averaged only $200,000,000 per year. Obviously we were sacrificing much-needed work in the last depression in order to indulge in work-relief highway projects.

If the States have planned properly and if they will proceed to carry out the spirit and purpose of the act now passed by Congress, they will avoid these mistakes, and they will see to it that highway funds will be spent on permanent and needed improvements and under the private construction system. However, the passage of this highway legislation by the Federal Government is only the beginning of an important road program, the execution of which depends upon the State highway departments and on their ability to establish working relationships with the county and local governments to carry out the new and expanded post-war highway program contemplated under the act.

During the early part of this year 44 State legislatures will be in session. Most of these will not meet again for 2 years in regular session. In almost every State some legislation is necessary in order to take full advantage of the Federal Highway Act. Therefore, it is necessary that this legislation be examined carefully by the highway divisions of the various States in order to secure necessary legislation.

Too much stress cannot be placed on the fact, and I think the members of this organization should fully understand and appreciate, that Congress and the Public Roads Administration are not seeking to have the State highway departments usurp the road functions of our local governments. Those of you who are familiar with the long history of Federal-State highway relationships know that the Public Roads Administration has endeavored constantly to strengthen the "grass roots" government in the local administration of our highway program. The new Federal-Aid Highway Act calls on the States to establish cooperative relationship with the county and local highway departments. If any State through misguided motives sought to take unfair advantage of this new highway legislation, I am certain that Commissioner MacDonald would follow in full the spirit of the mandate from Congress that he see to it that the State local relationships are cooperative rather than coercive.

There has always been considerable discussion over the question of bureaucratic government, and federalization of government is very often overemphasized and looked upon with a great deal of fear on the part of local government officials. Under the bill which has just been passed, we have made an honest effort to strengthen State and local governments by giving them the money to help carry out one of their major public-works functions, that of building adequate roads and streets. The proper performance of a function is the best guaranty that the function will never be removed from the jurisdiction of the agency performing that function. The States are required by law under this new act to cooperate with county and local governments if they obtain Federal aid. The States ought to cooperate, and the Public Roads Administration has a mandate from Congress to see to it that this cooperation takes place in reality and in spirit. The preservation and strengthening of sound local administration of the highway function requires that county and local governments meet the State half-way. There will be difficulties and a need for give and take on all sides.

What I am trying to say with all sincerity is that the way to preserve State and local highway administration and avoid the federalization which all of us oppose; and which the Public Roads Administration has fought for nearly 30 years, is for local and State highway administrators to realize that this new Federal highway bill gives an excellent opportunity to strengthen and preserve their highway functions. Both sides must accept this challenge. If they do not, then certainly in the not very distant future there will be established some super agency of the Federal Government that will take over the job that State-local-Federal cooperation and the profit contract system failed to do.

In the State-by-State application of these general principles it is assumed that local traditions and practices will dictate the final form of State enabling legislation. It is my hope, as I am sure it is the hope of the entire Congress, that no person or agency associated with road building will read into the principles set out in this legislation anything except an attempt to make the new Federal highway legislation workable in every State on the basis of intelligent cooperation by State and local governmental agencies.

Soon after this law was passed the American Association of State Highway Officials sent to its members eight points which it was suggested should be considered in preparing a legislative program in the light of conditions created by the passage of the Federal Highway Act. I think it is well worth our while to review these eight points and to explain them in some detail, because if legislation is necessary to put into effect the present highway bill in any of the various States, then this organization here should understand what is necessary to be done and should immediately organize to do this work. These points are as follows:

No. 1. Legislative authority may be required to permit the State to cooperate with county, city, or other local highway officials in the selection of road systems provided in the Federal Act, and in the actual construction of the systems with Federal aid. The State highway department should have rather broad powers in negotiating with county and local officials regarding the secondary system in order to permit considerable latitude with respect to matching funds, method of construction, and responsibility for maintenance. We must keep in mind that the Federal Government deals only with the States on projects. State officials should have considerable discretion. Changes in the State law may be found desirable later, but the State highway department should not be unduly restricted in the initial application of the new law, or we may find the new program unworkable—which is an invitation for another W. P. A. program. The State Department may also require legislation to permit work on secondary roads outside of the present State highway system, and to use State funds to match Federal funds on such projects.

No. 2. The need for broad authority to cooperate with municipal authorities on urban construction, including the power to designate urban areas as defined in the act. In certain States the State highway department is prohibited by law from cooperating on urban projects.

No. 3. Authority to acquire adequate rights-of-way by purchase and condemnation. The right of immediate entry on land acquired by condemnation is essential to the success of the new highway program. The States also should have the power to acquire rights-of-way on behalf of local governments in cases where this might be necessary.

No. 4 deals with the question of the diversion of road-user revenue for nonhighway purposes.

The first highway-user tax, in the modern sense, was the automobile registration fee levied by the State of New York in 1901. This tax, small at first, was soon adopted by other States and rapidly expanded into a source of considerable revenue for road funds. It was not until 18 years later, however, that the State of Oregon imposed the first gasoline tax. Other States quickly followed suit, and New York, which had imposed the first registration tax, was the last to impose a gasoline tax when it levied a charge of 2 cents per gallon in 1929. In recent years these taxes have constituted practically the entire source of current State revenues for highways and have been used in most States in large amounts to support local roads and city streets.

Unfortunately, a practice grew up in many States of assigning these road-user taxes to other purposes than highways. In 1933 the diversion of these highway-user taxes

amounted to more than $147,000,000. Congress took cognizance of this situation and its effect on the progress of highway work by including an antidiversion provision in the Hayden-Cartwright Act of June 18, 1934. Section 12 of this act reads as follows:

"Since it is unfair and unjust to tax motor-vehicle transportation unless the proceeds of such taxation are applied to the construction, improvement, or maintenance of highways, after June 30, 1935, Federal aid for highway construction shall be extended only to those States that use at least the amounts now provided by law for such purposes in each State from State motor-vehicle registration fees, licenses, gasoline taxes, and other special taxes on motor-vehicle owners and operators of all kinds for the construction, improvement, and maintenance of highways and administrative expenses in connection therewith, including the retirement of bonds for the payment of which such revenues have been pledged, and for no other purposes, under such regulations as the Secretary of Agriculture shall promulgate from time to time: *Provided*, That in no case shall the provisions of this section operate to deprive any State of more than one-third of the amount to which that State would be entitled under any apportionment hereafter made for the fiscal year for which the apportionment is made."

While this provision rather vigorously condemns the diversion of road-user revenues to other than highway purposes, the penalty of withholding part of any State's Federal-aid apportionments in violation of the section applies only where the diversion exceeds that authorized by State law at the time of the passage of the act (June 18, 1934). Since the passage of this act only three States have been penalized. Other States have found it necessary to make restitution to highway funds of funds that have been diverted. However, the existence of this antidiversion legislation has been a powerful influence in assisting the friends of highways in State legislatures in defeating antidiversion proposals. Section 12 has accomplished its purpose of preventing further diversion.

It is my firm conviction that the great majority of the public is opposed to the diversion of road-user revenues to other than highway purposes, although they will cheerfully pay such special taxes when they know they are to be used for needed highway work.

During the past year 2 States passed constitutional amendments making it illegal to use road-user revenues for other than highway purposes. This makes 16 States that prohibit diversion by constitutional amendment, and more States are being added to this list every year. In addition there are several States with statutory provisions against diversion. For the past several years there have been no new apportionments of Federal-aid highway funds, but with the recent passage of the post-war highway legislation making large sums again available for Federal-aid highway work in cooperation with the State highway departments, it becomes more important than ever for the States to consider the effect their present practices with respect to road-user revenues may have on their highway program.

The following is quoted from the certificate of apportionment of the $500,000,000 authorized for the first post-war fiscal year made by the Federal Works Administrator on January 6, 1945:

"That the sum apportioned to each State, the District of Columbia, the Territory of Hawaii, and the island of Puerto Rico, shall be subject to such reduction, if any, as the Federal Works Administrator may find is required by reason of the diversion of road-user revenues in violation of the provisions of section 12 of the act of June 18, 1934 (48 Stat. 995)."

The taxation of highway users is so easy, the collection process so simple, and the returns so certain that the procedure is being misused in many States. These taxes were designed and are justified only to provide funds for road construction and maintenance. Well-organized and selfish groups, however, have succeeded in diverting large amounts of revenue that are needed to develop the highway systems, or in imposing additional taxes on highway users to raise money for non-highway purposes. It must be remembered that highway users are subject to all of the other taxes paid by the general public: The highway user pays the income tax, the property tax, the sale tax, the social security tax, the tobacco tax, and all of the others levied for non-highway purposes. It is particularly worth noting that several States which refund the tax paid on gasoline not used on the highways still use a considerable amount of their gasoline tax money, paid only by highway users, for non-highway purposes.

Let me give you an idea of the size of diversions: In 1925 a little over $7,000,000 was diverted; in 1931 more than $23,000,000 was diverted; and in 1932, at the bottom of the depression, the amount jumped to nearly $77,000,000, of which the State general funds took more than half. The amount increased year by year, until in 1941 it was more than $215,000,000. Even in 1943, with greatly curtailed highway-user revenues due to rationing and other wartime restrictions, the diversion was over $155,000,000.

In the past 10 years many so-called emergency highway-user taxes, particularly for relief, have been imposed to raise funds for both highway and nonhighway purposes. The passing of the emergency, however, has not prevented legislatures from reenacting these taxes, even in some States with unprecedented surpluses in their treasuries. If the trend in diversion is resumed in the post-war period, it will prevent the development of an adequate system of highways. It may place such a heavy tax burden on highway users as to restrict development of highway transport. Either result would be detrimental to the Nation as a whole. It is difficult to escape the conclusion that diversion is an expensive and unwise expedient.

Since nearly all of the State legislatures meet this winter, it is my hope that, where necessary, legislative action will be taken to prevent loss of Federal-aid highway funds because of diversion. Even though the diversion in a State is not such as to make necessary the withholding of Federal aid under section 12, it is highly desirable that the legislature give careful consideration to the reservation of all highway-user taxes for highway purposes, as they will be certainly needed to rehabilitate and improve our highway systems in the post-war period.

No. 5 deals with the designation of the national highway system or State highways by joint action of the State highway department of each State and the adjoining States. In some States the systems are designated by acts of the legislatures, so such legislation may be needed.

No. 6 deals with the authority to acquire model limited access highways. There has been widespread misunderstanding of this proposed legislation to permit the building of limited access interstate highways. It should be made clear that the interregional highway report specifically recommended that no limited access routes be constructed unless and until traffic conditions justify such design. The stress was put on the need for the legal power to limit access in the future and the power to control certain roadside developments which affect the safety and capacity of our highways. We have wasted many millions in highway funds and wasted many lives through traffic fatalities because our engineers have had to concern themselves only with the roadway itself and have had nothing to do with what happens along the roadside. If our post-war investments are to be protected from early obsolescence and from new accident hazards due to unsound roadside encroachments, it is absolutely essential that our highway builders be given the power to limit road access if and when such limitation becomes necessary to the safety and traffic capacity of the road. Seventeen States, including many of our largest ones, now have such legislation, although in some instances the legislation needs revision. Every State needs such legislation, not to build limited access routes in any large volume at the outset but to have the protection of being able to limit access if future conditions require. That legislation will save large sums of money and permit the highway program to move forward with the assurance that the new roads are permanently protected from roadside influences of the wrong type.

No. 7 concerns legislation permitting the State highway department to enter into agreements with airport authorities regarding the relocation of roads where the land is needed for airports, and the building of roads giving access to airports. Unless such agreements are made, Federal highway funds cannot be used for the rebuilding of roads to serve airports.

This provision was inserted to prevent recurrence of certain wasteful practices which already have resulted from lack of consultation between airport and highway officials when new airports were developed. It should encourage the practice of joint planning of airport-highway facilities, and in several other ways appears to be a very sound provision. As post-war airport developments increase, the provision will become more important.

No. 8 concerns a possible need for modifying State laws pertaining to the amount of contribution railroads must make toward grade crossing elimination projects. The new Federal legislation provides that Federal funds can be used to pay the full cost of constructing such projects, and half the cost of rights-of-way. However, it provides that the railroad must pay to the United States Government a sum equal to a portion of the benefit of the project to the railroad—the portion being a prorata share of the net benefit, based on the Federal share of the total cost of the project, but not more than 10 percent of the cost.

The net effect of this provision is that grade separation projects need no longer be delayed pending agreement by the railroad as to its contribution, or its willingness to participate. At the same time, the arrangement gives the railroads protection from unreasonable demands. But changes may be required in State grade-crossing elimination laws, insofar as Federal-aid projects of this type are concerned.

We think that Congress has passed a good, workable, highway bill. We also believe that we have been far-sighted in planning a post-war highway program: First, by passing a bill authorizing a contribution of money to the States for planning purposes and, second, by the passage of an act which will give the States money to take care of all of their highway needs over a period of 3 years. When the war ends, or the emergency is over, it will be the problem of the States to carry out the intent of Congress and to enlarge upon our great system of highways.

A majority of the Members of Congress think that the amount of money authorized in the bill is all that can economically be used during the 3-year post-war period. However, if the road administrations of the various States tackle this problem enthusiastically and courageously, there is a possibility of more money being used economically than is authorized in this legislation.

But when the success of the program as outlined is completely demonstrated, then if it should develop that more funds are necessary, I feel sure that organizations such as

yours and other road enthusiasts could come back to Congress and present a good case for additional appropriations, and in such an event you can be assured that Congress would be sympathetic to your problem.

Legion Supports Dies Committee

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. RANKIN. Mr. Speaker, one of the outstanding organizations of this country that stands for America and American principles, at all times, is the American Legion.

The Legion has its posts in practically every county, and its membership on guard in every precinct throughout this great country.

In my efforts to create a Standing Committee on Un-American Activities, I had the unqualified support of the Legion, as I explained in the debate at that time, when I read from its resolution of endorsement.

Under permission granted me to extend my remarks in the RECORD, I am inserting an article which appeared in the National Legionnaire for January 1945, which I hope every Member of the House will take the time to read.

The article referred to follows:

UN-AMERICAN INVESTIGATION WILL CONTINUE—DIES COMMITTEE PERMANENT AS RESULT OF RANKIN AMENDMENT

The American Legion scored a smashing victory in its battle against spies, saboteurs, and disloyal elements on January 3 when the House of Representatives voted 207 to 186 to make its Committee on Un-American Activities a permanent part of the House organization.

The resolution not only to continue the committee but to make it a permanent standing body instead of a special temporary one was introduced by Representative JOHN RANKIN, Democrat, of Mississippi, soon after the Seventy-ninth Congress convened for the first time.

Within a few moments an overwhelming combination of Republicans and Democrats adopted the resolution and saved the committee from extinction.

"It was a signal victory," said Francis M. Sullivan, legislative director of the Legion.

CREATED IN 1938

The committee was first created in 1938 in conformance with a mandate of the nineteenth national convention of the American Legion in 1937. Former Representative Martin Dies, Democrat, of Texas, was named its chairman. It was continued for 2 years in 1940, again in 1942 and for 1 year in January of 1944.

During its stormy career it was frequently the target of pacifist, Communist, and other critics, but Congress stood its ground, providing $675,000 for the committee to carry on its work.

Had the committee been permitted to pass out of existence with the Seventy-eighth Congress, its voluminous files and thousands of documents bearing directly on subversive activities and disloyal elements were threatened with disposal, although they had many times proved valuable to the armed forces and the F. B. I.

COMMITTEE'S RECORD

In the course of its work the committee, among other things, did the following:

Exposed Communist group instigation in several labor disturbances.

Disclosed that the German-American Bund was foreign backed with the result that Fritz Kuhn and James Wheeler Hill, bund officers, were convicted of subversive activities.

Disclosed the Communist Party plan to seize control of the American labor movement by infiltrating in labor groups.

Revealed the American Youth Congress as Communist-controlled.

Exposed the Transocean News Service, American Fellowship Forum, Germany Library of Information, and the German railway agencies as channels for distribution of Nazi propaganda.

Investigated and exposed the Kyffhauserbund as an organization of former German soldiers and officers during propaganda work.

Exposed Joseph Curran, president of the Maritime Union and vice president of the C. I. O., as a member of the Communist Party.

Revealed Communist activities within the American Newspaper Guild, and in the California aircraft industries.

Built up a complete file on fifth column organizations containing the names and records of hundreds of thousands of individuals.

Investigated and exposed Communist Party fraud in obtaining signatures to nominating petitions used in the 1940 elections, with the result that party officials were indicted in several States and party candidates ruled off the ballots.

Exposed the activities of Harry Bridges, Fascist leaders James E. Campbell, George Deatherage, and Charles Hudson, and Silver Shirt Leader William Dudley Pelley.

There were many other accomplishments, also, which brought bitter opposition to continuance of the committee, but it continued its work.

As a permanent, standing body, the committee now has power under rules of the House to recommend specific bills, whereas previously it could merely file reports. It also is entitled to a regular appropriation from House funds. Heretofore, a special resolution was necessary every time money was needed and the ensuing fights sometimes threatened existence of the committee.

Army Troop-Rotation Plan

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. BROOKS. Mr. Speaker, the troop-rotation policy of the War Department has been the subject of much discussion from time to time. I have been most interested in the return of selected servicemen to the United States for short rest periods after long months of overseas service. As an incentive to the enlisted man and to the officer for a high standard of service, it is much sought after. As a morale builder for the veterans in foreign lands after months and years of weary service it is without an equal.

On December 5, 1944, Secretary of War Henry L. Stimson wrote to me a very fine letter on this subject. On January 13, 1945, replying to my inquiry, I received a letter from Gen. George Marshall, Chief of Staff, regarding the same subject. I feel that the subject contained in these two letters are of such general interest to the people of the United States that I ask they be printed in full below.

The letters are as follows:

WAR DEPARTMENT,
Washington, December 5, 1944.

Hon. OVERTON BROOKS,
House of Representatives,
Washington, D. C.

DEAR MR. BROOKS: I appreciate your personal interest in the recent announcement of the national commander, Veterans of Foreign Wars, with regard to our rotation policies, and am pleased to have this opportunity to discuss a matter of such general concern. This is an extremely complex matter, as you know, and we, therefore, have had difficulty in making it generally understood why more soldiers cannot return home while the war is actively in progress. The attached study of the entire subject may be useful to you in this regard.

It would be helpful if your correspondents on this subject are informed not only that the Army is doing everything it can consistently do and at the same time prosecute the war vigorously, but also, from the factual standpoint, that the Army has returned since Pearl Harbor well over 750,000 men to the United States; that sick and wounded soldiers are now being returned by air at the rate of over 4,000 a month; and that we are now returning soldiers on rotation, leave, and furlough, at the rate of over 30,000 a month, or 360,000 a year. In considering these numbers it is well to bear in mind that we have done this while exerting prodigious efforts to increase our overseas strength, and at all times we have been under heavy pressure from our enemies.

In view of the restrictions which must govern our actions in wartime—and with our soldiers serving all over the world—I believe you will agree, in considering the above figures, that our efforts to implement a working rotation plan have been more than merely substantial. I believe this will be even more evident when it is pointed out, as explained in the attached study, that from 4 to 7 soldiers must be immobilized for every soldier who is returned on rotation and temporary duty, with the result that our present program deprives the Army of the equivalent of from 8 to 14 divisions. I believe this fact is not generally recognized but is, in itself, a rather graphic reason why an expansion of this program while the war continues, or certainly until the defeat of Germany, would be in neither the military nor the national interest. Since, as stated in the enclosure, the return of soldiers to this country on rotation is the function of the theater commander, the War Department cannot predict when specific individuals can be returned.

The statement in the article to which you refer, to the effect that "our military experts are too cautious in their willingness to substitute replacements for seasoned combat troops" is not only incorrect, but, in my judgment, is the type of assertion which, when disseminated, can only hamper our efforts to implement this program. The simple truth of the matter is that we do not have an inexhaustible reservoir of soldiers, despite the popular impression to the con-

trary. The shortage of qualified replacements, not our hesitancy to use them, is the greatest limiting factor in the rotation program. I believe the attached study will demonstrate this fact.

The best we can do, therefore, is to reiterate that we will return as many men as possible consistent with the prosecution of the war. General Marshall and I certainly share your hope that this will permit the return of our men in the southwest Pacific area at an early date, and you can rest assured that if changed military conditions eventually permit us to increase the rotation quotas, this will be done without delay.

Sincerely yours,

HENRY L. STIMSON,
Secretary of War.

WAR DEPARTMENT,
THE CHIEF OF STAFF,
Washington, January 13, 1945.

Hon. OVERTON BROOKS,
House of Representatives,
Washington, D. C.

DEAR MR. BROOKS: I have your letter of January 9 regarding our rotation plan and regret that I can add little to Mr. Stimson's letter of December 5 to you on the same subject. A copy of that letter is attached.

Since Mr. Stimson's letter was sent to you, however, we have removed all limitations on the number of soldiers who may be returned on leave or furlough, without replacements, for 1-month visits in the United States. Consequently, theater commanders may now return any men they can spare for 1 month, plus the several months' travel time involved. The number of soldiers returned on temporary duty under this procedure will probably increase markedly within the next few months.

Under this procedure the selection of those to be returned will remain entirely a function of the theater commanders in which the War Department will not be involved.

I should like to reiterate Mr. Stimson's comment in the attached letter that if military conditions eventually permit an increase in the rotation quotas, this will be done without delay. The Army's manpower limitations at this time are so severe, however, that an expansion of this program, at least until the defeat of Germany, appears very unlikely.

Faithfully yours,

G. C. MARSHALL.

Ratification of Treaties

EXTENSION OF REMARKS
OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. ALLEN of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shreveport (La.) Times of January 16, 1945:

NOT A QUESTION OF PRESTIGE

Some Members of the House of Representatives are displaying great enthusiasm over the proposal that future treaties be ratified by a majority vote of both Houses, instead of by two-thirds majority in the Senate, as is now required.

The feeling on the part of these House Members seems to be that the prestige of their branch of the legislature is involved.

It is doubtful that the project will have the slightest chance of approval if this question of prestige is kept in the forefront. In dealing with the problem of treaty making, the Nation is not interested in the prestige of the House—or of the Senate, for that matter.

The country's welfare requires that a mode of treaty ratification be used which will produce wise decisions, based not just upon temporary conditions but upon the long-term welfare of the United States and of the world.

From this standpoint, the rule requiring two-thirds vote approval in the Senate is sound. If a treaty is desirable, and if it has the endorsement of most Americans, then the assumption is that a two-thirds majority can be obtained. If a two-thirds majority cannot be obtained for any given treaty, then it is reasonable to suppose that it lacks merit, or that the American people do not strongly approve it.

The proposal to drop the two-thirds requirement would make it possible to put through Congress a treaty of which a majority of the people did not approve. A treaty so adopted would lack the validity derived from overwhelming public support and might be put aside at any time an aroused majority took action to rescind it.

Whereas the two-thirds rule tends to put the Nation squarely and wholeheartedly behind any treaty which the Senate approves, the majority rule would leave the question of public support strongly in doubt and would weaken any structure of international peace in which the United States participated.

If a change in the method of ratifying treaties is required—and no conclusive evidence of the necessity has been presented—the change should be made not on the basis of prestige or expediency but on the basis of what the Nation's welfare requires.

Over past decades, the Senate has not done badly as a treaty-making body. A simple majority in both Houses might produce much less satisfactory results.

Poland

EXTENSION OF REMARKS
OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. SCRIVNER. Mr. Speaker, the pitiful plight of Poland is brought into sharp focus by the poignant plea contained in the following telegram from a group of Americans of Polish descent.

COUNCIL 63,
POLISH NATIONAL ALLIANCE,
Kansas City, Kans., January 18, 1945.

Hon. ERRETT P. SCRIVNER,
House of Representatives,
Washington, D. C.:

Appeal to you to raise your voice in protest against Russia's land grab in her unilateral settlement of her dispute with Poland as sanctioned by Churchill. The future peace will be endangered if Poland is again wronged.

JOSEPH KSIAZEK,
President.
FRANK KUSTRA,
Secretary.

Democracy's Mandate in Puerto Rico

EXTENSION OF REMARKS
OF

HON. JESÚS T. PIÑERO

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. PIÑERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tables, showing the results of the last three elections held in the island of Puerto Rico, during the years 1936, 1940, and 1944.

All figures are taken from the official reports of the Insular Board of Elections, San Juan, P. R., and clearly show the decline of the old party alinements and combination of parties seeking to hold, and sometimes holding, control of the government through various strategic schemes. They also show what I believe to be a clear democratic expression of the will of the people of Puerto Rico and of their unqualified support of the legislative and administrative programs and accomplishments of the Popular Democratic Party:

	1936	1940	1944
Voters registered	764,602	714,960	719,759
Votes cast	549,500	568,851	591,978
Union Republican Party [1]	152,739	134,582	101,779
Socialist Party [2]	144,294	87,841	68,107
Coalition total	297,033	222,423	[3] 169,886
Liberal Party	252,467	[4] 130,299	28,630
Pure Agrarian Party	.....	[5] 1,272	.....
Popular Democratic Party [6]	.....	214,857	383,280

SENATE OF PUERTO RICO (19 SEATS)

	1936	1940	1944
Union Republican	7	5	1
Socialist	7	4	1
Liberal	5	0	0
Popular Democrats [6]	.....	10	17
Total	19	19	19

HOUSE OF REPRESENTATIVES (39 SEATS)

Union Republicans	14	11	1
Socialists	13	7	0
Liberals	12	[4] 3	1
Popular Democrats [6]	.....	18	37
Total	39	39	39

[1] The Union Republican Party and the Socialist Party nominate the same candidates for all insular elective offices and for Resident Commissioner in Congress. They have always been known as the coalition parties.

[2] One of the coalition parties (see above).

[3] In 1944 the two coalition parties (Union Republicans and Socialists) and the Liberal Party nominated the same candidates for all insular elective offices and for Resident Commissioner in Congress. Their aggregate total was 208,516.

[4] In 1940 the Liberal Party went to the polls under the name of Puerto Rican Tripartite, Unificacionist Party together with two groups known as the Reformist and the Labor Parties. These last two groups were not registered as parties and the figure represents the aggregate total.

[5] This party only registered for the 1940 election. It nominated the same candidates as the Tripartite group. (See footnote 4.)

[6] Founded by Hon. Senator Luis Munoz-Marin in 1938 and was finally registered in 1940.

In 1936 Mr. Iglesias, the Coalition Party's candidate for Resident Commissioner in Congress, was elected by a 44,566-vote majority over the Liberal Party's candidate.

In 1940 Mr. Pagán, the Coalition party's candidate for Resident Commissioner in Congress, was elected by a 7,566-vote plurality over his nearest contender.

In 1944 JESÚS T. PIÑERO, the Popular Democratic Party's candidate for Resident Commissioner in Congress, was elected by a 174,764-vote majority over all the other parties' combined votes.

Our Power Strike and Mr. Roosevelt's Law

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Cleveland News of January 16, 1945, which gives a realistic picture of a great city's helplessness under present conditions:

OUR POWER STRIKE AND MR. ROOSEVELT'S LAW

While the Illuminating Co. strike and its threat to this city are in our minds, let us discuss a fundamental national cause of it which will have to be remedied sooner or later if we are not to be menaced again with a strike which means darkness, shut-down, and helplessness.

We submit that a few hundred men under a handful of union leaders ought not to be allowed the power to go on a strike and set up picket lines aimed to shut down our electric power supply in defiance of the misfortunes of the rest of 1,250,000 people of greater Cleveland.

This was the premeditated intention, as is shown by the union leaders' bargaining for Friday's strikers return to work and abandonment of coercive picketing.

Let us understand that this union, the leaders, the few hundred men who took direct action, have authority negatively founded in law to take Cleveland this way by the throat, and that this authority was most deliberately placed in these irresponsible or revolutionary hands by President Roosevelt, the New Deal Congresses, and the National Labor Relations Board as the result of the Wagner law, enacted in 1935 to benefit unions and union organizers.

Until this law is amended to compel unions to perform duties, the power plant workers may strike again, as often as they see fit.

Mr. Roosevelt has resisted all attempts to amend and equalize this law; he vetoed one other law which sought to equalize a little of the unbalance. Let us understand that he wants the unions and the organizers to have exactly this power that the Illuminating Co., C. I. O. union, wielded last Friday.

The Wagner law penalizes industries or employers which resist the union organizers or employee unionizing movements; no matter even if these organizings are with fraud or coercion. As the National Labor Relations Board interprets the law, the employer may not advise employees about a union or about their conduct as a union. The Board has been swift to put any employer on the defensive who has spoken out, or put him in a position calculated to turn employees against him.

With intention, the law imposes no limits or responsibilities or duties on the union or its organizers. The unions and the organizers have understood perfectly this purposeful omission of restraints on them. They know they may do all the proposing and talking to employees, including strike proposals, and that the employer either will be silenced or narrowly limited.

No law compels a union to keep its word or its contract. The Illuminating Co. union breached its contract by its strike Friday, but the law compels the company to maintain the union nevertheless as if nothing had happened.

The natural effect of this legal onesidedness is to give union officers and organizers the whip hand over employees' conduct. We repeat, this is as intended by Mr. Roosevelt. And the evidence abounds that his intention has not changed today.

In the Graphite Bronze strike of last year, enforced by picketing in which men and women workers were assaulted by nonemployees, the Government permitted its War Labor Board to remain helpless after ordering the strikers back to work. The War Board could do nothing because of the license given the union in the Wagner law.

Two elections at Thompson Products have gone heavily against the C. I. O. organizers, leaving no doubt of the overwhelming desires of Thompson employees. But the N. L. R. B. threw out both union defeats on technical interpretations, has set another election, and plainly wants C. I. O. to win.

The clearest present intention of the administration is shown in the attempt of Sewell Avery, of Montgomery Ward, to test the legal one-sideness of the Wagner law, which he chose to combat. Courts to which he appealed told him that Mr. Roosevelt's wartime powers from Congress are now employed to prevent such a Wagner law test during the war period. All during the war, on the other hand, the National Labor Relations Board, administering this law, has gone quietly but busily along opening all doors to the union organizers, silencing employers, and holding elections designed to give unions a bargaining contract.

This city thereby could come to the realization Friday night that the few hundred strikers at the power plants held the rest of us in a tight grip, with the express consent if not the permanent direction of the President of the United States. Let us put the fundamental credit—if that is the word—where it belongs.

We see no way of release from this peril to the rest of us without Wagner law amendment aimed to make unions and their organizers just as responsible and limited in their conduct as are the employers. The "few hundred" still have their loaded gun, they are merely not digging it into our ribs at this moment.

The amendment to the Wagner law will take hard work by our Congressmen, and conversion of some of them. This will not take place unless we the people tell our Congressmen what we feel must be done. It may be that at least our Cleveland Congressmen are now appalled along with the rest of us at the strike last Friday and the dreadful prospects it presented.

Servicemen's Paper Supports Committee on Un-American Activities

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting excerpts from an editorial which appeared in the National Tribune of January 11, 1945, an ex-servicemen's paper published here in Washington.

It reads as follows:

The veterans and all other patriotic organizations of the country were vindicated last Wednesday when the House of Representatives, by a record vote listed elsewhere in this issue, expressed itself strongly in favor of a permanent committee to investigate un-American activities. Ever since the so-called Dies committee was founded in 1937, they have supported strongly its purposes and have defended as strenuously any and all attacks upon it. They did so not because of its weaknesses and shortcomings, but rather for its strength and the world of good its members were accomplishing.

That committee went out of existence with the adjournment of the Seventy-eighth Congress just before Christmas. It was revived with a bang on the opening day of the Seventy-ninth Congress in an unprecedented move that assures permanency under the rules of the House and that in all probability promises an investigating group that will possess all of the virtues and few of the vices of the old committee. It will have the power to consider and report remedial legislation when such moves seem advisable, and it can do so under the standing rules of the House.

Before the surprise action on the birthday of the new Congress, there was feverish activity in the headquarters of most of the major veterans' organizations. Representative JOHN E. RANKIN, of Mississippi, a proven friend of veterans and chairman of the House Committee on World War Veterans' Legislation, has been appealed to and had agreed to lead the fight to restore the life of the investigating committee that had in its day performed a great service to the Nation in ferreting out elements that opposed our American form of government. Communications went out to veterans' leaders and their memberships to contact their Representatives for support of the Rankin resolution. Responses flooded in. Most House Members had also been advised that Spanish War Veterans, the Legion, the V. F. W., the D. A. V., groups allied to the old Grand Army, the Daughters of the American Revolution and other organizations with intensely patriotic backgrounds desired to see the work of the Dies committee continued. Their confidence in Congressman RANKIN was proven justified; their faith in the Congress itself was shown to be warranted.

During formal adoption of the House rules, RANKIN offered an amendment to set up the investigating body as a permanent committee with all of the prerogatives of such. The move was opposed by the leadership as vigorously as RANKIN advocated it. It went down on a teller count but passed by a vote of 207 to 186 on a roll call. Some who voted against the amendment did not like the method of procedure. Others followed blindly a notoriously well-known opposition to the continued investigation by the administration in power, and there were those who have objected consistently and in good conscience to the committee's continuance. Also there were those with left wing tendencies who have fought it tooth and nail for 7 years, to the delight of followers of * * * Adolph Hitler and worshipers of the Sons of the Rising Sun. Nevertheless, 207 tried and true Americans went on record for American principles, and JOHN RANKIN enjoyed a personal triumph of no mean proportions and the Nation's patriotic sons of war were sustained in their objective. Within 2 hours after the Seventy-ninth Congress had met, it showed itself strong enough to do right by an act that will be applauded generously in real American homes.

* * * * * * *

The Dies committee erred. Its friends recognize that as do no others. Nevertheless, it uncovered some of the most pernicious

anti-American agencies that ever attempted to destroy free government. The Attorney General of the United States admitted that the Department of Justice had failed to cooperate with it as it should. Its pitiless publicity separated many admitted Communists from Government pay rolls and drove countless others to their rat holes. The Federal Bureau of Investigation finally utilized the files that had been threatened with destruction. The Dies committee proved itself to be of inestimable value to constituted authorities, and—mark this—no member of the group ever had his patriotism questioned.

It is axiomatic that citizenship, even domicile within this country's borders, carries a responsibility to understand the privileges and freedoms guaranteed by the American Constitution and the Bill of Rights. To that principle the Dies group devoted itself. It promoted active, alert Americanism. It heeded warnings that are still apparent to all who will see. It proclaimed that communism and fascism are doctrines not acceptable to the American people, and it insisted that American institutions must remain untrammeled in the world. Those assurances are worth nurturing.

As yet there is no indication who will serve on the new House committee, but it should be composed of the best qualified, the most reliable and the most earnest patriots in the House of Representatives. That is the grave responsibility of the leadership, and it must accept its charge if the new body is to avoid the unwarranted stigma of bigotry, demagoguery, Red-baiting and worse that was attached to its predecessor group.

Much of this war is yet to be fought. The public learns of the arrival by U-boat of some Axis spies and of probable balloon landings of others; it knows little or nothing about the many aliens who plot against our country from within its borders and it is loath to believe that traitors among our citizens now lead fomenters of revolution. Real enemies are already girding themselves to fight the new committee. In the words of Congressman RANKIN, "This is no time to relax our vigilance."

The Nurse Shortage

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. BROOKS. Mr. Speaker, in connection with the shortage of nurses for the armed services and in connection with any proposed legislation to assist in this respect, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the short letter of January 16, 1945, from Dr. Charles M. Griffith, Medical Director of the Veterans' Administration, showing a shortage at the present time of 2,000 nurses. The letter is as follows:

VETERANS' ADMINISTRATION,
Washington, D. C., January 16, 1945.

Hon. OVERTON BROOKS,
House of Representatives,
Washington, D. C.

MY DEAR MR. BROOKS: This will acknowledge your letter of January 12, 1945, in which you request information as to the number of nurses presently employed by the Veterans' Administration. You also inquire whether the Veterans' Administration has a sufficient number of nurses or if there is a surplus.

You are advised that as of November 1, 1944, there were 4,150 nurses on duty in the various facilities of this Administration, with approximately 1,000 vacancies in authorized nurse positions. It is estimated that an additional 2,000 will be needed to care for additional beds being added to care for the new facilities being opened between now and July 1, 1945. Our immediate need for nurses is urgent.

Your interest in this matter is appreciated.

Very truly yours,

CHAS. M. GRIFFITH,
Medical Director.

Individual Freedom

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. McKENZIE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an editorial by the Honorable Thurman Sensing, director of research, Southern States Industrial Council. It is a thoroughly American statement and should awaken in the minds of every citizen the realization that individual freedom is the priceless heritage of being an American. Let us preserve it.

The editorial follows:

INDIVIDUAL FREEDOM

(By Thurman Sensing, director of research, Southern States Industrial Council)

The most valuable possession owned by a citizen of the United States is individual freedom. Moreover, individual freedom is owned not by just a favored few, not by just the wealthy or by the educated, not by just the clergy or the lawyers or the doctors or the politicians or the diplomats—it is owned by every citizen of the land.

Individual freedom means, among other things, the right of a citizen to carve out his own career, the right to work when and where he pleases, the right to vote for whom he pleases, the right to live where he pleases, the right to study, the right to save, the right to trade, the right to accumulate property.

The benefits of individual freedom are the greatest that man can have. Individual freedom makes it possible for a man with energy and ambition to rise to any height to which he aspires. Time and time again in this country, individual freedom has made railroad presidents out of section hands, has made bank presidents out of office boys, has made owners and operators of all sorts of businesses from men who started at the bottom—has moved men from log cabins to the White House.

Individual freedom depends on the type of government we have. So long as the people control the Government, then we have individual freedom. When it comes about that the Government controls the people, then there is no individual freedom.

This individual freedom was the fundamental basis of the Government established under our Constitution. For the first time in the history of the world, our forefathers were able to establish the kind of government men had been struggling for from the beginning of time—a government that would serve the people. Heretofore peoples had existed for the benefit of their governments; our fathers established a government that would exist for the benefit of the people—a government built on individual freedom.

There is serious danger that we may lose individual freedom in this country, and that soon—as it has been lost in other countries of the world. There is serious danger that in our search for economic security and in our demand that the Government guarantee us a living that we shall relinquish our freedom, that we shall turn over to the Government the right to order our lives, that we shall make the same fatal mistake that has often been made before in history—that we shall "sell our birthright for a mess of pottage." Individual freedom is a very personal thing in the life of a people—with it, they are masters; without it, they are slaves.

Unquestionably those who have most to lose in the surrender of individual freedom in this country are the great middle classes of the country—the working man, the average man. When individual freedom is surrendered, then the average man will no longer have the opportunity or the incentive to rise higher in the world, to make better provisions for his family, to accumulate property, to own his own business.

Every one of us should realize more keenly now than ever before that "eternal vigilance is the price of liberty." We should realize that we can't play the ostrich and stick our heads in the sand and say "everything will come out all right." We should keep our eyes open and not be deluded by false promises of those whose real purpose is to gain control of the freedom which we all have as individuals.

This is not a matter of politics or political parties—it is a matter of principles of government. We shall not be worthy of our ancestors who fought with Washington at Valley Forge or those who fought with Lee and Grant at Gettysburg or those who fought with Pershing at Belleau Wood—and we shall not be worthy of our sons and brothers who are fighting now all over the face of the world—if we let anyone or any organization take away from us our most precious possession—the individual freedom of a freeman in a free country.

British Women—Orchids to Some Gallant Ladies

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement by Walter Winchell from his column:

WALTER WINCHELL IN NEW YORK

BRITISH WOMEN—ORCHIDS TO SOME GALLANT LADIES

Britain is the only country that has conscripted women for the fighting forces. Of about 16,000,000 women in Britain between the ages of 14 and 59, over 7,000,000 are in the services or in paid employment. Of the single women between 18 and 40, 9 out of every 10 are in essential war work; the rest are either physically unfit or engaged in taking care of younger brothers and sisters or elderly parents—467,000 are in the services; 56,000 are doing full time civil defense work; 6,500,000 are in industry.

In 42 British Government ordnance factories, 6 out of every 10 employees are women. Half the employees in the chemicals and explosives industries and 4 out of 10 in the engineering and allied industries are women. In the iron and steel industries British women do 950 types of jobs—working at blast furnaces, at smelting, in forges and foundries. In aircraft manufacture they are engaged on 150 processes. In May 1942 the British Ministry of Labor ruled that women industrial workers must work a minimum of 52 hours a week unless they were married and had domestic responsibilities.

On the British railways near London 105,000 women have been employed—releasing 100,000 men for the armed forces. They do the dirty work with the clean. The London Passenger Transport Board employs 3,500 women on engineering, 7,000 as bus conductors, 600 as porters, and 450 as ticket sellers. Thousands more are employed on bus systems in other parts of the country. Half the total number of post-office employees are women—more than 125,000 of them. The Auxiliary Territorial Services (A. T. S.) has over 200,000 members who work at more than 60 trades beside the men in khaki. They work, for example, as switchboard and teleprinter operators, dispatch riders, cooks, draftsmen, auditors—and many work on experimental ranges, in gunnery research, on antiaircraft duties, radar duties, and with searchlight batteries.

The Women's Royal Naval Service (WRENS), with over 40,000 members between the ages of 17½ and 50, recruit girls to replace men in nearly 80 categories of shore duty, besides manning small motor launches in harbor waters and undertaking certain duties at sea. The Women's Auxiliary Air Force (WAAF) has over 100,000 women who work with the R. A. F. as armorers, electricians, metallurgists, photographers, parachute repairers, bomb plotters, laboratory assistants, code and cipher clerks, and so forth. The strength of the W. A. A. F. is now greater than that of the R. A. F. in September 1938.

The Women's Voluntary Services, with over a million members, has organized women volunteers to help in every kind of civil defense and war emergency work. President of the organization is Lady Reading, who is assisted by an advisory council of representatives from over 60 women's organizations. It was women of the W. V. S. who organized the evacuation of congested areas at the time of the blitz—compiled registers of houses to which children were to be sent, helped to take evacuees to the refugee areas, providing meals on arrival, and local transport.

The Women's Auxiliary Police Corps was recruited to supplement the small number of regular policewomen employed in peacetime and now numbers more than 5,000 policewomen in England and Wales. The Women's Section of the Air Transport Auxiliary consists of paid women pilots who ferry aircraft from the manufacturers to air force stations and blood banks to hospitals.

The Mechanized Transport Corps is an organization of volunteer drivers whose work has been approved by the Minister of Transport, and who undertake no work not guaranteed as essential by the Government. They buy their own khaki uniforms and many work without pay. The Women's Legion is a London organization of women drivers operating as a voluntary corps. It recruits women up to the age of 58 who are exempt from serving in the regular auxiliary services, and operates mobile canteens and drives for various government agencies.

Virginia-born Lady Astor, comparing ordinary English girls with some extra-healthy female members of the master race, once quipped: "Give me a woman from the East End of London with adenoids and varicose veins and she will have more guts." Five years later, buzz bombs and rockets prove Lady A. can pick winners.

Four out of every 10 antiaircraft guns in England are "manned" by women—with Winston Churchill's pretty daughter, Mary, in charge of one of them. Under the command of General Pile, many women ack-ack crews went into action against the flying bombs when they were London's most serious threat. Now several female crews—hardened in action against buzz bombs—are manning guns in France. It was a woman, Flight Officer Constance Babington-Smith, of the British WAAF, who first spotted a robot bomb in an aerial photograph of a mysterious experimental station at Peenemuende. A woman's sharp eyes prevented the Nazis from achieving the surprise they hoped for when they boasted that robot bombs would win the war for them.

Average feminine wardrobe in England—now only two and one-half pairs of stockings and four dresses. Milady has only one one-hundredth of her prewar underwear supply. In one branch of the service they have collected some American wedding dresses—for renting to fighting brides—rental about $3 and the cost of cleaning. Girls conserve scraps of lipstick, keeping perfume, powder, stockings, and dresses for special occasions—going on dates, getting married, having babies, as Nazi terror weapons fall not far off.

Smart, sophisticated Lady Edwina Mountbatten, who social-butterflied her way through the 1920's and early 1930's, is now backing up her fighting husband all the way. No polite rolling of bandages or easy knitting and sewing—but back-breaking work among the wounded. As superintendent-in-chief of the joint Red Cross and St. John's ambulance organization, she has done more than her share—but modestly calls herself "just the wife of a commando."

These are the women—the British—who teach us what to expect from our American girls. With every third house in England bombed, British women can still greet the buzzbombs with remarks like: "Just as I've tidied the place up, down it comes!" At least one little town—the village of Alnwick—has started a memorial to the war effort of its women. The memorial—a new maternity hospital. And Ernie Bevin, Britain's Minister of Labor and National Service, has said: "Our women tipped the scales of victory." Which is why this reporter—tips his hat to them.

Let's Win This Peace

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. LUDLOW. Mr. Speaker, the Indianapolis chapter of the Rainbow Division Veterans' Association has presented to the country in a very forthright manner its views in regard to the establishment of a durable world peace and problems of post-war reconstruction.

These views are set forth in an article printed in Snow, the organ of the association entitled "Let's Win the Peace."

The article is being widely acclaimed by combat veterans of World War No. 1 who say that it expresses in simple words what all of them are thinking.

I am glad to present this article to the House for its consideration and to ask unanimous consent that it may be printed in full in the CONGRESSIONAL RECORD.

The article referred to is in full as follows:

LET'S WIN THE PEACE

Win the peace! Everybody and his brother are shouting and writing, "win the peace." And what are we doing about it? Following the same pattern exactly of the last war. What do you suppose the buddies we left behind in France a quarter of a century ago are thinking now as they see the picture unfolding? My guess is that they are saying, "Well, let's go, this is where we came in."

All this is only a personal opinion but it seems to me that now is the time for every person in this country and especially every veteran to speak up. Stop and think a moment of the things that are happening in this world today. The mess in Greece. The confusion and chaos in Italy and Belgium. The Polish situation. The Jewish question in Palestine. The Balkans. The set-up in China. The picture in Spain and in certain South American countries. Isn't it about time someone spoke up? Does anyone have a better right to speak out than the man who has fought for his country?

For years now we have listened to that glib remark: "Well, you fellows didn't finish the job in 1918." I am —— sick and tired of it. We did finish our job, turned it over to the politicians and they made the —— mess that was ever created. That is all past history you say and not important. The present is important isn't it, and the future? Well I wonder then if the picture beginning to emerge now looks the same to you as it does to me. The grab for more territory, the scramble for more power, the determination to control other countries, the egotistical stubbornness of certain men and groups of men to have their own way, the secret agreements, the bickering, the distrust, the endless red tape, the evasions and double talk, the large words and small deeds, the empty promises, the starry-eyed dreaming. Doesn't it all look and sound familiar? To me it looks exactly like a repeat performance of the bungling, pussyfooting years following the First World War.

I'm not talking or thinking about any particular man or any particular political party. I'm thinking and talking about politicians of all parties. We have the tragic example of what happened when so-called statesmen attempted to straighten out the world in the years following 1918. Do we have to have another lesson? Can we survive another lesson? Are there any indications that the politicians of today are any smarter than those of 25 years ago? What do you think? Votes and the next election still seem to be the criteria by which the destiny of nations is weighed. It has always been that way and always will be as long as you and I and millions more liks us sit unconcernedly and say, "Aw, what the h——." We let our own battle dead down because we were too —— lazy, blind, and indifferent as to what was going on in the years after 1918. Are you going to let your own boys and their buddies down too?

What can we do, did you say? Well for one thing what's the matter with the Rainbow starting the fight right now to see that some fighting men have a hand in making this peace? Is anyone more entitled to sit at the peace table than the man who pushed the bayonet, threw the grenades, manned the machine guns, slept in fox holes, lived on cold rations, went hungry, froze and still kept going? And I don't mean some one general sitting down with all the politicians and international smoothies. Some figurehead appointed by the politicians as a sort of grand beau geste to the fighting men. I mean a fighting man at the head of the table—a MacArthur, an Eisenhower or a Hal-

sey—and around the table other fighting men, buck privates and second lieutenants, sergeants and captains, corporals and majors—in short the men who did the fighting. You say it wouldn't work. Militaristic? Prussianism? Nuts.

I would rather trust the future of my country and my own future freedom to a MacArthur and Eisenhower or a Halsey than to any of the politicians who have strutted across the world stage in the last 25 years. Why the hell wouldn't it work? Do our politicians or those of any country have a mortgage on all the brains and common sense and guts in the world? If they have, they have kept the fact well hidden.

Let's have men make this peace who know how to speak plain English and have guts and sense enough to speak it. Men who have fought for their country, bled for it; who have frozen and gone hungry for it and have seen their friends die for it. Men who know what a wonderful country this United States is; men, who on a thousand far-off battlefronts have learned to love the Stars and Stripes and everything it stands for. Let's have men like these make this peace instead of politicians who have spent years on the public pay roll, in an air-conditioned office behind a mahogany desk and whose greatest hardship has been finding a pack of Luckies.

Instead of having men who know exactly which fork to use, who are graceful on the dance floor, who know when to wear striped pants and when to wear white tie and tails—instead of having men like this make the peace this time, let's have men who can bring a bomber home on one engine—men who can hit the beach in a hail of machine-gun fire—men who know what it means to sweat out a night in a jungle foxhole—damn it, let's have men make this peace and not stuffed shirts.

How far do you think these Old World diplomats with their suave blather and double talk would get with Sgt. G. I. Joe at the peace table. I have a feeling that the sergeant might tell them something about like this: "Gentlemen, we are going to use but one language in this conference, just plain, ordinary English and wherever possible words of one syllable. We will say exactly what we mean and mean it. This entire conference will be open to the press. What we do here will affect every man, woman, and child in the world, and they have the right to know what is going on here at all time.

"We are all agreed on one thing, we want no more war. We want the guilty punished and by punished we mean shot. Regardless of what the international lawyers tell us about not being able to punish the head of a country, the head of any country which has practiced mass murder and torture will be shot. Do I make myself clear on that?

"Now, gentlemen, your countries are broke, your cities in shambles, your roads, railroads, and bridges destroyed, your empires falling apart, your people hungry, despondent, bewildered, and fighting among themselves. You need help, you need it now and lots of it.

"My country can and will furnish that help to the best of its ability—but, only under certain conditions. First, we want a peaceful government in your countries. The kind of government is up to your own people. If they want a free democratic government so desperately they are willing to fight for it as my country did, that is their business. We will not interfere—but you will get no help from us until you do have a stable, peaceful government. As the kind of rule your people want is none of our affair, likewise we expect and will see to it that you keep your nose out of our government. We want no isms of any kind in our country. Secondly, this habit some of you have of trying to control the smaller nations will stop now. It is none of your concern who rules in those countries as long as it is a peaceful rule. Third, there will be no more secret meetings, treaties, and agreements. As I said before this entire conference is open to the press and in addition everything we say here is being broadcast to the world. The day is past when half a dozen men sitting around a table in secret can play god over the rest of the world. Fourth, we expect you to pay for this help—in cash, in goods, in services, and in good will. My country is not a Shylock demanding his pound of flesh—but we have learned, gentlemen, that neither does it profit a man nor make him friends to give away his shirt and pants. Fifth, and this applies especially to you gentlemen representing the countries which have claimed to be neutral. Frankly your countries did not hold hands in this pot and some of you held very peculiar ideas about neutrality, so there is very little for you to say. And you might as well understand right now that we expect you to hand over to us any of the murderers who take refuge in your countries. If you do not hand them over we will simply walk in and take them.

"Now gentlemen those are the terms on which you can get the help you need. If my words sound blunt and harsh to you, just bear in mind that this is the second time in one generation my country has been called upon for help and drawn into your Old World fights. We are damn well fed up with your back yard quarrels. My people are people of good will who want to live at peace with the world, work with your people for the good of all—but, if you don't want to play by rules which are above board and open to the world—then if there must be a top-dog in this world to keep the peace and run things, my country will be that top-dog."

Sergeant Joe would probably express himself a lot better than I have but in the main I believe these would be his sentiments. Would it work? I don't know. The other way didn't work so why not try this method? It would be refreshing at least to hear our representative talk in such definite terms for a change; and I wouldn't be at all surprised but what Marshal Stalin might appreciate such plain talking and might even say, "The kid has something there, what are we waiting for, let's get to work."

And I am sure the old Rainbower whose luck ran out back in '18, looking down from the Halls of Valhalla and hearing, perhaps your son or maybe his own son make such a speech would turn to his buddies and say, "By the gods, our country has come of age at last."

Swell stuff you say, but what can I do about it? Damn it you are a free American aren't you? You can talk and write and fight can't you? All right, start fighting then for God knows you will never have a better cause for which to fight. Make no mistake about this—we are going to have to fight like hell to win this peace.

Every veteran and every veteran's organization ought to be able to agree on something like this. Think what twelve or fifteen million men could do if they pulled together. When a politician pulls one bonehead play after another, straddles every question, pussyfoots on every issue, talks big and does nothing—then start raising hell. And 15,000,000 men could raise quite a little hell if they got serious about it. You think the politicians would listen to 15,000,000 votes?

For God's sake let's have men make this peace who don't give a tinker's damn about personal glory or the next election. We don't give two whoops whether they are Democrats, Republicans, or believe in voodooism—whether they represent labor, capital, or the Saturday night pool and poker club. We want men who will represent 130,000,000 Americans and not just a few. Men damn it; fighting men who have fought for their country; men who know what war is like; men who believe in their country, love it, and have proven they are willing to die for it.

If we could do this, then when our number is called and we gather in Odin's Hall for that big reunion, we can face our old buddies and the thousands of fine kids who have joined them and in a clear voice report, "Soldiers, we didn't let you down this time."

A Time for Truth

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of January 15, 1945:

A TIME FOR TRUTH

In their efforts to know the truth from the ponderous mass of propaganda, distortion, and censorship, the American people are rapidly approaching the point where they are measuring the changing tides of war on maps by geographical gains, rather than on the basis of official announcements from their own and other Allied Governments.

Like the reports of the mythical Swedish commercial traveler who is always flying to Stockholm from Berlin to announce that the German people are at the end of their rope, the official and semiofficial announcements of the Allied Governments are received with a generous sprinkling of salt.

Thus, when the great Soviet offensive in Poland was announced by the Germans and confirmed by the Russians, the average American pardonably said, "If it's true it's about time." This may be unfair to the truly great contribution the Russians have made to winning the war, but it is a direct result of exaggeration of war news at its sources thousands of miles from the American scene.

There is so much that is inconsistent about all news affecting the war, both at home and abroad, that the growing skepticism of the American people cannot be ignored. There is, for example, the question of the shortage in cigarettes. The grim story of that situation is beginning to come out—of French civilians trading with a thieving minority of American soldiers who were stealing carloads of cigarettes.

It seemed preferable to the American command in France to let the millions of men at the fronts believe that civilians at home were greedily grabbing all the cigarettes, with the result that the troops went on short rations, rather than to explain that the American cigarettes being sold in France by civilians at $3 a pack had been stolen and placed in circulation in the black market.

Perhaps it was hoped that the people here at home would believe that the De Gaulle government was able to exercise complete authority in civil affairs if the story was suppressed. But we at home know that black markets on such an enormous scale can only operate if civil authority is weak or venal, and that French civil government is still in a state of flux.

Military authorities have been learning the hard way that the Americans at home can take their bad news in stiff doses, and resent any attempt to condition or cushion the bad news.

It is high time that Washington learned the same lessons. The involved maneuvers with manpower, job freezes, slow-down of conversion to civilian production—all part of a concerted drive for a national service act—will only cause greater dissension than ever. If a national service act is necessary it should be passed on its merits and not

as a result of hysterical and half-baked pressure.

Statistics can be made to prove anything, and Washington is over fond of statistical proof of the need for such far-reaching measures. It is an affront to sincere, patriotic, and self-sacrificing Americans to seek to bend them to an objective by assuming that the vast majority of us are scheming ways to circumvent controls necessary for winning the war.

We are aware that no one is infallible, and that great and small mistakes have been made. Perhaps Chester Bowles accomplished more for O. P. A. when he frankly admitted a mistake had been made in estimating food supplies than all the phony whoop-la which had preceded that forthright and honest statement.

We need fewer inspirational inventions and more facts, and it must be realized that facts are not half-truths and distortions, but plain, unadorned truth.

Guaranty of Full-Time Employment at Standard Wages

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, January 22, 1945

Mr. TAFT. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD an address which I delivered to the National Industrial Conference Board in New York City on Thursday, January 18.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NO DEMOCRATIC GOVERNMENT CAN GUARANTEE FULL-TIME EMPLOYMENT AT STANDARD WAGES

Ladies and gentlemen of the National Industrial Conference Board, it is a great pleasure to appear again before your Board, which for so many years has conducted a sound, impartial survey of economic problems and set an example now followed by many organizations. I am sure that none has investigated questions with a more realistic and impartial approach, and that none has more successfully assembled the basic facts on which every sound economic policy must be based.

In the last year or two we have seen the announcement of a new theory of government or economics that every man and every woman is entitled to a full-time job at good wages, just as he or she is entitled to police protection and the possession of his own home. The necessary corollary has followed that the Government must guarantee him a full time job at good wages. This is an attractive and plausible theory and it has made substantial headway throughout the United States with very little critical examination of its soundness. Your purpose here this evening is to examine the basis for this new theory.

1. FULL EMPLOYMENT AT STANDARD WAGES IS OUR GOAL BUT NOT A RIGHT TO BE GUARANTEED BY LAW

We can all agree that full employment at good wages for every man and every woman who wishes to work in the United States is a goal devoutly to be wished. It is an ideal to be strenuously sought, and no questioning of its existence as a legal right in any way detracts from the desire of the questioner to attain the ideal. Good wages means, perhaps, $2,500 a year. Obviously a goal of $5,000 a year apiece, or $25,000, is even more desirable. Even the most-hard headed realists will agree that utopia itself is a proper goal to seek.

The distinction is between an ideal or a hope, and a right which can be conferred by law. Thus we can agree on the desirability of the principles of the Atlantic Charter and the "four freedoms," but even the President today admits that these are merely a hope and not something to be guaranteed by a world government. This proposed new legal right certainly goes far beyond the Declaration of Independence which mentions only the rights to life, liberty, and the pursuit of happiness. The Constitution while promising to secure the blessing of liberty, only proposes to promote the general welfare. It seems impossible to me, to assert the legal duty of our Government to guarantee full-time employment. It may take many steps toward that goal and adopt many methods which are more likely to secure it than others.

However, the means by which we have raised our standard of living to a higher average than any other country in the history of the world and in a shorter time, have been the application of freedom to individual activity, not the guarantee to anybody of anything other than freedom. The economic machine of America created out of that freedom has made this country the most powerful in the world. That freedom can be qualified so that it does not include the freedom to throw monkey wrenches in the machine. The economic machine can be oiled and speeded up and improved. But I believe I can show not only that a guarantee of work by the Government to every individual is impossible but that it is wholly inconsistent with the very freedom which has produced and animated the machine which provides jobs at good wages.

2. THE NEW PROPOSED ECONOMIC BILL OF RIGHTS

Just what is this theory of a Government guarantee of employment? My attention was first called to it in the National Resources Planning Board Report of January 1, 1943, in which that Board stated its belief that it should be the declared policy of the United States Government "to underwrite full employment for the unemployed and guarantee a job for every man released from the armed forces or the war industries with fair pay and working conditions." The whole report of that Board was based on that theory, without the slightest consideration of cost or taxation. It proposed a vast spending program for the United States Government as a means of producing prosperity. The Government was not only to underwrite full employment but it was to "underwrite effective demand for goods and services" and "underwrite the attainment of high production."

President Roosevelt adopted the so-called economic bill of rights of the Board in his address to Congress in January 1944, and reaffirmed his position this year, saying that "of these rights the most fundamental, and one on which the fulfillment of the others in large degree depends, is the right to a useful and remunerative job in the industries or shops or farms or mines of the Nation." He adds that the full employment means not only jobs but productive jobs at standard wages.

The C. I. O.-P. A. C. platform of January 1944 commends the President's new bill of rights and says that the full employment program must "be guaranteed by the Government with a prepared program of jobs at useful work, with standard wages and working conditions, if and to the extent that private industry falls short of the guarantee."

The Kilgore subcommittee of the Senate Military Affairs Committee, largely dominated by the Political Action Committee thinking, proposed the enactment of this theory into law. Their bill would require the President each year to inform Congress as to the prospects of employment and national production and if his estimate falls short of full employment, to recommend a specific program of Federal expenditure to fill the gap. The policy crystallizes into the proposal that the United States Government shall guarantee 60,000,000 jobs at $2,500 a year.

The whole policy sounds so easy and attractive that it has been thoughtlessly accepted by many without analysis. Even the Committee of Economic Development, made up of hard-headed businessmen, at first rather undertook to assume for industry the responsibility of guaranteeing from fifty-three to fifty-seven million jobs. A guarantee of employment by private enterprise of course is even more difficult than one by government, because there are millions of employers wholly unable to employ more men than economic conditions permit, and wholly without the power to combat nation-wide economic forces. The danger is that if employers undertake the responsibility and fail in any degree because of conditions beyond their control, it would open the door for the claim that the Government must step into the breach with the complete guarantee.

3. WHY SHOULD WE GUARANTEE ANY SPECIFIED NUMBER OF JOBS?

The first question that arises is whether it is necessary or wise to provide, or try to provide, 60,000,000 or even 50,000,000 full time jobs. There are only 35,000,000 families in the United States, and this would provide two jobs for many million families. Should there be an obligation to provide a full time job for every woman who wants to work when perhaps her husband or other member of the family is perfectly able and willing to support her? Is it perhaps not better to keep boys and girls longer in school, and retire the aged at a lower age? How can we say that there must be 60,000,000 jobs when perhaps 50,000,000 workers can do all the work of the Nation? Doesn't a nation have a higher standard of living if the work can be done by a fewer number of people in fewer hours?

4. A DIRECT GUARANTY OF A JOB TO EVERY MAN AND WOMAN IS IMPRACTICAL

In analyzing the soundness of this new doctrine, a good many questions arise as to its exact meaning. What is full employment and what is a good wage? Is there to be a guarantee of any job a man wants in any industry, or is it to be such a job as the Government chooses to provide? Who is to decide what a good wage is? Men have a way of overestimating their own ability and few are going to be satisfied with the wage the Government thinks adequate. Is the Government going to guarantee a flat wage for all, or a wage having some relation to the amount and quality of work that a man does? Who will decide when his wages are to be raised?

The President says every man has the right to a job in the "industries or shops or farms or mines of the Nation." The total number of men employed in these categories is only thirty million. How can they be increased and why should they be? Millions are employed in other types of service. The Census of 1940 showed 9,758,000 employers and own-account workers, including farmers. How will the Government guarantee this kind of a job, or guarantee that these can make a living wage? Some 2,300,000 people are listed as in domestic service. Is the provision of such a job going to be a performance of the Government guarantee?

5. DIRECT GUARANTY INVOLVES COMPLETE REGIMENTATION

It is clear to me that any direct guaranty of full-time jobs at good wages would in-

volve the Government in the placement of every man and woman in the country, and ultimately the assignment by the Government of every man and woman to the job selected by the Government. This is exactly the system pursued in Russia today, as anyone can see by reading the recent articles in the Readers' Digest by William L. White. It is in contradition of the whole American tradition and is bound to destroy the very freedom for which our armies fight throughout the world. It is obvious to me that the proponents of the theory would very quickly back away from any literal interpretation of the supposed guaranty. They must quickly disown the theory that the right to work is one which can be ordered by the Government and protected by court decree.

6. GUARANTY OF GOVERNMENT EMPLOYMENT ON PUBLIC WORKS IMPRACTICAL

How then is this guaranty to be carried out? The Political Action Committee suggests that it is to be done by direct Government employment of all those not employed by private industry. The unthinking popular view is that the jobs are to be guaranteed by the planning and execution of public works. The President says that full employment means employment in productive jobs and therefore the public works must not be make-shift or make-work projects, but must be real public works. I have yet to hear of the most ardent new dealer who has devised a system of spending more than $5,000,000,000 a year on productive public works.

A billion dollars a year for public housing is about the largest single proposal for the expenditure of public money on public works. We passed a public-road bill proposing the expenditure of approximately half a billion dollars a year of Federal money, and I doubt if it will all be spent. We passed a billion-dollar flood control bill but it will certainly take 5 years to carry it out, so that it only provides two hundred million a year. Rivers and harbors expenditure is likely to be even less. Supposing we can find $5,000,000,000 a year of worth-while projects for the expenditure of Federal funds, that would mean about two and one-half million jobs. But we are trying to provide 60,000,000 jobs. We can get many more jobs by tuning up the private-economic machine by 10 percent, than by the largest public-works program anyone has conceived.

We found in the great depression that the employment of a man on public works cost three to five times the amount expended on work relief programs per man, and six to ten times the cost of direct relief. Furthermore, public works are only a stop-gap, because most such works cost money to maintain after they are constructed. The construction of a factory may give employment to many men year after year. But a courthouse or a new road or a new school costs more to maintain and more taxes than before. Of course, there are some productive public works, but most of them produce no permanent jobs.

7. GUARANTY OF EMPLOYMENT BY GOVERNMENT INVOLVES GOVERNMENT ENTRY INTO BUSINESS

The lack of public works available to meet mass unemployment suggests to those who advocate direct Government employment that the Government would have to go into many fields of non-Government activity. Most employment in any nation must be in the making of goods and the furnishing of service. The Government could take over factories and make clothing, food, and other necessities to be given away to the low-income groups. We saw a start in that direction in the 30's. The difficulty is that the moment the Government enters such a field, private capital is afraid to go ahead. You hamper and discourage the recovery of the very economic machine on which you are relying to produce prosperity. No individual can successfully compete with the Government. Constant Government experimentation and interference in the 30's delayed recovery far beyond the time required in foreign countries, or in past depressions in this country. The expenditure by the Government of 30 or 40 billion dollars a year to give direct employment on a full-time basis and good wages to, say, 15,000,000 men would add that sum to the public debt and certainly discourage any attempt at real recovery.

8. GUARANTY THEORY IS THE OLD KEYNESIAN PUBLIC SPENDING THEORY IN A NEW DISGUISE

When the difficulty of direct employment, and the limitations of any public works program, are pointed out the proponents of the guaranty theory turn to another policy which they probably intended to follow all the time.

Public works shall be only one branch of the means by which jobs are to be guaranteed. The other branches are set forth in the President's recent budget message of January 3, most of which passed unnoticed in the excitement of the war and foreign relations.

That message proposes many different methods of additional Government spending after the war. The borrowing authority of the Farm Security Administration is to be increased $60,000,000 for rural rehabilitation. The Commodity Credit Corporation is to spend two billions more in the purchase of crops. The Federal Government is to give aid to all common school and high school education, leading ultimately, according to the National Resources Planning Board, to a Federal expenditure of $3,000,000,000.

Federal loans and guaranties are recommended to stimulate private construction after the war. Federal salary rates are to be increased. Taxes on consumers are all to be reduced while there is no indication that progressive income taxes on high incomes are to be reduced. Rather they are to be increased. Unemployment compensation payment rates are to be increased. Six billion dollars is to be turned over to the proposed international monetary fund and the proposed international bank. This aid to foreign countries is to be supplemented by loans extended by the Export-Import Bank not only to cover short and medium-term commitments to finance exporters but in the form of long-term loans for reconstruction and development. Finally the President's program is to include provisions for extended social security, including medical care; for better education, health, and nutrition; for the improvement of our homes, cities, and farms; and for the development of transportation facilities and river valleys. To this he adds compulsory military training, which may easily cost $2,500,000,000 a year.

When we add to all these proposals the expenditure of $6,000,000,000 for interest on the public debt, five or six billion dollars for the post-war Army and Navy, the expense of the regular Government departments, and the expenditures already authorized for veterans we find a Federal Budget which may well amount to $50,000,000,000 a year. Many of these expenditures are frankly urged as a means of guaranteeing full employment. It is said that we have had full employment during the war because of vast Government spending and the only way we can fulfill the new guaranty is to continue this Government spending in time of peace. In this form the supposed guaranty of employment merges into the same old Government-spending theory advocated by Keynes and Hansen—the theory that a nation can spend itself into prosperity, that deficits are a blessing in disguise, that we need have no concern about our public debt because we owe it to ourselves. We tried this theory in the thirties, and it left us with a large debt and 10,000,000 unemployed. Any huge spending, whether for direct employment or to prime the pump for indirect employment, leads to the same result. The post-war Budget of the Government will be at least $20,000,000,000 for expenses that we cannot escape—four times our pre-war Budget. It may be just possible to find a tax system that will produce this much income in time of peace without disccuraging all initiative. If we add the additional Government spending proposed by the guaranty theory, we will run the Budget up to forty or fifty billion dollars. Either a tax system must be imposed at even higher rates than the war system now in force, or we must increase the debt by somewhere between fifteen and thirty billion dollars a year. Either of these alternatives would destroy the economic machine upon which our prosperity has been based. Either would destroy the system of private enterprise to which the advocates of this new theory, even Earl Browder, give lip service.

9. HUGE GOVERNMENT DEFICITS MEAN THE END OF FREEDOM

If the present tax rates on business are continued, there will be no incentive to anyone either to put his money into new business or to expand old business. If the present rates on individual incomes are continued, there will be little incentive to any man to exert himself to build up his income with the hope of providing a better living for himself and a better education for his children, or a better provision for his family after death. The incentive created by the American system of rewards for genius, initiative and daring will disappear, and it is vain to hope that the expansion of private industry will continue. One industry after another will become unprofitable, just as the railroads became unprofitable before the war. The Government will have to finance necessary expansion and will gradually absorb one industry after another.

The advocates of the theory, however, do not really contemplate any such tax system. They are disciples of the Keynesian theory that the public debt can be indefinitely increased.

To me it is obvious that this can only end in extreme inflation. Because of Government deficits, we have had an increase in the cost of living of approximately 30 percent during the war, in spite of the most rigid price and wage controls. In my opinion, while controls of this kind can be enforced to some extent in wartime, in peacetime in America they would suffer the fate of prohibition. A steady increase in prices would force increases of wages and a cycle of rising costs which could not be checked while Government deficits continued.

Such an inflation would lead to more attempted Government regulation of everything and everybody and more Government expense and finally a complete break-down of the financial and banking structure upon which our commerce, business, and currency are based. It would mean the destruction of the private industry system. We could point out that it had been sabotaged by its enemies, but I am afraid it would be like Humpty Dumpty, and, once fallen, all the king's horses and all the king's men could not put it together again. We would have to reconstruct our business and price system completely and that would only be done on the basis of 100 percent Government control and operation. In my opinion the more radical wing of those who advocate the spending theory, and this Government guarantee of full employment, really look forward with pleasure to that result. It is the best and surest method of destroying the system which they detest.

10. FOREIGN TRADE NO PANACEA FOR UNEMPLOYMENT

One interesting phase of the full employment program and the spending theory is the plan to lend money abroad in large sums. It is frequently said, and generally accepted without analysis of any kind, that we cannot provide full employment without a tremendous increase in our export trade. We are exporting about $12,000,000,000 worth of goods a year, about 80 percent under lease-lend. It is said that that volume must continue even though we have to lend all the money to continue it.

Of course, in the immediate post-war period it will be necessary to lend money for humanitarian reasons, and perhaps in an amount sufficient to enable the foreign countries to set their own economic machinery in motion, but continued Government lending can only have the same effect which we saw in the twenties with private lending. Sooner or later it becomes glaringly apparent that the loans will never be repaid. Thereupon the lending stops and the employment created thereby comes to a sudden and disastrous end, producing or accentuating a depression; and the debt is added to our own debt and our citizens pay the interest on it. Obviously, it can be of no advantage to our workers to produce goods and give them away, and that is what foreign trade means if it is created only by large loans which cannot be repaid. Like the other forms of spending, it will produce employment at the cost of ultimately destroying all employment and all freedom with it.

The sounder advocates of a stimulated foreign trade realize that we must import goods if the trade is to give us any permanent increase in employment. But if those imports reduce employment in our home industries, why is there any net increase in employment, except a very small advantage comparatively in buying the imports cheaper? The theory is that by manufacturing goods to be shipped abroad, we create an additional purchasing power in the workers who produce those exports, which can be used to pay for imported goods without interfering with our own industries. Since, however, it is admitted that exports are of no use unless paid for by imports, and that an American market must be created for those imports, why isn't it just as easy to create an additional home market for home goods as it is to create an American market for imported goods?

The truth probably lies between the two extremes. Some additional market can be created for imported goods which is not available for domestic production. But the idea that foreign trade can produce any tremendous increase in employment, unless we are going to give away our products at the expense of the taxpayer, is a mirage. And one thing is certainly clear. There can be no sound expansion of employment by the Government guaranteeing expanded exports, but only by the gradual building up by hard work of a foreign trade based on mutual advantage in the exchange of certain types of goods. Tariffs can be lower, but they cannot be so reduced as to destroy established industries in this country.

11. THE SPENDING THEORY IS FATAL TO THE FUTURE OF AMERICA

So also the path to prosperity and happiness at home cannot be solved by any panacea of public spending or a Government guarantee of full employment. It can only be achieved by the gradual speeding up of the great private economic machinery upon which our prosperity depends. That is indeed a difficult task because the economic machine is infinitely delicate. To secure the best results prices must bear the right relation to wages and wages to prices. There must be an accurate adjustment between the production of capital goods and consumers goods. There must be incentive to save and invest and work and open up new fields. There must be a continued reward for hard work and ability and the willingness to take a chance. There must be a free choice of employment so that every man may choose that profession or calling to which he is best suited. These results can only be brought about by sound fiscal policies, proper encourragement of spending, and the maintenance of individual freedom. The progress which we have achieved under the American system in the last 150 years at least suggests that we had better rely on it a while longer. It has the advantage of being based on freedom of the individual as no other economic system is based. Let us not give up our guarantee of freedom for a spurious guarantee of employment.

For the spending theory on which the legal guarantee of full employment is based is a false god. It is fatal to the very prosperity which it seeks to attain. It is fatal to sound government because the spending of money becomes its own justification regardless of the soundness of the project for which it is spent. It teaches the people that they can obtain something for nothing and that every man is entitled to the same living from the Government whether his ability and his willingness to produce justify it or not; and therefore it is fatal to the character of the people who fall down and worship it.

Time To Take Stock

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, January 22, 1945

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address entitled "Time To Take Stock," delivered by former Governor Alf M. Landon, of Topeka, Kans., before the annual meeting of the Junior Chamber of Commerce in Cleveland, Ohio, on January 18, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am especially happy to have this opportunity of addressing this group of outstanding young businessmen of the great State of Ohio. The opportunity carries with it a heavy responsibility, because the future of the Nation and of the world is in the hands of the on-coming generation. What you think, the opinions you form, the attitude you take, will determine the course of future history. Therefore, it behooves any man who addresses you, to guard well his lips. I shall do that; if for no other reason than that I know no one could pull the wool over your eyes if he wanted to.

In a peculiar way, this terrific war which we are fighting, is your war. Your generation is fighting it; you and your children and your children's children must pay its staggering costs. And for the rest of your life the world you will live in, will be the world which emerges from this war, its shape, and its spirit determined by what we do today. It is of the highest importance, then, that you should know what it is all about: What are the United Nations fighting for? What is our ultimate purpose? What are we doing to attain that objective? How wisely and steadfastly are our leaders moving toward the desired end?

Pertinent questions. And the answer is: You don't know. Through no fault of your own, you don't know. Nobody knows for sure.

At a time when our every thought and effort should be directed to winning the war and establishing a lasting peace, the American people are in a state of confusion, dazzled one day by high-sounding phrases of idealism, and bewildered and dismayed the next day by acts which belie the Allies' avowal of high intentions.

When we should have kept our discussions in accord with the character and the needs of the American people, we were wrangling about how we were going to stew the rabbit we hadn't caught; about world restoring, reforming, mythmaking with fine words—all adding to the burdens of our forces in the field.

The American people are in the dark as to the real relationship existing among the Allies. We have not been able to get a clear concept of real conditions. Every effort to inform the public of the enormous difficulties in our path has been hushed. Even questions have been resented or brushed aside by a cynical wisecrack. Every attempt at honest discussion has been met with hysterical screams of "isolationism," or "Red baiter," or "British hater." Even in Congress attempts are made to smother discussion. This black-out, this confusion and uncertainty, creates unrest and suspicion among the people, which may lead to dire results. A fatal dissension among the United Nations may be produced by heat generated by smoldering as easily as by friction.

We are in one of the darkest hours of our entire history. There is urgent necessity that we come down from the Olympian heights and get our feet on the ground. We must stop dodging the crucial fact that the necessary teamwork is lacking among Russia, Britain, and America—that those differences are well known by the enemy and are of major encouragement to them. These differences cannot be solved by refusing to mention them, nor by pretending that they do not exist.

Those differences must be composed with realistic frankness but with every respect and toleration for the fundamentally different backgrounds from which Russia, Britain, and America approach this war—if we are to achieve a victorious peace.

Without taking our eyes for one moment off the ultimate aim, right now I am more concerned about winning the war than anything else. Three years ago, when we caught our breath after Pearl Harbor, we were going to bomb the treacherous Japs off the face of the earth within 6 weeks. But we didn't. Three months ago we were ready on account of optimistic campaign oratory to roll right into Berlin. But we didn't. Despite our heroic and masterly efforts in the Pacific and on the Continent, we are now told we have only just started.

We are in the perilous position of conducting a two-ocean war, one 6,000 miles from our shore, the other nearly 5,000 miles from our center of production, without a common political policy and seemingly without a common military policy among the Big Three.

Russia has at last moved on the vital eastern front with gratifying results; but for months press dispatches from Washington said our high command was "in hopes" of a Russian offensive sometime, but was in the dark as to Russia's definite intentions. Such uncertainty was pregnant with terrible disaster. We have every admiration for what Russia did in the face of terrible handicaps when Hitler turned upon her. Her armies and people made history. Her sacrifices and heroism are epic. But it must not be forgotten that we were her active, cooperating part-

ner in that time of peril. She performed wonders in her production of war material; but, as Stalin has gratefully acknowledged, if it were not for the supplies America poured into Russia and Great Britain at a time when we were equipping ourselves to strike hard and often, the outcome would have been vastly different. Russia could not have driven the Germans back without our aid. It was that which established the bond between us.

The good news of today should not eclipse the basic fact that we could ring Germany's neck in shorter time if we had the means for the exchange of definite military information that would enable each of the Big Three to fit its war plans into the others.

Being partners, we have a right, then, to insist that Russia take her place on the joint military staff with Britain and America in order to formulate a common military policy.

If the joint military staff knew how many guns, how many soldiers, how many sailors, how many airplanes, and when and where each of the Big Three would furnish, it would be able to put together a more coherent, efficient, smooth-running battle machine on all fronts.

No one of us can win the war alone. If we cannot have mutual confidence and coordinated effort in the war today, how much more difficult, then, is the task of achieving cooperation in building a lasting peace when the Nazi peril is past?

There may be good reasons for Russia's refusal to give us bomber bases in conquered eastern Poland, from which we could attack the Nazi factories in eastern Germany—the chief source of German war material. But we ought to know what these reasons are. There may have been good reasons for the ejection of our military missions to Rumania and Bulgaria, but Washington should have known those reasons in advance and we should know them now. Suppression of facts creates mystification and leads to unrest and suspicion of an ally which may be wholly without foundation. In justice to Russia, to say nothing of our own morale, we ought to know.

Naturally Russia may not now make any announcement of her policies in the Pacific after the Nazis have surrendered. I can only hope that Mr. Roosevelt has succeeded in getting definite commitment. In the absence of such commitment, we must face the grave consequences that we may never have the use of the Russian bases.

We have lost our air bases in China, the cutting of China in two by the Japanese is a colossal calamity. Those reverses will balance the splendid Philippines victories of our valiant forces, if Japan has time to construct an inland coastal route that will facilitate her access to needed supplies. The outlying islands will become of less strategic value if Japan is able to complete her conquest of China. The Pacific war then is changed from basically naval operations to a slugging land war comparable to the European war, except that it is twice as far from home and we have even with the Phillipines no base comparable to England from which to start our invasion of either the Japanese islands or of China. Yet there are those who still cling to the hope that air power and the Navy are all we need to do the trick.

Due to a lamentable lack of accord between Washington and London, the backing and filling over recognition of General De Gaulle, only a fraction of the men the fighting French could put into the field are in action so far, while we are frantically extending the draft in this country. And this is not the fault of France alone.

On the political front, all Europe is divided into three parts: Russian, British and German. The Communists in France and other liberated countries are carrying on vigorous anti-American propaganda. They are crushing everywhere not only the monarchist but the liberal, democratic and socialist anti-Nazi underground, in their attempt to establish Communist states by terrorist methods. That issue surpasses any boundary dispute in importance. Of even greater importance, the Communists treat friendly allied nations the same as enemy nations. Britain and America must bear their share of the responsibility for failing to be better prepared to meet the problems of liberation. We may agree with the Pope's Christmas message that the cause of the war was a "concentration of dictatorial power."

Our interest then, in lasting peace forbids closing our eyes to the consequences of puppet dictators springing up like mushrooms all over Europe. The disorder and insurgency in Greece, Belgium and Italy has forced the British to divert men and materials from their front in order to prevent complete anarchy, a most serious threat to our forces. The Greek situation is a case of Greeks fighting Greeks, and Greeks fighting British and Russians; just as the Spanish civil war developed into Spaniards fighting Spaniards and Spaniards fighting Russians, Italians, and Germans.

The Secretary of State made an official contribution to disunity when he publicly rebuked the British for pursuing a policy in Greece which they claim had been previously approved by the President himself. That seemed to be the straw that broke the camel's back in England and caused their explosion of resentment at us for which we must bear some measure of responsibility.

America is showing tragic symptoms of dividing also between the Lion and the Bear. One group advises that we should line up with Russia in order to achieve permanent peace. Another says we should place our bets on Great Britain in order to maintain stability and peace in the world.

On the economic front, from August 1939 to date, the destruction of property values through war has been greater than in the entire period from the downfall of the Roman Empire to August 1939. Our banking system is more entangled with Government finance than Germany's was before the advent of Hitler.

Here is where I believe that we can win the war and lose the peace. We cannot let the cost prevent or even retard victory. Our valiant forces are entitled to the best war equipment, not only in quantity but also in quality. Howevery, a farsighted government should estimate where we are going to come out "at," as the saying goes. Any individual must estimate the cost of any project he is engaged in, and government, even in war, must keep in mind the immutible laws of economics.

Our first job, of course, must be in concentrating on winning the war. Our first job in winning the peace must be concentrated on leaving the United States in the strongest possible financial condition. We will probably wind up the war with somewhere between a third and half a trillion dollars of national indebtedness. Yet, outside of a few voices crying in the wilderness, too little attention is being given to what that means. We are content; that is, the majority is content, with assurances that old economic laws belong to the horse-and-buggy days. Because we are living in a streamlined machine era and a streamlined government era, we are told that all our financial troubles will be solved by brand-new streamlined economics.

In my judgment failure to achieve a lasting peace will not come from our inability to work out some form of collective world security so much as it will come from chaos, misery, and abject human suffering caused by the collapse of economic stability of governments all over the world. Dictators are created out of the misery that results from economic collapse of governments.

I am not so much worried about our inability to carry the financial burden of this war, as I am our failure to give it the attention now that its importance warrants.

If we are to bear our share of reconstructing the kind of civilization we believe in, that our strength warrants, our humanitarian instincts demand, and our strength requires, we must be on a sound basis financially.

We won't solve the problem by being afraid to discuss it for fear of alarming the American people. It is bigger than the economies that could be made in the nonmilitary expenses of our governments. Although that is one of the steps we should have taken long ago we admit there is waste and inefficiency in all governments. But the false theory that we could spend our way to prosperity has resulted in abnormal government extravagance.

We must first dismiss from our minds the crackpot schemes of managed currency and permanent deficit financing. Just as we set up in the Atlantic Charter an ideological banner for this war, we must set up a sound financial base to cling to. The crux of the whole business lies in the problems of production wages and profits. Therefore, the entire range of Government policies toward business is involved.

If the United States is not a sound financial mooring post for the world to tie to in the post-war years, then we along with other nations will travel a merry gait to hell, regardless of the form of international organizations for peace. The problem of a durable peace includes economic stability as well as political and military agreement. The great and pressing need for food, clothing, and shelter is a powerful force in shaping the destiny of many nations.

As great as the destruction of property values, even more terrifying is the destruction of moral values. We were told we were fighting with Great Britain under the banner of the Atlantic Charter. Beautifully engraved copies by the tens of thousands with the purported signatures of Churchill and Roosevelt were distributed over the land by the O. W. I. But only a few weeks ago the President shocked the world by his admission that no such formal document ever existed. The Sacred Covenant was nothing but scribbled pieces of memoranda—some of which have been lost. Neither he nor Churchill had ever signed it. Their signatures proved to be a misrepresentation of a Government agency. That misrepresentation was never corrected until the President laughed it off when pressed for the facts.

Never has the moral leadership of America and the world received such a blow. No wonder the world is confused as to our foreign policies. No wonder it questions the character, the integrity, the self-respect, and the intentions of a people whose Government resorts to such trumperies. The integrity of Government, with its people, is the backbone of a Nation. As Plato well said "As a government is, so are the people."

The Atlantic Charter, which we now discover had only a phony physical form, seems to be about ready to give up the ghost and lose its spiritual form as well. If tragically it shall be laid in the tomb of oblivion, we doubtless shall be told that it was a thing of beauty but far too fine and ethereal for a realistic world. And, if you will reread it in the light of what is happening in Greece, in Poland, in the Balkans, and the Baltic states, you will see that the distinguished world leaders who did not sign it are in position to say "We merely gave you something to shoot at." And in truth that is all they did. They merely set forth certain principles upon which they based their hopes and wishes, and desires and belief. Those are the words they used—no positive commitments. They did announce that their countries seek no aggrandizement, and they did promise to

aid and encourage practical measures which will lighten the crushing burden of armaments. That was good; though, to be sure, manifest destiny may again force unsought territory upon some of the Allies, and disarmament may be found not practical. Nevertheless it was a noble document—or at least a bunch of scraps of paper with noble aspirations.

Do not mistake me. I would not belittle the Atlantic Charter nor the great service it rendered in heartening the peace-loving peoples of the world. It was a noble document. A thousand years from now it may rank with the Magna Carta and the Declaration of Independence, if, and only if, we turn its noble wishes and desires into living, breathing actualities. The time has come when the American people and the peoples of the world have a right to know whether it means anything or not; whether it is real or phony; whether the leaders to whom we have given power will regard it as a sacred promise to be kept at whatever cost, or will complacently ignore it. You have a right to know and to know now, lest you become another disillusioned generation such as World War No. 1 produced.

To be sure the realization of the ideals held before us when we entered this war, present difficulties and trying problems. We knew that when the Atlantic Charter was hailed with such loud acclaim. We knew that neither war no diplomacy is a Sunday-school picnic. And that is all the greater reason for our wanting to know what is going on in world politics. If we or any of our allies are fudging we have a right to know how far they fudge.

Another conference of the heads of the United Nations will be held, we are told, in the near future. May we hope that our President upon his return will follow the precedents set by Mr. Churchill after previous conferences, and make a report to the Nation of what occurred and what was decided? Mr. Churchill found it safe and desirable to make such reports. But we have never had such reports from our President.

Our self-respect received another blow at Dumbarton Oaks. Like the Moscow Conference, it could be ballyhooed as a great achievement only because of its indefiniteness. It has yet to be completed as to its vital parts. The talk of transposing the accord now existing among the United Nations shows an almost childish refusal to recognize the existing condition of discord. I say the first job is to tie together our war efforts. Let us create accord before we talk about transplanting it in a new field.

We must have a better understanding than we now have of the gigantic international problems to be solved, if anything is to be saved out of the present world-wide wreckage.

We must recognize that we are actually pursuing an isolationist policy with regard to Europe, where the seeds of the next war or peace are being planted.

We must understand that despite all the fine words in the Atlantic Charter, the Moscow Pact, and at Dumbarton Oaks, we are giving the green light to Russian imperialism and British imperialism, and we also are squinting in that direction ourselves.

The proopsed swapping territories to satisfy the conflicting claims of the victorious coalition is a return to the old order of things with a vengeance.

The movement of populations around like cattle is as old as the Jewish captivity in Babylon.

Peace has never come to longing mankind by such methods, and never will. Always victorious statesmen have dealt in emotional thinking and the short term view.

Always permanent peace could be obtained by a "universal union" in the form of an alliance against some "awful" nation. The French were "it" after the Napoleonic wars. Before them were the "terrible Swedes," and the Spaniards.

Always the form rather than the substance has been emphasized. Always the front of high and noble purposes—rather than the hard, grueling, and unpopular task of writing a just peace that attempts the long view of removing some of the causes of war. In face of the new devil's stew of secret alliances based on the balance of power theory, of strategic borders, the seizure of territory, enemy and Allies alike, people are increasingly asking why are we in this war.

Well, as I said early in 1942—"Our hides are now at stake." We must face the grim facts of a two-ocean war—neither of them won, chaos in the liberated countries of Europe and the lack of vital collaboration between the principle allies.

Civilized people have the right to expect—to demand—willing cooperation among their governments, in preventing the destruction and disaster of future wars.

With the victorious conclusion of World War No. 2 there comes once more another opportunity for man to save himself from destruction. That means creating a new type of international relationships. But so far we are only following the old, old pattern.

Our policy of fearing to question our allies has contributed to the failure in creating adequate joint machinery for either peace or war. The hush-hush, everything is hunky-dory treatment no longer can conceal from the American people the friction between ourselves and our allies. It has definitely added to the difficulties of reconciling those differences. It can result in a disastrous explosion if nothing consistently constructive is done to meet and forestall dangerous consequences.

Part of our national tradition is a patient skepticism which does not like to be driven or shouted at. It is as natural for an American to argue the topics of the day with his neighbors as it is for a dog to scratch his fleas.

Like the blacksmith at an anvil, we hammer out the tools of conviction and the sparks fly. Argument is the bellows with which we keep alive the fires of democracy, and is the essential beginning of the process. This is not confusion; it is not disunity. It is the way, the indispensable way, to freedom.

Once we know where we are at we can spit on our hands and gird our loins for the long pull. And also to reach an effective coalition for maintaining peace.

If the fundamental differences between the United Nations will not stand public airing, we had better find it out before we enter into a permanent union.

Every American, as a matter of sanity, desires political and economic peace among nations of the earth. That high ideal was implanted in men's minds and hearts when the herald angels sang nearly 2,000 years ago. The ideal has never died. Mr. Chamberlain desired peace and thought he had achieved peace in our time by appeasement at Munich, but his wishful thinking only made more certain the most devastating war in human history. He was, to say the least, overly optimistic. He did not face realities.

We easily can make the same mistake. Our hope of establishing lasting peace through international organization, based on collective security, is in perilous danger today and for the very same reason, namely, an overly optimistic appraisal of the realities of conditions in the rest of the world, and the surrender of our ideologies to the theory that might makes right.

America's War and Peace Aims

EXTENSION OF REMARKS
OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, January 22, 1945

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on America's war and peace aims, delivered by me before America's Town Meeting of the Air, in New York, January 18 last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

What are America's war and peace aims? A trite answer is: "To win the war, and establish a just and enduring peace." We shall not win the war, however, until we compel Germany and Japan to disarm; prohibit their rearmament and construction of planes, and cause to be removed from power the warmongers of these nations.

That we shall win the war eventually is certain. That we shall have a just and enduring peace, is not so certain. As Hamlet said, "Aye! There's the rub." Let us turn to Patrick Henry's guide, "The light from the lamp of experience." Twenty-five years ago, a so-called peace was made. It proved to be a farce. Let us ask ourselves whether we have learned anything from the bitter experiences of that war. One recalls the ironic comment of Briand, who said, "The only lesson we learn from experience is that we learn nothing from experience."

A few years ago, Mr. Churchill and our President gave to the world a statement of aims and purposes, called the Atlantic Charter. It was endorsed by every Allied Nation. Millions of plain people, the world over, took courage and new hope. Let them not be swayed from its principles by any statement that it never was formally executed, and that it cannot be carried out. The pronouncements in that charter are graven in the hearts and aspirations of millions, here and abroad, and the principles it expressed stimulated the deepest emotion of all, the yearning for freedom by the people. It is for that ideal we thought we were waging this war.

Soon another vital conference is to be held. The prayers and hopes of the Nation will be with the President. Nothing would unite public opinion more than a statement by our President, reaffirming the principles of the Atlantic Charter and promising to use his great influence to make it a living reality in the provisions of the Dumbarton Oaks agreement. Such a statement now would result in a united public approval which would constitute a "vis a tergo," or strength at the back of the Executive, as he proceeds to the conference.

My colleague, Senator VANDENBERG, has shown the way to an interim treaty pledging our resources to our allies against Nazi and Nipponese aggression. For such assurance we should ask that our allies pledge their allegiance to the principles of the Atlantic Charter, which each has accepted.

That great liberal, the late Justice Brandeis said, "If we would guide in the light of reason, we must let our minds be bold." I believe the present situation calls for bold, constructive action on the part of the Executive, and the Nation will be behind him if he will practice it. There are precedents. In 1899, at the time of the Boxer Rebellion in China, the great powers decided to dis-

member China. Then in stepped America, boldly, through John Hay, Secretary of State, and served an ultimatum—"the integrity of China must be preserved"—and there was no dismemberment. That was America in bold action.

As one who supported and worked for the League of Nations 25 years ago, I strongly favor our participation in an association of nations, with power to put down aggression when it shows its head. I favor a world court, an international bill of rights, and a code of fundamental principles of international law.

If free people are bound together in an association of nations, which can enforce international morality upon any aggressor nation, I believe there is hope for a lasting peace.

And the time to make such commitments is now, while the Allies are dependent on each other; for if we wait until the shooting stops, it will be a case of every one to his own way.

Coming events will prove whether or not the world is ready for a real peace. There are obstacles in the pathway. Some of the strongest nations are approaching the matter with reservations, and from a standpoint of self-interest. We need to learn the great lesson of interdependence.

Each of the Allied nations must be willing to surrender some of its prerogatives for the common good, or else we shall fail.

As an able editor in my own State recently said, "Here in this country we organized a great Nation by surrender of some of the sovereignty of the several States, to the central government. That unity, which obtains among the States of our Union, is essential in the world, if world peace is to come."

An Outstanding Governor Retires

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, January 22, 1945

Mr. TAFT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "An Outstanding Governor Retires," from the Columbus Dispatch of Sunday, January 7, last.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN OUTSTANDING GOVERNOR RETIRES—GOVERNOR BRICKER HAS CONTRIBUTED MUCH TO BOTH STATE AND NATION

To most conscientious American citizens who recognize the worth not only of Government in all its manifestations to themselves, but also their own importance to it, the standards by which the good administration of Government may be measured are easily defined.

The first and most frequently asked question of any public officeholder is, Is he honest? Perhaps next is, Is his judgment sound? These questions appear in various forms and include such queries as, Is he sincere? Is he economical? Is he aware of the needs of the time? and so on through an increasing list.

Ohio, in the main, has been fortunate in the caliber of its Governors. Under a long line of chief magistrates, many of them outstanding for ability, the State has prospered and progressed and, under the administration of law based on the Ordinance of 1787, which created the great Northwest Territory, has been politically progressive.

Gov. John W. Bricker, who tomorrow retires from the governorship after 6 years of service in that position, has been one of the most successful and most notable of Ohio Governors, judged by any standards.

Under Governor Bricker, the State has been efficiently and economically operated. The vast network of departments has been well administered by reason of almost universally excellent appointments. The large responsibility which devolves upon a Governor who operates with a legislature of his own party and therefore is publicly charged with the errors of government, as well as publicly credited for its accomplishments, has been easily and commendably borne. The people have been well served in the matter of law enforcement, education, restrained taxation, good highways, industrial relations, the efficient use of funds, in welfare and in all the other complicated series of services which come under the gubernatorial direction.

The executive and the legislative branches have worked harmoniously together and by a course of moderation have succeeded in forwarding the best interests of the State.

In addition, Governor Bricker has in the fortunate circumstance of his candidacy for Vice President of the United States served the interests of Government well through the instrument of party by a vigorous definition and discussion of the basic principles of government.

A superior man, someone once said, is one who is able to rise to his responsibilities. This Governor Bricker has done to the eminent satisfaction of the vast majority of his fellow Ohioans during one of the most difficult periods in Ohio's—and for that matter, the Nation's—history.

The problems of government have not been easy during this period of change and unrest. Nor have the problems of administration. Not only questions of political importance, but questions of economic and financial importance and those of social importance as well grew to huge proportions during Mr. Bricker's three terms as Governor of Ohio.

Governor Bricker's record in office stands as a complete refutation to those radicals and theorists who would alter our form of government and take from the States their rightful and important powers and center them in the hands of a Washington bureaucracy. Governor Bricker has proved not only the correctness of the principle upon which the founding fathers built the Federal Union, but has demonstrated to a generation which appears confused in its knowledge of and faltering in its allegiance to America's first tenets of home rule the necessity of that principle.

He has thus served not only the State which has honored him with the highest office it has to bestow on anyone, but he has served well the Nation in a time when the examples of purposeful and sincere men so much outweigh in importance the endless words, glittering generalities and boundless theories with which we are all too familiar.

He leaves a record difficult to surpass, but one which cannot but serve as an inspiration and as a source of fortitude and assurance for all who follow him in the governorship.

Compulsory Military Training

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, January 22, 1945

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address on compulsory military training, delivered on January 18 by Brig. Gen. Albert L. Cox, at the Central High School in this city under the auspices of the Parent-Teacher Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I favor military training for all able-bodied men between the ages of 18 and 21, inclusive.

I favor the establishment of such training within 12 months after the cessation of the present hostilities.

We have no reason to think that the world has undergone such a change that conditions following this war will be much unlike those that have followed other wars. Christianity teaches that peace and harmony can exist. But those other human characteristics—envy, hatred, and malice—have long prevented the ascendancy of peace and harmony. The role of a victor, while superior to that of the vanquished, has ever been one to guard with exceeding care. This country will emerge a victor in the greatest of all world wars, and likewise will have many enemies. What other nation will have its homeland intact? Jealousies from covetousness, coupled with political and economic conditions, do not present an optimistic picture of a future peace.

In the past, due to friendly nations, America has always had time to prepare after war has been declared. We cannot continue to rely on such circumstances in the future. We must expect war to come suddenly upon us, as it has upon other nations of the earth and, in consequence, we must be ready to defend ourselves, as any reliance upon others for such defense may be found to be misplaced. War is not won by untrained men. The plight of China is conclusive proof of this, but our own early losses due to lack of trained and equipped men add to that proof. In all wars, the advantage is decidedly with the side that is ready.

The future does not belong to us but to our children and to our childrens' children. The future of America lies in their hands. Unless we give them the training, the opportunities, and the facilities for turning their talents and their genius into a powerful and disciplined machine, we cannot view a bright future for our land. If we extend training to our youth we will make our greatest contribution to national security. The maintenance of a peace is with those who come after us.

The experience of history demonstrates the necessity for universal military training. Few people volunteer for war. The majority must be actuated by legislation. This is a natural trait in all animal natures, and not a manifestation of cowardice. The only animals which have deliberately sought combat were the saber-toothed tiger and the rogue elephant. The saber-toothed tiger is extinct. The rogue elephant is berserk.

Every means should be employed to the end that there will never be another war. Ultimate success is extremely doubtful. The fallacy lies in the word "never," for in using that term we deal with infinity, which is an unknown quantity. The introduction of an unknown quantity into our equation makes the solution thereof extremely doubtful.

To illustrate, and in no sense to criticize, the war in Europe is far from over, and yet two mighty nations are already engaged in consolidating their respective spheres of influence. You have but to glance at a map of the Mediterranean to see the extent of the interest which Great Britain and Russia there have. Since the days of Peter the Great, Russia has desired a warm-water outlet from the Black Sea through the Dardanelles to the Mediterranean. If that desire is now obtained, Great Britain's only opportunity to enjoy free communication lies through Greece

and her adjacent isles. This is vital to Great Britain as her life line runs through the Mediterranean and the Suez Canal to the Far East. She cannot be blamed too much for making it secure.

However, illustrations such as this do not make for perpetual peace, but on the contrary, breed war.

We are now in the midst of the Second World War in which we have engaged in less than 30 years. We were fortunate in World War No. 1 in that Germany withdrew vitally needed troops from the French front for service in East Prussia, and such withdrawal cost that nation the first battle of the Marne. Germany's second great blunder was in its failure to do everything possible to keep us out of that war, and, third, that nation's straddling the situation during the great offensive of March 1918, saved the British from being driven into the English Channel.

In World War No. 1 and in World War No. 2 the Germans thought we could not get ready in time to do any good. Both times they have been wrong. We can't depend upon such blunders forever. Had we been ready and had we demonstrated to the world our readiness and our willingness to act, there would have been no World War No. 1 and no World War No. 2. We would then have saved ourselves half a million casualties in World War No. 1 and, to date, approximately three-quarters of a million casualties in World War No. 2, with the end not yet in sight. If the saving of lives already sacrificed and of those yet to be laid down is not worth the price of military training, then the destiny of this Nation is being risked for a mess of pottage. To stop the slaughter of our youth, we had best not forget George Washington's reminder, "In time of peace, prepare for war."

Generalship of today is not alone concerned with the handling of large masses of troops, but also with problems in industrial engineering. The armed power of a nation is now measured by the size of its heavy industry. To shift our factories from peace to war production and to make such production available, in the light of experience, requires some 18 months. To assure ourselves of this period of time we need:

1. Outposts reaching far into the Atlantic and into the Pacific, of sufficient strength and sufficiently manned to hold back a hostile force until our production for war is assured and our armies trained.

2. Air and naval strength sufficient to keep open the supply lanes for such outposts.

While strategy and tactics remain much the same, implements of war are ever undergoing change. We now base our strength on a flow of weapons, and not upon a stockpile. To endeavor to create an excessively large air force would be but to emulate the unfortunate experience of France in 1930. In building the largest air force in Europe, the French Air Ministry failed to recognize how much war planes suffer from obsolescence, and was therefore unable to cope with the Luftwaffe when Germany attacked. The most useful air force will be relatively small, but with a high rate of turnover in order that technical developments may be used to advantage. Such a statement as well holds true for other branches of our armed forces.

As new machines of war are developed, so, too, must men be trained in their use. We must avoid developing a training program which too soon will become outmoded.

The training of our young men should include a rehabilitation or personal hygiene period. It should take the place of the sort of adventures and excitements which too often lead to a lack of discipline. It should be so planned that interference with education and interference with the ordinary work and duties of young men should be at a minimum.

I fully see the need, as I have heretofore said, of universal military training. I do not see the necessity, however, of segregating such young men for 12 months of their time in military posts or military camps. Long experience has shown me that a perfectly green youngster can be quickly taught the school of the soldier, from which progresses the school of the squad, the school of the platoon, the school of the company, and the higher echelons.

There are two classes of these young men for whom provision must be made. First, those who wish and plan to go to college and, second, those who for good and sufficient reasons do not plan such a course.

For the first group I favor the enlargement and development of our Reserve Officer Training Corps, knowing the splendid instruction which it has accomplished in our schools and colleges in the past.

For the second group I favor giving military training much in the manner in which the National Guard has been trained and, in the same way, without preventing the occupations in which these young men are engaged. I am satisfied that a course of training could be provided at our armories, and at other centers, of sufficient scope to give these young men benefits equal to those they would receive at military posts or training camps. Instead of concentrating these men in large training areas and sending them hundreds even thousands, of miles from home for their preliminary training, such training, intelligently planned and covering the development of a soldier up to field training and the hardening process, can be done efficiently while the soldier continues to live and to work at home. The men involved would continue their civilian pursuits while receiving training in military fundamentals.

I would follow the work done by the young men in the R. O. T. C. and the work done by the young men at the armories and at other places of instruction by more intensive training in larger groups, to be given from the middle of May until the middle of September, a period of 4 months, when the days are longest and when the opportunity for outdoor training without interruption is best. The 8 months' training received at college or in the armories would be sufficient to equip these young men for the 4 months of intensive summer training.

At the end of their 12 months' training I would insist upon these young men continuing in the Regular Army, the National Guard, or in the Reserves for a period of from 3 to 5 years, that they might have specialized training and improve the lessons they had learned, and that they might be available for training the classes which followed. I would likewise encourage these young men to fit and qualify themselves for the performance of duties of noncommissioned officers and of officers as well.

There is nothing revolutionary about such an idea, but rather it is a method of training which has proved to be efficacious and worth while.

The uniforms, the rifles, and other munitions, the tanks, and other necessary vehicles, and the cadres of instructors would be no more than are necessary in the large training camps. Armories have been built all over this land where the men could report in the evenings and on week-ends for their uniforms and equipment and to receive their training. The country is filled with men of much service who would make excellent drill masters and who would glory in the opportunity that was theirs to so engage their time.

With the short time at my disposal I do not attempt to go into details, but merely to express what seems to me, and to many to whom I have spoken, to be a real solution to a definite problem.

As Army Field Service Regulations state, "Even a defective plan, boldly and resolutely carried out, is far better than the hesitating search for the ideal."

Six Full Days Work Every Week

EXTENSION OF REMARKS
OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, January 22, 1945

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a plan proposed by the Kiwanis Club of West Point, Va., for the purpose of encouraging all available persons to work at least 6 full days every week in essential industry so that, by unified and 100 percent war effort, the war may be terminated at the earliest possible time. I am informed that this plan has worked very effectively in actual operation, and I feel certain that it is worthy of consideration and support by other communities throughout the country.

There being no objection, the plan was ordered to be printed in the RECORD, as follows:

A PLAN TO ENCOURAGE FULL-TIME WORK IN ESSENTIAL INDUSTRY BY EVERY AVAILABLE PERSON

Total war on the fighting front requires full-time work on the home front. Believing that one of the greatest needs on the home front is to get every available person to work full time in essential industry, the West Point Kiwanis Club adopts as a primary objective for 1945:

A PLAN TO CREATE PUBLIC OPINION WHICH WOULD ENCOURAGE ALL AVAILABLE PERSONS TO WORK AT LEAST 6 FULL DAYS EVERY WEEK IN SOME ESSENTIAL INDUSTRY

A. Action by individual members of this club

1. Every member will devote himself wholeheartedly to the furtherance of the war effort.

2. Personal contact by members of this club with employers and employees in this community.

3. Requesting each employer in essential industry to carefully explain to those employed by him both directly and indirectly how his particular work fits into the war effort.

B. Action by the club

1. Requesting all advertisers to convert their advertising to the promotion of this program in behalf of the war effort in this community.

2. Using every available avenue of publicity to further this program.

3. Requesting the churches, both white and colored, to bring to the attention of their members the necessity for every available person to work 6 full days in essential industry as his contribution to the war effort.

4. Requesting the schools to instruct the pupils, and through them the parents, of the necessity for every patriotic citizen to work at least 6 full days per week in an essential industry, pointing out to them which businesses have been designated by the Government as essential and how each contributes to the war effort.

5. Contacting each women's club and civic organization in the community and requesting them to cooperate in the promotion of this program.

6. This program is based on the patriotic duty of every citizen to do his full share in the war effort and should be approached and developed from this angle. When, however, all other means have proved unavailing in an

individual case and it is found that a person who has been deferred from active military service because of the nature of his work, or granted special rationing of tires and gasoline because of his occupation, is failing to work regularly and full time in essential industry, this fact should be brought to the attention of the local selective-service board and local war-price and ration board.

Be it resolved by the West Point Kiwanis Club:

First. That it heartily and unanimously adopts the foregoing plan of action as one of its objectives for 1945;

Second. That the president of this club appoint a committee of five members to be known as the war-work committee, whose duty it shall be to put this program into effect throughout this community, and that the chairman of each of the standing committees of this club is authorized, upon the request of the war-work committee, to undertake and perform any duty assigned in furtherance of this program;

Third. That the war-work committee contact representative civic organizations in each of the following counties in Virginia, present this program and plan of action to them, with the request that if it be deemed sound, practical, and patriotic, that they sponsor a similar program in their respective counties: King William, King and Queen, New Kent, James City, Charles City, York, Gloucester, Mathews, Middlesex, Caroline, Essex, Richmond, Lancaster, Westmoreland, Northumberland, King George, Accomac, and Northampton; and

Fourth. That a copy of this be sent to Kiwanis International, to the governor, and to the secretary of the Capital district of Kiwanis International, and to the president of each Kiwanis Club in the Capital district.

Is There a Manpower Shortage or Only Labor Hoarding and Organized Confusion?

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. WHITE. Mr. Speaker, the most critical question before the Congress and the country is manpower for essential industry—the building of the implements of war and the production of food for our armed forces, our own people, and our allies.

There are now before the Congress—or shortly to come before the Congress—several pieces of legislation designed to correct this situation. Personally, I question the desirability or efficiency of labor draft or compulsion; certainly until a careful examination has been made of the contributing causes. I do not think there is a manpower shortage if this matter is intelligently handled.

That there is much labor hoarding and uneconomic use of labor, there is little question. I am submitting a letter from a most reputable Idaho citizen holding a responsible position in a defense industry. For obvious reason his name is withheld, but I shall gladly furnish it to any congressional committee and have him appear personally as a witness, if they will protect his rights as an honorable and patriotic citizen. The letter follows:

HANFORD, WASH., *January 15, 1945.*

The Honorable COMPTON I. WHITE,
Congressman, Washington, D. C.

DEAR MR. WHITE: Since there has been so much fuss stirred up the past few days about manpower shortage, I am compelled to offer a word of protest.

I want to say that the people are getting damned tired of hearing all this bunk, when in reality there is no manpower shortage generally speaking.

There is no doubt a shortage in certain areas, and that is caused by two things, first of which is wage differential, and second is hogging of labor, both skilled and unskilled, by war plants.

If Mr. McNutt would get some good practical men in the field, or else let Congress do it and investigate the actual conditions around these plants, both on construction and operations, he will learn that many of them have twice as many men as they need.

I have been 2½ years on this work, and I can assure you that what I have personally observed is enough to make any soldier throw down his gun and accept a court martial.

Not only is this true of the jobs I have seen, but I have talked with hundreds of men from different types of war work, and they all tell the same story; in fact the men themselves are disgusted with the way the management are wasting manpower, and something had better be done about it before they start drafting labor.

If there has ever been any effort to check on this directly on the job, I have never heard of it, but from what I can find out they have conferred with the management, which, after all, don't mean a thing, for each one of them will swear they are short of men when men are simply falling over each other.

It is high time that somebody looks into this matter, and I am sure if they go about it in the right way they will get the biggest surprise of their lives in Mr. McNutt's office.

If you want to get the low-down on this, don't ever go to the management, but go direct to the foreman on the job, put him on his honor to find out just how many men he actually needs to do the job, and you will be surprised; in fact I have tried it out a little myself and I know the foremen and the men both feel as I do about it.

I wrote Mr. McNutt a few days ago about this matter, but so far he has not answered my letter.

Now, Mr. WHITE, if some action is not taken at once to look into this matter, a bunch of us are going to get in the papers on this and see that something is done.

I know you will do anything you can to assist, but it will take more than one man to do it, so I am writing our new Senator TAYLOR along these same lines, and I hope between the two of you that you can get something started.

Thanking you for your early consideration in this important matter, and trusting you to see that the matter is brought before the manpower commissioner with sufficient force to get action.

Sincerely yours,

——— ———.

It is inevitable, under proposed legislation, that there would be a constant conflict and much duplication between the 6,500 selective-service boards in the United States and the 1,500 United States Employment Service offices, if these offices were designated to handle draft of labor. I believe both functions should be handled by Selective Service through their 6,500 local draft boards. The members of these boards are, in every instance with which I have come in contact, reputable citizens of their community, and answerable to the people of their community. Augmented with competent paid assistants, they are just as qualified to designate who should work and where, as they are to designate who shall go to the armed forces. This would eliminate the confusion, duplication, and conflict which would result from service and labor draft being handled by different organizations. By consolidating the two agencies, harmony would result, as well as a decrease in the cost of operating two separate agencies.

Drafting of Farm Labor

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. ANDERSON of California. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I wish to call attention to the following thought-provoking editorial which appeared in a recent issue of the Pacific Rural Press.

Any reckless drafting of farmers or farm workers without due consideration to the food-production needs of this country and our allies can very seriously impair the war effort.

DRAFT OFFICIALS PICK ON THE FARMER

Farmers are in no way responsible for the fight-power and manpower embarrassments of Government, but are asked to take the rap for it under the latest draft orders.

It is fair and factual to remind that farmers have not maintained a 30-hour week, as have Harry Bridges' ship loaders. They have not had a 48-hour week as has Government. Farmers have not been labor hoarders, as have some war manufacturers accused of holding two men to get one man's work done. Farmers did not stage any of the record number of strikes in 1944, including such monkey business as the Montgomery Ward strikes to enforce a closed shop and check-off system. Farmers wasted no time at horse races, night spots, and gambling halls. They hit the ball.

It is probable that the farmers' record is unequalled in increasing production with depleted manpower and limited equipment.

But Government, forced to have more fight-power and manpower in a hurry, does not suggest repeal of the 40-hour week; does not forbid strikes; does not make work-or-fight rules which mean anything.

If you say this is harsh talk, we say it is true, and we direct attention to the effort to take it out on the farmer.

The new order is that draft boards shall take farmers between the ages of 18 and 26 years without referring the cases to the county war boards for further discussion of needs for deferment.

However, and this is important, the county war boards have the right and the moral duty to support appeals when deferment is just and vital.

In the past, county war boards have often muffed it because they did not present enough factual data to the appeal boards. Appeal boards act only on the information presented to them and they should have all the facts. In the absence of such data, the approval of induction is almost automatic.

There is something wrong with the figures given out regarding deferments of young farmers. Dave Davidson, chairman of the California war board, says he cannot understand or reconcile them.

It has been asserted by draft officials that California has proportionally about twice as many deferred young farmers as has the Nation—a statement which farm leaders have never believed.

Now draft officials are saying that California has 6,505 of these and the Nation has 364,000. Well, California has 2.17 percent of all the farms of the United States, and if we had proportionally double the deferees, our share would be 15,878. If we were just average, we would have nearly 8,000.

So it seems somebody owes us an apology. We have actually furnished more than our share of the fighters from farms.

Not only that, but the farmers left on the land to produce food munitions have done much better than an average job, because California farmers, want to do less than their share of the fighting for victory on the battle fronts, but they should not hesitate to fight for rights and equality when an attempt is made to load the mistakes of others on their already burdened shoulders.

That's not the way to win the war.

Every county war board should be alert and active in this situation. It doesn't pay to be chicken.

Meanwhile everyone should unite in demanding that draft boards be given authority to ask employers for the work records of deferred men.

For the Government to protect absenteeism, slow-down tactics, and general slackerism in time of war is a raw deal to the patriots who are doing their part, and a disservice to the country.

The Relationship Between Industry and Government

EXTENSION OF REMARKS

OF

HON. GEORGE W. ANDREWS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. ANDREWS of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech, The Relationship Between Industry and Government, delivered by Hon. JENNINGS RANDOLPH, of West Virginia, before the American Road Builders' Association at Chicago, Ill.:

President Brown, President-elect Skelly, our chairman of the morning meeting, and the officers and gentlemen of the conference: I should like to say, in prefacing my regular remarks which will come under the subject of the relationship between industry and Government, that I believe those of you who are members of this association and reside in the various States, would like to know from one Member of Congress that which could be substantiated by many others if they had the opportunity to speak.

That statement is this: That the informed and convincing testimony which Mr. Upham and those who speak through your State units have given on legislative matters in the House of Representatives and in the Senate of the United States, causes me to believe that the American Road Builders' Association is of valuable assistance in the formulation and the proper passage of those bills directly affecting the highway programs of this country.

I am sure that the distinguished and able chairman of the House Roads Committee, Mr. ROBINSON of Utah, and those other five Members who have come to this meeting, Representatives ANDREWS of Alabama, WOLCOTT, MOTT, and CUNNINGHAM join with me in saying, at the very beginning of this convention, that we want to express our appreciation for the splendid spirit of cooperation which has been given by those who have acted as the spokesmen for your great organization in the legislative halls at Washington, D. C. [Applause.]

First of all, I desire to make myself clearly understood prior to the actual subject matter of this talk. It is this: There is one paramount task before the American people today, and that is the No. 1 job of the successful prosecution of the war. We subordinate all other thinking, certainly all other acting. I am sure that it is with such spirit that the members of your organization have come to Chicago for this forty-second annual gathering.

Nothing that I shall say, or certainly none of the deliberations that will take place during the 3 or 4 days that you are to be here, can be construed in anywise as weakening or even attempting to divert our major considerations from the winning of this global conflict into which all the resources of America—mental, physical, moral, and spiritual—are being thrown during these troublous times. But I am going to talk with you about certain conditions which I believe exist in the Government of the United States, not always wholesome, yet they form the fabric which is being woven today in our National Government.

We have a responsibility to consider these problems and to see what we can do to alleviate many of what I believe to be the mistakes which are being made.

Mr. Brown made mention of a directive in connection with a certain program which had been enunciated during this war. I make no criticism of the President of the United States. I realize, welcome, and support the fact that Franklin Roosevelt is Commander in Chief of the armed forces of the United States and, by and large, is giving a great leadership to our war effort. I do say this morning, however, that the Congress of the United States in the future must be on guard to retake unto itself certain rightful powers which have been lodged there by the founding fathers and under constitutional authority of the United States.

We have had, under this national administration, 3,600 directives that have been issued. Many of them—and this is no carping criticism of what has been done—have no basis whatsoever in constitutional law or in the statutes of our country. Certainly in the future our Congress, be it Republican or Democratic, must return unto itself the rightful lawmaking responsibility and exercise it, not only in peacetime but also insofar as possible under the impact of war. [Applause.]

The Congress of the United States itself, by such action, is weakly giving ground to directives and decrees, and also to authority which should be vested within its elected body. Failure to function doesn't gain the credit for Congress that it should possess with the citizenry of the United States.

Now, for the speech theme, let us firmly believe that both big and little businesses must be given every proper incentive to use venture money. The incentive to use such funds comes first, I believe, with the assurance that the Federal Government will see to it that taxes are assessed sanely and proportionately.

In Congress we have been trying to develop solutions to certain phases of the tax question. Three measures have been approved which are reasonably good attempts to solve portions of the problem.

The Contract Settlement Act attempts to prevent crippling loss and undue delay in the adjustment of those terminated war contracts. The Surplus Property Act prevents the dumping of materials which would stifle private industry for an indeterminate period. The Reconversion Act was drawn, also, to prevent distress and lack of purchasing power resulting from possible unemployment.

These legislative steps are somewhat negative however, for they foresee commercial illness, always commercial illness, and they prescribe remedies.

There is, I am sure, in the minds and hearts of all of our people universal agreement that thriving private industry is essential to the fullest employment and national prosperity in our post-war period.

Now, this three-point program that I have spoken of still lacks the positive, active stimulus that private industry has a right to expect. We must bring vital venture capital again into production. A workable plan must also be provided to induce industry to expand its present plants or build for the production of new and improved products. It is only by such means that fairly steady employment will be made available to our returning veterans and our displaced war workers. Without this provision, the fourth and most important feature of our post-war program will be missing.

Now, taxes that are so high as to be practically confiscatory have been unavoidable during the prosecution of the war. Our Government has needed the revenue from these taxes to pay the emergency costs of the prosecution of this terrible conflict.

Excessive taxes, however, always tend to stifle private initiative, and I declare this morning, in no uncertain terms, that I believe we have reached the saturation point from the standpoint of the levying and the collection of taxes. Who will risk capital when they know in advance that, if the venture is successful, taxes will absorb all the gain? It is a case of "Heads, the tax collector wins; tails, the investor loses," and make no mistake about it. Those of you who are in private industry know the full import of the words that I have just spoken.

I digress for just a moment to recall a story. Down in my West Virginia hill country we had a little mountain church that was very desirous of raising some needed funds for a worthy project.

The preacher, at a social one night, was exhorting those in the congregation to raise the necessary money. He understood full well that he had a great many stewards in the church that were tightwads; he knew that. So he was putting on all the steam, as it were, in an attempt to get from their pockets some of this money.

Now, one of the members of the congregation, during the minister's appeal—a practical joker we will call him—went unobserved and poured a quart of liquor into the punch bowl and gave it a little stir.

The punch was later consumed by the entire congregation, including the parson. They were all feeling strangely elated in a few minutes, and one of these tightwad stewards came to the preacher and said, "Pastor, here's my check for $1,000 for this worthy cause."

The pastor smiled back, put his hands on the steward's shoulders, and said, "Old boy, I greatly appreciate this, but I don't need the money." [Laughter.]

Now, I say to you this morning that your Government has needed and will continue to need the money with which to carry forward this mechanized struggle. However, it is apparent that, with war's end, taxes should and could be reduced. The Government will not require as much money, except as it sets in motion unnecessary programs which will re-

quire it. But what, if any, will be the reduction of these taxes when war ends? Industry has not been advised. Assurance could be given, and given now; it doesn't have to come later. Tax relief can provide the needed stimulus to business. And tax relief, also, through legislation enacted now, to become effective when victory comes, would remove doubt and uncertainty which today continue to prevail

Those who have participated, and the Members of the Congress who are with me today, in the writing of tax legislation, would readily agree that we cannot draft a completely new tax bill without the most careful consideration. Horizontal reductions in the existing tax structure could, in my opinion, be enacted now. They would give investors and industry the incentive to start planning. Then, with the war's close, the channels of trade would have been cleared by clear thinking prior to the actual V-day. The time lag during the planning period would be eliminated and millions of jobs might immediately become available.

I think it is noteworthy that we read the significant statement made by the President of the United States in his message to the Seventy-ninth Congress, delivered on January 6. Mr. Roosevelt said: "We must overhaul the wartime tax structure to stimulate consumers' demand to promote business investment."

The President, correctly, has given thought to what will be necessary in the post-war period. If you read carefully the President's message, you will see it is divided into two general themes: The first part, the story of our Nation at war's end; in the second place, the necessary story of what we must do when peace comes and our Nation once again goes into the channels of an economy which we all pray will shortly come to America and the world.

Not only is the expression of the President significant but also the statement yesterday in Washington by the minority leader of the House of Representatives, Mr. MARTIN of Massachusetts, should be taken into consideration. He is formulating a program by which 23 House Members, of the minority party, will make an exhaustive study of our entire tax structure.

Mr. MARTIN makes the assertion that we must convert our tax structure today into a tomorrow where we will go from a punitive to an incentive system. He is correct. Our President of the United States and Mr. MARTIN and all others who are thinking logically have a definite responsibility now, not later, to set such programs in motion.

Now, those persons who are here today will agree with me that this is no partisan problem; it is a matter which should have the wholehearted support of Republicans and Democrats, although being a Democrat, I should say "Democrats and Republicans." I want, however, to be very considerate and gracious, to the recently defeated opposition. [Laughter.] We must assure our people of continued prosperity in the American way.

I have made a study of this subject of venture capital. Of course, I realize that it is only a partial approach, but I have introduced H. R. 280, and some of you might, after this convention has recessed, get the bill and study its provisions. It would attempt to encourage venture capital by amending the Securities Act of 1933, as amended, so as to give an exemption for security issues from the present ceiling of $100,000 to $300,000, offering, as it were, an opportunity for the business interests to form themselves into active industry and commercial enterprise.

Now, members of the convention, the impact of this global war has forced our Government to the realization that it was necessary to utilize small manufacturing plants in the production program, in order to meet the full battle requirements. But now we are forced to consider a new set of economic problems which are going to confront us as we approach nearer to the end of this conflict.

The war, a few months ago, reached a point where cut-backs and termination of production contracts occurred at such a rate as to threaten serious confusion in our internal affairs. Although the picture has changed somewhat, it is necessary that we now provide a program to meet the problems which are certain to face the American people in the coming months.

At this point it is well to consider the place occupied by private industry during the prosecution of this war. I know of no man who has stated the case better for private industry than Dr. Harold Glenn Moulton, the president of Brookings Institution. He says:

"Instead of sealing the fate of private enterprise, the war period has brought to the American people as a whole and, I believe, to our Government a new realization of its vital importance."

He continues: "This profound change in Government attitude is due to two principal factors: The remarkable achievement of private enterprise during the war, and a growing recognition that employment and wages depend upon business expansion under a private-enterprise system unless risk assumption is encouraged by the chance of reasonable profits."

He concludes by saying: "Repeated emphasis on the many freedoms that we are fighting for has inevitably, if unconsciously, carried over into the field of our business enterprises. I do not mean to imply that all Government regulations of business will henceforth be abandoned or that it would be desirable to scrap all forms of proper regulation. I do mean that the excesses of recent years are likely to be modified and a new spirit prevail."

I believe that Dr. Moulton has thus stated the case, and our hopes, in a manner that we can all place our stamp of approval upon his utterance.

The stake of business in this complex and many-sided reconversion picture has been of vital concern to the Members of Congress and to members of your own American Road Builders' Association. It is a concern, which I have had, growing out of a deep conviction that sound and healthy business spirit is an indispensable bulwark against monopoly and any threat to our democratic way of living. Sound industry is the keystone in the arch of our free enterprise.

I therefore believe that it is in the national interest to maintain and strengthen the competitive position of industry and to assure it always the fullest opportunity for devolpment.

In this development I have always rejected the proposition that small business constituted a special interest that requires some type of favored treatment at the expense of other groups. Small business seeks only to be recognized as a vitally important part of our national economy and to be protected against practices which interfere with its rightful course of free competition. Nothing else will do justice to these manufacturing and commercial concerns which constitute the backbone of American economy.

To quote a saying which has become famous for its truth: "Little business incorporated is the biggest business in America."

That statement is to express the viewpoint, I am sure, of the vast majority of those who are present.

In thinking of the American business outlook and certain trends which are developing, I believe it is well for us to consider in just a sentence the essence of what must be done with Germany and Japan, so as to prevent the future wars of aggression.

It will be absolutely necessary not only to have military control, at least for a period, over those countries but there must be a close supervision of the key industries in those nations. That, perhaps, is more important than the temporary military control. We will have no permanent peace plan if such a courageous stand is not taken by the American people.

The assertion is often made that we face a problem of permanent unemployment in the United States of America. According to this view—it is popular with many—there would be hundreds of thousands of American citizens who are physically and mentally capable of earning a substantial income but they must, through no fault of their own, live in a state of near pauperism or actually pauperism itself. I do not subscribe to that concept of the future of our Republic. To me, it is unthinkable that any American who is able and willing to provide himself with the necessities and some of the luxuries and conveniences of life by honest work, should not be given the opportunity to do so.

The chief obstacles to such opportunities are frequently of a national character. We cannot forget that. If such, they are beyond individual control.

As a Member of the Congress—and other Members are joining in the program—I have tried to use very resource at our command to see what we overcome in those national, economic difficulties which are too great for an individual to solve himself or surmount alone. But I am convinced that men and women everywhere should depend upon their own physical and mental resources to rise above those obstacles when they are within the source of individual achievement.

This distinction is necessary if we are to maintain a strong, healthy and self-reliant people as the citizenry of this country.

I don't believe that in 1945 or 1950 or 1960 we are going to get too much of the true American spirit in this country. I pay a tribute to the sterling men and women of the long ago, because they had those qualities of character which constructed the fabric of our great country. I don't want us to lose sight, for a moment, of the essentials which went into their way of thinking and their way of doing.

I repeat, you can't get too much of the sound Americanism which is exemplified by those who have gone before us. They builded better than they knew. Bless their memories.

I think of another church in my West Virginia hills. We have many churches. [Laughter]. I joke just now, but before telling the following story I pay tribute to the principles of a Christian citizenship. Peace will never completely come to the world until the spirit of the Christ possesses the hearts of men and of nations.

I remember this old friend. He had just one way of beginning every prayer. He always said, "O Lord, past blessings have gone with past necessities, and tonight finds me the same needy creature as ever." Then, one evening, at testimony meeting, he launched into an appeal, and said "O Lord, send me barrels of apples, barrels of potatoes, barrels of sugar, barrels of salt, barrels of pepper," and he stopped a moment and cried out, "Oh, hell, that's too much pepper."

I repeat you can't get too much of the true spirit of Americanism in the dangerous days that loom large for this country of yours and mine.

I introduced a scientific research bill, first in 1935, which I believe might help to increase the number of jobs available in private industry after the war. I have ever believed that the dollar you spend in research comes back ten- or a hundred-fold. It is the expenditure that gives a real dividend for the payment of whatever sum you put in it as a Government or other political subdivision.

If industry is to provide a continually increasing number of jobs, one of the first requisites is the stabilization of business conditions. This is based upon adequate regulation of the supply and demand for capital, either by limiting the supply or by increasing the demand, or by the use of both.

In this proposal I believe we formulate the foundation for a sound research program from which new industrial and commercial developments can spring. As these developments appear, new and profitable outlets of capital will be provided, as well as new and better jobs for hundreds of thousands of workers.

Consequently private investment may ultimately be substituted for Government expenditures and borrowing as the chief element in the demand for capital. Business will then be able to carry on under its own power as it receives constant stimulation from the flow of new opportunities and private investment. Federal funds spent for roads and airports, both vital to our transportation demands, constitute Government leadership in the field of public works which generally finds ready support from our people. We must, by carefully selected projects, cushion the period from total war to the step-down to peace. I believe that a Government with a tax policy must be as eager to promote a constructive peace as it is to prosecute a destructive war.

The soundest sense that I know is the one that gives to the Americans a low rate of tax, insofar as possible, on a high volume of income or business. I think that is the only way to avoid the subterfuges of inflation, due to the debt to be repudiated, and I think it is the American way to bring a high volume of business with, as I said before, a low tax rate.

Suppose for just a moment, as I finish, we consider the opposite conception of taxation. Suppose we say, "let's have high tax rates and put it on a low volume of output. What will happen?" I believe you will agree with me that the American family Ford would become the tenant farmer's mule. I believe you would agree with me that our wives would go back to the washboard and the spinning wheel of our grandmother's day, and the man that would hold the mortgage this time would be Uncle Sam and the tax collectors of the Federal Government. That condition would be almost tragic.

High rates on low volume is nothing more, to quote a colleague, that "government of the government, by the government and for the government," and that, certainly, is not the American way of doing business.

I want to return to the subject of taxes, with which I began this talk. We must consider our present and our future structure. We cannot expect at reduction in our present income tax structure on the incomes of 1945, and it is also likely that corporation normal and surtax will remain unchanged. It is possible that the tax rate on excess profits will be reduced on 1945 incomes. I believe we can definitely look toward a downward trend rather than an upward trend in connection with the payment of taxes for the remainder of the war.

When tax reductions come our excess-profits tax, in the case of corporations, must be eliminated. That is not only my own viewpoint but, certainly, that is the viewpoint of many of those who hold key positions on finance and banking committees in the Congress of the United States. And, also, profits paid as dividends should be taxed at lower rates. It is only just that we must change the present double taxation of profits, in the first place, as income in the keeping of corporations and, second, as income in the hands of those individuals who have been receiving dividends.

I hope that the White House thinking embraces the idea that our national tax policy must support the need for incentives, so that we will find both individuals and corporations working more in the future rather than working less.

Congress should proceed toward this desired goal even in the face of pressure groups who sponsor governmental paternalism instead of a practical relationship between Washington and the Main Streets of our country.

In closing, I wish to make observations which have nothing of a direct bearing on the set address, and it is briefly this: Senator VANDENBERG, a Republican, who a few months ago was charged with being an isolationist, gave what to me is one of the great utterances, from the standpoint of a pronouncement, on the purposes of peace, that has been given not only in this country in years but in the entire history of America and the world. Speaking about the principles by which we carry on the war, he said: "They march with our armies; they sail with our fleet; they fly with our eagles; they sleep with our martyred dead."

The spirit of VANDENBERG or any other Member of the Congress or citizen of the United States today, be he or she a Republican or Democrat, must be the spirit of the prosecution of this war to a successful conclusion and to a lasting peace.

In Chicago a few months ago I found, in one of the morning newspapers, these words paraphrasing that poem of other years, In Flanders Fields:

"We cannot sleep, though poppies grow
Between the crosses, row on row;
We cannot sleep, for in the sky
Instead of larks, the bombers fly:
The crashing gun, the screaming shell
The hissing flame, as if from hell,
The rumbling tank, the roaring jeep
And marching men disturb our sleep
In Flanders Fields.

The torch we threw fell on the sands,
Dropped by supine and greedy hands;
For shame, move over, buddies, and make room
For those who now must die;
Since they broke faith with us who lie
In Flanders Fields."

Regardless of our political preference, regardless of our creeds, let us go united from this convention, as from every group meeting, with not only victory as a proper goal but a permanent peace for America and all the peoples of the world as an even higher goal. That determination is one which we must not allow to be thwarted by any charge of power politics, by any mistakes which are made within our own government or those that are joined with us in this cause. Let us rededicate ourselves again and again to the proposition that America, great enough to join with others in winning a war, must be great and good enough to join with others in the writing and the keeping of the peace of the world.

Plan for a Limited Government of the United Nations

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. REES of Kansas. Mr. Speaker, I am submitting for the RECORD and for the consideration of the membership of the House a plan for limited government of the United Nations. The plan was prepared by Pvt. (1st cl.) Clifford R. Hope, Jr., serving overseas in Belgium with Headquarters Battalion, Sixteenth Field Artillery. The plan offered by Private Hope is a most interesting and constructive one. Since the proposal is submitted by a young man serving in the armed forces and being the result of his study of this problem with the background of his present experience, it is worthy of the consideration of the membership of this House. I trust the Members will read it.

Private Hope is the son of my colleague, Hon. CLIFFORD R. HOPE, of Kansas.

PLAN FOR A LIMITED GOVERNMENT OF THE UNITED NATIONS

1. By "limited" I mean that such a government, at first at least, would not have all the authority and functions of what we generally assume in the connotation "government."

In these plans I have made two basic assumptions:

1. Surrender or armistice terms have already been definitely agreed upon by the Big Four:

2. World peace machinery must gradually evolve from below and cannot be successfully imposed from above.

The plan in brief is to have a United Nations Executive Council, a United Nations Legislative Assembly, a United Nations Supreme Court, and eight United Nations commissions, dealing with the most striking international problems. The functions of each are numerated below:

1. The United Nations Council would consist of 11 members, 1 each from China, France, Great Britain, the United States, Russia; 2 each from Latin America and the rest of Europe; and 1 each from the British Commonwealth of Nations and the independent nations of Asia (including Liberia and Ethiopia). Their method of selection would rest with their own national government (or governments, with the intent that eventually they would be either directly elected or elected by the legislative assembly). Those members elected by a group of nations would be elected by a group of delegates from those nations, each nation holding the seat (or seats) in rotation. Their term would be 4 years (with a president elected by them, from their number for the same period of time) and they would be eligible for reelection once.

The functions of the Council would be (at first) to direct the activities of the eight United Nations commissions and to decide when and where force should be applied to would-be aggressors. Decision would be by a vote of at least 7 of the 11. Gradually, the Council's activities would become those of any executive branch of government, to direct the administration of measures passed by the legislative assembly.

2. The United Nations Legislative Assembly would consist of 1 member per 5,000,000 population or fraction thereof represented, but no nation represented would have less than 2 members. Thus the legislative assembly would be large enough to be a true assembly, yet not so large as to become unwieldy. At first, regardless of the number of its representatives, each member nation would have 1 vote; in time, when satisfactory minimum voting standards have been established in each nation, each representative would have 1 vote and the assembly would become a true legislature. At first, of course, primary responsibility would rest in the Council, but gradually the Assembly would revert from its "debating society" status and would pass legislation either initiated by the Council or written within its own ranks.

3. The United Nations Court's (taking over the functions of the present World Court)

primary function would be the arbitration of disputes between nations. Its decisions would be enforced by the Council. Associated with it for a necessary period would be a war guilt court for the trial of war criminals. The United Nations Court would consist of 9 (or any odd number from 7 to 13) justices, appointed in rotation, 1 by each nation (by its own prescribed methods). Every 3 years 3 justices would be replaced by 3 more from 3 different nations. As the authority of the Council and Assembly increases, the field of jurisdiction of the Court would likewise increase.

4. The United Nations Defense Commission would consist of the Combined Chiefs of Staff of the United Nations and the forces made available by each member nation upon the basis of population and seapower. The head of the Commission would be appointed by the United Nations Council and subject to removal at any time by it. The amount of available armed forces would vary according to need. The United States Council member should be voted authority by the United States Congress (renewable every 2 years) to vote for the use of United States forces made available to the Combined Chiefs of Staff. The United Nations Defense Council's primary responsibility would be the quelling of any armed clash between two or more nations (but not within one nation).

5. The United Nations Occupation Commission would be essentially a temporary agency in charge of administering the government of occupied axis territory, including Korea, for an indefinite period. Undoubtedly, detailed occupational plans have already been made by the Big Four.

The United Nations Occupation Commission's job would be to carry out those plans. As with other United Nations commissions, its members (of any flexible number) would first be appointed by individual nations, but in time its membership would be appointed by the council with the approval of the assembly. The U. N. O. C.'s work would terminate when, in the opinion of the council, occupied axis territories would be ready for membership in the United Nations.

6. The United Nations Colonial Commission would be primarily an advisory and regulatory commission. Its agents would be stationed in every colonial territory to report upon the preparations of the native population for self-government and economic development of the colony. Any nation found wanting in its duties and responsibilities to the native population would be reported to the U. N. Council for appropriate action. In addition to the above duties, the U. N. C. C. would directly administer former Italian colonies.

7. The United Nations Monetary Stabilization Commission would be charged with administering the plans of the Bretton Woods Conference and with recommending to the United Nations Council additional plans for the solution of international monetary problems.

8. The United Nations Trade and Communication Commission would be charged with lowering trade barriers, abolition of worldwide cartels, regulating international transport (including air traffic) and communications, and developing and integrating all colonial areas into a world economy, and encouraging new productive business enterprises.

9. The United Nations Labor Commission would continue the work of the International Labor Office of the League of Nations. Particularly would it seek to raise labor standards in colonial areas.

10. The United Nations Resources Commission's primary job would be the direction of the development and utilization of all world national resources for a constantly expanding world economy, particularly in undeveloped areas. A research bureau would foster development of new industrial and agricultural processes.

11. The United Nations Commission on Education would seek to raise educational standards throughout the world, to make literacy universal, to develop a wide program of exchange students between nations, to make education a true pattern for living, with particular emphasis upon the re-education of the entire population of the Axis nations.

Let it be emphasized that the entire limited government suggested is aimed at alleviating the causes of world war, that such peace machinery must necessarily be simple and flexible, with a ready means for expansion; that future problems such as the admission of new states must be dealt with as they arise.

It can readily be seen that such an organization is far from a constituted government (which is impossible at this time) but it is certainly a step in the right direction.

Its success depends upon good faith to the cause of world peace by the participating nations and, ultimately, upon the sincerity and devotion of every individual in the world to the world to the cause of preventing another world-wide conflagration.

Tydings Amendment and the Food Supply

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. REED of New York. Mr. Speaker, I wish to call attention of the House Members to the tragic consequences which will follow the induction of critical and essential farm labor at this time. A directive sent out is a clever and slippery and tricky device typical of the New Deal in seeking to adroitly override existing law by indirection. The Tydings amendment is still the law of the land. The food problem is critical as would seem to be indicated by the many restrictions imposed by the O. P. A. and other agencies. It is also evidenced by the urgent request on the part of the War Food Administration to increase the production of foods by at least 3 percent. It must be known, or should be known to the officials of this Government that every farm is a factory that will not operate without adequate manpower. The Tydings amendment was intended to make secure enough labor to each farmer to meet the full demand of the Government for a greater production of food. Plain common sense seems to have been thrown to the winds and instead of drawing on hoarded labor for manpower the New Deal seeks to strip the farms of necessary labor and thus reduce the food production instead of increasing it at a time when the farmers of this country are asked to supply food for civilian population, our Army and Navy and the peoples of liberated countries. The Congress is the last refuge of those engaged in a basic and vital war industry, namely the farms of this country. Under leave to extend my remarks, I include a resolution adopted by the New York State Horticultural Society with reference to the food supply:

FARM LABOR

Whereas farmers at the quest of the Government have met food production requirements for several years. This has been achieved through favorable weather; long hours and hard work. In planning for 1945, the odds are against another year of favorable weather, and farmers are unable to accomplish more work per day; and

Whereas the average age of farm workers has risen and there are now on farms less workers than a year ago; and

Whereas the supply of new farm machinery has been inadequate and the supply of existing machinery has become less dependable and repair parts more difficult to obtain and fewer competent repair men; and

Whereas any further drain on the supply of farm labor will jeopardize the supply of food for the armed forces and the consuming public, because the young men on farms are the ones who operate the machinery and are key men, and are not replaceable; and

Whereas the recent order from selective service to the local authorities is making it impossible for farmers to plan their operations for 1945, and these plans have to be made at this time of year: Be it

Resolved, That the New York State Horticultural Society request selective service to use the greatest care and consideration in any reduction in present numbers of men on farms which will affect the national war effort adversely. And that copies of this resolution be sent to all Congressmen and Senators from New York State; to Governor Dewey; to Chester Du Mond, commissioner of agriculture and markets; to Norman Hurd, State manpower director; Harold Stanley, chairman of the State Food Commission; and E. S. Foster, secretary of the State Agricultural Defense Committee.

Race Hate

EXTENSION OF REMARKS

OF

HON. NED R. HEALY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. HEALY. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a magazine article by Hon. Frank Murphy, Associate Justice, United States Supreme Court.

The article follows:

[From Liberty of January 6, 1945]

RACE HATE—THE ENEMY BULLETS CAN'T STOP

(By Frank Murphy, Associate Justice, United States Supreme Court)

The end of the war is in sight. All that our armies and the armies of our allies have struggled for is in our grasp or within our reach. To accomplish this we have given unstintingly in men, in materials, and in money. We have made many sacrifices, and we are prepared to make many more until final victory over all of our enemies shall be ours.

What has been the justification for this enormous expenditure of American lives and American resources? Why have we made these sacrifices? For conquest? For power? For vengeance? No. Our war aims lie deeper than any of these.

All that we are fighting for, all that we seek in the council of nations, is determined by one fundamental purpose: to safeguard this Nation as our forefathers created it, as later

generations preserved and extended it, and as we intend to hand it on to our children. If we lose in this, we lose in all else.

Victory in this war could be snatched from us by a secret enemy here at home even as our statesmen are signing the agreements which would end military hostilities. This enemy can't be stopped by guns. It can be stopped, and overcome, only by an awareness on the part of each one of us of the real nature of our country's glory.

The true greatness of our country is to be found in an idea—an unshakable belief in the essential goodness of man, in the basic God-given equality of all men, in man's right to personal liberty and to the respect of his neighbors. Our ancestors—those who came here 300 years ago and those who came 30 years ago—all saw in this belief the hope of a new, better life. They came here to escape the hatreds and animosities of the Old World, to live in a land where men could be truly free.

The founding fathers of the United States drew up a Declaration of Independence proclaiming that all men are created equal and endowed by their Creator with certain inalienable rights. Among these rights are life, liberty, and the pursuit of happiness. Once independence had been won, the framers of the Constitution secured these rights in law by incorporating them into a Bill of Rights guaranteeing freedom of speech, freedom of religion, freedom of the press, and equality before the law.

This, the mainspring of American life, is what our enemies would have us destroy even while our armies are winning victories overseas. They would have us forget our belief in the equality of man and adopt their own false standards of race supremacy. They would see us divided against ourselves, our national strength consumed in racial and religious hatreds. The America our troops sought to preserve would then have been destroyed by our own hands.

This attempt to bring about civil strife has met with more success than many of us care to admit. Propaganda aimed at setting one group against another has found its mark in many instances, and we have seen the sorry spectacle of religious bigotry and racial hatred rise where none had existed before. Or, where misunderstandings already existed, we have seen these misunderstandings somehow turned into animosities bitter enough to involve an entire city. And largely because a few hate-spreaders have accomplished their assignments.

Taking advantage of the high emotional state which prevails in any nation at war, these hate-spreaders have toiled systematically toward a set of definite objectives. Their ultimate aim is not merely to kill innocent people, or to slow our industrial production, or even to hamper our war effort by a temporary reign of terror. Their plan is to crush our trust in one another and so make it impossible for our Republic, and our way of life, to survive. And after the war they will exploit whatever confusion and uncertainty may arise during the transition from a war to a peace economy.

Racial friction and religious persecution are unfortunately not new. Even the history of this country has not been entirely free from outbursts of bigotry. The Quakers of New England were early victims of religious intolerance. In the nineteenth century a political party, the notorious know-nothings, turned against newly arrived immigrants and sought to deny the privileges of American citizenship to all but native-born Protestants. Still later, within the memory of our parents, Irish immigrants who came to America in large numbers were greeted with abuse and derision.

But none of these sordid movements ever dominated the American scene. The American people as a whole defeated the designs of a few hatemongers and continued along their determined path of liberty and democracy.

Now, in our day, irrational hatred has again reared its head, aided by the strain of war and abetted by those trained in the ways of the Nazis. One species of this hatred is perhaps more threatening than any other. It is anti-Semitism.

Anti-Semitism, as an organized means of disrupting the unity of a democratic people, is a Nazi invention. It is aimed not only at the Jews but at democracy and Christianity as well. If we can be persuaded to use this crafty device to destroy ourselves from within, then the Nazis—and not the forces of the United Nations—will have won the war. The weapon which the defeated Nazis will have placed in our own hands will be the cause of our national suicide. At some future date a new breed of Nazis, foreign or domestic, will reap the spoils of real conquest.

This is not fantasy. Hitler has boasted publicly that the seeds of nazi-ism and anti-Semitism which he has sown will rise to plague us long after the German high command has been forced to surrender.

Now is the time to stamp out all the traces of this Nazi-inspired bigotry, before it has a chance to get out of hand. The existence of anti-Semitism challenges every man and woman in the United States. Not only is American democracy threatened; Christianity is also threatened, and so I believe we Christians have a special mission to perform.

We must unite to combat anti-Semitism as a threat to both American and Christian principles. Fully conscious of the right of freedom of speech, we should not seek to throttle those who unwittingly are spreading ill-will. Instead, we should point out the falseness of their arguments and, above all, expose the made-in-Berlin source of their wares. As for those who are deliberately seeking to destroy all that our fathers fought for, and all that our sons are now fighting for, we should fight their propaganda with all the means in our power.

Total victory over these enemies of God and man cannot be won easily. The basic cure lies in the purification of our own hearts. Traces of racial suspicions and misconception lurk in the hearts of the best of us. They cannot be rooted out in a moment. A complete searching, cleansing process is necessary.

If you are tempted to utter a single anti-Semitic remark, no matter how harmless it sounds, or to commit a single anti-Semitic act, ask yourself if this word or deed violates your belief in the dignity of the individual, the right of personal liberty, or the equality of all mankind.

What are the means of which the anti-Semites hopes to turn us against American Jews and eventually against the fundamental ideals of American and Christian life. The first method is to convince us that the Jews are to be blamed for anything and everything we happen not to like. The second method is somehow to create the impression that Jews are different from the rest of us—queer, impossible to understand, alien to American ways.

These charges are historically false as well as morally evil. Yet, they have sometimes been accepted by Christians who are innocent of any malicious intent. These Christians cannot know very much of history, or else they would realize that everything now being charged to the Jews was once charged to the early Christians. The church fathers were accused of belonging to an inferior people, of being aliens and agitators and of tainting the "racial purity" of other peoples. It is heartbreaking today to witness Christians, who were once a religious minority and subject to all the persecutions now inflicted upon the Jews, spread propaganda which—whether they realize it or not—is not only anti-Jewish but anti-Christian as well.

By anti-Semitism we mean something quite different from criticism of individuals who happen to be Jewish. There are good and bad Jews, just as there are good and bad Catholics, good and bad Irish, and good and bad persons of every other description. It is when we attribute our ills to Jews as a whole that we become guilty of passing on some of the poison brewed by our enemies. Or when we accept the master-race myth that a type of people called "Aryans" is in some mystic way superior to all others.

This notion of racial superiority is without any foundation in science, but is seized upon by some persons as solace in their troubles. They think their troubles are eased by the satisfaction of looking down on someone "beneath" them. What a low sort of satisfaction this is.

Each time a person says or does something derogatory to his Jewish neighbors he lowers himself and detracts from the spiritual progress of the human race. While he is injuring himself spiritually, he is also starting something which will lead to his own physical downfall. For bigotry is like a landslide: it gathers momentum as it spreads, finding one victim after another until everyone has suffered. It is true that the first victims of rampant anti-Semitism would be Jews, but the course of history has shown unmistakably that one form of hatred breeds another. Hate-maddened people would turn on a second minority and then on a third. Each one of us in America is a member of a minority in some way or another. Thus we would see our country torn into a multitude of warring groups.

Anti-Semitism and the other forms of group hatred have caused incalculable harm in the world, but never the slightest bit of good. Far from helping in the solution of any national problems, they destroy the very basis on which any problem can be solved—the spirit of mutual understanding and good will. Men's minds are diverted from the problem, and, instead of tackling it, they seek a scapegoat to blame for its existence. In short, hatred cannot remove any of our difficulties—economic, social, or political. It can only add new and more dangerous ones.

And how can any Christian honestly harbor any hatred of a group of his fellow men and still profess to believe in Christianity? Christ commanded us: "Thou shalt love thy neighbor as thyself." He taught us that all men are neighbors, no matter what their nationality or convictions. The brotherhood of man cannot be accepted piecemeal. Genuine Christianity does not allow for love of one neighbor and hatred of another any more than it allows for obedience to one of the commandments and not to all of them.

It was in keeping with this great Christian tradition that Pope Pius XI spoke of anti-Semitism: "It is a movement in which we Christians can have no part whatsoever. Anti-Semitism is unacceptable. Spiritually we are Semites."

The true Christian cannot stain his conscience with hatred of those of differing religious beliefs or ancestry. Nor can he remain indifferent to their sufferings under the tyranny of others. He will protect them from their enemies, give sanctuary to them in their need, and lend a brotherly hand in restoring to them peace of mind and physical security. To remain silent while the forces of evil are abroad is to give those forces aid and comfort, and this the true Christian cannot find in his conscience to do.

Today, of all times, is not a time for silence. The virus of anti-Semitism has already been well planted. I do not cry "Wolf!" when there is no wolf. The enemy is real. The forces of evil are not preparing to attack us; they are already battling us, under cover, cunningly, and with growing strength. The time to crush this enemy is now. One hundred million volunteers are needed to circulate sober, hate-quenching facts in every

American home, farm, factory, union, church, and school, in the press and on the air. But, first, each volunteer should search his own conscience. Our first victory must be won within ourselves.

If we are true to ourselves and our traditions, this Nation cannot but fulfill its rightful destiny. There is in us all a real capacity for human kindness. The brotherhood of man is a living, growing reality. The future lies with those who will tear asunder the shackles of bigotry and reassert their faith in the dignity and independence of man. Our Christian tenets and our American heritage call us to this task. In deepening our love and understanding of our neighbors, we become better Catholics, or Protestants, or Jews—whatever our creed may be. In building a firmer spirit of unity among the peoples of our land, we become better Americans.

Out of this war must be born something better than the old hatreds in modern guise. The sufferings and sacrifices of our sons must not have been in vain. It is our duty to bring forth a nation more firmly devoted to its ideals, more invulnerable to the counsels of hate, and more fully conscious of its mission of justice and righteousness. Working together, we can achieve this lofty goal. Proud of the power of our country, we can be prouder still of our unflinching defense of the rights of man. We shall have remained true to the promise of America.

Southern California's Post-war Problems

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. McDONOUGH. Mr. Speaker, let us pause for a moment and consider what our situation will be in southern California following the end of the war:

We have had a wartime increase in our population in southern California of 632,933. The air-frame industry in Los Angeles County in January 1940 had a total of 26,816 employees, and this notwithstanding the fact that we were making a great many war airplanes for our allies at that time. At the present moment, the air-frame industry in this county has 173,000 employees. The shipbuilding industry in this county in 1939 had 864 employees and today the shipbuilding industry here is employing approximately 110,000 employees. In 1939 the concerns now engaged in making aircraft parts—then making other items—were employing 20,000 people. Today these 600 plants are employing 100,000. The rubber fabricating plants were employing 5,855 employees in 1939 and are now employing 19,000. The petroleum refining industry in this county in 1939 employed 6,458, and today is employing 10,500.

When World War No. 1 ended the shipbuilding industry in this area disappeared overnight and was never revived until World War No. 2. We know that during World War No. 2 we have already constructed a greater number of ships than can be employed in a peacetime economy.

A tremendous change is bound to take place in our aircraft industry. Unquestionably we will maintain our position as the No. 1 aircraft producing center of the world. But the types of airplanes being produced for military purposes, I am informed, are wholly unsuited for peacetime use. Hence, with the termination of the war and the cancelation of contracts for military planes, the airplane industry must to a large extent suspend operations until it can retool for the manufacture of new types of planes suitable for peacetime use. When you realize that we only employed 150,000 people in industry in Los Angeles County in 1939 it will be a great problem to find post-war employment for the 350,000 excess war workers who will be released from our major war industries as soon as the war is terminated.

You may be interested in a few of the figures resulting from a survey recently made to ascertain the intentions of our war workers and soldiers with regard to their future employment. The survey recently completed indicates their intention to leave southern California. The first survey showed that 89 percent of the men in our war industries plan to live here after the war. The second survey reveals that only 75 percent intend to remain here. Of the immigrants who have but recently come into Los Angeles County and entered war industry, the first survey showed that 79 percent desire to remain here. The second survey shows that even a lesser percentage desire to remain here. Whereas only 3 percent of the female war workers had done factory work before the war, 42 percent want to continue in factory work after the war. Thirty-six percent of all of our women in war industries were housewives before the war and 34 percent of our female workers say they wish to be housewives after the war. Eleven percent of our women in war work were domestic servants and waitresses. Of our local boys in the military services, 95 percent wish to return to southern California for post-war employment, and of those who intend to return to California, 72 percent desire to return to their former employers.

Notwithstanding the fact that 75 percent of the men in our war industries now indicate their desire to live and work here after the war, many of them apparently realize that there is a serious risk of their not being able to find satisfactory post-war employment in this area, and today we are greatly embarrassed by finding that thousands of our war workers are leaving the State in order to reestablish themselves in the communities from which they came to California. Careful surveys recently made in the airframe industry and in the rubber industry indicate that from 38 to 40 percent of the people now leaving those industries are also leaving the State of California. And when you consider that the average monthly quits in the airframe industry are now around 20,000 per month, you will see that of this group approximately 8,000 a month are leaving the State.

The necessities of war have caused this State to assume the role of a great industrial center. That position we will not willingly relinquish in the post-war era. The Seabees have a motto: "We defend what we build." That will be the motto of industrial California in the post-war period. That California is destined to be one of the greatest industrial centers in the world, I have no doubt. But before we can change from the great peak of war production to a stabilized peace economy, we have many hurdles to jump, some great problems to solve, and it is going to take courage and foresight and the expenditure of a lot of money and fair treatment by government, and agencies of government, to carry our industry through the critical post-war reconversion period. The road ahead is by no means lined with insurmountable obstacles. But the thoughts of a painless victory and an easy post-war period might as well be dispelled.

Very properly you may ask, what do I think we could or should do to pave the way for an early return to a proper peacetime economy in California. I will give you my idea of some things we should do, or strive to do:

First. Insist that California shall have as fair treatment as any other part of the country in being permitted to start now with the manufacture of peacetime commodities. Such a policy would give us a fair break with our competitors and materially assist us in solving our post-war unemployment.

Second. Urge procurement agencies of the Government not to thrust on this State a disproportionate part of the war production after VE-day, other than that which it is absolutely necessary that we undertake—just because we are the closest to Japan.

Third. Urge that the number of Federal employees be reduced to the lowest minimum at the earliest possible moment, so as to reduce the cost of Government to a point that it can be financed with a reasonable burden of taxation. The first plank of the Democratic Platform in 1932 read:

> We advocate: 1. An immediate and drastic reduction of governmental expenditures by abolishing useless commissions and offices, consolidating departments and bureaus and eliminating extravagance to accomplish a saving of not less than 25 percent in the cost of Government.

During that campaign of 1932, President Roosevelt supported that platform with words that could not possibly be misunderstood. He said:

> I accuse the present administration—
>
> Hoover's—
>
> of being the greatest spending administration in peacetime in all American history—one which piled bureau on bureau, commission on commission, and has failed to anticipate the dire needs or reduced earning power of the people.

Fourth. Keep the expansion of our social-security program within the limits that we can afford without ruinous taxation.

Fifth. Along with the reduction in our Federal expenditures, cut down the taxes on business, so that business can expand and increase the rate of production, and thus raise our national income to a point where we can sustain a reasonable Federal budget.

Sixth. Insist that we put an end to the control of business by the withering hand of Government. To succeed in the future we must produce greater wealth. Germany found that government control of business had failed to solve its economic necessities, and it started a war of aggression to acquire by force the raw materials and foodstuffs with which to carry on its national existence.

Seventh. Use our influence to bring to this State a cheap and abundant supply of steel and other metals to enable us to keep and develop our heavy metals industry. This may mean that we should encourage the maintenance in the future of the steel mills that have been constructed in the West during the war.

Eighth. Exercise every influence to preserve for this State its commanding position in the aircraft industry and air transport, and endeavor to maintain a permanent position for our shipbuilding industry, which we have developed so successfully for our Government during the war.

Ninth. Endeavor to secure the maximum amount of the trade of Latin America. We like the people of Latin America. They are our neighbors. Why should not California enjoy the bulk of the Latin-American trade? That desirable trade should not go back to Europe.

Tenth. Work in close harmony with labor. Put an end to the philosophy that management and labor are natural enemies. Let organized labor look to prewar Germany for an example of what such a system offers to labor for a future. We are all fellow Americans, working for a living and for the good of the same country. Management and labor have a great deal in common.

Eleventh. Put an end to paralleling in this country the economic policies which have proven a failure in continental Europe, and which destroyed the freedom of the people, both labor and management, and brought on this devastating war. Our national income is six times as great as that of any other six nations combined. Our living standard is twice that of England, three times that of any nation of continental Europe, and six times that of Russia. And these results have been achieved by private industry working under a free enterprise system. We must cherish and preserve that economic system under which we became the leading Nation of the world. In the perpetuation of that system lies our only hope. If America fails, the economic structure of the entire world will fall into chaos for generations, if not for centuries.

Twelfth. Fight for the elimination of price controls at the earliest possible moment after the cessation of hostilities, and insist that the establishment of hours of work and wage rates by the Government be abandoned. Having achieved full Government control, the Government must arbitrarily limit the price of labor, and has done so in all totalitarian governments. That is the ultimate end toward which labor must look forward if it follows the socialistic pied piper over the hills to the promised land.

No matter how rough the road ahead may seem, no matter how great our fears may be as to our future, I venture the opinion that our problems are less formidable than those which faced the 49'ers who fought their way across the plains and built an empire in this State. With equal courage and determination, we can succeed in the period ahead of us.

This Program Is Difficult To Justify in Wartime

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, during the past few years with more and more Government control we have witnessed the allocations of vegetable oils and the allocation of animal fats. We have also witnessed the subsidies to the various vegetable oils and some of the animal fats.

An animal fat, such as lard, has been allocated to the soap industry in large amounts. In fact, some soap companies hire time on the radio and announce the giving away of soap, a year's supply, for a contestant answering some question.

In January 1944, I received the following letter from the War Food Administration:

WASHINGTON, D. C., *January 13, 1944.*

Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: This is in reply to your letter of December 30, addressed to Mr. W. H. Jasspon and your letter of January 3, with reference to the use of lard in the production of soap.

From July, the first month in 1943 in which lard was used in soap, through November which is the last month for which figures are available, soap makers were granted approval to purchase a total of 128,430,000 pounds of inspected and uninspected lard. Seventy-three million eight hundred and twenty-six thousand pounds of this total was purchased during the month of August at which time fats suitable for use in soap production were in very short supply. For your information, as of December 10, soap makers were advised that they could no longer purchase inspected lard for use in soap, but could use such quantities as they may have had on hand. They are still permitted to purchase and use uninspected lard.

If there is any further information you desire, please do not hesitate to let us know.

Sincerely yours,

S. R. SMITH,
Deputy Director.

In January 1944 I also received the following letter:

WAR FOOD ADMINISTRATION,
OFFICE OF DISTRIBUTION,
Washington, D. C., January 29, 1944.

Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: This is in reply to your letter of January 24 in which you ask for a list of the soap companies granted approval to purchase lard for use in the manufacture of soap. The following companies elected to use lard and were granted approval during the year 1943:

Procter & Gamble Co., Cincinnati, Ohio.

Lever Bros. Co., Cambridge, Mass.

Colgate-Palmolive-Peet Co., Jersey City, N. J.

S. Strunz & Son, Inc., 708 Bingham, Pittsburgh, Pa.

Lanman & Kemp-Barclay Co., Grand and Columbia Avenues, Palisades Park, N. J.

Fels & Co., Seventy-third and Woodland Avenue, Philadelphia (42), Pa.

Manhattan Soap Co., Inc., Bristol, Pa.

Armour & Co., Thirty-first and Benson Streets, Chicago, Ill.

In our letter of January 13 we advised you that as of December 10 soap makers were informed that approval of the use of inspected lard would no longer be granted. We regret to state that this date was incorrect, and should have read December 18.

If there is any further information you desire, please do not hesitate to let us know.

Sincerely yours,

C. W. KITCHEN,
Acting Director.

You will note that in this letter that the soap makers were informed "that approval of the use of inspected lard would no longer be granted."

The allocation of lard to the soap makers had evidently continued in 1944 up until November 14, 1944—or 1 week after election—as shown in the following letter:

WAR FOOD ADMINISTRATION,
Washington, January 15, 1945.

Hon. REID F. MURRAY,
House of Representatives.

DEAR REID: Your letter of January 2, 1945, addressed to Mr. J. A. Krug, Chairman, War Production Board, inquiring as to the number of pounds of lard allocated to soap manufacturers in 1943 and 1944 and the names of the soap manufacturers receiving allocations, has been referred to us for reply.

No specific allocation of lard has been made to individual soap companies. The purchase of lard for soap has been prohibited since November 13, 1944, under War Food Order 42-b, amendment 1.

The Bureau of the Census reports the use of 74,000,000 pounds of lard in soap during 1943. This represents 4.3 percent of the reported 1943 use of primary fats in soap. Approximately 126,000,000 pounds of lard were used in soap during the first three quarters of 1944. This increase over 1943 was due primarily to the heavy seasonal production of lard in 1944, when other storage and shipping space was unavailable.

Statistics are not yet public for the fourth quarter of 1944. However, we estimate that approximately 45,000,000 pounds of lard purchased prior to November 13, 1944, have been used in soap during the last quarter of 1944.

We trust that the foregoing provides the information you require, and we would be pleased to furnish any additional information you desire regarding this subject.

Sincerely yours,

MARVIN JONES,
Administrator.

What are the facts brought out by these letters: First, that a good animal fat in the form of lard with 4,000 calories per pound has been allocated to soap making when the housewife was compelled to pay points to obtain lard to feed the family; second, that even in 1944 171,000,000 pounds of this good food was allocated for soap; and, third, that in addition many millions of dollars were appropriated to subsidize the production of vegetable oils such as soybean oil, and peanut oil at the very time the animal fat lard was being allocated for soap making.

It is heartening to note that the diversion of this good food product to soap making has at last been discontinued. We have been listening to much propaganda as to the available food supplies that is not in keeping with the facts.

The food situation has now reached the point where more reliable information should come from, and more constructive approaches should be made in, high places.

An American Heritage

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STIGLER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. STIGLER. Mr. Speaker, several months ago it was my privilege to get admitted to the gallery several college girls who wanted to witness the proceedings of the House. Among those was Miss Nancy Hanck, 17 years of age.

Miss Hanck is now a student of the George Washington University of this city, having won a scholarship in June 1944. She is a lieutenant colonel of the Girls' Cadet Corps and on the junior staff of the college paper, besides being secretary of the freshman class, as well as president of the Alpha Delta Phi pledges.

This young lady is a talented dancer and has volunteered over 1,000 hours in entertaining in military camp shows for servicemen in the Military District of Washington.

A short time after her trip to the Capitol she wrote what I consider a very outstanding essay about her visit, which she called An American Heritage, and sent me a copy of the same. In times like these, Mr. Speaker, it is very refreshing to read articles on our American heritage and I am pleased to insert Miss Hanck's essay in the RECORD. It reads as follows:

AN AMERICAN HERITAGE

The lights are shining brightly in the red brick house on the corner. In the window there is a service flag with two stars on it. The family is gathered around the fireplace, reading newspapers or a magazine. The sound of laughter, mixed with radio music, echoes through the big house. All of this is part of an American heritage. The service flag in the window shows that two members of this family are fighting to keep it.

All of you have probably heard the words "American heritage" many times before, and today I would like to tell you exactly what I think those words mean.

I know that I had never even thought about it until last summer, and then something happened that made me stop and think and be glad. A friend of mine was visiting me from California, and as it was her first visit to Washington, she naturally wanted to go sightseeing. The Capitol was first on her list. We told my aunt from Oklahoma about this, and she said that since she knew a Congressman from Oklahoma, she would see if she could get passes for us to see Congress in action. She called him and told him about us, and not only did he give us the passes, but he acted as our guide through a tour of the Capitol. After we had seen all of the interesting places in the building, we went up in the gallery to watch Congress in action. As I was sitting up there in the gallery, watching and listening to all of the men that I'd read about in the papers, I began to think just how wonderful it was for me to be able to sit there and watch the law-making body of our Government. I mentioned this to Congressman STIGLER and he told me that it was all part of an "American heritage."

When you drive through Virginia and see the birthplaces of men like Henry Clay and Patrick Henry, you realize that they are all part of this heritage, as are the men that fought at Bunker Hill and in all of the battles of the Revolutionary War. But men are not all that make up this heritage. There are documents * * * The Declaration of Independence, the Constitution, the Bill of Rights, Lincoln's Gettysburg Address. And there are wars * * * the Civil War, the War of 1812, World War No. 1. And someday the present World War will take its place alongside the others. All of these things go to make up this heritage of ours.

But just exactly what is an "American heritage"? Is it democracy, freedom, loyalty, or what? I think that it is all of these things, plus a great many others. Things like being able to get as much education as you want, and reading the newspaper that you prefer. It's being able to go to the movies that you want to see, or staying at home if you want to. It's being able to stand up in a classroom and critize the foreign policy of the President of the United States, if you don't agree with it. And it's also being able to fight for your country.

A few days later, my friend and I visited the Lincoln Memorial and those two words, "American heritage," were even more firmly impressed on my mind. They were no longer just two words; they were a real, living picture. The white stone pillars, gleaming in the sunlight, seemed to bring this out. And as I walked up the steps, and looked at the statue of the Great Emancipator, the stone image seemed to gaze into both the past and the future with the same strength and serenity. And I realized that here was the true personification of an "American heritage."

Resolution of the Legislature of the State of Arizona

EXTENSION OF REMARKS

OF

HON. RICHARD F. HARLESS

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution from the Governor of Arizona, Hon. Sidney P. Osborn:

EXECUTIVE OFFICE,
STATE HOUSE,
Phoenix, Ariz., January 16, 1945.

Hon. RICHARD F. HARLESS,
Member, House of Representatives, House Office Building, Washington, D. C.

MY DEAR DICK: I am enclosing herewith a certified copy of Senate Joint Memorial 2, regular session of the Seventeenth Arizona Legislature, being a joint memorial requesting the Senate of the United States to ratify the treaty with Mexico relating to the waters of the Colorado, Rio Grande, and Tia Juana Rivers, which memorial was adopted by the Arizona State Senate on January 11 last without a dissenting vote and adopted by the House of Representatives on January 12, there being only one dissenting vote cast by that body.

I am sure you will agree that the almost unanimous action of the members of both houses of the Seventeenth Arizona Legislature reflects the true sentiment of the people of Arizona on this important matter.

May I not hope that you will use all of your influence to the end that this treaty be ratified by the United States Senate at the earliest opportunity.

With all good wishes, I am

Sincerely,

SIDNEY P. OSBORN, *Governor.*

Senate Joint Memorial 2

Joint memorial requesting the Senate of the United States to ratify the treaty with Mexico relating to the waters of the Colorado, Rio Grande, and Tia Juana Rivers

To the Senate of the United States:

Your memorialist represents: That it is the belief of this body that the pending treaty between the United States and Mexico, respecting the waters of the Colorado, Rio Grande, and Tia Juana Rivers, signed at Washington, D. C., February 3, 1944, as clarified by the protocol signed November 14, 1944, will, as it pertains to the waters of the Colorado River, prove very beneficial to the United States and to the State of Arizona.

Wherefore your memorialist, the Legislature of the State of Arizona, requests:

1. That your honorable body ratify the proposed treaty at the earliest possible date.

Adopted by the senate January 11, 1945, by the following vote: 15 ayes, 0 nays, 4 not voting.

Adopted by the house January 12, 1945, by the following vote: 48 ayes, 1 nay, 0 absent, 9 excused.

Approved by the Governor, January 15, 1945.

Filed in the office of the secretary of state, Januar 15, 1945.

"Lift Up Now Thine Eyes"

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. CANNON of Missouri. Mr. Speaker, under leave granted me, I submit for the RECORD the profound and timely address delivered by Dr. Peter Marshall in Washington Cathedral yesterday afternoon as a part of the service sponsored by the Washington Federation of Churches, in reaffirmation of the Nations faith in God, following the inauguration of the President of the United States.

Dr. Marshall, a native of Scotland, is pastor of the New York Avenue Presbyterian Church in Washington, and has served churches in Atlanta and New York City.

Incidentally, his address, Quicken the Spirit Within You—the Only Foundation for National Greatness, is carried as the feature article by the current issue of the Reader's Digest.

Dr. Marshall's philosophy might well be expressed by the concluding paragraph in that address:

"Choose ye this day whom ye will serve." For it is an imperishable verity: "No man

can serve two masters. Ye cannot serve God and mammon." That is the choice America must make we must choose God—or go to hell!

In addressing a distinguished gathering, including representatives from the executive, legislative, and judicial branches of the Government, at Mount St. Alban yesterday, Dr. Marshall said:

Text: Genesis xiii: 14, 15:

"Lift up now thine eyes, and look from the place where thou art, northward, and southward, and eastward, and westward: for all the land which thou seest, to thee will I give it, and to thy seed forever."

We in America pride ourselves upon being realists.

Let us therefore look at the situation which confronts us as individuals and as a Nation, with all the realism we possess.

Let us be clear-eyed—yes even hard-headed about it.

Against our wills, and certainly without planning it so, we are engaged in the most gigantic conflict in world history.

American boys are engaged in bloody fighting in every part of the globe.

Already this conflict has cost us many American lives, and billions of dollars, and the worst is yet to come.

The biggest and bloodiest battles are yet to be fought.

Furthermore, all of us are most uneasily aware of the fact, that, having fought the war through to a bloody but victorious end, the great battle to win the peace must then begin.

We shall be standing where Woodrow Wilson stood in 1919.

Certain questions haunt us:

Can we make a permanent peace this time?

Do we have any way of guaranteeing the rights of small and relatively helpless nations?

Can we establish economic stability in our world?

How may the German people be rehabilitated—reeducated?

How may the poison of nazi-ism be drawn from their hearts?

How can the peace be preserved so that our sons will not have to march off to another world war 25 years hence?

When we face these and similar questions squarely, let us admit that many among us are frankly skeptical.

"After all, it's a pretty rotten world," they say. "We'll just have to do the best we can—that's all we can do—and hope for the best."

A few months ago a board of four men discussed the question, What can be done with Germany?

One of the men was a Belgian, the former editor of a large Belgian newspaper. He was, he said, a realist, and his attitude was, quite frankly, that the German people were hopeless.

He felt that nothing could ever change them; therefore he had not the slightest hope for enduring peace.

The very most that would be accomplished, he thought, was to crush Germany as completely as possible. If Germany was pulverized enough, then perhaps the Third World War might be postponed for, say, 30 years.

He felt, further, that in the next war Germany will probably jump over Belgium and even England, and attack the United States. He repeated at the end of his statement that he was a realist.

Is that all to which we can look forward? Is that really the most for which we can hope, after all this misery, bloodshed, and sacrifice?

I am here to say to you that I believe with all my heart that it is the most we can hope for; if we depend solely upon human resources and human wisdom.

The stern, hard, cold fact is that the men at Versailles thought that they were using the very best of human wisdom, all the ingenuity they had, and they failed.

Do we really think that if we rely upon the same resources we shall succeed where they failed?

We would be departing from our realism, and would be taking an excursion into the realm of wishful thinking to believe that.

Let me make a suggestion which will seem fantastic perhaps, to some of you.

Let me suggest with all the fervor in me that, all other resources having failed, we seriously consider using the power and the wisdom of an infinite God to solve the problems which confront us.

That power has been available to us all the time—and we have not used it—not even sought it—just as the power latent in the Mississippi River was there for hundreds—yes, thousands of years before it was harnessed.

Men used the mighty power of the Mississippi for amusement, if they wanted to swim, to fish, or to sail; sometimes its beauty beguiled them and inspired songs and poems and pictures; sometimes it was simply an obstruction, a barrier to expansion and a hazard for their wagons of commerce and trade.

So has God's power been to many of us.

Some have regarded God's great promises in the Old Book as amusing—entertaining—even interesting—but have concluded that that sort of thing was all right for the simple orientals, for the naive and imaginative nomads of the desert, adapted to simple Galilean fishermen, but too abstract and idyllic for this hard-boiled twentieth century.

Yes, perhaps it might have been all right for them—living in far-off Palestine in the dim and distant days when the moon was a child's bubble—instead of the synthetic pearl it is today; but these men didn't have to deal with the complex problems of twentieth century civilization—and God didn't know Washington.

Some among us have used the beauty and the grandeur of God's promises in the Old Book to garnish a speech much as we use parsley on a plate of meat.

Sometimes they have even proved an obstruction when we were primarily concerned with the selfish interests of individuals or pressure groups which pose as Government.

The idea of believing them, trying them out, might be helpful to invalids and shutins, might be good for children to learn in Sunday school, but for Presidents and prime ministers, for secretaries of state and foreign ministers, for Senators and Congressmen, for captains of industry, bankers, and statesmen, they remain the one thing untried, because while they can never be forgotten, somehow they are never quite believed.

When will we become so discouraged with our repeated failures that we shall be willing to give God a chance?

How can we find God's wisdom and tap His power? I believe this verse provides a technique:

"Lift up now thine eyes, and look from the place where thou art.

"Lift up now thine eyes."

Every undertaking which succeeds, which takes civilization a permanent step forward, begins with the upward look, with a vision, with a dream, an idealistic dream, if you please, planted in someone's heart.

Abraham Lincoln looked up, and dreamed a dream of a Nation without slavery. Many of his contemporaries said that dream could never become reality, it was much too idealistic.

But it did become reality, although the Emancipation Proclamation freed the slaves from their masters, but did not make them free. Lincoln's promise has still to be fulfilled.

Florence Nightingale looked up and dreamed a dream of medical care and nursing for wounded soldiers—of angels in white ministering to the casualties so that they need not die for want of care.

Out of her dream came the glorious order of the Red Cross.

Edison looked up and dreamed a dream of a lamp that would need neither oil nor wick. Men said he was mad.

He had seen an indication that an important achievement was possible, and he experimented with it, by methods, all of which failed.

His assistant tried to sympathize with him by saying, "It's too bad to do all that work with no result."

"But," said Edison, "we have a lot of results. We now know 700 things that won't work."

Woodrow Wilson looked up and dreamed a dream of permanent world peace and a permanent world organization which would solve international problems by arbitration as they came up—in a world court.

It was idealistic—yes; as all dreams are. It failed—not because the idea was bad but because the conditions for its success were not met.

In the meantime we have discovered many more things that won't work.

Is it not time that we were willing to give God's way a chance? One would think that the rulers of the nations, the statesmen, and the politicians would be tired of trying to devise new human methods, new formulas, new declarations, new charters, new treaties, when there is an old one that has never been applied.

A famous American journalist has recently spoken of what he called the morass of Wilsonism, but you can't dismiss a dream that way. Certainly not one that has fired the hearts of the Nations; one that had more to do with Germany's collapse in the last war than anything else, and produced more hope in the hearts of men and women all over the world than anything that has happened in our time.

There has been a tendency recently to feel that because after the last war we were idealistic and aimed too high. This time we should be more cynical, more suspicious; have less faith and expectation, and aim much lower. That, we say, is being realistic. The means we used did not achieve the ends we desired. But why conclude that the end itself was wrong, just because the means proved inadequate?

Is that realism? Is it even common sense?

Our true aim is after all, exactly what Wilson's was, namely, permanent world peace, based upon a community of nations, seeking to settle international disputes without resort to war.

When our men went marching off to war in 1917 it was to certain slogans which have been sneered at by the unthinking and the cynical.

They went into this war "to end wars." That was their purpose as it was Wilson's dream. Well, it could have ended wars, if the Nations, including our own, had been willing.

They crossed the Atlantic "to make the world safe for democracy" and in order to do so they swept through the cobbled streets of Chateau Thierry and through the dark forests of the Argonne.

Despite the sneers of the men they protected at home they did exactly that—they made the world safe for democracy. It was not their fault that their valor, their sacrifice and their effort failed to produce that result for which they were willing to give their lives.

Permanent world peace, and an organization of the nations of the world to preserve that peace is our aim in this present world struggle.

No other aim is worthy of the sacrifice of millions of our sons, young, full of life, and the zest for living, our hope and our pride,

but it will not suffice us then to aim lower and achieve even less.

We are right to feel that we—on the human level—can now bring our dream of world peace into fulfillment, but we dare not leave God out again.

Our first step, then, is to "lift up our eyes unto the hills from whence our help cometh."

If we look up, we, too, can catch that dream and sense its possibility in the power of God guiding, supporting, nerving human hearts.

The second step is to look from the place where we are.

We are inclined to regard God's solutions as impractical, but they are not.

God begins with us where we are, and as we are.

If we want ripples to spread over a pool, they must begin with a minute circle in the middle and spread outward. There is no other way.

Which is to say that if we desire peace, unity, and harmony to spread over the world, it must originate with us and go outward.

There is no other place where we can begin, except with ourselves.

It is here that God's solution—far from being impracticable—is so practical that we cringe, and many of us immediately shy away.

For we love peace, but we do not always love the qualities of mind and heart that make for peace.

Let us be clear about this: God's guidance is not a question of hokus-pokus. It can only come through individuals, as we are willing to get quiet enough to hear the whispering of that voice in our hearts, as we are willing so to be cleansed ourselves that there will be nothing to obstruct the clear channel of guidance.

The guidance of God is not an empty phrase.

I personally know that full well. That God can and does guide men in real-life situations is one of the verities that has been deposited in the crucible of my own experience, for God has guided me every step of my way, from a machine shop in a tube mill in Scotland across the Atlantic because He wanted me in the ministry, to where I stand at this moment.

We must look from where we are, as a Nation.

We can see clearly enough the splinters in the eyes of other nations, the Germans and the Japanese, yes, even in the eyes of our allies, but let us not overlook the beams in our own eyes.

We are not without blame for the chaotic condition of our world.

We have been very smug, very materialistic, very selfish.

We have been very reluctant indeed to be our brother's keepers in any sense, until now we are forced into a corner where we see that the only way to keep out of the ditch ourselves, is to pull our brothers out and keep them out.

America has the opportunity to lead the rest of the world spiritually with moral power and force and to lead the way into a new and bright tomorrow. America has the wealth, the natural resources, the prestige, the ability, the brains, the genius, and the skill; the means of communication, the political forms, the people to do this. But is America good enough?

Are we good enough to assume world leadership?

That seems to be what God is laying before us—for the second time in 25 years.

Surely we all realize that it is not enough to join in singing:

"God bless America, land that I love;
Stand beside her and guide her through the night with a light from above.
From the mountains to the prairies,
To the oceans white with foam,
God bless America!
My home sweet home."

God has blessed America—in the past—and He will bless America now and in the future—if we become worthy, and if we will keep the conditions He has laid down.

"If My people, which are called by My name, will humble themselves, and pray, and seek My face, and turn from their wicked ways, then will I hear from Heaven, and forgive their sin, and will heal their land."

There are the conditions, and not until they are kept can God's blessings now be ours.

This call to repentance is sounding through America now. It is coming in many ways to many people. Your presence here indicates your own response to it.

America will never repent until you and I repent. America will never keep God's conditions, until they are kept in your life and in mine. For we are America.

America is made up of 130,000,000 people like you and me. We must learn our lesson this time—before it is too late.

God has a plan for America. Her history is proof of that. God's hand has been in her history from the beginning. No thoughtful student of American history can doubt it.

Washington said: "No people can be bound to accept and adore the Invisible Hand which conducts the affairs of man, more than the people of the United States.

"Every step by which they have advanced to the character of an independent nation seems to have been destined by some token of Providential agency."

God's hand is upon us—at this hour—God is looking to us.

If our Nation was founded under God, as we believe it was, then a great responsibility rests upon us.

America may be humanity's last chance. We don't know. But it certainly is humanity's latest chance, God's latest experiment.

And if America fails to realize her destiny under God, then the opportunity may go to another nation. God has waited—waited a long time. He will not wait forever.

We know, as Christians, that lasting peace issues from righteousness. The eternal order is righteousness first * * * and then peace.

God has said so, and history verifies the Word of God.

Christ must be the Unseen Delegate at the peace table. He is vitally concerned. Can we doubt that for a moment? God is more anxious to have peace than we are.

Surely Christ will be at the peace conference—with His wounds—the marks of the nails—and His crown of thorns. Surely the shadow of a cross will fall over the peace table.

But how can these men see it? How can they be made to feel it?

This we can say, with all the fervor and conviction of our Christian faith—unless the spirit of Jesus Christ pervades the peace conference—they will labor in vain who write their signatures to any treaty.

God must be consulted about the peace: about the solution of the problems that vex us, the problems that keep our statesmen awake at nights. God has the answers to them all, and He will give them to us if we seek them, and are willing to follow His guidance.

Miracles could happen at the peace conference. Miracles must happen, if another world war is to be avoided, and it is for these miracles that we pray. And the miracles will happen here in America, too. The President yesterday took the oath of office—an impressive oath which ended with these words: "So help me God."

God will help our President. God wants to help him. Without God's help he will surely fail.

He must seek God's help. So must every man and woman sharing responsibility of government under him. So must every Senator and every Congressman. So must every man and woman in America.

God helping us, we cannot fail this time. God helping us, we shall keep faith with the men who have fallen, and those who will give to the last full measure of devotion that we might have another chance to make America what we want her to be—God's own country!

Present Agricultural Programs Not Based on Maximum Food Production

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, the present farm-labor problem is primarily due to the false food pictures presented by the political agriculturists during the past few months. In addition to the word pictures, we have witnessed the inauguration of programs that most assuredly have misled the American people as to the food supplies of the Nation.

For example, did you know that wheat was being exported up until April 1943 and that 25 to 30 cents per bushel was spent to get rid of it? Did you know that on November 15, 1944, this export program was again put into operation, and that already "Exporters have agreed to export a total of 285,908 bushels of wheat"? Did you know that "the average amount that will be payable upon exportation is 33.43 cents per bushel"?

Did you know that 131,349 bales of cotton with an export subsidy of $20 per bale was paid since the export program was revived in November?

Does it make sense to use manpower, fertilizer, and production subsidies for crops such as wheat and cotton and then turn around and pay 33 cents per bushel and $20 per bale in order to get rid of them to say nothing about the manpower, transportation, and shipping space used in order to dispose of them?

The following letters and articles are evidence of the situation:

WAR FOOD ADMINISTRATION,
Washington, September 12, 1944.

Hon. REID F. MURRAY,
House of Representatives.

DEAR REID: Reference is made to your inquiry of August 22 concerning the subsidizing of exports of wheat to Mexico.

No agency of the Department of Agriculture or War Food Administration is subsidizing the exportation of wheat or wheat products to Mexico. We believe your reference may be to a flour subsidy program administered by the Defense Supplies Corporation.

Sincerely yours,

MARVIN JONES,
Administrator.

The following is an article which appeared in the Chicago Journal of Commerce of October 19, 1944:

C. C. C. AND TRADE AGREE ON WHEAT EXPORT SUBSIDY

WASHINGTON, October 18.—Agreement on the general principles to govern wheat and flour export subsidy programs designed to take care of this country's surpluses was

announced by the Commodity Credit Corporation today following meetings held with industry advisory committees. However, another meeting between flour millers and C. C. C. officials, or a joint meeting of flour and grain trade representatives may be necessary before details of the program can be fully developed.

Although both industry groups and C. C. C. are reported in agreement on the general outlines of the program as a result of two meetings held here last week, some points still remain to be cleared up. Chief among these is whether exporters will be required to buy C. C. C. wheat or whether they can buy on the open market and still be eligible for the reduced rate.

C. C. C., it is understood, favors a plan whereby agency-owned stocks of wheat would be offered first to exporters, and grain trade representatives are in agreement. The millers, however, do not want to be compelled to buy C. C. C. wheat. While there is no objection to buying agency-owned wheat, officials of the industry said, they want some freedom of choice as a protection against out-of-position stocks or the wrong types of wheat.

Although generally referred to as a subsidy program, the actual plan probably will be a sort of exchange-sale agreement, with no direct subsidy payment, according to C. C. C. officials. Tentative plans provide that exporters will buy wheat at prevailing domestic prices, sell it to C. C. C. at the same rate, and then buy back at the established export rate.

The export rate will be a price which will permit competition with other exporting nations, at present about 40 cents under the New York market level. Under the tentative program, prices at which C. C. C. will resell at each market will be announced each day, sometime after the Chicago market closes. If no announcement is made, the preceding day's prices will remain in effect. Differentials between markets will be geared to world competitive prices, it was explained.

Official estimates of the program's cost are not available, but if the United States exports approximately 72,000,000 bushels this year at a price 40 cents below the market price, approximately $28,000,000 would be needed. A congressional appropriation is expected to be asked as soon as Congress reconvenes in November.

The following is a letter received from Grover B. Hill, Acting Administrator, War Food Administration, dated December 26, 1944:

WAR FOOD ADMINISTRATION,
Washington, December 26, 1944.

Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: This will acknowledge your letter of December 11 inquiring as to whether or not we currently have an export program for cotton. We are enclosing a copy of the announcement of November 11 giving the details of the export program for cotton and wheat.

The exports of raw cotton are currently being made at an export differential of 4 cents per pound. The Commodity Credit Corporation owns a large stock of cotton, and we are, as much as possible, liquidating these stocks through the export program. If the Corporation does not have stocks available to meet the requirements of the export market, the exporter purchases the cotton in the open market, sells the cotton to the Corporation, and the Corporation, in turn, resells the identical cotton to the exporter at the 4-cent per pound export differential.

The funds of Commodity Credit Corporation are used in making exports of this kind. We are endeavoring to handle the export program so that the maximum amount of cotton will be sold from the stocks of the Corporation and that the minimum amount of cash will be required.

Sincerely yours,

GROVER B. HILL,
Acting Administrator.

The following is a letter received from the Commodity Credit Corporation dated January 5, 1945:

UNITED STATES DEPARTMENT
OF AGRICULTURE,
COMMODITY CREDIT CORPORATION,
Washington, D. C., January 5, 1945.

Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: This is in reply to your letter of December 30, in which you requested information concerning wheat, wheat flour, and cotton export programs.

The following data in regard to wheat and wheat flour are based on transactions entered into through December 28, 1944, as reported to this office.

No actual exportations of wheat have taken place under the program. However, exporters have agreed to export a total of 285,908 bushels of wheat in the form of wheat. The average amount that will be payable upon exportation is 33.42 cents per bushel.

Exports of flour equivalent to 6,680 bushels of wheat have been made under the wheat flour program. However, exporters have agreed to export flour equivalent to 4,906,816 bushels of wheat and the average payment per bushel when exportations are made will be 14.92 cents.

The program was inaugurated on November 15, 1944. Payment rates for exports in the form of wheat under the program have been as follows: For Atlantic coast and Gulf ports, 34 cents per bushel from the time the program was inaugurated until the present time; for exports through rail points to Mexico, 6 cents per bushel for the entire time the program has been in effect; for exports from Pacific coast ports, the rates have been 29 cents per bushel from November 15 through November 27, 30 cents per bushel from November 28 through December 4, and 29 cents per bushel from December 5 to the present time. Effective January 4, 1945, the foregoing rates are used only in determining the export payments on flour since the program was temporarily suspended with respect to exports in the form of wheat.

The payment rates for flour are determined by subtracting the flour-production payment of Defense Supplies Corporation from the rate established for exports in the form of wheat. For exports from the Atlantic coast and Gulf ports the payment rate was 16 cents per bushel from November 15 through November 30, and 15 cents per bushel for the month of December. There is no payment on flour exported by rail to Mexico. For exports from the Pacific coast the payment rates have been 11 cents for November 15 through November 27; 12 cents for November 28 through November 30; 11 cents for December 1 through December 4; and 10 cents for the remainder of December.

Data requested in regard to the cotton export program are as follows:

Exporters had registered sales, through December 30, covering 131,349 bales of cotton for export under the program.

The export price of cotton, as announced November 15, is based on the domestic price less 4 cents per pound gross weight, or approximately $20 per bale difference in the domestic and export price.

Sincerely yours,

C. C. FARRINGTON,
Vice President.

My point in presenting the above are, first, it would be a constructive aid to the war effort if programs that were of questionable value in peace were discontinued during the war.

The second constructive suggestion is that it would be well to foster a food production program based on war needs rather than on one that wastes manpower and fertilizer in producing crops that require an export subsidy in order to get rid of them with added waste of manpower and transportation.

The following article is from the December 29, 1944, edition of the Los Angeles Times:

WHEAT PILED ON OPEN LOT WILL BE USED

Disposal of 26,000 tons of Australian wheat now stored on an open lot at 5945 Malt Avenue, is certain when current supplies of United States-grown feed grain run short about February, officials of the Commodity Credit Corporation, Federal agency in charge of grain, declared yesterday.

The wheat, arrival and processing of which was first reported in the Times, November 1, is the remainder of a contract for 50,000 tons purchased in Australia last February at the behest of the California State Department of Agriculture when a shortage in feed was forecast.

SOME TO BE SALVAGED

Rain will injure only the top layer of the pile, Earl C. Correy, regional director of the C. C. C. said here yesterday, and added that even much of the rain-soaked wheat will be salvaged for hog feed.

A plant to roll the grain is being completed on a lot near the mountain of wheat and will be in operation January 20, Corey said.

The Miller Malting Co. provided the storage lot free of charge to the Government. A "live wire" fence guarding the pile is intended solely to keep away livestock grazing in the area.

The Australian wheat is restricted to the seven southern California counties not growing wheat because of an Australian disease called flag smut.

ARRIVES LATE

When the wheat was first purchased in Australia it was thought that it would arrive here not later than May to help in alleviating feed shortages. Due to diversion of ships, the cargoes didn't arrive until October 4 and then in rapid succession at a time when the Nation enjoyed a bumper feed crop.

Because storage facilities were lacking 26,000 tons were stored in the open and the other 24,000 tons were distributed to feeders. The total cost of the Australian contract was about $2,000,000, Corey said.

From reading the letters and articles is it any wonder that President Roosevelt, General Hershey, and the local draft boards have been led to believe that food is not as important as it really is?

When our agricultural powers promote programs that expend millions of hours of manpower and millions of dollars in money to produce a crop and then turn around and spend millions more hours of manpower and other millions of dollars of money in order to get rid of the crop, it is pretty difficult to make anyone, not familiar with the situation, believe that there is a serious food problem.

The departments of the W. F. A. have been carrying on many activities that in my judgment are not contributing to the highest production of food, nor in making best utilization of manpower.

What Is An "Un-American Activity"?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. MUNDT. Mr. Speaker, "What is an un-American Activity?" In an effort to secure considered and intelligent answers to that question, I sent out letters last Saturday to 100 prominent American citizens asking them to let our newly created standing Committee on un-American Activities and the Congress have the benefit of their thinking as this unprecedented standing committee begins facing up to its great responsibilities.

As a member of the former Dies committee and as one of the only two members of that committee to be reappointed to serve on this new House Committee on un-American Activities, I know from personal experience some of the problems and the pressures which our group will face as we proceed with our work. In order to best assure the success of our committee activities and to best serve the interest of this Republic, it seems to me it is highly important that we set up certain sound and workable criteria for determining what is and what is not an un-American activity.

To that end I have written this group of 100 Americans some of whom have looked with favor and some with disfavor upon the work of the preceding House Committee on un-American Activities. A study of the list of names to whom my inquiry was sent will indicate, I feel certain, that a cross section of replies received from this group should accurately and fairly reflect prevailing American opinion.

Our committee will begin its work with new and increased authority, under a new chairman, with substantially a new membership but its mandate remains the same as that given the Dies committee—to expose and eradicate un-American activities in the United States. We begin our work with whole cloth and a new pattern. I sincerely hope that those to whom letters were mailed on Saturday will respond with frank and helpful letters. For the information of the Congress and the country, I am including with these remarks a copy of the letter which I mailed in this connection together with a copy of the data sheet which accompanied it:

COPY OF LETTER SENT BY CONGRESSMAN MUNDT TO EACH INDIVIDUAL NAMED ON ATTACHED LIST

CONGRESS OF THE UNITED STATES,
Washington, D. C., January 20, 1945.

DEAR FELLOW AMERICAN: May I take just a few minutes of your time to discuss with you what I believe you will agree is a very important topic? * * * What policies should be followed by the recently created, permanent House Committee on Un-American Activities?

The writer was for the past 2 years a member of the former Dies committee and is one of the only two members of the newly appointed committee who were selected from the old membership of the Dies committee. Consequently, I know something of the problems and the pressures which face our new committee.

One of the factors which disturbed me often as a member of the Dies committee was the absence of a suitable and working criterion to determine what does and what does not comprise an un-American activity. We all know that there are some activities which are un-American—whether we are at war or at peace—and I am sure all right-minded Americans oppose such activities. I feel that a committee which limits its functions to exposing and helping to eradicate activities of this type should have, and will receive, the support of Americans in every walk of life. It is my hope that this new committee may so serve America.

This letter is being sent alike to important Americans who were supporters and critics of the former Dies committee (a list of those receiving this letter is enclosed). It is a sincere effort to determine and define the proper scope of activities for this new committee. Will you, therefore, please write me your suggestions with regard to the proper scope of activities which should engage the attention of the new House Committee on Un-American Activities? Your considered reply will be appreciated and it will be most helpful to our committee in developing criteria for determining whether certain activities should or should not come within the purview of our authority. If you so specify, your suggestions will be kept in confidence although their maximum helpfulness will accrue if you permit their full use in helping the committee and the Congress chart the course to be taken by the standing committee on un-American activities.

Too often in America, we are all inclined to attribute un-Americanism to the political, economic, and social theories with which we disagree. Obviously this is not the proper test. Unless you feel that there are no un-American activities in this free land of ours, I shall therefore appreciate your writing me the benefit of your own thinking in connection with the question posed in the preceding paragraphs.

With kindest regards, and hoping to hear from you before February 10, I am,

Cordially yours,

(Signed) KARL E. MUNDT,
Member of Congress.

DATA SHEET MAILED WITH FOREGOING LETTER TO PROMINENT AMERICANS IN VARIOUS FIELDS OF ENDEAVOR AND WITH DIFFERING POINTS OF VIEW

(From the office of Hon. KARL E. MUNDT, Republican, South Dakota, room 1206, New House Office Building, Washington, D. C., former member of the Dies committee, member of the newly created Standing Committee on Un-American Activities in the House of Representatives)

The accompanying letter is being sent to the prominent Americans whose names appear below. It is being sent to these citizens because each of them is helping to shape public opinion and determine public policy in America and because they represent an honest cross section of opinion concerning the past activities of the Dies committee and with regard to the wisdom of the House of Representatives in establishing a permanent Standing Committee of the House on Un-American Activities.

Regardless of whether you think the establishment of this committee was wise or unwise, it is now an accomplished fact. This action is unprecedented in American history and your recommendations are solicited in response to the question, "What criterion should this committee use in determining the type of activities which this committee should classify as 'Un-American' and to which it should devote its attention?"

Obviously, neither witch hunting nor white washing can be a part of this new committee's performance if it is to render a worth-while public service. This is a new committee; it is not a creature of the old. We start our work with whole cloth and a new pattern. Will you please help design the pattern governing our activities by sending me your concept of what comprises an "un-American activity."

The following list is a complete enumeration of those receiving this request:

The Governors and one leading newspaper of each of the four most Democratic States in the Union and of each of the four most Republican States in the Union, as indicated by statistics of the last national election:

Gov. Thomas L. Bailey, Mississippi.
Gov. Ransome J. Williams, S. Carolina.
Gov. Ellis G. Arnall, Georgia.
Gov. Chauncey Sparks, Alabama.
Gov. Andrew F. Schoeppel, Kansas.
Gov. Dwight Griswo'd, Nebraska.
Gov. M. Q. Sharpe, South Dakota.
Gov. Mortimer R. Proctor, Vermont.
W. W. Ball, editor, News and Courier, Charleston, S. C.
Frederick Sullens, editor, Jackson Daily News, Jackson, Miss.
Ralph McGill, editor, Atlanta Constitution, Atlanta, Ga.
George Cox, editor, Mobile Press, Mobile, Ala.
Milton Tabor, editor, Topeka State Capital, Topeka, Kans.
H. E. Newbranch, editor, Omaha World-Herald, Omaha, Nebr.
Fred C. Christopherson, editor, Daily Argus Leader, Sioux Falls, S. Dak.
E. F. Crane, editor, Vermont Free Press, Burlington, Vt.

Heads of the following influential organizations: The American Legion, Edward N. Scheiberling, Albany, N. Y.; Veterans of Foreign Wars, Carl J. Shoenenger, Kansas City, Mo.; Benevolent and Protective Order of Elks, Frank J. Lonegran, Chicago, Ill.; Knights of Columbus, Francis P. Matthews, New Haven, Conn.; National Federation of Women's Clubs, Mrs. John L. Whitehurst, Washington, D. C.; American Association of University Women, Dr. Helen C. White, Washington, D. C.; Federal Council of Churches, Dr. G. Bromely Oxnam, New York City; Daughters of the American Revolution, Mrs. Elizabeth M. Cox, Washington, D. C.; Imperial Potentate of the Shrine, Alfred G. Arvold, Fargo, N. Dak.

Prominent radio commentators: Walter Winchell, H. V. Kaltenborn, H. R. Baukhage, Richard Harkness, Raymond Gram Swing, Fulton Lewis, Jr., Drew Pearson, Upton Close, Lowell Thomas, and Earl Godwin.

Prominent newspaper columnists: David Lawrence, Mark Sullivan, Gould Lincoln, Arthur Krock, George Rothwell Brown, Ray Tucker, Marquis W. Childs, Arthur Sears Henning, Thomas L. Stokes, Ernest K. Lindley, Eleanor Roosevelt, Dorothy Thompson, Walter Lippman, Paul Mallon, John O'Donnell, Constantine Brown, Lowell Mellett, Samuel Grafton, Frank Kent, Westbrook Pegler.

Editors of leading magazines in public opinion field: Time, Henry R. Luce; Saturday Evening Post, Ben Hibbs; Colliers, Wm. L. Chenery; Liberty, Fulton Oursler; News Week, Malcolm Muir; Look, Harlan Logan; Reader's Digest, DeWitt Wallace; Cosmopolitan, Frances Whiting; The American, Sumner Blossom; Pathfinder, Robert West Howard.

Editors of selected metropolitan newspapers: New York Times, Charles Merz; New York Herald Tribune, Ogden Reid; PM, J. P. Lewis; Hearst newspapers, Wm. Randolph Hearst; Chicago Tribune, Col. Robert McCormick; Chicago Sun, Marshall Field; Chicago

Daily News, J. S. Knight; Des Moines Register-Tribune, W. A. Waymack; Los Angeles Times, S. D. Hotchkiss; Washington Times-Herald, Eleanor Patterson; Washington Star, T. W. Noyes; Washington Post, Eugene Meyer; Washington News, John T. O'Rourke; Denver Post, W. C. Shepherd; Kansas City Star, H. J. Haskell; Minneapolis Star-Journal, B. L. Walter; New Orleans Times-Picayune, L. K. Nicholson; Christian Science Monitor, Erwin D. Canham.

Prominent counselors of American thought: Archbishop Francis J. Beckman, Dubuque, Iowa; James Farley, New York City; John W. Davis, New York City; John T. Flynn, New York City; Robert Hutchins, Chicago, Ill.; Samuel L. Pettingill, South Bend, Ind.; William Green of A. F. L., Washington, D. C.; Harry Emerson Fosdick, New York City; Gen. Robert E. Wood, Chicago, Ill.; Rabbi Stephen S. Wise, New York; Rabbi Abba Silver, Cleveland; Herbert C. Hoover, New York City; Harold L. Ickes, Washington, D. C.; Henry A. Wallace, Washington, D. C.; John L. Lewis of U. M. W., Washington, D. C.; Philip Murray of C I. O., Washington, D. C.; Fiorello LaGuaria, New York City.

It will be greatly appreciated if those whose names appear on this selected list will write their recommendations to Congressman MUNDT before February 10 so that their suggestions may fulfill the maximum public service in developing a sound, workable set of criteria for directing the activities of the Committee on Un-American Activities.

Radio Address of Hon. Chester Bowles

EXTENSION OF REMARKS

OF

HON. EMILY TAFT DOUGLAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mrs. DOUGLAS of Illinois. Mr. Speaker, in the absence of the gentleman from Illinois [Mr. SABATH], under unanimous consent, I extend my remarks and include therein a radio address by O. P. A. Administrator Chester Bowles concerning the problems of servicemen's families.

Hello everybody. I have as my guests this week two people who are going to tell you about the most important money in the country. It is not a big sum. Not the confusing billions you are probably tired of hearing about. It is quite a small sum. Only $80. Yet I think you'll agree it is the most important money in the country when you have heard from these two people.

One of them is the wife of a serviceman who, with her little girl, is living on a dependency allotment of $80 a month. The other is a veteran of this war * * * a marine who was wounded at the Marshall Islands and is now finding his place again in civilian life.

The problems and plans of these 2 people represent the problems and plans of nearly a sixth of our Nation. Yes, nearly 21,000,000 Americans. That includes all our servicemen and their eight to nine million wives, children, and parents who depend on servicemen's allotments. To all these people, our fight to keep down prices and rents on the home front is just about the most important battle of this war. For it is a battle whose outcome will determine how much, or how little security and happiness all of us in America will have in the months and years immediately ahead.

In that battle every conscientious American should enter with an alert mind and vigorous action. The great majority of businessmen, of labor leaders, of farmers and consumers have already done so. They stand solidly behind our efforts to hold down prices and hold down rents. They have given full and loyal support to O. P. A.'s price and rent control program.

But if those few greedy, home-front saboteurs of our war effort—the chiselers and the pressure groups—do get the upper hand in our battle against higher prices, if their efforts should succeed and O. P. A. should fail, all groups, all families would have to pay the price in hardship and privation.

But the wrecking of price and rent control would strike most brutally at one group in particular—our servicemen and their families.

My first guest here tonight is the wife of a serviceman, Mrs. Nelson Post. Mrs. Post has had some first hand experience with living on an allotment of $80 a month and I want her to tell you about it. Mrs. Post, suppose you tell us first just where you live.

Mrs. POST. I live with my mother, Mr. Bowles, in Silver Spring, Md. When my husband went into the air corps last April we decided that was about the only thing I could do because of the baby. I know I'm lucky that mother was able to have me stay with her.

Mr. BOWLES. What did you plan to do—share your rent with your mother?

Mrs. POST. Yes. I was to share half of all the expenses. But I found out that even half the rent was more than I could pay with only $80 a month coming in. So what I've done is to have two roomers who help me pay my share. Now I pay just $20 a month rent out of my allotment.

Mr. BOWLES. How about food expenses, do you keep track of your food costs.

Mrs. POST. Yes. They come to about $7.50 a week for myself and the baby. That's about $30 a month, really $35 when I add the milk bill. We get plenty to eat on that, but it's plain food, just the essentials.

Mr. BOWLES. Do you buy different kinds of meals now from those you had before your husband went into the Air Corps?

Mrs. POST. Oh, yes. We just—well, never have any of the luxuries any more. I always get the fruit and vegetables we need, especially for the baby, of course. But I mean we have stew more often instead of a nice piece of meat, and more things like spaghetti and macaroni to help fill out. I can save almost $1 a week that way. Maybe $7.50 seems a lot just for food for myself and a 2-year-old baby. The truth is some of it goes for company. We can't afford to go out now and so having friends in is our recreation, you might say. It helps when you're alone. But when company comes we just have family meals, nothing fancy.

Mr. BOWLES. Then, as I understand it, altogether you spend $35 a month for food and $20 for rent. That's $55 spent already out of your $80 monthly allotment. What happens to the other $25?

Mrs. POST. Well, $10 of it goes for clothing expenses—mostly for the baby. She grows out of things and wears them out so fast I just have to replace them. When I buy any big things for her—like a snowsuit—I have to spread the cost over several months to come out right.

Mr. BOWLES. I don't believe you can buy much new clothing for yourself at that rate.

Mrs. POST. Well, no, I can't. Even a cheap dress is out of the question. I get along on what I have. I've kept one outfit pretty nice for when I go out—and I guess I still look presentable.

Mr. BOWLES. You certainly do. Now after that $10, there's still $15 left of your $80 a month to be accounted for. Where does that go? I know these are pretty personal questions, Mrs. Post, but I hope you won't mind answering. I think it will help many people understand just how closely a serviceman's wife with a child has to budget to make ends meet on an $80-a-month allotment.

Mrs. POST. I guess many service wives are spending just about the same way I do. So what I'm telling isn't really very personal, Mr. Bowles. Well, about that other $15. Ten dollars of it goes to keep up the car. It's an old car, and so many things need to be done for it all the time. It always seems to come to about $10 a month.

Mr. BOWLES. So that leaves $5. From what you've told me, any expense except rent, food, clothing, and your car has to come out of that last $5 a month.

Mrs. POST. Yes, it does, Mr. Bowles. A movie sometimes, but not very often any more—or a little gift for mother. And stamps to write letters to my husband. Stamps mount up to a lot when you write often as I do—almost $1 a month. That $5 doesn't last very long.

Mr. BOWLES. What have you done when there was some large, extra expense—say a dentist bill, or doctor bills for the baby?

Mrs. POST. Well, there was only one thing I could do. That was go into some of the savings my husband and I put by before he was drafted. I mean the savings we had in the bank—not the War bonds. I hope I won't ever have to touch those. Those are for the time my husband gets back and we can really, well, start a home together. I don't want to do anything to spoil that. Our whole life now is just waiting for that time.

Mr. BOWLES. I want to ask you a very frank question, Mrs. Post. What would you do now if prices went up—if rent went up? Let's put it like this: Suppose the efforts of the pressure groups and profiteers were successful in raising prices and rents. Suppose the cost of living had risen as much as it did by this time in the last war. The $80 allotment you get now would be worth only $56 today. Fifty-six dollars instead of eighty. What would that mean to you? What would you do?

Mrs. POST. Well, I couldn't pay more than I do now for anything and still make the $80 a month go around. I guess there would be only two things I could do. I could take the War bonds we've been saving and live for a little while, anyway. That would mean nothing left for our future together at all. Or I could leave our baby with mother and go to work. I wouldn't want to leave the baby—it means so much to me, and I think to her—when my husband isn't home. I would be afraid to tell him, I think, if price control stopped. He would worry about us all the time. He would never be sure we were all right. And I would never be sure either if prices and rents were not controlled.

Mr. BOWLES. Thank you, Mrs. Post. I'm sure that your story sounds familiar to a great many who are listening. Not only those eight or nine million of you who as wives, children, or parents are dependent on our servicemen's allotments but all of you who must live on small salaries or pensions or incomes that simply will not stretch any more.

Now, let's hear what one of our servicemen thinks about price control. My next guest is Mr. Bernard Redmont, until recently a sergeant in the marines. Where did you serve with the marines, Mr. Redmont?

Mr. REDMONT. In the Marshall Islands, Mr. Bowles. I was wounded in action there and got my discharge papers last September.

Mr. BOWLES. You have a family?

Mr. REDMONT. Yes. I'm married and we have a 2-year-old son. When I was overseas they had to depend on their $80 a month allotment just like Mrs. Post.

Mr. BOWLES. How did they get along?

Mr. REDMONT. Now that I'm back, I know it was plenty tough. I suspected it when I was away, though her letters were always cheerful. So I worried, just like all the other guys with families back here, no matter how cheerful the letters are they get from home.

Mr. BOWLES. Do the servicemen you met think our O. P. A. program here is doing a good or bad job of keeping prices and rents down?

Mr. REDMONT. They think it's such a good job they can't quite believe it. That's why they worry. They're afraid the chiselers and cheaters will mess things up. Of course, most servicemen have a chip on their shoulder about the home front. It's only natural. Most of us are young. We were just getting a start in life. We hadn't time to put aside much in the way of savings. We all had a lot of plans that had to be shelved. And now * * * if we're lucky enough to come through it all * * * we'll have just been * * * well, marking time for 2 or 4 or I don't know how many years. It makes you see things differently. Price and rent chiselers would change their tune if they had to answer to a group of servicemen. Your G. I. knows the O. P. A. boards and O. P. A. rent people are doing a great job and deserve a whale of a lot of credit for the way they're protecting servicemen's families today from those chiselers.

Mr. BOWLES. Our local O. P. A. boards and O. P. A. rent office do deserve a lot of credit, Mr. Redmont. And not only for the tough, day-to-day job they're doing. By their work in keeping down prices they're building a good, bedrock foundation for a post-war prosperity that will insure jobs of all returning servicemen. I'll tell you why. Do you have any War bonds?

Mr. REDMONT. Sure. That's where I've put all the money I could save. Not much, maybe $10 a month while I was in service. But those bonds are a start toward our future home.

Mr. BOWLES. Our servicemen altogether have put over 1½ billion dollars in bonds since the war began.

Well, you wouldn't remember what happened after the last war. But that time, the selfish pressure groups who wanted higher prices had their way. If they could do it again, if price increases were allowed to reach to the inflationary peak they did in the last war, every $100 you save today would be worth only $61 before that inflation ended. And that's only part of it. Like the last time, the inflation bubble would burst. And our servicemen would come home * * * not to jobs and the future they deserve * * * but to another depression.

Mr. REDMONT. From what I've seen, servicemen just wouldn't stand for that, Mr. Bowles. Price control has got to work. I've heard too many servicemen say, "They'd better make it work."

Mr. BOWLES. Thank you, Mr. Redmont. Yes; all of us together had better make price control work.

Our servicemen fighting on Luzon, on the frozen ground of Belgium and Italy, are not here to fight our home-front battle against higher prices. That battle they have entrusted to us, for the protection of us all. But through the letters they get now, and in what they find when they come home, they will know how well we are doing the job they have entrusted to us. They will know. And if that job is not done, if price control fails, they will know who its enemies have been.

All of us working together must do this job of protecting servicemen's families, as well as ourselves, from the soaring rents and prices that cause inflation. We must not fail. With your help, we will not fail.

Good-bye to you all until next week.

Tydings Amendment Still Law

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. H. CARL ANDERSEN. Mr. Speaker, last January 10, 52 Congressmen of both parties met and discussed the now famous directive No. 288 put out by General Hershey to the State directors of selective service on January 3.

A bipartisan committee of 11 was appointed at that gathering and at the call of this committee nearly 200 Congressmen and others met with General Hershey last week and he was urged to review the directive as put out by himself and send out a clarification thereof.

As one of the members of this committee of 11 who were interested in securing prompt action before untold damage has been done to the farm labor supply of America, I was personally glad to be invited to the executive meeting of the House Committee on Agriculture yesterday. General Hershey at that meeting agreed to send out a correction on State directors advice No. 288 and at this point I quote that explanatory directive sent to all State directors and then to all local boards:

Questions of interpretation of State directors advice No. 288 have been brought to my attention by Members of Congress and by others.

The directive of January 3, 1945, State directors advice No. 288 did not change or modify in any manner the Tydings amendment. The opinions and findings contained in State directors advice No. 288 were for the consideration of the local boards in determining the classifications of registrants in the age group 18 through 25.

Section 5 K of the Selective Training and Service Act, known as the Tydings amendment, places upon each local board the responsibility to determining, subject to appeal, in the case of the individual registrant whether or not the registrant meets the requirements prescribed by this section.

Notify all local boards immediately.

It is my feeling that the confusion arising out of the January 3 directive will be erased and corrected to a large degree by the issuance of this explanatory directive by General Hershey. We, as members of the unofficial committee of 11 who commenced the agitation for reconsideration of directive No. 288, appreciate the action of General Hershey in collaboration with the House Committee on Agriculture in seeing that this procedure was followed.

I submit a letter from Mr. Edward A. O'Neal, president of the American Farm Bureau Federation, to Director James F. Byrnes of the Office of War Mobilization and Reconversion relative to the farm labor situation:

JANUARY 17, 1945.

Hon. JAMES F. BYRNES,
Director of War Mobilization and Reconversion, Washington, D. C.

MY DEAR DIRECTOR BYRNES: The recent instructions sent out by Selective Service System Headquarters requiring reexamination and preinduction physical examinations of all deferred registrants in agriculture are causing a lot of confusion.

We are getting many distressing appeals by telephone, telegraph, and letter indicating that a great many farmers are panicky over the situation, as they do not see how they will be able to continue operations at present levels and meet their food production goals, if they lose these trained key men. Apparently the impression has gone out pretty generally over the country that these regulations mean, for all practical purposes, the nullification of the Tydings amendment requiring the deferment of all essential agricultural workers who cannot be replaced.

Another thing which is very upsetting is the requirement for preinduction physical examination. The mere fact that every man is called up for a physical examination before his essentiality is determined, creates such uncertainty that many of these young men will leave the farm, even though they are urgently needed.

As you know, the supply of farm labor now is the lowest on record, and farmers have been able to meet their food production goals only by working long hours and by utilizing large numbers of elderly people, women, and children. There are a great many cases where the person deferred under the Tydings amendment is the only able-bodied person, and is the key man upon whom the whole farming operations depend—his work being supplemented by an elderly person and, in some cases, by children, who could not carry on the farming operations at their present level without this key person.

It is my understanding that these resources of deferred registrants have been pretty thoroughly combed over already. I am convinced that if any large number of these key essential workers are taken off the farm it will result in a substantial reduction in production of food.

We understand that it was your intention that the provisions of the Tydings amendment be strictly observed. The reports coming to us indicate that the recent instructions are being interpreted in such a manner that may result in largely nullifying the Tydings amendment.

I wish to respectfully urge that you immediately review this whole situation in the light of the possible effects on food production and take such additional steps as may be necessary to reassure farmers by clarifying the intent and purpose of your recent order with respect to farm deferments and assuring farmers of an adequate supply of dependable labor necessary to meet their food-production goals.

Another phase of the farm-manpower problem which we believe needs immediate attention is the holding of the farm men or men who are rejected for military duties because of physical disabilities. Under the present interpretation of the regulations, many of these men may be lost to agriculture unless some further instructions are given to draft boards.

I wish to strongly urge that appropriate steps be taken immediately, instructing local draft boards to prevent all deferred registrants in agriculture who are rejected for military service because of physical disabilities from leaving essential activities in agriculture unless the draft board determines they have good cause. It is our understanding that orders were issued recently requiring this to be done in the case of industrial workers. We feel that the same protection should certainly be given agriculture.

Sincerely yours,

EDW. A. O'NEAL,
President.

Mr. Speaker, the unofficial committee of 11, heretofore referred to, worked for several days in drawing up a resolution to be submitted to the Congress by the gentleman from North Dakota [Mr. LEMKE], chairman of this committee. I am pleased to note that Senator BUSHFIELD, of South Dakota, yesterday introduced in the Senate this resolution as prepared by our committee of 11.

Furthermore I have received the following statement of Mr. W. R. Ogg, director, Washington office, American Farm Bureau Federation, before the House Military Affairs Committee on January 18:

Farmers can rightly be proud of their war record. Despite a growing shortage of farm machinery and ever-growing shortage of labor, and many other handicaps, they have produced record-breaking supplies of food, for 4 successive years, in order to meet the needs of our armed forces, our allies and our civilian population. As a result of this all-out effort, our armed forces and our civilian population have been better fed than in any other war in our history.

There have been no strikes on the farm front, and no slow-downs of production. Despite harassing restrictions and impractical regulations, farmers have gone about their production job trying to do their utmost to meet their food-production goals. They have only been able to accomplish these phenomenal results by working much longer hours and by utilizing large numbers of elderly people, women, and children. Farmers do not have a 40-hour week, with time and a half for overtime, and double pay for Sundays and holidays. The farmers' work week is much longer than the national 48-hour week in war industries. Farmers in general have worked 60, 70, and as high as 80 hours a week to produce food and fiber needed for the winning of the war.

Congress recognized early in the war that food was just as vital as munitions for the winning of the war and enacted the so-called Tydings amendment requiring the deferment of all essential workers in agriculture who cannot be replaced. No responsible farmer or farm organization seeks any selfish advantage or protection for any worker engaged in agriculture who can be replaced. The lists of agricultural deferments, especially those between the ages of 18 through 25 years, have been repeatedly combed over thoroughly, and it is our belief that the agricultural deferments have been combed down to the point where, with very limited exceptions, they are the most efficient of all agricultural workers.

Farmers are greatly disturbed over the recent directive issued by Justice Byrnes and the regulations issued by selective service directing the reexamination and requiring preinduction physical examination of all deferred registrants in agriculture between 18 and 26 years of age. Apparently, the impression has gone out pretty generally to the country that this represents virtual annulment of the Tydings amendment. We took up this matter with Selective Service headquarters and were assured that this was not the intent of the new regulations. Nevertheless, these regulations are being almost universally interpreted as the first step toward induction. Again I want to repeat that I am sure that all responsible leaders in agriculture have never in the past nor are they now interested in protecting the agricultural deferment of any unworthy registrant, but we are convinced that if any large number of the deferred registrants 18 to 26 are removed from farms at this time, it will result in a substantial reduction in the over-all production of food, that it will result in a substantial reduction of livestock and dairy cattle, and later in a substantial reduction in production of soil crops. We feel that it is our obligation at this time to give to the Congress and to responsible administrators in government the best judgment of farm people with respect to this situation.

These deferred registrants, particularly in this age group, are keymen. In many instances they are the only able-bodied men on these farms, and the elderly people and children who are supplementing their work would be unable to carry on the farming operations at their present production levels if these men are taken and are not replaced.

It should be borne in mind also that on December 1, 1944, according to the report published by the Bureau of Agricultural Economics, there was the smallest farm employment for that date on record. The 1944 annual average number of hired workers was about 13 percent below the 1935–39 average. Even the number of family workers, despite the increased dependency upon family labor, was 7 percent less in 1944 than in 1935–39, according to B. A. E. The report further stated that farm operators worked on an average 12.1 hours per day on September 1 and 10.8 hours per day around the 1st of December, and that hired workers averaged 10 hours per day and 9.3 hours per day, respectively. This, even in the less busy season of December, represents a weekly average of more than 60 hours per week for the farm operator not counting any work on Sunday, and every farmer knows that the farm week, particularly in the dairy industry, is a 7-day-week enterprise. A 12.1-hour day adds up to more than 80 hours per week for the dairy farmer. I am sure that you are well aware that the average workweek in industry is far less.

In face of all these conditions farmers cannot understand why so much emphasis is now being placed upon the induction of these key workers in agriculture who are so vitally needed to produce the food required and to enable farmers to meet their food production goals, and especially when there is so much wastage of manpower in nonagricultural occupations by reason of persons engaging in nonessential activities, and by reason of slow-downs and strikes and by reason of the continued production of luxury goods and other nonessential materials with corresponding wastage of manpower. They believe that this wastage of manpower should be corrected.

In order to enable farmers to meet their food production goals we believe that immediate steps should be taken to suspend or clarify the recent instructions with respect to induction of key farm workers.

We also believe in the principle of work or fight, which has been proposed in various bills introduced in Congress, under which workers engaged in essential industries would be required to stay in these jobs unless they secure the approval of their draft boards, or unless the draft boards find they have good cause for leaving, and authority given to bring about the transfer of workers from nonessential occupations to essential occupations.

We believe that this legislation, however, should be properly safeguarded so as to assure that the placement of all such workers will be carried on in the manner now provided by the War Food Administration and the War Manpower Commission. As a further safeguard, we believe that civil penalties should be provided instead of induction under penalty conditions.

Robert E. Lee—A Great American

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a speech which I delivered in Statuary Hall, here in the Capitol, under the auspices of the United Daughters of the Confederacy, on Friday, January 19, 1945, the one hundred and thirty-eighth anniversary of the birth of Robert E. Lee.

The speech follows:

Ladies and gentlemen, permit me to express to you my profound gratitude for honoring me with the invitation to address you on this historic occasion, the one hundred and thirty-eighth anniversary of the birth of Robert E. Lee.

On June 3 last year, the one hundred and thirty-sixth anniversary of the birth of Jefferson Davis, I enjoyed a privilege that will never come to another Member of the Congress of the United States—that of introducing to the House of Representatives an ex-Confederate soldier, in the person of Gen. Julius Franklin Howell, acting commander in chief of the United Confederate Veterans.

His appearance, and his address to that body, will go down in history as one of the most unusual occurrences this Capitol has ever seen. Erect as an Indian, dressed in the uniform of a Confederate general, bearing his 98 years with the manhood and dignity of a real soldier, General Howell delivered an address that, taking everything into consideration, has never been surpassed on an occasion of its kind anywhere in the world.

We are now engaged in a great war in which the brave and generous sons of both the Blue and the Gray are grappling with our enemies on every battle front in the world. In the hall of the House of Representatives, yonder, and over there in the Senate, are the sons, grandsons, nephews, and other relatives of those brave men who from 1861 to 1865 struggled for the supremacy of the New World.

While our brave men are fighting to protect American institutions abroad, these Americans, the offspring of the men who fought on both sides of the War between the States, are now striving to protect American institutions at home. They recognize the safety of this Nation, and the perpetuity of our American institutions, as issues that rise high above the scramble for party vantage or the noisy clamor of men for place and power.

While we are gathered here to commemorate the achievements of our own brave men in gray, it is not our purpose, nor is it our intention, to in any way discredit the loyalty and patriotism of the men who wore the blue. They were all Americans, fighting for what they believed to be the best interests of their respective countries.

As I said, today is the anniversary of the birth of Robert E. Lee, perhaps the greatest Christian leader who ever commanded an army in all the history of the world.

Theodore Roosevelt called him the greatest captain of the English-speaking race, and General Maurice, of the British army, in his Life of Robert E. Lee, placed him above Wellington as the greatest commander the English-speaking race has yet produced.

He is to me the most magnificent, the most sublime, and the most serenely inspiring figure on the horizon of human history. I am sure that all real Americans are now glad to claim kindred with his spirit. As was said by Senator Ben Hill, of Georgia, "He was Caesar without his ambition, Frederick without his tyranny, Napoleon without his selfishness, and Washington without his reward."

Standing beside his manly statue here is that of Jefferson Davis, the Great White Chieftain of the Confederacy, who, as Caleb Cushing once said, "was wise among the wisest in counsel, eloquent among the most eloquent in debate, and brave among the bravest on the battlefield."

He needs no eulogy at my hands, or at the hands of anyone else, to commend him to the consideration of all fair-minded men.

As Bishop Galloway once said of him, "Marvelous, many-sided, masterful man. His virtues will grow brighter, and his name be writ larger, with each passing century. When another hundred years have passed away, no intelligent voice will fail to praise him, no patriotic hand will refuse to place a laurel wreath upon his radiant brow."

We shall never cease to honor those untold thousands of brave Confederate veterans who went through 4 years of bloody war, as well as through the dark and bitter years of reconstruction.

Greater soldiers in time of war, or greater citizens in times of peace, this world has never seen. We honor them today for the services they rendered and the sacrifices they made for the cause of home and country.

But they could not have accomplished what they did, in either peace or war, had it not been for the loyalty and devotion of the patriotic women of the Confederacy.

Their examples of unselfish sacrifice and unyielding heroism under the most trying circumstances have seldom been equaled, and never surpassed, in all the annals of mankind. As someone has said:

"Glorious women of the South. Fashioned in Paradise, wreathed in graces and virtues that blossomed like flowers plucked from the green fields of Eden, led down to earth by angels along a pathway of stars, to be the joy, the blessing, the inspiration of noble men."

Our country is today at the crossroads of her destiny. While we are engaged in a world-wide conflict, testing whether or not our form of government and our civilization shall continue to endure, we are also engaged in a desperate struggle at home with the enemies within our gates, who would overthrow this Government, destroy our sacred institutions, and impose upon the American people an alien and un-American system that would mean the end of everything that is near and dear to us.

On the opening day of the present Congress I secured the adoption of an amendment to the Rules of the House setting up a permanent Committee on Un-American Activities, with all the necessary powers of investigation and subpena. I want to appeal to you, and to all other real Americans, to give that committee your enthusiastic support.

This great Government of ours will never be destroyed by the descendents of those men who wore the blue, or the ones who wore the gray. They are real Americans, they believe in the American form of government and are now dying all over the world to defend it.

But we have an infiltration of what Prime Minister Churchill on yesterday called Trotskyist-Communists who, as a rule, have been run out of the countries of their births and who have joined with other subversive elements to try to undermine and destroy this Government, as well as that of the British Empire.

In the early days of the war they joined hands with the German Nazis, the Italian Black Shirts, and the Black Dragon Society of Japan, whose agents have been busy stirring race trouble and buying up firearms and ammunition in almost every community in America. While many of these elements have been driven under ground temporarily, they are still with us, and still plotting against our country.

In the words of George Washington, we want to "put only Americans on guard," so that while your sons, your husbands, and your brothers and your fathers are shedding their blood to protect this Nation abroad, we can adequately defend it against these destructive elements at home.

As I have said before, I have no desire to outlive this Republic. It is the greatest Government the world has ever known. God grant that I may never live to see it destroyed, or dominated by those alien ideologies of atheism, anarchy, and infidelity.

But when we have won this war and restored the peace of mankind, let us pass this great Republic unimpaired to our children and our children's children. So that when generations yet unborn shall emerge from the stream of time they may find a government more powerful than the Athens of Pericles or the Rome of Augustus, more splendid than the France of Louis or the England of Queen Elizabeth, shedding her blessings alike upon the strong and the weak, the rich and the poor, holding high the torch and making light the way up which all other civilized countries of the world must come in "God's appointed time."

Are We Being Deceived About the Inflation?

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. BUFFETT. Mr. Speaker, what is inflation? I suppose most people would answer that inflation is an extreme rise in prices. However, inflation might be better understood if it were defined as a extreme decline or deterioration in the purchasing power of a nation's money.

The following definitions from Webster are helpful to the citizen who would like to know what inflation is and whether inflation is being prevented:

Inflate: To expand or increase abnormally or improperly, to extend imprudently; as, to inflate the currency.

Inflationist: One who favors inflation, especially of the currency, by the issue of paper money.

Inflationist period: The time of suspension of specie payments, from 1862 to 1879.

The foregoing dictionary yardsticks seem to indicate that the United States has been inflating since 1933, when the gold clause protecting our bonds and currency was repudiated and paper money in circulation began to increase.

The January 1945 National City Bank bulletin has an informative report on inflation in France and Belgium. The bulletin points out that "currency and bank deposits have been inflated enormously, while supplies of goods have been depleted." The following data gives the financial breakdown of their inflation, and I have added the corresponding financial indicators for the United States:

Wartime expansion of note circulation, bank credit, and public debt

[In billions of national currency]

	August 1939	September 1944	Percent change
France (francs):			
Bank deposits	70	270	+257
Notes in circulation	142	600	+322
Public debt	445	1,650	+271
Belgium (francs):			
Bank deposits	29	83	+186
Notes in circulation	26	100	+285
Public debt	59	120 (a)	+233

[In millions of dollars]

United States:			
Bank deposits	27,265	[1] 64,200	+135
Notes in circulation	7,171	23,535	+228
Public debt	50,891	209,496	+412

[1] As of June 30 1944.

The foregoing facts, yardsticks of inflation, defy all efforts on my part to adequately portray their ominous significance.

However, they do give a clue to the situation behind the fantastic buying of real estate and other tangible property by shrewd and cunning people all over the land. Black markets, jewelry sales, and hoarding of valuables of all kinds is reportedly reaching spectacular proportions. Yet, the average citizen has been relying on his Government's pledge that there is no inflation.

I invite Mr. Bowles, or any administration expert on preventing inflation, to explain how America will avoid the tragic effects of a deteriorating currency when the financial fever chart indicates a condition worse than that of France and Belgium.

Are we being deceived about inflation? Is inflation galloping on, with the tragic effects being hidden by subsidies, price-fixing, and an O. P. A. American Gestapo?

Is it true, as Harold Moulton, of the Brookings Institution, has warned, that—

> With unlimited debt expansion we cannot prevent inflation without the use of totalitarian methods of control. No compromise or halfway measures can adjust the difficulties. The choice is between regimentation and inflation.
>
> The foregoing analysis serves to disclose the gravest danger with which the United States is now confronted. Unable or unwilling to perceive basic inconsistencies, or to choose between clear-cut alternatives, we drift toward the deep financial waters from which there is no return other than through repudiation in one form or another.

To the interested citizen, these facts will indicate that, unless this administration has the courage to apply the brakes on its reckless spending, the fate of our middle classes is sealed.

In Europe the inflationary loss in the purchasing value of Government bonds is bankrupting the middle classes and

leading everywhere to Socialism and the end of human liberty.

Our inflation, thus far, has followed a similar pattern—though at a somewhat slower speed.

A careful study of these figures should warn every patriot of the dangers involved in the global spending plans now pending in Congress. The American people must learn this economic truth: New Deal deficit spending will wind up either in ruinous inflation or a slave economy that eliminates human liberty.

These facts and these dangers call for forthright and courageous action now. Many times I have called the attention of the administration and the majority to this problem. I hope and pray that the administration will meet this critical problem honestly at last. They must do so, or else the greatest struggle in which the American people are involved—the preservation of the sound currency on which our freedom and our civilization is based—will be lost by default.

Shortage of Staple Cotton Goods

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. CARLSON. Mr. Speaker, I have received the following letter from one of the merchants in my district who sells all types of dress goods, shoes, hosiery, ready-to-wear, notions, and gentlemen's furnishings. As this letter is typical of many I have received during the past few months I think it it well to call the attention of the House to a serious shortage of work clothes which are badly needed in the rural areas. The rural areas must have an additional supply of cotton and woolen work clothing which would include such items as overalls, shirts, gloves and underwear. My complaints indicate that it is most difficult for farm families to purchase overalls and jackets for boys who are of school age. Merchan. after merchant complains to me about the shortage of cotton flannel husking gloves and mittens. One interesting phase of the complaint on husking mittens is that there are none for sale locally in the district but a farmer could send an order to a mail order house in Chicago or Kansas City and receive an immediate shipment of any quantity he wanted to buy.

I am calling this matter to the attention of Chester Bowles, Administrator of the O. P. A., urging his cooperation in relieving this serious situation.

The letter reads:

SHARON SPRINGS, KANS.,
December 16, 1944.

Hon. FRANK CARLSON,
House Office Building,
Washington, D. C.

DEAR SIR: There is a very acute shortage of staple cotton goods in our community. We are the only store in Wallace County that handles yard goods and in the past year we have had about one-half of 1 percent of the demand of staple cotton goods for this community. We have notified our wholesaler of this acute shortage but as yet we have not had made available to us, through our wholesaler, goods to relieve, even in part, this extreme shortage of goods.

I hope that you will use your assistance in any possible way to see that merchandise is allocated through the regular channels of trade for distribution, especially to the rural population, some staple cotton goods to relieve in part this shortage.

While we know the war situation is not the best, still it is necessary that the people in the rural communities have clothing and textiles to care for their acute needs.

We feel that a preference should be given to the needs of the rural population over those of lend-lease or foreign distribution of these cotton goods and that lend-lease of goods for foreign consumption should not have priority over those of our own people.

Yours very truly,

C. V. MILLER.

Brass Tacks

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of January 19, 1945:

BRASS TACKS

The Post backed national service as soon as the Japanese fell on Pearl Harbor. Total war called for it—the consecration of all that we have and are in an unrelenting struggle in all the seven seas. The need to assure the fighting men of equality of sacrifice was a formidable argument in its favor. We should have been farther on the road to victory today if there had been national service. With it the present danger of post-war social and economic difficulties might have been avoided. For instance, we face a shortage of doctors within the next 5 years, in part because we allowed older doctors to volunteer for service. Under national service the right man would have been kept in the right place. The life and death premise is still valid as the basic argument for national service, but the evidence before the May committee undermines the ground upon which the administration has chosen to fight for it. That ground is the manpower shortage in war industry.

The cry of general shortages of materials traceable to shortages of manpower simply cannot be sustained under the withering blast it has got from business and organized labor. The cry is scund and fury signifying nothing without the facts. And the plain fact is that the armed services have only the foggiest idea of what they possess in the shape of war supplies. How, then, can they talk of shortages? The Mead committee, which seems to see no need for national service, has repeatedly scored the Army for its shortcomings as a business agency; bad scheduling, inadequate utilization of labor, and lack of coordination. Labor and business have now added to the indictment. Whatever the President may say, the members of the committee who heard the testimony of the A. F. L. and the C. I. O. were visibly impressed. We are at a loss to see how anybody could fail to be impressed.

The emerging picture from the testimony before the May committee is a befuddling one of surplus and shortage. In case after case of shortage complained of, C. I. O. investigators found not shortages but surpluses. Philip Murray gave chapter and verse for the officials to disprove. He came to the same conclusion as A. F. of L.'s Lewis G. Hines, who had also declared that the charges of widespread shortages were fictitious. That conclusion was that where shortages existed, they were local, and in the main due to changing Army orders, which, in the exigencies of warfare, cannot be coped with by advance planning, but must be remedied by local readjustments. Both witnesses were not content with defending the situation in industry. They acknowledged that hoarding of labor existed, but said flatly that the Government was the No. 1 hoarder of the Nation. The Mead committee in its last report gave plenty of instances of waste of manpower in the business operations of the Army. Mr. Murray went further, and pinned the bee on Government-run plants as the prime hoarder.

The public has become completely mystified by the conflict between official data and demands, and the facts made available by the men in the best position to know. It is said that the Mead committee intends soon to make a definitive study on manpower. That would be helpful in clearing the air. In the meantime Army needs must be given attention. The Army estimate is that 700,000 extra workers are needed in the next 6 months. How this figure was arrived at, in view of the fact that the Army doesn't know either its inventory or its wants, is a mystery. But, granted the need, granted the positing of the problem as a local one, all that Congress can do at present is to give the W. M. C. the powers available for making its local orders stick.

The existing bewilderment is not helpful in building up a case for national service, limited or general. It makes for confusion, not production. Why raise new problems when the old problems remain unsolved? Power is no substitute for efficiency, and will not create it; and it is efficiency that produces the goods. The present confusion, which labor and business have exposed, underlines the chief objection against national service, namely that the administration of our manpower could not be trusted with national service. It would be better to concentrate on giving W. M. C. statutory powers than to keep up the wild shooting that is going on for national service. This is missing the mark even as a booster of morale at home and abroad. A real need exists, the need to put teeth into W. M. C. controls, and the whole energy of the Administration should be mobilized back of it.

Amendment To Define Commerce Among the Several States

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. REES of Kansas. Mr. Speaker, under the unanimous consent granted me by the House, I am including a resolution adopted by the Town Hall Committee of Wichita, Kans. The Town Hall is a nonpartisan group and is organized in the interest and support of

sound government under the Constitution. The resolution read as follows:

Whereas the tendency of the Federal Administration in ecent years toward construction of what constitutes interstate commerce has gone far beyond the wishes and beliefs of the public; and

Whereas the Town Hall Committee of Wichita, believing that the abuse has reached the point where some action should be taken to correct the tendency; and

Whereas the effect of the recent construction of interstate commerce has been to eliminate and curtail free enterprise and bring practically every business within the control of Federal bureaus;

Now, therefore, we the Town Hall Committee of Wichita, recommend to Congress that it give full and immediate consideration to an amendment to the Constitution that will limit and define "commerce among the several States" as set forth in the Constitution so as to better meet the needs of the people in protecting their liberties and property and in this connection: we cite, as outstanding examples, the recent decision of the Supreme Court of the United States in the case of the *Southeastern Underwriters Association*, and *Wickard* v. *Filburn* (317 U. S. 111), the latter case holding in substance that a farmer cannot feed his own wheat to his own livestock because to do so would depress interstate commerce.

How Can Business Help Preserve Constitutional Government and Free Enterprise?

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me on January 23, 1945, before the National Association of State Chambers of Commerce:

Mr President, in accepting the invitation to address this group I recognized but one obligation and that was to speak my own mind, to do it humbly, but very plainly. Naturally I should like to please, but if that cannot be so, then I hope not to offend.

My friends, unless we face some facts realistically, this Nation is apt to end up under a dictator.

There has been for several years a powerful and concerted drive against our constitutional system of government, our free enterprise system of economy, and our free system of society.

This movement, wholly subversive in its intent, wholly surreptitious in its methods, wholly dishonest in its representations, and wholly menacing to everything that makes life worth while in America, has finally crystallized into a definite pattern.

The first part of this pattern was to subjugate the Federal judiciary to the executive branch of the Government. That attempt, turned back by the Congress, was finally accomplished through time and human frailties.

The second pattern was to subjugate the legislative branch of the Government to the executive. The Congress resisted this movement; thereupon a powerful, concerted barrage of vilification, ridicule, falsification, and slander was laid down against the Congress as an institution. It still continues.

The third part of this pattern was to destroy business, big and little, or so tie its destinies to the largesse of the Federal Government as to enable the bureaucrats to hold control ove. all business in America. This is the pattern of a planned economy.

The fourth part of the pattern is to condition Americans to obey rationing, regimentation, sudden changes of administrative orders, and the breaking of administrative promises.

The Congress, and the Congress alone, now stands between the people, including business big and little, and war powers so expanded and extended that post-war America would be operating under a political bureaucracy at Washington headed by one man. That would be absolutism.

I am not talking about individuals as such. I am discussing a very definite trend toward the very definite pattern in which individuals simply fit into the scheme of things. That great student of American Government, James Bryce, stated the case when he wrote in his American Commonwealth:

"A bold President who knew himself to be supported by a majority in the country might be tempted to override the law and deprive the minority of the protection which the law affords it. He might be a tyrant, not against the masses but with the masses."

There is nothing new in the tendency we are witnessing today. The founding fathers knew that power too long possessed and exercised does something to the individual. They knew that even men with the highest ideals and the most noble motives will, in time, become hypnotized by the possession of power, enamored of the exercise of power, and corroded by the adulation they receive from those always ready to flatter power.

Edward Livingston, a great thinker, expressed it clearly when he said:

"The gloss of zeal for the public service is always spread over acts of oppression, and the people are sometimes made to consider that zeal as a brilliant exertion of energy in their favor which, when viewed in its true light, would be found a fatal blow to their rights. In no government is this effect so easily produced as in a free republic; party spirit, inseparable from its existence, aids the illusion, and a popular leader is allowed in many instances impunity—and sometimes is rewarded with applause, for acts which would make a tyrant tremble on his throne."

We are now compelled to recognize that anyone who insists on some consideration of the freedom, soundness, and financial solvency of the United States will be assailed bitterly by those who would barter away American resources in exchange for world power. These people who lust for world power protest their great love for our constitutional from of government, for our men and women fighting and dying on battle lines eveywhere in the world. But they are, at the same time, insisting that America nurture all other peoples of the world at her breast, regardless of whether or not it so depletes us that we become financially insolvent and lose our liberty.

We must consider the welfare of the United States of America. Mr. Churchill is very definitely, very emphatically, very consistently, a British Empire nationalist. I do not blame him for that. I think he ought to consider the British Empire first.

Joseph Stalin is first, last, and at all times, a Soviet Russian nationalist. I do not blame him for that. He ought to be for Russia and Russians first.

Therefore, we who believe in giving some consideration to the welfare of the United States and our own people certainly ought not to let any blush of embarrassment mount our cheeks; we ought to offer no apologies whatsoever because we insist that the welfare of America have some consideration in this plan of some self-appointed guardians of the world for us to rebuild all the war-torn countries on the globe; restore their shattered factories; rehabilitate their wrecked agriculture; and then undertake to change their cultural habits and traditions, their religious convictions, and their economic practices, to coincide with ours.

Daniel Webster, a century ago, summed up this situation as it is today as well as it could be stated by anybody now. Let me quote him briefly:

"It is hardly too strong to say that the Constitution was made to guard the people against the dangers of good intentions, real or pretended. * * * There are men in all ages who mean to exercise power usefully—but who mean to exercise it. They mean to govern well—but they mean to govern; they promise to be kind masters, but they mean to be masters. They think they need but little restraint upon themselves. Their notion of the public interest is apt to be quite closely connected with their own exercise of authority. They may not, indeed, always understand their own motives. The love of power may sink too deep in their own hearts even for their own security and may pass with themselves for mere patriotism and benevolence."

There is a growing number of people in the United States today who appear to prefer security to freedom. They have organized to bring the weight of numbers against free enterprise and the Constitution. These people have become adroit at campaigning. They work very largely under the guidance of Communists or fellow travelers. It is their determination to control the Congress. They, themselves, say so. They want to socialize all industry—and with them socialization means that they will boss the jobs and the people. They, in turn, will be bossed by somebody up at the top. In that way America will be dragged into totalitarianism willy-nilly. If, as, and when that happens, our heroic men and women who have given their lives in past struggles, and in this present struggle, will have died in vain.

You gentlemen know just as well as I do what the P. A. C. means to do politically, if possible. You know as well as I do what the labor racketeers mean to do to and with American labor, if they can.

That is why I was very happy to come here today to talk to you on the subject of how business can help to preserve constitutional government and our free-enterprise system of economy.

Any rational analysis of the question of the survival of free government necessarily involves an analysis of free enterprise. By free enterprise, I mean the orderly processes of production and distribution of goods on a properly regulated competitive basis.

The first declaration for free government and free enterprise in the United States of America is found in the Declaration of Independence itself. It is the right to life, liberty, and the pursuit of happiness. The founding fathers didn't mean a planned economy. They didn't believe a man should have to pay a fee to some labor racketeer for the right to labor in defense of the Nation.

We must perfect our distribution system, which is faulty. We have solved the problem of production, but we have not solved the problem of distribution. But there is the human equation which must be taken into consideration.

If all humanity were perfect, if all men were equally capable, honest, energetic, diligent, imaginative, and determined, then certainly we might talk about providing every man with a job, and of taking care of him when he didn't have one. But the fact is, and we all know this, there is a large percentage of humanity that will work only

under the lash of economic necessity—the necessity for something to eat, something to wear, and a place to sleep and get in out of the storm. There is a large percentage of humanity that, if it could, would sit on the sunny side of the cabin and idle away the hours, dream away the days, while the county, or the city, or the State, or the Federal Government provided the housing and the clothing and the food for the family.

We have got to be careful, my friends, that our altruism does not become misguided—that we do not continue to put a premium on shiftlessness and a penalty on thrift.

Our American system of government would never have survived the vicissitudes through which it has passed except that our economic system was based on free enterprise. Conversely, free enterprise never would have grown to its present magnitude and efficiency had it not been protected by free government, as expressed in the Bill of Rights.

All men are created equal in their opportunities, in their right to pursue life and liberty and happiness to the best of their individual abilities and capacities. And that means the right to work at a job without paying a stiff fee to some union overlord.

Of course, some lose out in the race of life. The problems of existence are too intricate for many. Some are stricken by disease or accident and rendered incapable of providing for themselves. We in America have never allowed our fellow citizens who were thus handicapped to starve to death. They have always been provided for; they are provided for by the States and the counties and the municipalities and their neighbors.

Now, many of these self-appointed world saviors think we should make ourselves responsible for all the sick and halt and lame and blind and ignoble and thriftless and lazy people in the world. You and I know we cannot do that. We cannot work hard enough, we cannot produce enough in the United States of America to sustain the whole world. The only way under God's heaven we can help the rest of the world is first to be safe, free, sound, and solvent as a nation ourselves. Under such circumstances we then can help other peoples to help themselves—to rehabilitate their own industries, their own agriculture, and their own lives.

Contrary to the utterly despicable assertions of many, the United States of America was not responsible for this war. We were not responsible for the blight that has hit these other nations. It was not our responsibility to try to run the nations on the continent of Europe or of Asia. It was none of our business until the marauders started so rapidly to subjugate the rest of the world that it became a matter of world welfare for us to intervene. Even now we are being told to keep our hands off of European political affairs.

Free enterprise is the essence of free government because it is the people, the consumers, who are constantly exercising, in their choice of goods and services, that high degree of selectivity which, in turn, constitutes both a compulsion and an incentive for competitive enterprisers constantly to strive to turn out better goods and services and to reduce costs and prices. It is obvious, of course, that such a constant discriminating selectivity could not possibly be exercised by any government, no matter how able and efficient the heads of governmental bureaus might be.

It was precisely through such wise compulsions and incentives that the American free-enterprise system was forced and encouraged to experiment, to study, to strive for better quality and more efficient methods. Thus, we reached that state of productive efficiency which enabled American industry to overcome, in about 3 years, the concentrated efforts and all of the skill in war preparation exercised in Germany for 12 years under Hitler; in Italy for 20 years under Mussolini; in Japan for 40 years under the war lords.

Free government is always under the same system of discriminating selectivity. Every 2 years the people choose all of their Representatives, and a third of their Senators; every 4 years they elect their President. Such frequent elections also characterize State, county, and local governments. The people's privileges under the Bill of Rights have enabled them to exercise the same degree of criticism, the same degree of approval or disapproval of the acts and policies of their public service, that they have all exercised under their free economy, in their selection of goods and services produced by their industries and their professional people.

These compulsions, and these compulsions alone operated to inspire and build our great system of American free government, as they operated to inspire and build our great system of free enterprise in this Nation. Thus two great systems, plus our rich natural resources, have come down to us from our ancestors, not as our absolute possession for this generation alone, but as our trust for generations to follow us. Thomas Jefferson saw this fact clearly and expressed it in these words:

"Were we directed from Washington when to sow and when to reap, we should soon want bread."

And I might add—butter.

Jefferson also detected something which I think is the very essence of the plots of those who conspire for a planned economy today.

"Dependence begets subservience and venality, suffocates the germ of virtue, and prepares fit tools for the designs of ambition."

These words might have been spoken yesterday. They were prophetic.

Now, the question is: How can you, as businessmen, help to preserve free government and free enterprise?

Well, the first thing you can do is to refuse to apologize for being big businessmen, or little businessmen, and assert your pride in the fact that industry is the structure of our modern economy, and the wellspring of our rich American life. It has not been the bureaucrats, the Communists, the P. A. C., the labor racketeers, who have given America the highest living levels, the highest wage levels, the greatest individual luxuries, and the greatest freedom ever enjoyed by any people on the face of this globe. It has been business—businessmen and business managers—agriculture, industry—those who put up the money and furnished the direction for agriculture and industry—who have made this the greatest Nation in the world. Business and businessmen ought to be proud of that fact.

These bureaucrats and these professional slanderers of business, and of the Congress, like to tell the people businessmen are in a category along with horse thieves and bank robbers. The best way for you to help America is to hurl the lie back in their teeth and stand by your guns. You have made mistakes; so have governors made mistakes; on very rare occasions it has been known that bureaucrats have made mistakes, too. So, instead of shrinking and defending yourselves against your traducers, stand up in your justifiable pride of achievement and tell them that while they were busy traducing you, who are in business, and industry, and agriculture, you were busy preparing this Nation to fight the biggest war in which it has ever been engaged.

Tell them it was industry and agriculture, it was business and agricultural management, working together with the people in the workshops with the tools created by industry, if you please, that overcame that 12-year lead in Germany, that 20-year lead in Italy, that 40-year lead in Japan, so that today our forces are fighting on the offensive, and the dictators and marauders and pirates of the world now can see death on the gallows, or by the firing squad, staring them in the face.

Those who howl most loudly against business are people who never knew what it was to do anything more than work in another man's factory or on another man's farm.

Partisan henchmen and subversive plotters who have wormed their way to the top of many of the governmental bureaus like to say a businessman is untrustworthy, selfish, and dishonest. They insist a politician is a fellow who can straddle the fence, keep both ears to the ground, and look behind him all at the same time. Well, maybe so. But a bureaucrat is a fellow who shuts his eyes and stops his ears and leaps before he looks. You can take your choice.

We certainly cannot entrust our post-war economy to bureaucratic theorists who want to stop the butchering of "female" steers and who want farmers to take the horses' shoes off at night to save wear.

No Member of Congress objects to fair criticism of himself. But when anybody, business men or women, or any other citizen, lends himself or herself to the plan to ridicule and abuse the Congress to the point where the people lose their confidence in it as an institution, then that individual is lending himself or herself to this plot to destroy constitutional government and free enterprise in America.

It is perfectly amazing how many writers and speakers consider it humorous—with a touch of realism—to speak of Congress, and the Members of Congress collectively, as self-seeking politicians, boobs, or fakers.

Now, if the American people want to change their form of government, if they have so far lost their love for liberty as to prefer a dictatorship, and the regimentations, and rationings, and compulsions of a bureaucracy, then it is the undeniable right of the American people to do so. But we ought to be sure they see clearly what they are about, and what the consequences of such action would be upon their own lives and happiness.

It would be tragic, not alone for America but for the whole world, if the greatest experiment in human freedom and in free government—that is, the United States of America—were to prove a failure. It would throw the human race back centuries in its progress toward the higher ideals of life. Businessmen should uphold the legislative branch of the Government as an institution and as a necessary part of that free government.

Another way in which you, as businessmen, may help to preserve our constitutional government and our free enterprise system is to meet and turn back this propaganda that industry must furnish all the jobs in the post-war period.

I have noted somewhere, and I think the figures are approximately correct, that the manufacturing industry furnishes about 37 percent of the jobs and that agriculture and the professions furnish the balance. The United States Department of Commerce (in its 1941 edition of Trade and Professional Associations of the United States) states that 20 percent of our labor is engaged in agriculture, 4 percent in contract construction, 11 percent in Government, 25 percent in manufacturing, 2 percent in mining, 6 percent in miscellaneous, 7 percent in service and finance, 13 percent in trade—wholesale and retail, 6 percent in transportation and public utilities, and 7 percent unemployed.

Whatever changes may have taken place in these figures since 1941 will not affect my use of them to illustrate what I mean.

The foundation is being laid right now by those who want a planned economy, who

want the Government to control all industry, to accuse business later on of falling down on its responsibilities of providing jobs for the returned service people. You will remember, back before we got into this war, businessmen were vilified as tories, economic royalists, aristocratic anarchists, and what not. Then, when we were suddenly engulfed in the war, to whom did we turn to prepare our defense? To industry, business, and agriculture, and the people. It was a national job, not a partisan one.

It is a singular fact—or maybe it isn't—that those who talk about sixty, and sixty-five, and seventy, or eighty million jobs most loudly, are those who never raised a dollar for industry, or a company, or for an agricultural project, and who never managed a successful business in their lives. Those who rail most loudly against business forget—or ignore—the fact that it has been business and industry that furnished the tools and the workshops in which American citizens could better their working and living conditions.

There is a great danger in this country of overcentralization of business. I think there ought to be some decentralization of business. But some businesses need to be centralized. They are more efficient and economic that way. There are some businesses in which huge sums of money have to be invested in research, experimentation, and plans, before some product is ever ready for the market at all. Then, when it is produced, other huge sums of money must be invested to create the market for it. Obviously, the individual, or the small business, cannot undertake such gigantic expenditures and such long periods of experimentation and research. I am thinking of nylon, rayon, stainless steel, plastics of various kinds, a thousand and one new things, each one making a great contribution to the richness and the pleasure of life in this Nation, which have been provided, and which could only have been provided by the courage, the initiative, and the vision of men willing to invest millions, to go through years of research and experimentation, and then to build up markets for the marvelous products they produce.

Anybody who wants to berate big business and free enterprise ought to remember the days when the automobile, and the telephone and the sewing machine were the rich man's luxury, and which have, through the very planning and management of industry, been so reduced in cost that today they are the poor man's commonplace, everyday equipment to enrich his life.

Those who would destroy constitutional government and free enterprise have skillfully organized themselves. They are well financed. Those who wish to preserve free enterprise and constitutional government must be prepared to furnish the money to carry on the fight—because a fight it is, and a fight it will continue to be for many years to come.

There is just one way to meet the threat of the P. A. C. That is to adopt the methods of the P. A. C., and get to the grassroots and the doorbells of this country with the facts about industry and agriculture, with the facts about constitutional government and the Bill of Rights, before the subversionists hypnotize the people into believing free government is something no longer to be desired.

There are some facts—platitudes if you will—the people must not be allowed to forget. Let me mention them briefly:

Success is not a crime; it is to be desired.

Failure is not a virtue; it is to be avoided.

Wealth in itself is not evil; it should be put to good use.

Poverty in itself is not good; it is a misfortune.

Honesty, intelligence, thrift, ability, and initiative should be encouraged.

Incompetency, extravagance, idleness, and inefficiency should be discouraged.

The American way to national prosperity and security is not in limitation of opportunity for some; it is in equality of opportunity for all.

Business can be big without being bad; it can be bad without being big.

Big business naturally requires closer scrutiny than small business, because of its greater power for good or evil.

Ninety-nine percent of American business is honest and law-abiding. It must be preserved and encouraged. The crooked one percent should be eliminated without penalizing the honest ninety-nine percent.

Business can succeed under proper governmental regulation; it will fail under governmental domination and competition. Prosperity and security in this Nation lie in free enterprise fairly conducted.

The welfare of finance, industry, agriculture, and labor is in mutual ccoperation. It depends upon prosperous consumers.

Our Republic functions at its highest efficiency only under an administration wholly sympathetic with constitutional government.

Control and regulation by a political bureaucracy mean tyranny and retrogression; self-government by the people assures freedom and progress.

Experience and caution are to be preferred over experimentation and rashness in government.

America is still sound. We can win the war, recover prosperity, put our people back to work in peacetime private industry at good American wages, without giving up a single essential liberty or privilege.

By achieving these goals we can render ourselves and our posterity secure, and by example make free constitutional government the strongest incentive to other peoples to give up the ways of war and to follow the paths of peace.

We who believe in free constitutional government, in free enterprise and free society, must organize more carefully, more thoroughly, than ever before. We must carry this message and this fight to the "grass roots" and the doorbells of America. We must make the rank and file of the people understand what is happening to them and to their Government.

The necessities of war have required that we live under a practically totalitarian form of government while the struggle is on. The people are hedged about in every conceivable way by rationing, by regimentation, by a whole system of bureaucratic "do's and don't's." Business is menaced and leg-ironed by priorities, tax accountants, Treasury snoopers, labor agitators, unfair governmental decisions, and regimentation by the bureaus. These things come about during war. But they are the concomitants of a totalitarian government. Peoples, under dictatorships or autocracies, everywhere in the world, at every stage of history, have had to endure such privations, such regimentations, such bureaucratic arrogance, and stupidity, and mistakes. They are inherent and inescapable in absolutism.

As businessmen, you will have to carry the battle to the subversionists instead of remaining on the defense. If business is half as bad as these subversionists tell the people it is, then free enterprise ought to be extinguished. If business is not as bad as these subversionists say it is—and we know it isn't—then the lying propaganda of these subversionists ought to be extinguished.

I am for the American system of proposal, disagreement, discussion, and compromise. It is the essence of our constitutional system. But I am dead against deceit, treachery, lying, and dishonesty in high places, and the use of Government bureaus as a subterfuge to sabotage and wreck free government in the name of sweet charity or noble justice.

We must carry this fight to the people on a basis the people can understand. It is difficult to argue with a man that he should quarrel with a pay envelope which has two or three times as much money wages in it as he ever was able to earn before. We have got to make him understand that he is not getting three or four times as much real wages as he did before. And we must make him understand the further fact that these lush wages will last only so long as he can be lured into consenting to a totalitarian form of government; whereupon he will find himself in work battalions, working for what some dictator in Washington says he may receive—whether it be much or little—and under the dictators it has always been little.

Capital must be found to finance organizations adequate to get to the "grass roots" and the door bells and carry the facts to the people to counteract the propaganda being spread throughout every nook and cranny of this land by these subversionists who wish to destroy our Government, our industry, our agriculture, and our freedom.

You businessmen must procure public cooperation if industry is to provide its share of the security and abundance along with agriculture and the professions. This it cannot do unless it can persuade a constructive public action to insure industry conditions and circumstances under which it can survive and thrive.

As a result of wartime controls, regulatory legislation which has been enacted in the last 12 years, and the tendencies which have grown up in Government under this giant bureaucracy which bestrides this Nation like an old man of the sea, industry is faced by obstacles which alone it cannot overcome.

The barrage of propaganda to poison the people's thinking against industry must be met before legislative relief can be brought about for industry. Without legislative relief, you gentlemen know, industry cannot successfully accomplish the task of providing jobs and of helping Americans to achieve greater security.

Industry simply cannot hope for sympathetic political action until it has convinced the public of its own good motives and the soundness of its economic leadership.

You must work out a positive program—of which I believe you are fully capable—specifying the action you intend to take and the ccurse you intend to follow.

You must convince the American people you can do the job. You must build confidence among the American people that you will do the job, and that you mean to do the job as a choice between a free economy and a governmentally controlled economy—a choice between the liberties offered by the one and the sacrifices and hardships offered by the other.

If industry is to be able to meet the demands upon it for reemployment of returned service people and defense workers, our tax rates must be readjusted. Our tax system must be incentive instead of punitive in its operation and its administration. The Government must assume a sympathetic instead of a hostile attitude toward business. We cannot make a whipping boy of business for partisan political purposes and still expect business to produce jobs and wages for American men and women.

Someone has well said the surest way to make a cow go dry is to keep clubbing her and chasing her all over the meadow. The surest way to dry up jobs and wages and prosperity is to keep clubbing industry all over the lot, and chasing it all over the map with hostile administrative attitudes and orders.

Business must have a program for post-war reemployment, but in order to do that, business must first be able to have some glimmering of what the post-war economic pattern will be. Secondly, business must know that the attitude of the Government is going

to be friendly instead of hostile and suspicious. And, thirdly, business must know that it is going to be given a chance not only to finance itself, but to operate without interference by a lot of theoretical, inexperienced bureaucrats who do not understand business operation at all.

I think much of the job you have to do is a psychological one. I think when the people are in a victory mood may be the time for you to act. You must establish the necessary psychological background for the general industrial effort.

We will have to guard ourselves against inflation—if we can. I shall not take your time or try your patience by giving you figures on the inflation of the currency. Probably you know them as well as I do, or better. One thing is sure; that is that if the Congress permits inflation to get out of hand, it will operate to destroy business more quickly than anything else. Inflation is the greatest single danger that confronts industry and agriculture in this Nation today.

As I said a while ago, this is a job for the people to do—this job of rescuing their Government from the hands of the bureaucrats and the subversionists, and reestablishing it on a basis of freedom. It is your job, as businessmen and industrialists, to help rally the people around the Constitution once more, and to turn back this growing wave of communism and socialism and totalitarianism which has started to sweep across the world and which may wash up in tidal proportions across our own land unless we have courage and very great wisdom and foresight.

John Stuart Mill summed up the problem which confronts us today as concisely and completely as I think it can be put into words. In conclusion, I want to give you that quotation:

"A people may prefer a free government, but if, from indolence, or carelessness, or cowardice, or want of public spirit, they are unequal to the exertions necessary for preserving it; if they will not fight for it when it is directly attacked; if they can be deluded by the artifices used to cheat them out of it; if by momentary discouragement or temporary panic or a fit of enthusiasm for an individual, they can be induced to lay their liberties at the feet even of a great man, or trust him with powers which enable him to subvert their institutions; in all these cases they are more or less unfit for liberty; and though it may be for their good to have had it even for a short time, they are unlikely long to enjoy it?"

It is your job and my job to persuade the people to prefer a free government; to render the exertions necessary to preserve a free government; to refuse to be deluded by the artifices used to cheat them out of it.

How can I better close my remarks than to use Jefferson's words when he said:

"The station which we occupy among the nations of the earth is honorable, but awful. Trusted with the destinies of this solitary Republic of the world, the only monument of human rights and the sole depositary of the sacred fire of freedom and self-government, * * * to what sacrifices of interest or convenience ought not these considerations to animate us? To what compromises of opinion and inclination, to maintain harmony and union among ourselves, and to preserve from all danger this hallowed ark of human hope and happiness. * * *

"My God! How little do my countrymen know what precious blessings they are in possession of and which no other people on earth enjoy. * * *

"The last hope of human liberty in this world rests on us. We ought for so dear a stake to sacrifice every attachment and every enmity."

God illumine our consciousness and strengthen our hearts for this battle for right, for justice, for liberty.

Distribution of Income-Tax Blanks

EXTENSION OF REMARKS

OF

HON. DUDLEY G. ROE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. ROE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from the Ridgely Bank, Ridgely, Md., in my district. It seems our people have been unable to get blanks on which to make their income-tax returns and to pay their income taxes. Certainly, this is an oversight of the Treasury Department and any persons who are delayed in making their return because of their inability to obtain blanks should surely have their delay excused.

The letter follows:

THE RIDGELY BANK,
Ridgely, Md., January 18, 1945.

Hon. DUDLEY G. ROE,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN ROE: I desire to call your attention to the mess our Treasury Department made in getting in the January 15 tax returns. First of all, they are supposed to send blanks to those people who have made reports in the past. I do not believe that 10 percent of these people have received any blanks to date.

Then they publish in the papers that blanks can be had at the banks and post offices. The post offices have never had any, and our bank wrote for blanks at least 3 weeks before January 15. On the 12th we received about 10 Form 1040. None for farmers, and as a consequence, our farmers have not sent in any returns.

I suggest that you introduce a resolution requiring the Treasury to send full supplies to all banks, and those post offices where there is no bank in the town. The present system certainly makes a lot of confusion and causes considerable uneasiness.

With kindest personal regards, I am,

Very truly yours,

G. L. WILSON, *Cashier.*

National Commander of the American Legion Supports Committee on Un-American Activities

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a statement made by the national commander of the American Legion, Hon. Edward N. Scheiberling, before the Committee on World War Veterans' Legislation, on yesterday, January 22, with reference to the creation of the Committee on Un-American Activities.

Since this question of protecting this country against un-American activities of all kinds will undoubtedly be an issue in every congressional district in the United States in the primaries next year, as well as in the general election, I hope every Member of this House will read Commander Scheiberling's statement. He represents the greatest organized group of Americans in the country.

The matter referred to follows:

Commander SCHEIBERLING. Mr. Chairman, I want to express now, on behalf of the American Legion, our grateful appreciation to this committee for the bill which was enacted into law in December, H. R. 1744, the widows' and orphans' pension bill, which was the fourth plank in our four-point program of 1933; and after 11 long years of struggle, through the efforts of this committee, and particularly through the efforts of the man who sits up there as chairman, JOHN E. RANKIN, this bill was finally enacted into law.

That was a great achievement for the American Legion. We sent word to all of the members of the Legion, telling them of the work of you men and Mrs. ROGERS on this committee, what you have been doing for the members of the American Legion, and what you did to get that bill enacted into law.

So we are grateful, and I am happy to have the opportunity of saying it here personally on behalf of the entire American Legion organization and of our auxiliary.

On the very first day of this session, again through the generalship and leadership of JOHN E. RANKIN, the Committee on Un-American Activities was not only continued but it was made an official standing committee of the House with broadened powers. The American Legion is happy at that effort. That doesn't apply to your committee, I know. That is something else; that is not World War Veterans' Committee stuff; but, nevertheless, the man who is the head of your committee is a leader, not only in the things that pertain to veterans and their rehabilitation, but he has likewise assumed a position of leadership in the House on matters which are for the best interest of the American people, along the lines of Americanism, to suppress un-American activities. And we are grateful for that.

The job is well done, Mr. RANKIN. It was a marvelous piece of work. We know the forces which were alined against you, and I think in this case, like the general in battle, you adopted the element of surprise, which is a great thing. [Applause.]

If you catch the other fellow off guard, when he has not got his forces properly mustered and then go through, you will accomplish something.

Chairman RANKIN. At this point, Commander Scheiberling, let me interrupt you to say that I simply followed the tactics of one of my idols of the Confederate Army, General Forrest. I "took a short cut and got there first, with the most men."

Mr. SCHEIBERLING. And you did a grand job. I was in southern California when it happened. I picked up the paper at Riverdale and, on the dead level, Congressman, I threw away my speech—I had a prepared speech—and I talked about this resolution of the House to continue the Committee on Un-American Activities, and particularly I talked to them about JOHN RANKIN. If you could make your district in southern California, Mr. Chairman, you would go over like a house afire. Not that you're doing so bad where you are.

Those are the things that count.

Why Copy the Nazi Slave-Labor Scheme?

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am including an address delivered by myself over radio station WOW, Omaha, January 19, 1945:

Fellow Nebraskans, these are critical days in America's history. So it is important that your Representative in Washington should report to you frequently his beliefs and views on important public questions. For this reason I have taken this radio time to talk to you about the President's proposal for what he calls a National Service Act.

Of course, you will understand that Members of Congress are in a difficult position. I am desperately anxious to vote for any measure that will win the war quickly and get your boys back home—back to the normal lives of American citizens—back to their parents and sweethearts, or to their lonely wives and children whose nightly bedside prayer is for their daddy to come home quickly—back to the friendly neighborhood, church fellowship, and wholesome atmosphere of the average American peactime community.

On the other hand, I am faced with this solemn responsibility. I must not vote for some law cleverly presented as a measure to win the war quickly—only to find that law being used to enslave the working people of America.

So we must study this proposal carefully, with this fact in mind: In today's world the people who give up control of their government take a step from which they cannot turn back once those in power have solidified their position. Such is the monstrous power of arbitrary law, war regulations, and government propaganda that can destroy opposition by smear campaigns. The workers of Germany, Italy, and Japan have learned these lessons the hard way—are we in America going to make the same mistake?

Oh, yes; I know they will tell you some other countries have national service, but they don't tell you about the cruel tragedies it causes. Take the case of Joseph Henry Wright, of Burslem, Stoke-on-Trent, England, whose young life was snuffed out by the operation of the British national service law.

Joe Wright was killed, at the age of 18, in a pit explosion on New Year's Day, 1942. His father was a miner, too, and when he was injured in the pit he advised his son at all costs to get out of coal mining and seek other work. The young man did this. In the spring of 1941, his father died from injuries received in the mine. Then a few days before the end of 1941, the son was ordered by the Government to go to work in the mines because his father had been a miner. As Joe was getting ready for work, on New Year's Eve, he asked his widowed mother who should let the New Year in. She said he could do this when he left the house for the mine. So Joe opened the door to the New Year, and calling out a "Happy New Year" to his mother, started down the road. Joe never came back.

Joe's father tried to save the life of his son. He failed because an all-powerful government was heartless and cruel. Joe was only a miner's son, so it was easy to use national service to force him into the mines and to his death.

Now, the death of 18-year-old Joe Wright was sad, but, of course, many boys are dying today on far-flung fronts. The fact that is terrifying to me is that Joe Wright was sent by his government, against his will, under national service, to a private job where he lost his life.

I told you about Joe Wright some months ago, over this same radio station and indicated that I was opposed to that kind of a deal for American workers. On the job in Washington, I had seen the warning signals of this danger. Now it is on our doorstep.

A national-service law would have the effect of directing every citizen where, how, and under what conditions he would work. Such a law would set up the most absolute controls over the lives of the American people.

Now, suppose Congress would pass this national-service act, and when the boys come home we would be forced to confess to them, "We are sorry, but while you were away fighting to liberate the world, we lost your freedom at home."

What a tragedy and what a mockery that would be—a nation enslaved while its patriots were abroad trying to liberate other peoples.

On the basis of the known facts, I cannot understand the demand for this now. But I tell you frankly that all the facts are not given to us. In this case we are asked to pass a measure that will enslave our own workers—yet we are not given the truth about what is going on, and what are the conditions that justify taking away your liberties.

Here is my conviction. Not only Congress, but the fathers and mothers, wives and sweethearts, whose every waking hour is tormented by doubts and fears over the fate of their loved ones—are entitled to all the facts and the whole truth about this war. I, as their representative, should certainly not vote for laws that will add new anxiety and troubles to these patriots at home, while their flesh and blood is risking everything on the battlefields of the world.

A year ago, I said, "When the boys return, the American people will have the right to make this country a socialistic state, adopt communism as a way of life, or even subject themselves to the tyranny and arrogance of a military dictatorship. But no one has any right to move in that direction now."

Since the beginning of the war, all patriots have favored eliminating luxuries, and restricting wasteful pleasures. The amazing thing, to soldiers and their families, has been that the Government has allowed to continue, and has even encouraged such waste of manpower and materials for so long.

But it is hard to make sense out of this demand for national service now. It comes at least 2 years after we should have passed the critical point in the war. If national service were necessary, why wasn't it called for 3 years ago when Japan controlled almost the entire Pacific, when Hitler's legions were overrunning Africa, at the gates of Stalingrad—and Allied armies were fighting with their backs to the wall everywhere? Why was national service not called for then? It could only be for one of two reasons: Either those in power wanted to put over this totalitarian scheme by little steps, one at a time; or they have bungled their job since then and want additional power to cover up their failures.

A national-service law now reminds me of the drunken driver of a good team who got into deep mud and then started whipping and beating the horses. A good driver does not often get stuck in the mud. If he does, he gets out to lead his horses and does not use the whip. Apparently the administration, like the clumsy driver, chooses instead to lay the whip on the backs of the people with a conscript-labor law.

Let us measure this scheme against the facts that are available to us. We find that America is asked to submit herself to the slave-labor methods of the Nazis after we have freed 41,000,000 in France, 7,000,000 in Greece, many millions in north Africa and Italy, 8,000,000 in Belgium, at least 3,000,000 Serbs and others. Moreover, we have eliminated the active opposition of 13,000,000 Rumanians, and millions of Finns, Bulgars, and other Nazi satellites. Haven't all these great achievements toward victory, including the addition of at least 60,000,000 people to our active allies—haven't these great gains eliminated any present need for such drastic laws?

For example, David Lawrence reports that 3,000,000 Frenchmen and Belgians of draft age are available for fighting the Nazis, and that these millions are not being utilized. Why? This war is their fight—it's in their backyard—and these allies are already fed and housed near the battlefields. Why aren't these men used to fill the ranks of the Allied forces, instead of draining America for men who must be fed and maintained at the end of a 4,000-mile supply line? The American people should have full answers to all these questions before they are asked to put themselves in the chains of serfdom. They should have a factual report, made by a group whom the people can trust, about the hoarding of manpower in war plants, and about the idleness and over-staffing existing in Government offices, and in the Army itself.

The scheme reminds me of the Aesop's Fable that you and I learned in the first grade about the quarrel between the horse and the stag. The horse went to a hunter to ask his help to take revenge on the stag. The hunter agreed, but said, "If you desire to conquer the stag, you must permit me to place this piece of iron between your jaws, so that I may guide you with these reins, and allow this saddle to be placed upon your back so that I may keep steady upon you as we follow after the enemy." The horse agreed to the conditions, and the hunter soon saddled him and bridled him. Then with the aid of the hunter, the horse soon overcame the stag, and said to the hunter, "Now, get off, and remove those things from my mouth and back."

"Not so fast, friend," said the hunter, "I have now got you under bit and spur, and prefer to keep you as you are at present."

The lesson is plain—if we permit the Government to saddle and bridle us while we follow the enemy, the Government may decide to keep us as pack horses.

That is why a historian reports that the record of all history can be told in one sentence, "People gain freedom from their rulers by a long slow struggle over hundreds of years, and then lose that hard-won freedom by being persuaded to give it up in a moment of crisis, only to lose it forever."

Is this the step now being forced on us by the administration?

If there are critical problems in production and in the ranks of war nurses, etc., how should these problems be solved? In my mind the answer is clear. It is to give the American people the truth about the war. Give the folks back home the good news and the bad—the whole truth. That has been my plea from the beginning. If the American people, or even 5 percent of them, are faltering, it is because their Government is not giving them full and honest reports about the war.

Fathers, mothers, and loved ones of soldiers have written me many fair questions about the war that I cannot answer because of the hush-hush censorship policy. Democratic Senator Gillette, of Iowa, pointed this out in his farewell speech to the Senate:

"If we are not to commit national suicide, if we are to maintain the confidence of the world in our leadership for peace security in a free world, we must take the American

people into as full confidence as the military situation will permit."

As far as I am concerned, this question is not a political issue. There is nothing political about the worries and the suffering of the millions of average Americans in these trying days. These people can go through this period of heartbreak and trouble with courage and loyalty if their Government will trust them as patriots should be trusted. The truth about the war will strengthen their souls to carry them through the long, weary hours of suspense and suffering.

Let me close with this personal request. If you have any facts that may be helpful on this or other problems, send them to me. Moreover, if you have any problem or matter connected with the Government at Washington on which I might help, do not hesitate to write. While my duties are heavy, I feel that my first responsibility now is to those with loved ones in uniform. If you have occasion when you say to yourself, "I ought to write my Congressman about that"—obey the impulse. You and I have the job of helping to preserve human liberty in America until the boys come home, and that job is going to take the best efforts of all of us, working together.

Mr. Speaker, the foregoing radio transcript did not include two further questions which should be asked regarding this proposal.

First. If free labor is better than slave labor, why should we abandon it in favor of slave labor battalions?

Second. Why wasn't national service presented as an issue in the campaign, so the people could have had a voice in settling this issue—the most vital decision in 160 years?

Both of these questions deserve honest and straightforward answers when this measure comes before Congress.

Induction of Young Farmers Into Military Service

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

WHITLEY COUNTY U. S. D. A. WAR BOARD,
Columbia City, Ind., January 16, 1945.
Hon. GEORGE W. GILLIE,
House of Representatives,
Washington, D. C.

DEAR SIR: During the first 2 weeks of January 1945, the Whitley County U. S. D. A. War Board met a number of times with township committeemen, the selective service board, and other farm leaders of this district for the purpose of reclassifying Whitley County farmers between the ages of 18 and 25 years, inclusive, preparatory to induction into the armed services.

After much discussion, it was found to be the opinion of the board members and 46 other farm leaders that continued induction of the young farmers from this district will bring about a grave situation. It will cause abandonment of fertile farm land throughout the county and serious food production curtailment.

Those discussing the situation thought it would be well to mention the matter to you.

Sincerely yours,

WILSON BENNETT,
Chairman.
GLEN C. BOWMAN,
Secretary.
RONALD T. NEWMAN,
T. GENE WARNER,
B. V. WIDNEY,
LEROY HARTMAN.

COLUMBIA CITY, IND., *January 17, 1945.*
Representative GEORGE W. GILLIE,
Washington, D. C.

DEAR SIR: The board of directors of Whitley County Farm Bureau at their last regular session January 13, instructed me as secretary to advise you of the serious shortage of manpower arising on the farms of Whitley County.

Representatives from each and every township reported that in studying the activities of draft-age men in their respective localities, if these experienced men are taken from the farm food production will be greatly impaired.

They contend that with the ever-rising average age of farm operators, with machinery becoming over-worn and in almost constant need of repair while in operation; with seasonal help impossible to find, with increased demand for food, and with soil fertility constantly diminishing, it will be impossible to meet our past record of production.

Some of the main factors they relate are:

(1) The boys now remaining on farms are doing a remarkable job of production. In practically all cases they can outperform their fathers or elders in the operation of present-day machinery.

(2) There is always a certain amount of choring, repair, and managerial work essential about a farm which one man has to perform. In most cases the young men put in many more hours in field and livestock operation than their elders can.

(3) Present equipment must have experienced operators or else stand idle too long to get the work done.

(4) On the whole if industrial workers averaged the same hours as the farmers there would not be such a serious manpower shortage.

(5) These boys are not replacable at a time when a man of any age cannot be had to handle even a fork or hoe, let alone operating complicated machines.

We will concede that possibly a few cases, all of which could be counted upon the fingers of one hand, might have abused deferment privileges by perhaps the father going to other work and the son operating the farm to get deferred; but we even question if many of those were purposely guilty.

Whitley County Farm Bureau membership is fully aware that it cannot possibly maintain high food production if the Byrnes directive is carried out; therefore, we deem it absolutely essential that these experienced young men be left to continue their fine efforts on the farms of Whitley County.

Every farm family has been working wholeheartedly with physical endurance strained almost to the limit in order to accomplish the wonderful production of past years. We fear that the big bosses down there are getting the idea that they can do most anything to our labor or supply situation and the farmers will still deliver. You and I know better.

Please use whatever influence you can to prevent the Byrnes directive, which scraps the Tydings amendment, from depleting the farm-labor supply to the point that we cannot produce the needed food supply to win the war.

Very sincerely yours,

WHITLEY COUNTY FARM BUREAU, INC.
JOSHUA C. NIERMAN, *Secretary.*

Drafting of Farm Boys

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. McGREGOR. Mr. Speaker, I wish to file my protest against the directive issued by General Hershey, Director of Selective Service, on January 3, whereby he notified the draft boards that all farm boys in the 18 to 25 age bracket would be placed in I–A. To me this is a mandatory directive and I feel it is so taken by the local draft boards of my district.

If General Hershey and other military leaders are going to dictate to the local draft boards and not allow them to consider each case on its own merits, then why have local boards?

I fear, Mr. Speaker, that some of our leaders, both military and civilian, do not realize that food is produced from the soil, and by long hours, hard work, and sweat of the brow of the American farmers—specialists in their trade. If the leaders who are responsible for these directives, or orders, do not soon recognize that farming is an essential industry and necessary to the winning of the war, we will so find ourselves short of food and those of us who served in World War No. 1 fully realize that a soldier cannot fight on an empty stomach.

Must Defeat Nazis Utterly

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. LANE. Mr. Speaker, under leave to include my remarks in the RECORD, I wish to include the following article by Robert L. Norton, which appeared in the January 21, 1945, edition of the Boston (Mass.) Sunday Post, entitled "Must Defeat Nazis Utterly":

MUST DEFEAT NAZIS UTTERLY — SENATOR WHEELER'S FIGHT FOR LESS THAN UNCONDITIONAL SURRENDER WINS LITTLE POPULAR SUPPORT

(By Robert L. Norton)

WASHINGTON, January 20.—It is doubtful if Senator WHEELER's diatribe against an unconditional surrender of Germany has made any impression upon Congress, the American people, or our fighting men. Whatever else may be the differences between the United Nations, on this point they are in firm agreement.

Premier Churchill reaffirmed the attitude of Britain in a recent speech to Parliament and Mr. Roosevelt has stressed the fact that we may have to continue fighting in Germany until the last Nazi is wiped out. There is certainly no change in the viewpoint of Marshal Stalin, if the official utterances of Pravda are consulted.

The terms to be extended to Germany after unconditional surrender is something else

again and the Montana Senator offers no plan on this score, which constitutes the very nub of the problem to be faced by Messrs. Stalin, Churchill, and Roosevelt in their coming conference.

Those who have any sympathy with the Wheeler viewpoint should realize that the German mentality is such that it can only grasp the idea of unconditional surrender. Any other terms would be regarded as an indication of softness on the part of the Allies and a weakening of the unity which has governed the conduct of the war in a military sense, however this unity may have been ruffled through political considerations.

MIGHT PROLONG WAR

Any divergence from the decision of the Allies would be regarded by the Germans as an admission of a stalemate and an acknowledgment that they, the Allies, lacked the might to bring about a decisive victory.

The net effect of Senator WHEELER's speech on the Germans might well mean the prolongation of the war, since the enemy could conclude that, by killing more American soldiers, ultimate defeat would be postponed; that the will of the American people and their fighting forces to carry on to a finish had been weakened, and a negotiated peace could be secured.

The same feeling might conceivably be shared by Japan, with the same results in the war in the Pacific. Vengeance and brutal retaliation for the murdersome excesses of the Germans is not necessarily associated with the idea of unconditional surrender, although it does imply the distribution of stern justice, along with severe penalties to prevent another world war.

As a matter of fact the Germans, in the final analysis, might fare much better under the agreed policy of the Allies to demand unconditional surrender.

It is certain that the Russians would not accede to any other terms, but the Germans have reasons to experience a profound fear of what might happen if the agreement was declared off and the Soviet armies reached Berlin first.

Americans are reasonably well acquainted with the meaning of the term unconditional surrender, through the historical remark of General Grant when he was asked for an armistice by General Buckner at Ft. Donaldson. Replying to the Confederate general he said, "No terms except an unconditional and immediate surrender can be accepted."

There is also the example of the last war. Describing Marshal Foch's interview with the German emissaries seeking an armistice at Rethondes on November 8, 1918, Maj. Charles Bugnet in the book, "Foch Speaks," quotes the Allied commander in chief:

MARSHAL FOCH'S WAY

"I asked them: 'Who are you?' They gave their names. 'Have you any papers? We must examine them.' I asked them, 'What do you want?'

"'We wish to know your proposals.'

"'I have no proposals to make.'

"'We would like to know under what conditions an armistice would be granted.'

"'I have no conditions to give you.' Erzberger wished to read me a paper. * * * President Wilson's note * * * but I stopped him. 'Do you wish to ask for an armistice? If so, say so.' 'We ask for an armistice.'"

It is doubtful if any great number of the American people would agree with Senator Wheeler in condemning the policy of unconditional surrender as a brutal and asinine contention.

But on the other hand, it must be stated in all truth that going hand in hand with the demand for unconditional surrender is the crying necessity of some declaration on the part of the Allies saying what conditions will be imposed upon the Germans when they do surrender.

Presumably these conditions will be formulated at the coming conference of the chiefs of the United Nations.

Unless there is some agreement as to the terms which will be forced upon Germany after her defeat, there can be no guaranty against a renewal of aggression in the future, more particularly if the Allies pursue separate and arbitrary policies when the Nazis finally succumb. The Junkers and the German military staff will have a better understanding of what the future holds for Germany if they are convinced that the Allies present a solid front in the matter of conditions upon which unconditional surrender is predicated. It is idle to think that Germany will respect anything but the use of force.

NOT BRUTAL DEMAND

Unless an understanding is reached with our allies as to the kind of a situation we intend to promote in Germany when the Germans have laid down their arms, we shall lose the opportunity to capitalize our victory. There is nothing brutal in the demand for unconditional surrender. Such a demand is nothing more than an expression of the moral indignation of mankind. It establishes the only condition under which we could afford to deal justice, spiced with generosity, to the Germans.

While Mr. WHEELER insists that he does not favor a negotiated peace, the logical outcome of his attacks upon the integrity of the Allies in carrying out the expressions of the Allies, as contained in the Atlantic Charter, would be the making of a separate peace between this country and Germany. Such a conclusion would be highly unfortunate.

To consider the viewpoint of the Montana Senator. He declares that the war is developing into a struggle for a new balance of power.

Despite the many democratic proclamations on the part of our allies, he asserts that there is no real unity on the one hand between the British and the Russians, who are attempting to create their own sphere of influence in a new balance of power, and on the other hand, the American people, who are still hoping to justify the sacrifices of the war by achieving a lasting and fair peace. He described the so-called unity between the Big Three as merely the result of a shotgun wedding, and there was very little resemblance between the proclaimed principles of the major allies in the realm of political and military affairs.

CLAIMS COST IN LIVES

He assailed the Dumbarton Oaks Conference as evidence of moral degeneration within the ranks of the Allies, "proposals which emasculate the good-neighbor policy, override the principle of sovereign equality of nations, offer in the place of a genuinely international society of nations a grim military alliance, destroy the very concept of neutrality, approve as a cardinal principle the use of brute force, and cleverly disguise the deliberate omission of the Atlantic Charter by referring to a new United Nations charter that is to be formulated in the future."

The Senator maintains that the continued use of the term "unconditional surrender" is costing thousands of lives.

His alternative is the adoption by all nations of a universal bill of rights; the immediate creation of a United Nations political council to provide for a democratic settlement in harmony with the principles of the Atlantic Charter of territorial questions that have arisen in Europe and may arise elsewhere; a pledge by the United Nations to support free plebiscites under international supervision in the liberated countries; the immediate creation of a United Nations economic council to improve living standards everywhere; and, finally, the creation of a United States of Europe which, he declared, was the only way in which peace could be assured on the Continent.

NOBLE ASPIRATIONS

This program represents noble aspirations to which no person committed to the United States using its full power for world peace after the war could object. But to a degree it typifies that demand for perfectionism to which Mr. Roosevelt referred in his message to Congress and which the President maintained only served a masked purpose to bring about disunity between the Allies.

Nowhere in the declarations of the Montana Senator is there anything approaching a realistic program, describing the terms which will be imposed upon Germany whether she consents to unconditional surrender or a negotiated peace. Neither did the Senator make any proposals for dealing with war criminals in Germany or indicate that he would approve the United States joining in an effective security organization.

On the contrary the Senator is opposed to giving the American delegate on the security council of the proposed international organization any authority to determine even when limited United States forces should be used against the aggressors. This means denying such power to the President.

Resenting the term "irresponsible perfectionism," as used by the President, Senator WHEELER states there is no use in attacking his position on this basis.

"Who was the perfectionist when this matter was originally brought up?" he asks.

"On January 6, 1941, in his annual message to Congress the President said: 'The fourth freedom is the freedom from fear * * * which, translated in world terms, means world-wide reduction in armaments to such a point and in such a thorough fashion that no nation will be in a position to commit an act of physical aggression against any other nation in the world. If that is not perfectionism, I do not know what it is.'"

LIKE FIRST WORLD WAR

Much the same line of discussion as that now precipitated by Senator WHEELER took place in the First World War. A note was sent to President Wilson, saying that the newly organized German Cabinet accepted his famous Fourteen Points as a basis for negotiation. At that time both Senator Lodge and Theodore Roosevelt were demanding unconditional surrender. Writing to Colonel Roosevelt, the Massachusetts Senator said:

"I am living in a constant state of anxiety now of the sudden plunge of the administration for a negotiated peace. At this point, if we make an armistice we have lost the war and we shall leave Germany about where she started.

"I am sure that the people want a complete victory and an unconditional surrender. They want to win this fight on German soil and every man who comes here, who has been fighting on the western front, says the soldiers are determined to go into Germany and would resent it bitterly if they were held back."

President Wilson sent the German Government a reply inquiring whether it was meant that the terms were accepted so as to leave for discussion only the practical details of their application. He demanded in this note that the Central Powers consent to withdraw immediately from invaded territory. His note was denounced by some of the German leaders, who declared that it virtually demanded unconditional surrender. While in the United States, on the other hand, it was denounced because it did not demand unconditional surrender.

NO NEGOTIATED PEACE

In the finality, President Wilson succeeded in breaking down German morale and secured every concession for which he asked.

If the Germans accepted Senator WHEELER's views as representing the views of the American people, then they would be justified in suing for a separate peace with this

country. But this is not the fact. Whatever else, Americans generally are determined upon an unconditional surrender of Germany. A negotiated peace would constitute a betrayal of our fighting men, and such a peace would mean that American lives would have been not only lost, but utterly wasted. All of our great sacrifices would have been in vain.

Strengthening Congress

EXTENSION OF REMARKS
OF
HON. ROGER C. SLAUGHTER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. SLAUGHTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Star of January 21, 1945:

STRENGTHENING CONGRESS

What's the matter with Congress?

As every American schoolboy knows, our form of government consists of an interlocking set of checks and balances. The executive, the legislature, and the judiciary were intended to be coequal members of this system. Each was provided by the Constitution with a sphere of original authority. But the same instrument also clothed each of them with certain powers designed to curb the possible abuse of their authority by either of the other two.

That tripartite arrangement, in general, worked well for about 150 years. Devised at a time when our ancestors were acutely aware of the danger an overconcentration of power in any branch of the Government would present to their basic liberties, it had shown itself remarkably adaptive to new circumstances. Even today there is no disposition openly to propose that it be scrapped or to advocate a revision of the Constitution for this purpose. We are not a people given to tampering with the structure of our democracy.

Recently, however, political observers have begun to point to the enormous accumulation of authority in the executive department and to ask whether we are not, as a matter of fact, steadily shifting away from our concept of checks and balances. Congress, they say, seems not only to be able to impose less and less real restraint upon the President but to be delegating more and more of its original authority to him. As a result, in their opinion, both the actual power and the prestige of the National Legislature has been progressively declining for a considerable period.

These same observers note that the tendency of Government increasingly to regulate private enterprise and to furnish additional services of one sort or another was apparent long before the current war. It is not, they argue, the product of a temporary emergency but the outgrowth of long-range forces operating in our national life. Whichever political party has charge, according to their view, we must expect the zone of governmental activity to continue to expand after the war.

We shall have some control over the speed and scope of such an expansion, the observers contend, but we cannot reasonably hope to stop the process, much less to reverse it. Therefore, they declare, the problem before us is to determine how the mounting governmental influence is to be exercised and, in particular, whether it is to be vested almost altogether with the President and his administrative subordinates (as now appears to be the tendency) or Congress is to reassert its function as an effective check against the centering of so vast an authority in the executive branch.

As this thesis runs—and there are few today to dispute its essential accuracy—the trouble with Congress is largely organic. It has failed to keep up with changing condition. The executive and, to a smaller degree, the judicial branches of our Government have altered their organization and procedures, to meet new requirements. The legislative has not. Fundamentally, it is still set up as it was in the last century. In the words of one critic it is attempting to handle the problems of a machine age with hand tools. Its organization is unwieldy. Its procedures are inefficient. And, as a consequence, Congress can no longer adequately perform the duties assigned to it by the Constitution.

That verdict is widely accepted by persons in touch with our national legislature. So is the corollary that the machinery of Congress should be modernized, although a minority group is not inclined to insist on such action, presumably because it prefers to see more power in the hands of the executive department—even at the cost of permanently disrupting the equilibrium of authority and running the risk of dictatorship. But there agreement ends.

In what direction and how far Congress should be reorganized are still matters of debate. Congress, itself, has established a joint committee to inquire into the subject and make recommendations. This committee has just sustained the loss of its chairman, Senator Francis Maloney, of Connecticut. Meanwhile, public discussion of the question is at last commencing to gain momentum and the available literature is growing.

A former secretary of the Senate's Committee on Foreign Relations, Roland Young, has written This Is Congress, a book in which he analyzes the weakness and strength of that body and offers some suggestions for its improvement. And James F. Byrnes, drawing on an extensive legislative experience, considers the same problem more briefly in the latest issue of the American magazine. The most comprehensive study yet conducted, however, has produced the Heller report, which was published a few days ago under the auspices of the National Planning Association and advances a 14-point program for increasing the efficiency of Congress through a general reorganization.

The Heller report is the work of a business management consultant of Cleveland and, in its entirety, consists of about 300 pages of factual analysis and conclusions. The National Planning Association, which sponsors it, is a nonpolitical body that includes representative figures from American business, labor, and agriculture. All three groups within the association, incidentally, have considered and endorsed the Heller report. The assembled information and recommendations last week were placed before the Maloney committee.

It is unfortunate that initial accounts of the Heller report have dealt so largely with its salary and pension proposals. These are integral but minor parts of the program. Far more important are the sections which call for a drastic reduction of the number of standing committees in both Houses, the creation of majority and minority policy committees in each House, provision of competent secretarial staffs for all committees, expansion of the research and legislative reference services available to Congress, more effective control over executive expenditures, and an experiment with a question period at which members of the executive branch could be interrogated.

At present the Senate has 33 and the House 47 standing committees. Many of these have overlapping jurisdictions. The report recommends that the number be diminished to 15 in each House, their jurisdiction be carefully redefined, and that, as far as practical, the committee structure of the two Houses be paralleled to avoid confusion.

The chief innovation proposed by the report is the establishment of the new policy committees, consisting in the case of the majority party of the chairmen of all the other committees and in the case of the opposition party of the ranking minority members of the same committees. The functions of these policy comittees would be to formulate the legislative programs of the respective parties in Congress, to center responsibility, and to give each party a really authoritative spokesman in each House.

The staffing and research provisions are intended to take a load of detail off individual Congressmen and, at the same time, to make them independent of the experts now furnished them on request by the executive departments which may themselves be under congressional scrutiny. The report urges that Congress should not continue to go into great detail on appropriation bills, a procedure which consumes much time, but that the duties of the General Accounting Office be enlarged so that Congress may be constantly informed of the way in which the money is being spent and can take prompt remedial action where necessary.

The report suggests various other means of tightening the legislative procedures; among them discontinuance of the practice of tacking irrelevant matter to bills in the form of riders and abolition of the filibuster. It agrees that selection of committee chairmen by seniority is illogical, but offers a choice of substitutes, rather than a fixed recommendation. The report further attempts to set up clearer channels of communication between the executive and legislative branches of the Government through both the policy committees and the question period.

The Heller contention that abler Congressmen could be obtained in the long run by raising their salaries to $25,000 a year and assuring them of retirement pay was bound to provoke controversy. But it should not be allowed to obscure the main propositions of the report calculated to improve the machinery of Congress in line with trends commonly accepted by American industry.

Several of these propositions—notably the reorganization of the committee system, the creation of policy committees, and the provision of better research facilities—had been previously outlined by others. The particular virtue of the Heller report, however, is that it seeks to offer a comprehensive program of reforms, virtually all of which can be initiated by Congress itself.

In the past Congress has been curiously reluctant to revise its internal structure and procedures. Whether it meant business when it created the Maloney committee remains to be seen. But no one can very well challenge the assumption that our National Legislature is badly in need of greater efficiency in its operations—or that the congressional balance in our system has been growing dangerously light.

Cancelation of Rationing Stamps

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. PATMAN. Mr. Speaker, in Mr. Chester Bowles' weekly statement last

week he discussed the cancelation of rationing stamps.

It appears that there was a clash of obligations. One obligation was to equally and fairly distribute the food among the people so that every person would have an opportunity to obtain his or her share. The next obligation was to make it possible for people who held these stamps to obtain the commodities it was possible for them to obtain with them.

Obviously there were too many stamps out, and both obligations could not be honestly performed. Therefore, it was necessary that the administrative officer, in this case Mr. Bowles, take the responsibility of doing what was the nearest fair and right thing under the circumstances.

PULLMAN ACCOMMODATIONS MAY BE TAKEN

In this war many obligations will probably be broken, not because any person wants to break an obligation, but because of situations brought about by the war which make it impossible to perform them.

For instance, if a person has a railroad ticket and space in a Pullman from Washington to St. Louis, or between any two points in this country, and he gets on the train and occupies his Pullman space, and it should happen that there is a disabled serviceman traveling between these points accompanied by a nurse or doctor, the railroad company, not having accommodations for the disabled serviceman, will take the Pullman space, although the passenger has paid his fare and has actually occupied it. There is a case where an obligation will be broken, and it is being broken every day. Of course, the passenger could scream to high heaven that he had his ticket and his accommodations paid for and there was an obligation on the part of the railroad company and the Government to protect him in his contractual rights, but it would not do him any good.

If it is necessary to cancel stamps and points to furnish adequate food to our fighting men the ones holding the canceled points are in the same position as the passenger on the train who has his space taken by a serviceman.

GOLD CERTIFICATES

Another case is gold certificates. We have billions of dollars of paper money outstanding that says on its face "payable on demand in gold." For reasons brought about by the world situation, it was impossible to redeem these certificates in gold without disturbing and possibly paralyzing our domestic economy. So there being a clash of obligations, the nearest fair and right thing had to be done, and that was to prohibit the payment of these certificates in gold. The people are not injured in their rights because any money they obtain is worth just as much as gold, but at the same time it can be contended that there is a breach of faith on the part of the Government.

Mr. Bowles' statement is as follows:

We have received many comments of approval on the changes made in the rationing program. We have the wholehearted support of the consumer groups, whose advisory committee has been studying the facts with us. Many business groups who know the food-supply picture also have commended the action. A splendid statement by Paul Willis, president of the Grocery Manufacturers Association, is a good example. Labor groups also have indicated their approval.

On the other hand there has been serious criticism from many other people who have not understood the reasons for the change * * * particularly the cancelation of old stamps. We knew many would feel hurt and some would be seriously disappointed when they learned that the old stamps were no longer valid. But we simply had to face this situation, difficult and unpleasant though it was, and to make the only decision which was fair.

The facts are that, while overall food supplies will be ample in 1945, the supplies of meat, sugar, canned foods, and butter available to civilians at least in the first part of the year will be lower. In addition, we know that in the last quarter of 1944 there was bad maldistribution of meats, sugar, and butter in many parts of the country. District after district reported short supplies, so that many people found none of these items at their grocers or butchers, time after time. While there were canned foods on store shelves, we were using up our supplies much too fast and they must last until next summer.

It was apparent, therefore, that, as we started the new year, each family would have a little less of each of these foods. So, many additions to the rationing list had to be made.

The next question was how to handle the 2½ months' supply of extra ration stamps in the hands of about 25,000,000 families. We had only two possible choices—both difficult. Either we could increase point values, thus cutting the rations per person, or we could cancel this excess currency.

The first alternative, I believe, would have been completely unfair. It would have required the majority to get along on even smaller amounts of these scarce foods in order to provide additional amounts for those who had been able to save old stamps.

Some of these had kept their stamps in order to conserve the Nation's food supply. Our surveys reveal, however, that most people didn't buy because they didn't need the food.

Our surveys also show that 30,000,000 of America's 40,000,000 families say they have no more stamps than are required to meet their normal needs, while 10,000,000 families say they have stamps in excess of their needs.

The second alternative seemed to be much the lesser of the two evils. In taking it we have earned the disapproval of the 10,000,000 families who lost stamps through invalidation. But if we had taken the other road and reduced ration values, we would have imposed an extra hardship on 30,000,000 families.

Of course, it is natural that many people were bitterly disappointed. I can understand how they felt. It was the toughest decision we ever made.

But I believe O. P. A. made a decision which was right. I believe it was the only fair decision. I hope you'll do what you can to explain the reasons for it to your family, friends, and neighbors, who certainly have a right to know the facts.

Sincerely,

CHESTER BOWLES.

I am also inserting herewith a letter from the President of the National Council of Women, a letter from the President of the American Home Economics Association, and a letter from Mr. Bowles which answers many of the criticisms that have been urged against O. P. A. because of the cancellation of points and stamps:

NATIONAL COUNCIL OF WOMEN
OF THE UNITED STATES,
New York, N. Y., January 11, 1945.

Mr. CHESTER BOWLES,
Office of Price Administration,
Washington, D. C.

DEAR MR. BOWLES: Stricter rationing is the only democratic method of assuring an equitable distribution of scarce consumer goods. The new rationing program may meet with resistance for a while, until its urgent necessity becomes understood; but eventually I believe the general consuming public will accept it as an essential step toward victory.

After all, it is a matter of simple arithmetic. We cannot increase food stocks at the fighting fronts, to supply our vastly increased overseas forces, and at the same time maintain surpluses at home. There can be no question as to the priority of our fighting men, even if we on the home front find it more difficult to find the foods we want. Though we shall have to change our eating habits to conform to the revised program, it would be ridiculous to call this a sacrifice, in the face of the terrible hardships endured by our own sons on the battle fronts, or the gallant sacrifices of civilians in our Allied Nations. After all, we are a long way off from K rations or a substandard diet, even with stricter rationing.

Sincerely yours,

LUCY R. MILLIGAN,
President.

MRS. HAROLD V. MILLIGAN,

AMERICAN HOME
ECONOMICS ASSOCIATION,
Washington, D. C., January 11, 1945.

Mr. CHESTER BOWLES,
Administrator,
Office of Price Administration,
Washington, D. C.

Dear Mr. BOWLES: May we congratulate you on your determined stand to insure a fair division of scarce supplies as shown by your recent action returning many foods to the ration list and canceling the backlog of unused ration stamps. We are well aware of the courage it took to act in the face of inevitable criticism and misunderstanding. However in view of the war needs and the supply situation we believe no other action was justifiable.

Because of our great concern over the situation we are calling to the attention of our members the reasons which made these changes in the rationing program necessary.

With this information I am confident they will continue to take active leadership in securing public support of necessary wartime price and rationing controls.

Very truly yours,

DORA S. LEWIS, *President.*

OFFICE OF PRICE ADMINISTRATION,
Washington, D. C., January 19, 1945.

The Honorable WRIGHT PATMAN,
House of Representatives,
Washington, D. C.

DEAR MR. PATMAN: I am writing to you to explain the nature of the action which we are now taking in connection with rationed foods. I will not, in this letter, attempt to give you all of the details, point values, and other data involved in this action. If you are interested in these figures, you will find them in the press release which you can get by contacting our liaison offices on the Hill. It is my intent to confine the letter to matters of broad significance and policy.

I should like to emphasize the fact that the tighter rationing program on which we are now embarking, is not a program which takes supplies away from the average person. It is rather a program which will help to assure him a better balanced consumption and a wider access to food products. It means very little to have certain food items on the point-free list if they cannot be purchased. By

restoring them to the point list, it is my expectation that more of these items will be available to the average consumer.

In brief, the action we are now taking has two phases. First, we are restoring to the point list most meat items and most processed foods, and, at the same time, are raising the point value of butter and prolonging the period between the validation of new sugar stamps. All of these steps move in the direction of a tighter rationing program. Second, we are canceling unspent ration stamps which have been built up since this program started.

A TIGHTER RATIONING PROGRAM

It was necessary to make the rationing program tighter because civilian food supplies were reaching low levels and were threatening to drop below the safe level at which our distribution machine could operate. The butter supply for 1945 is expected to be smaller than that for 1944; the meat supply will be 10 to 15 percent less in this coming quarter than it was in the same 3 months of 1944. On December 1 of this year, supplies of commercially canned vegetables available for civilians were approximately 56 percent of the quantity available for civilians at the same time last year. It is now expected that there will be in 1945 9 percent less sugar than in 1944 available for civilians for use in the home and by bakeries, bottlers, candy makers, etc.

Against these short supplies, we have a built-up backlog of ration stamps which stands as a threat against any ration-point program which might be established. A survey made in October by the Census Bureau showed that blue stamps outstanding equal 2.8 months' supply of processed foods and outstanding unspent red stamps equalled 2.5 months' supply. In the case of sugar, unspent stamps were equivalent to about 2 months' regular consumer ration and this report did not cover stamp 33 which became good on September 1.

CANCELATION OF UNSPENT STAMPS

Because we had this large supply of unspent ration currency, we had to make this most difficult decision to cancel unspent stamps. This is probably not nearly so great a hardship upon those holding such unspent stamps as we were at first inclined to believe might be the case. No rationing system which applies to 130,000,000 people can be so perfectly tailored as to provide each person with exactly that ration currency which he needs. We can only hope to set our point values in such manner as will most equitably move the available supplies of scarce civilian commodities into the public market. This means, of course, that some holders of ration books will have less need for coupons than will others. Undoubtedly there are some people who, for patriotic or other reasons, have refrained from spending all their stamps and coupons during the months when they first became valid. They will, accordingly, not have spent all of these coupons and will, from month to month, accumulate a surplus without in any way sacrificing or depriving themselves of necessary food supplies.

Our survey showed that the surplus stamps were held mainly by four kinds of families.

One was the family producing a good deal of its own food from a garden, such as a suburban family or rural family with a victory garden or the farm family. Families of this kind which didn't need all of their ration stamps in 1944 probably will go right along adding in an important way to the Nation's food supply by producing a large share of their own food. They likely will wind up the next year again with a lot of unused ration stamps. None of these people will think it a hardship to begin the new year on an even basis with all other families.

Another kind of family had some accumulated ration stamps on hand for the simple reason that they felt the patriotic thing to do was to draw on the Nation's limited wartime food supply to as little extent as possible. These patriotic families will continue to be patriotic. They will not feel unhappy at the thought that in buying rationed foods in 1945 they will have for use only the stamps to be made good in 1945, and that they are sharing equally with all others in these supplies.

A third large group of families holding accumulated stamps was made up of people, war workers for example, whose wartime way of living demands that they eat a good many meals in restaurants. This same way of living is still open to them, and this group, like the others, will not deem it a hardship to have to depend only on 1945 ration currency to buy 1945 foods.

Still another group was made up of people who had been saving stamps to buy a roast, or a ham, or a can of pineapple for use on some special occasion. For the moment, these people will feel a keen disappointment. We sympathize with them; but had we not wiped out the old currency, and had a buying spree developed, this very same housewife probably would not have been able, after all, to get the roast or the ham or the can of fruit. While our action seemingly deprived her of the special item she wanted at the moment, actually it preserved for her the opportunity to meet her day-to-day needs for rationed foods in an orderly way through the months ahead.

With sugar the supply problem was serious. Already consumers were having difficulty in some parts of the country in finding sugar available in the stores. Immediately ahead is a much tighter sugar-supply situation than that of the last year. Old sugar stamps and 1944 home canning coupons in consumer's hands represented between five hundred and six hundred million pounds. We reasoned that when the story on the 1945 sugar supply was published advance buying of sugar beyond current needs would be stimulated, depleting stocks already low. The result would have been more stores out of sugar and unable to meet consumers' immediate needs as the year advanced.

This, too, was a difficult step for O. P. A. to take. We regret being compelled to take it. But the fact is the public welfare could have been served in no other way.

When we reach a period such as that which now confronts us, with supplies at a low level, points must be restored or raised on the critical items. If we allowed these unspent ration stamps to remain valid, we should be starting this new phase of the ration program by giving to those with surplus stamps—those who have had less need for their allotted ration currency in the past—a considerable "edge" over those who have found it necessary to use all their stamps in the past. This I think you will agree would not be fair. We have, therefore, canceled unspent ration stamps which had been validated before December 1944, leaving in effect the new red and blue stamps which were made valid in December and the most recently validated sugar stamp, No. 34.

NEW STAMPS TO BE VALIDATED

With the restoration of these various food items to the point list we will, beginning with the end of December, validate five new red stamps for the 4-week January meat-ration period. A similar number of blue stamps will also be validated for the month of January. Previously in recent periods we have been validating only three red stamps per ration period; this marks the addition of two new stamps worth 20 points and will give consumers 50 red points for the ration period.

I am not going to outline for you the various point values which are being established under this program. You can find them, if you want them, in the press release available through our liaison offices on the Hill. I want this letter to provide answers for you to questions which you may be asked in connection with this program. If my letter does not answer some of these inquiries or if you have additional questions yourself, I should be very glad to have you write me and discuss any aspects of the new program in which you are interested.

Sincerely,

CHESTER BOWLES, *Administrator.*

The Barre Granite Case

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. PLUMLEY. Mr. Speaker, under permission heretofore granted to extend my remarks I am including an editorial from the Barre Times, of Barre, Vt., The Granite Center of the World, relative to the prosecution of the industry and the individuals by the Federal Government for fixing prices.

The public is entitled to be advised with respect to the circumstances involved in the case, and will find the following an extremely fair statement in that respect, though to those of us who have lived in the Granite Belt all our lives, it minimizes the efforts of the victims to bring themselves within the law in order to maintain the business on a living basis for labor and industry. It does not emphasize sufficiently the benefits derived therefrom by the public, from the fact that order was established out of chaos by them, at their expense of time, effort, and now of money paid in fines, as it turns out.

The editorial follows:

THE BARRE GRANITE CASE

There is more than meets the eye in the news accounts of Federal court proceedings in Burlington yesterday, when fines aggregating $75,000 were imposed on the Barre Granite Association and some 60 companies and individuals among the manufacturers and quarriers of the Barre district. Before denouncing the defandants for conspiring to fix prices, the public should be willing to examine the long chain of circumstances which culminated in the indictments and pleas of nolo contendere.

From the unequivocal nature of the pleas it can only be concluded that the industry went too far in its efforts to substitute order for chaos. There must have been errors of judgment in designing the program for stabilization. When it comes to censuring the defendants, however, no one on the sidelines should ignore the fact that the very people who are supposed to be adversely affected by price fixing are the ones who appear to have shared greatly in the benefits of a fairly dependable price level on Barre granite monuments. We refer to the retail dealers of the country, who, with significant unanimity, are said to have welcomed the existence of a fairly firm floor under Barre prices and an end to selling below cost. Equally significant has been the apparent absence of any clamor from the purchasing public.

One need not have been active in the granite industry to remember something of the unhealthy state of its activities for more than a decade prior to 1940. Before 1930 the record was dismal enough, but the early years of the depression ushered in the wildest orgy of price cutting in the annals of Barre. Wage variations, selling below production costs, and

a bewildering dossier of other unethical practices unquestionably sparked the disastrous strike of 1933.

Arbitration ended the "industrial holiday" and restored a uniform scale of wages. It resulted also in the early establishment of the Barre granite pay-roll clearing house, a surviving agency which has been repeatedly hailed by unions and industry throughout the country as a desirable meeting ground for labor and management and an effective method of insuring wage stability.

Arbitration did not stabilize prices, but it brought from the arbiters a recommendation which struck directly at the core of the industry's besetting weakness. With President Ernest M. Hopkins, of Dartmouth, as its chairman, the arbitration board consisted of a prominent Vermont industrialist and a leader of the Vermont bar, the selections of management; and two college professors, one from Harvard and the other a member of the faculty at Syracuse University, who were chosen by labor.

The taking of evidence consumed nearly a week. It covered every nook and corner of the industry, including the smelly ones. When the arbiters came to announce their findings as to wages they appended a recommendation which is worth quoting in the light of recent developments:

"The board would venture further to suggest the desirability of organization of the trade for the active control of the industry and for the definition of desirable and standard practices, with the appointment of an official who should have the title, privilege, and authority to safeguard the common welfare. A further purpose of such an official would be to enhance the economic stability of the granite industry in the Barre belt."

Before the industry was ready to adopt the letter of the recommendation, the National Industrial Recovery Act came into being. Under its provisions the Government legalized a form of price maintenance and the act operated beneficially in the granite industry until the Supreme Court clipped the wings of the Blue Eagle.

Still groping for a means of putting the industry on a sounder footing, the local association sought the assistance of the Federal Trade Commission in holding a trade-practice conference. For various reasons the resulting set of rules failed to effect the hoped-for results.

These approaches to a solution of the ills of the trade have been cited by those active in the industry today to show that the border line between legal attempts to install ethical practices and the activities now determined to be beyond the pale of the law was not always clearly discernible.

The value of stabilization within the industry has been stressed by organized labor and the public here at home. Both groups were liberally represented in a community committee which offered its good offices in the efforts of the industry to introduce remedial measures. Inconstestibly both labor and the community at large are co-beneficiaries of any cause that promotes the welfare of the granite industry.

Let us not be hasty in reproaching those who have been penalized. Patently in its latter-day striving for a pattern or ordered existence the industry went over the bay. But the record is replete with palliative factors, all of which undoubtedly would have come out in evidence had the case gone to trial.

It is probable that the Department of Justice weighed these factors in its recommendation of fines, which counsel for the defense did not oppose in view of heavier penalties recommended by the department in similar cases involving other industries. It is not inconceivable that the court, in imposing sentences, also took judicial notice of extenuating circumstances.

Early records indicate that pricewise the Barre granite industry got off to a bad start as long ago as the 1830's. In that period granite for the statehouse was sold at 12 cents a cubic foot, or 20 cents delivered in Montpelier. The producers lost money.

There have been recurring setbacks in the history of Barre granite. None of them as yet have proved permanently hurtful.

Naturally, Mr. Speaker, the men whose names have been listed among those fined, are embarrassed by the publicity. They need not be, so far as those of us who know them are concerned.

I say to you, Mr. Speaker, for the information of the public generally, that no more respectable, loyal group of unselfish, law-abiding, patriotic, public-minded citizens can be found anywhere than is found in the group, from the area which I have the honor to try to represent, who are the unwilling and unintentional victims of the litigation instigated by the Government, to which they contributed so much in time and effort and money in an attempt to discharge their obligations as citizens of a country in which, I assume, they hope there is equal justice for all under the law.

Butterfat Prices Should Be Increased

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. HAGEN. Mr. Speaker, rationing and price-ceiling policies have seriously curtailed production of butter and has deprived millions of people on the home front of one of the most important food supplies.

The O. P. A. has recently increased the number of red points required to purchase a pound of butter from 20 to 24 points without a corresponding increase of red points for butter substitutes. Thus, by Government action, one industry booms to the detriment of another.

The O. P. A. will argue that the shortage of butter is responsible for the action resulting in the increase of red points on butter. They fail to point out, however, that production had dropped off as a result of the low prices being paid to the producer for butterfat in comparison with other farm products. It has become more profitable for the farmer to sell whole milk to dry-milk processors than to sell butterfat to creameries to be manufactured into butter.

On January 4 the Blackduck American, a weekly newspaper of Blackduck, Minn., had the following to say about the butter situation:

If butter were not the No. 1 item on America's daily menu, there wouldn't be such hue and cry as there is today, now that butter's ration value has been increased from 20 to 24 points per pound.

So declared John Brandt, president, Land O' Lakes Creameries, Inc., in a statement this week. "Aside from the first and foremost factor that the military and lend-lease rightfully have first call on our butter production," Mr. Brandt declared, "there are several things which can be done to ease the critical situation of tight butter supply.

"Probably the chief contributing cause of the present butter shortage is the matter of price disadvantage with respect to prices of other farm commodities. If this price disparity continues," Mr. Brandt observed, "butter production must continue to decline."

From a health standpoint alone, he pointed out, today's tremendous unbalance of butter distribution is a serious menace to the Nation.

"Current price ceilings on butter fail to consider cost of production of dairy products," said Mr. Brandt. "Such items as labor and feed, for instance, have washed out the net income to the producer. O. P. A. price calculations that have been based upon the old parity formula have scrambled the balance with respect to net income against dairy production, all of which brings us all back to the fight which the milk producers group put up several years ago and has continued to espouse, namely, the enactment of legislation that would force the inclusion of the item of labor in reckoning parity and establishing a price basis for dairy products."

Mr. Brandt hastened to point out that rationing is necessary to equitably distribute what supplies we have. "However," he declared, "rationing neither increases nor decreases the available supply. If we want to lower points on butter we will have to have a better return to the farmer than the present price, which is 5 cents per pound less than the average price paid by the consumer in the peacetime years of 1921 to 1929. Such a situation in wartime, when all other prices are high, cannot be justified and cannot result in other than a decrease in butter production. And," he concluded, "if butter production continues to decrease, ration points for butter are going to continue to go up."

The Late John B. D'Alesandro

EXTENSION OF REMARKS

OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. FALLON. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I am including an article from the Baltimore Catholic Review, also a letter from the War Department, relative to Pvt. John B. D'Alesandro, brother of our colleague, THOMAS D'ALESANDRO, Jr., who was killed in action on November 25, 1944, while serving as a rifleman in the vicinity of Longeville, France, during combat operations.

I know the entire membership of the House joins with me in expressing our heartfelt sympathy to Congressman D'ALESANDRO and the members of his family.

[From Catholic Review of January 19, 1945]

PVT. JOHN B. D'ALESANDRO

Pvt. John B. D'Alesandro, 33 years old, son of Thomas D'Alesandro, Sr., 905 Eastern Avenue, Baltimore, and the late Antoinette D'Alesandro, and the brother of Congressman THOMAS D'ALESANDRO, Jr., was killed in action on November 25 last. He previously had been reported missing in action.

Private D'Alesandro was the father of three children: Antoinette, 12; John, Jr., 10; and Dolores, 9. He concluded his last letter home with these words: "Don't worry about me, I am feeling fine. Take care of my children. God bless you all."

A solemn high requiem mass for the repose of his soul was celebrated at St. Leo's Church on Monday by the Reverend Louis Lulli, P. S. M., pastor of the church. The Reverend Angelo Caso, P. S. M., was deacon, and the Reverend Maximillian Haarpaintner, P. S. M., subdeacon. The Right Reverend Monseigneur Harry A. Quinn was present in the sanctuary. Five nephews of Private D'Alesandro served as altar boys. The church was filled with many friends of the deceased.

Father Lulli in his sermon said that the family and friends of Private D'Alesandro should receive great consolation in the thought that he gave his life so that this world might be a better place in which to live.

Private D'Alesandro, a former altar boy at St. Leo's, was educated at St. Leo's Parochial School and Calvert Hall College. Besides his father, his three children, and Congressman D'ALESANDRO, he is survived by two other brothers, Thomas and Anthony, and three sisters, Mrs. Catherine Costantini, Mrs. Mary Cardegna, and Mrs. Jessie Granese.

Private D'Alesandro was inducted into the service on April 7 last year. He received his training at Fort McClellan, Ala., and went overseas last October. He was assigned to the Eightieth Division.

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, D. C., January 19, 1945.

Hon. THOMAS D'ALESANDRO, Jr.,
House Office Building,
Washington, D. C.

DEAR MR. D'ALESANDRO: I am again referring to my letter of January 9, 1945, concerning your brother, Pvt. John B. D'Alesandro, who made the supreme sacrifice in the service of his country.

A further report containing the circumstances of the death of your brother has just been received and reveals that he was serving as a rifleman in a rifle platoon which made an attack against the enemy in the vicinity of Longeville, France, on November 25, 1944. While actively engaged in this operation, Private D'Alesandro sustained gunshot wounds to the legs and back which, I deeply regret, resulted in his death on the same date. This information has been conveyed to his sister, Mrs. Mary Cardegna, 903 Eastern Avenue, Baltimore, Md.

Permit me to again extend to you and the other members of your family my deepest sympathy in your bereavement.

Sincerely yours,

ROBERT H. DUNLOP,
Brigadier General,
Acting The Adjutant General.

Address by Dr. Nahum Goldmann, Chairman of the Executive Committee, World Jewish Congress

---

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an address delivered by Dr. Nahum Goldmann on January 21, 1945, who is chairman of the executive committee, World Jewish Congress, at the annual convention of American Jewish Congress, New England division, at the Hotel Bradford, Boston:

At the first of three annual world Jewish conferences, in 1932, in Geneva, preliminary to the establishment of the World Jewish Congress, I was asked to analyze the world scene. Since that time, it has been my privilege, year in and year out, to repeat this analysis in the various international Jewish conferences which took place between then and the outbreak of the war. From the beginning it was a tragic task and it became more tragic as Nazi Germany gained in power and its anti-Jewish policy began to unfold itself in all its ruthlessness and devilish thoroughness. Year after year I had to analyze the Jewish situation—a situation which was going from bad to worse with all the portents of a catastrophe threatening the very existence of large parts of our people. Then came the war and we were separated, one from another, for 5 years.

Today, speaking before the first international Jewish conference since the outbreak of the war, the report I must make is, unfortunately, not merely one of a catastrophe impending—of a disaster which one senses in the air—but of a tragedy which has taken place—a tragedy much more terrible than any of us could ever have imagined. It is, perhaps, too early to discuss this catastrophe in exact figures. Some of the Nazi-occupied countries in Europe are not yet liberated, and who knows what will happen to the remnants of Jews in these countries in the last moments before the final collapse of the Nazi regime. But even from the countries which have been liberated, there is as yet no accurate statistical survey, though all the reports indicate that our worst fears were surpassed by what actually happened. At best countries which had millions of Jews are left with a few hundred thousand; countries of flourishing Jewish communities are left practically Judenrein—a hundred thousand more or less can no longer change the terrible fact, which is beyond doubt, that the vast majority of European Jewry has been massacred.

It is easy to say that Hitler and nazi-ism are responsible for it. But that does not cover the problem. Terms like "moral responsibility" do not apply to men like Hitler and his criminal gangsters. When a mad dog bites you, you don't hold the dog responsible. You destroy it. But you do hold the owner responsible. It would be very easy for the democracies to let us put the whole blame on Hitler and his Nazi gang. This would free the democracies from all obligations, because no one would expect Germany, after its defeat, to be in a position to make restoration for its crimes. The real moral responsibility for the tragedy lies with our whole generation. The entire phenomenon of nazi-ism is the responsibility of the world of today. No law in history or nature had made nazi-ism necessary or inevitable; and with a greater degree of moral courage and sense of solidarity among the nations, the catastrophe of the last decade, culminating in the war, might have been avoided. If there ever was a period in history when the punishment for lack of human solidarity and moral callousness was visited on the generation responsible for it, it is this generation. Millions of lives have been destroyed because governments and peoples were indifferent to the menace of nazi-ism and each one thought it might escape by letting the other suffer.

And what is true in general is doubly true for us. Nazi-ism did not start its anti-Jewish policy by killing Jews; it took even Hitler and his gang years of preparation to go from anti-Semitic propaganda and the Nuremberg laws to the death chambers of Maidlonik and Treblinka. Nor can the democracies say they were not warned. Since 1933 some of us assembled in this hall have again and again warned the leaders of the great democracies and pleaded with them either to stop Hitler's persecution of the Jews or at least to enable them to get out while there was yet time. Most of them regarded our warnings as exaggerations of panic-stricken Jews. When we asked them to intervene with Germany, the reply was that anti-Jewish policies are the internal affair of a country whose sovereignty forbids other countries to intervene. When we asked for the opening of the doors of other countries, especially Palestine, the reply was that immigration policies are the internal affairs of a sovereign state. And England's appeasement policy toward the Arabs led the English to shut the doors of Palestine at a time when their opening was more essential than ever before. Even during the war, when the news of the extermination began to reach us, doubted at first by the governments but later confirmed by their representatives, and we asked for bold policies to save hundreds of thousands of Jews, the reply was routine methods, red tape, and the rejection of measures proposed by us and other Jewish organizations.

Speech of Fred Bennett

EXTENSION OF REMARKS
OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by Fred Bennett, president of the New York Foreign Freight Forwarders Association, at that organization's annual dinner held at the Roosevelt Hotel, Tuesday, January 9.

I deem the address of such importance that I am inserting it in the RECORD with the hope that it will be read by all who are interested in foreign trade and its important place in the post-war world. The speech is as follows:

We welcome to this, our twenty-seventh annual dinner, our distinguished guests and all of our other friends in the steamship, railroad, insurance, bank, and allied industries. This dinner marks an end to another year but, each year's end is also a year's beginning.

You can reflect with a sense of satisfaction on the part you have played this last year in helping to bring about a substantial change in the war situation from what it was at the end of 1943. As a railroad man or a steamship operator, or in one of the other industries here represented, you were an effective force in the prosecution of the war. You have worked side by side in this global struggle with other representatives of our industries, who are stationed all over the world in the various theaters of action.

We hope that before another annual dinner the war in Europe will have been ended but, until we can see the end clearly in view, we must place before any other interest whatever our job, to insure victory at the earliest moment.

But, in the midst of hostilities, and to the extent that we can do so without interruption to our efforts toward victory—we should give a thought to the fact that our industries must play an important part in the establishment and maintenance of peace. The services here represented are an important link between our people and those of other lands. We are, in a sense, the vanguard in the approach to understanding with other nations.

The banks, insurance companies, the merchant marine, the foreign freight forwarders are necessary to a successful foreign-trade transaction. These services are as important to the future place of a product in the markets of the world as quality and price. The exporter is tragically shortsighted who, through his terms of sale and payment, relinquishes his interest in the selection of the services which handle his goods for shipment abroad.

On our part, we must make it a matter of pride to our foreign-trade merchants that there are no better services in the world. I believe this to be true, but, on the other hand, I remain in doubt that the available facilities have been organized as well as has been done in other countries. The tendency exists in the United States to emphasize individual units without regard to the over-all effect; this is a policy which may have its advantages in domestic trade but which has a definite disadvantage in the field of international trade. You cannot properly treat an international transaction without regard to the fact that all parts are of an integrated whole.

The key to peace is foreign trade and it is only as an integrated whole that we can translate principles and policies into practicalities and open the door to world peace. We can make more progress in this direction than we have done heretofore. We are all-out for a world's record of peace and understanding, for progress and prosperity. We cannot ignore our place in the future nor can we evade our responsibilities to work in close harmony with each other toward this end.

And so we can say on this occasion, "This much has happened up to now; this much has been done and this remains to do."

Farm Labor Threatened

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 22, 1945

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial on farm labor recently printed in the Sioux City (Iowa) Journal-Tribune:

FARM LABOR THREATENED

War Mobilization Director James F. Byrnes and War Food Administrator Marvin Jones do not see eye to eye on a question relating to manpower requirements for the armed services on one hand and the labor demand for farm production on the other. Unless a wise decision is reached in settling this controversy between the two highly placed officials, great harm may come to us as a Nation and people. And at the moment it looks as if Mr. Jones, in protesting against further raids on farm labor, is on the right track, and that Mr. Byrnes, if permitted, might go too far for the good of the country.

A new crop season is ahead. Farmers are making their plans the year around for production. They must know months ahead of the actual work what will be available to them in both equipment and labor. Farmers also must make plans, and they cannot do it intelligently unless they know what the situation is to be months hence.

Mr. Jones has let the farmers know what is expected of them in 1945. He has told them, as has the Department of Agriculture, that another banner crop will be needed. He has urged them to produce again this year as they did in 1944, that foodstuffs in great quantities are needed. For it is to be a longer conflict than was believed a few months ago. Therefore the call to the farmers to produce again as much as is humanly possible.

Some 1,600,000 men of military draft age have been deferred as farm workers. Mr. Byrnes has reported to the White House and to Congress that it may be necessary to reconsider the standards governing the deferment of agricultural workers, so additional manpower for the armed services may be had. Mr. Jones is opposing this. He wants agriculture to have all the labor now available, for he knows the production desired would be difficult, if not impossible, if farm workers in large numbers had to don uniforms.

According to Government figures agriculture right now has the smallest number of farm workers in 34 years. Yet the call from the Government to the farmers is for them to maintain production at 1944 figures, which constituted a record, to meet military and civilian requirements and the need for certain fibers that go into war production.

The deferred agricultural workers represent about 18 percent of the total number of farm operators and hired men on the farms as of December 1 last. These workers are considered, as one Government official put it, "the backbone of the farm labor supply." The other 82 percent is declared to be made up largely of landowners, women, children, and older men. The quality of the farm work is said to have decreased year by year for the simple reason that older men, women, and children of tender years are unable to do as much as workers of military age.

The farm people of the country have done a grand piece of work in responding to the call for greater crop yields. But they cannot keep it up year by year unless they are given the help they need. If any raids are made on the deferred farm workers for the military services and the Government fails to provide replacements, decreased production of foodstuffs will demonstrate the seriousness of the error in judgment made.

Once again let it be said that if Federal officials only looked into another barrel that has plenty of manpower that could be made available for war production or the armed services, they could leave the farm labor supply undisturbed. That barrel is quite close at hand for Federal officials. It is the one in Washington, and it holds hundreds of thousands of Government employees who could be spared from Uncle Sam's pay roll. Why don't the Federal officials take some of these workers out of the way of others so those remaining can perform their tasks to better advantage and in order that manpower requirements can be filled? The suggestion is directly made to Mr. Byrnes, himself.

Gov. Ben W. Hooper, of Tennessee, Champion of Honest Elections

EXTENSION OF REMARKS

OF

HON. JOHN JENNINGS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. JENNINGS. Mr. Speaker, for many years election frauds have hung like a pall over many counties in east Tennessee. The good citizens of McMinn and Polk Counties have been disfranchised for the past 10 years. The Biggs machine of Polk County and its Cantrell satellite of McMinn County in these two counties have substituted the rule of the pistol and blackjack for the ballot. Through their control of the State criminal court and the favors of the Federal judge having jurisdiction of election offenses in these counties they have openly and flagrantly defied the laws, both State and Federal, protecting the right of suffrage.

These outrages, like a creeping paralysis, have extended to other sections of the State.

They invaded Cocke County. There they were met and stopped in their tracks by former Gov. Ben W. Hooper. Governor Hooper has rendered great service to his State as legislator, soldier, prosecuting Federal attorney, Governor, judge, and as a lawyer, churchman, and civic leader. As chairman of a committee of 500 citizens he has smitten the election thieves of his county, hip and thigh, and restored honest elections in his county.

I deeply appreciate the following note from him:

JANUARY 17, 1945.

They've been trying to "McMinn and Polk" us up here in the mountains. But the folks got riled, riz up, rared back, and raised a ruction. Your good example has been worth a lot to us. You have rendered a great public and party service.

BEN W. HOOPER.

And his report as chairman of the committee of 500 citizens is so full of vital truth and exalted Americanism, I give it to good citizens everywhere as a call to arms in support of the right of the citizen to cast his vote and have it counted as case:

To the Committee of Five Hundred:

This communication is in the nature of a report made by your chairman in compliance with the requirements of your committee. It is obvious that an organization of such large membership cannot often be called together, but, at a convenient and suitable time, there should be another general meeting.

Since your organization was perfected, considerable progress has been made in cleaning up Cocke County elections. This has been accomplished by a quiet, determined effort upon the part of private citizens.

Our officials, as a rule, have not yet realized that a large element of the best citizenship in both parties would rather have their chicken roosts robbed than their ballot boxes. A man can be a citizen without a chicken or a dollar, but not without a ballot. And the man who steals your vote commits a far greater crime against you and the State than the man who picks your pocket.

THINGS ACCOMPLISHED

Among the things accomplished so far in behalf of honest elections in our country are the following:

1. The licensed sale of liquor, which had been forced upon the people of Cocke County by wholesale frauds of unprecedented flagrancy, was overwhelmingly revoked at the ballot box, but it required litigation and strenuous exertion upon the part of citizens, first, to get an election held and, second, to protect and preserve the rights of the majority at the ballot box.

The ministers of Cocke County and many other earnest men and women, who are not customarily active in elections, gave competent leadership in this fight. The same intelligent aggressiveness would have easily prevented the original local-option-election steal, for it was crude, open, and easily provable.

2. An ouster suit was brought in the chancery court against a county election commissioner by 39 citizens. The commissioner filed in the court on the morning of the trial his accepted resignation, which ended the suit.

3. A stolen election in the town of Newport was set aside—an election in which 100 illegal ballots were stuffed into the ballot box and 100 names forged on the scrolls at the Memorial precinct. If this fraud had been allowed to stand, the city recorder would have been named by a few election crooks, rather than by the people, as the law commands.

This was an instance of Democrats robbing one Democrat for the benefit of another, demonstrating that election thieves are not respecters of person or party.

4. An election of two justices of the peace in the first district was set aside for gross frauds and illegalities of the sort so frequently and notoriously practiced in that district for many years. Hugh Huff Burnett and Haze Moore and the people of that district deserve great credit for refusing to submit to this outrage.

5. A Republican primary for county offices was held last April which broke all records for fairness and freedom from fraud. It was, perhaps, the first time in the history of our county when election officers were appointed for the sole purpose of holding a fair election rather than promoting the interests of some candidate. But the candidates and voters cooperated in a fine way when they saw that a genuine effort was being made to hold a perfectly fair primary; and there was not a complaint or criticism when it was over.

Some Republican primaries in this county have been filled with fraud, but, at that, none of them have ever reached the point of simply padding and "writing up" the returns, as has become the fixed practice of the so-called Democratic organization in this county. Democratic primaries in Cocke County, as a rule, are travesties on democracy, and so far, there is no real effort in prospect for their reformation.

Illegalities and frauds in Republican or Democratic primaries pave the way for similar practices in regular elections.

6. The recent November election was finally held with reasonable fairness and legality, although extensive plans had been made to steal it. This scheme was blocked by the watchfulness and activity of many citizens over the county. The preceding November election of 1942 was one of the most shameless steals that ever disgraced a Tennessee county. One glaring example was the voting of sixty-odd so-called absentee ballots in the Edgemont precinct, every one of which was fraudulent and most of the frauds committed against men in the armed services of their country.

RECENT FRAUDS

But, notwithstanding some of the successful efforts that have been made to protect the ballots of the people, quite a number of illegalities have recently been perpetrated, which, although they may appear to be simple happen-so's, are far-reaching threats to the integrity of our elections.

For example, in the local option election a year ago the returns from Padgett's and Briar Thicket precincts were smuggled and suppressed and never canvassed and counted. No election supplies ever reached the Read Hill precinct, and, consequently, no election was held there. Thus, three entire precincts were totally disfranchised. In the same election, Bogard and Edgemont precincts experienced inexcusable difficulty and delay in obtaining election supplies. It just happened, of course, that all five of these precincts were voting heavily against licensed liquor.

In the last August election some 40 or 50 voters were disfranchised in the Grassy Fork precinct because of a lack of ballots.

In the recent November election the postal cards notifying Republican election officers of their appointment did not go out until Monday morning, November 6, the day before the election, although the law requires that the notices be given 10 days before the election. Some of the appointees received their notices after the election was over and one never did receive his.

The mailing of these postal cards might have been delayed still further if attention had not been called to the fact that they had not been mailed at a public meeting in the courthouse Saturday afternoon, November 4.

The failure of an appointee to receive his postal-card notice furnishes an excuse to prevent him from serving, and thus affords the opportunity to deprive Republicans even of the meager minority representation given them by the law.

In this election there was also much difficulty and delay in getting election supplies in the Long Creek precinct.

Such illegalities can easily change the result and thwart the will of the majority.

Another practice that has come into vogue in the last year or so is the failure of the election commissioners to file in the county court clerk's office one set of the original returns from each precinct in a November election and copies of both sets of returns in any other election. A failure to comply with this law denies the public the right to see these returns and is a direct aid to the concealment of fraud and the suppression of evidence, either in a civil suit or a criminal prosecution.

GENERAL OBSERVATIONS

The work that accomplished the favorable results mentioned in the first part of this report has been hard and burdensome on a comparatively small number of men, but its value to the people of Cocke County has been great. Personally, as your chairman, I have given more time, strength, and money to this cause of maintaining the right of our citizens to vote than a man of my feeble health, advanced years, and limited means should have given, but I do not regret it. I do, however, mean to call upon the members of this committee of 500, and all other good citizens to cooperate in the future even more full, and actively in this work of freeing our country from election thievery and the threat of disfranchisement. This is a condition that never confronted our country before in all its history of practically a century and a half.

As to myself, I regret that I shall not be able hereafter to devote to this vital public cause quite the time and attention I have heretofore. But my interest will be undiminished, and that interest is not personal nor partisan. I have reached an age where I entertain no political ambitions and am not actuated in connection with these matters by personal animosity or political prejudice. I do not want to see any man of any party unlawfully deprived of his right to vote, and I revolt at the thought that our State or any of its counties shall ever be dominated by the perpetrators and beneficiaries of stealage and fraud, committed against the political and civil rights of free men and women, who, must bear their fair share of the burdens of their country in peace and in war.

This problem is worthy of the anxious thought and the active exertions of all patriotic citizens. The right of suffrage lies at the foundation of free government. When that right is threatened, there immediately arises the greatest and most fundamental of all political issues, transcending all partisan considerations.

This work must not lag in our country. While this same problem exists in certain other sections of our State, we are most directly responsible for conditions in our own county.

Our people must carry on with vigilance and vigor or they will lose the ground they have gained. The returns of the election of November 1942 were so completely falsified that they bore not the slightest resemblance to the vote actually cast by our people, but, in the recent November election, the returns measurably, but not perfectly, reflected the voice of the voters. In the one instance, the electorate utterly failed to avail itself of such protection as the law affords; but, in the latter case, it asserted its rights under the law. Hereafter, whether you are sovereign citizens or political eunuchs will depend entirely upon whether or not you insist upon your constitutional rights.

While American boys are laying down their lives on all the battle fronts of the world for the preservation of human freedom, surely those of us at home will not permit the destruction of free government by the desecration of the ballot box and the disfranchisement of voters by force and fraud.

If this Republic of ours should ever perish it will not be at the hands of outside foes, but from conditions of internal disease that have rotted its heart and vitals—the sacred right of free, untrammelled, unobstructed, and undenied suffrage, the right to name at the ballot box the men who make, who interpret, and who execute our laws.

BEN W. HOOPER,
Chairman Committee of Five Hundred.

P. S.—This report should be preserved, as it contains information of permanent value.

Mr. Speaker, in due season, I shall place before this House the outrages perpetrated against the sancity of the ballot box and the citizen's right to vote in McMinn County and in Polk County, Tenn., in the November 1944 election, and what, if anything, has been done about it by those whose sworn and paid duty it is to enforce the laws of this Nation.

Work or Fight and the Tydings Amendment

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1945

Mr. WHITE. Mr. Speaker, at a congressional committee hearing on January 16, 1945, General Hershey, Director of Selective Service, stated:

If anybody in Idaho or anywhere else is telling the draft boards to disregard the Tydings amendment, they are not speaking for the Director of Selective Service.

The Tydings amendment provides:

Every registrant found by a selective service board, subject to appeal, to be necessary to and regularly engaged in an agricultural occupation or endeavor be deferred from training and service in the land and naval forces so long as he remains so engaged and until such time as a satisfactory replacement can be obtained.

Despite the above, my office is being deluged with letters of which the following is a fair sample:

BOISE, IDAHO, *January 19, 1945.*

Representative COMPTON I. WHITE,
Washington, D. C.

DEAR SIR: On December 27, 1944, our son was taken to the Army.

Glenn was born at Donnelly on the ranch in May 1921, age 23 now, and has been on the ranch all these years.

We do a great deal of farming by ourselves and has been up to Glenn to run and service the three tractors and three combines and other machinery.

Last year we harvested 12,000 bushels of grain and 48,000 pounds of clover seed, fed a carload of beef, pastured 400 head cattle, and irrigated 600 acres. We operate 1,320 acres in all.

By taking Glenn this leaves me alone to do this farming and I am not able to carry the load.

I appealed to the State board for reclassification, but the assistant in the selective service board said they were not interested in the hardships of the farmers, that they were out to get an Army. He said it was up to the employment office to get help for the farmers. I have asked them for help, but they say they do not have anything along that line.

The President calls for a work-or-fight program, and if doing all this farming isn't work then please tell us what work is.

We had a recommendation from the county war board that Glenn be deferred and a letter from the employment office stating they could not replace him, and a letter from a doctor saying I could not do that heavy work, but they ignored all this.

According to the Tydings Act he is still in the agricultural deferment class, and it seems to me someone has overstepped his authority in taking him.

Please advise us as to what steps can be taken to get him back on the farm.

Would surely appreciate an early reply.

Very truly yours,

FLOYD LOOMIS.

Union Rating

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. HOFFMAN. Mr. Speaker, it has long been a widespread opinion, not only among people generally but among employees as well as employers, that the N. L. R. B. has been the organizing and the coercing agent of the C. I. O.

The hearings of the House special committee investigating the N. L. R. B. headed by HOWARD SMITH, disclosed that all too often the charges of the A. F. of L. that the N. L. R. B. in days gone by was not impartial; that it favored the C. I. O., were true.

Perhaps the tieup has not of late been apparent to the same extent but that the opinion still exists is evidenced by a letter received today and which reads as follows:

INTERNATIONAL MOLDERS' AND
FOUNDRY WORKERS' UNION OF
NORTH AMERICA,
Kalamazoo, Mich., January 15, 1945.

No doubt by this time you have read the article printed by the International Teamsters Union on the C. I. O. dominated National Labor Relations Board.

It is indeed with regret that in order for this organization to survive that any Federal agency must favor it in all instances, especially where they have no organization and with the aid of the N. L. R. B. they place themselves in the position of disputing other organizations that have successfully dealt with various companies for years.

With the C. I. O. completely governing the N. L. R. B., a major part of the N. L. R. B. and the P. A. C. claiming full responsibility for the return of the present administration and a number of the Congressmen and Senators, it seems, at times, somewhat useless to attempt the continuation of the necessary flow of production to our boys in the armed forces.

All of us have close relatives in this conflict, and I am of the opinion that the greater number of the working class desire to see that plenty of materials are delivered in order to bring them back home safely in the shortest possible time. But due to the N. L. R. B. controlled by the C. I. O., they are only forced to go out and get 20 percent of the employees' signatures on their authorization cards and the N. L. R. B. will make an investigation as to the possibilities of having an election. During the time the Regional War Labor Board, the O. P. A. and the Economic Wage Stabilization Director, which usually takes from 4 to 12 months, the C. I. O. attempts to enter into the picture, telling the employees how much control they have on the various boards and if they will become interested in their organization they will get the dispute settled, thereby creating a feeling that tends to disrupt production and making a great number of dissatisfied workers.

I think all of us realize that foundries are the most critical of all industries, and with the wages paid in this industry we have enough trouble continuing their operation under normal conditions without the C. I. O. being assisted with the N. L. R. B.

A hearing was conducted in Kalamazoo last week, between our organization, the C. I. O., and a representative of the N. L. R. B., regarding a plant that we have had under contract for 43 years, but due to their desire to assist the war effort they converted over to another line of work and are doing a wonderful job, but the C. I. O. is attempting to wreck this membership when they realize that this company is paying the highest wages in the city with the best of working conditions, in fact they can get absolutely nothing for the employees, but are spreading their false propaganda of what can be done.

Tomorrow the N. L. R. B. is going to make another investigation on one of our plants, as the C. I. O. has petitioned for investigation, where we have a contract that covers six foundries jointly and, with the exception of one clause has been extended for another year. Here is a case where it took the W. L. B. just 1 year, lacking 13 days, to finally give a decision and this decision would not have been given at this time if the union had not made concessions to company in order to get the matter over with. We do not know how many authorization cards the C. I. O. has produced to get this investigation, but we do know that it happened some months ago when the employees were dissatisfied on the slowness of the W. L. B., as our committee contacted each employee this last week and got 141 signed cards out of a possible 155 employees, reaffirming their desire to continue with our organization, yet if there is any possible way, the N. L. R. B. will attempt to force an election.

We are not seriously worried about what is happening here, as a former employee of our union was more or less forced to resign from his position due to a difference in his accounts, and then joins with the C. I. O. and regardless of his past record is welcomed with open arms, but we do hope that some action can and will be taken so that we at least can go into any hearing and present our case and realize that we are going to get by on our merits, as we want nothing that we are not justly entitled to.

We are proud of our organization; we have been in existence since 1859; each and every one of our officers or representatives have been actually employed at the trade in the foundry, as we like to understand the problems of our members and be able to speak their language. We pay strike, sick, and death benefits and have one initiation fee throughout the United States and Canada, which is $3 and $5 and weekly dues of 35 and 75 cents, according to the benefits desired. It makes no difference where you join or work, the amount is the same, set by our constitution.

I hope that you will read the report on the N. L. R. B. as carried in their journal, as it is very explanatory and hits the nail on the head.

Something must be done to curb any Federal agency taking part in any organization, especially where a case is supposed to be decided on its merits.

I have been informed that in one city the N. L. R. B. has become affiliated with the C. I. O. and are members, and I hope to get more information on this report, as to me it seems like the end of our democracy if anything like this can happen.

Thanking you for your patience in the reading of this and hoping that Congress takes some action to see that our agencies represent all the people and not part of the people, even if it be A. F. L.

Very truly yours,

JOHN P. WARNER,
District Representative.

Mr. Speaker, special favors should not be granted by the administration to any special group.

Labor's Interest in Forestry

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. HOOK. Mr. Speaker, we are all aware, I think, of the seriousness of the forest situation in the United States. This was well brought out in the report of the Joint Congressional Committee on Forestry in March 1941. Since that time, I am informed, this adverse situation has been made even more serious, partly as an unavoidable result of the war. According to the United States Forest Service, the total volume of standing saw timber in this country was reduced almost 40 percent in the 30 years ending with 1938, while today our remaining saw-timber supply is being cut or destroyed twice as fast as it is growing. Personally, I have long been convinced that public action, such as is advocated by the Federal Forestry Service, is necessary if this trend is to be reversed and the forest resource again be built up to the point where it can contribute its full share to the economic and social welfare of our people. However, it is heartening to me—and I feel will be to many

of us—to know that labor organizations are taking an increasing interest in the forest situation. Therefore, under leave to extend my remarks in the RECORD, I include the following address by Mr. Richard T. Frankensteen, vice president of the United Automobile Workers, before the Washington section of the Society of American Foresters:

LABOR'S INTEREST IN FORESTRY

(By Richard T. Frankensteen)

It is a real pleasure to be here with you this evening. The president of our organization, R. J. Thomas, was scheduled to give this talk but has instead gone to other battle fronts—to tour England and France with a group of labor leaders.

I say other battle fronts in jest, but with more than a grain of seriousness. For reasons too complicated to discuss tonight the average technician, and I am afraid the average forester, has viewed labor unions and labor leaders with a dubious if not hostile eye. I am not going to abuse your hospitality by giving you an organizing speech. I do hope to show you, however, that there need be no hostility between us; that we have interests in common and that we can help each other.

A COMMON PHILOSOPHY

The chief foresters of the United States, from Pinchot to Watts, seem to have had as their basic aim the greatest good for the greatest number. As foresters they have added to this sound democratic philosophy something which a lot of us have overlooked, namely, the greatest good for the longest period of time.

The labor movement, and especially the organization I represent, has been guided by this same philosophy. An objective study of organized labor's role in American history will bear out this statement. Labor's fight against slavery, against intolerance, against monopoly, against child labor; and labor's fight for free schools, for the opening of the West, for decent wage levels, for protection of women in industry, yes, and its fight for conservation, all demonstrate that there is a basic harmony of interests between you and labor.

To get a little more concrete, I should like to cite a community where our people are now working. At Iron Mountain, Mich., there is a Ford plant which is engaged now in the manufacture of gliders. Before the war this plant produced bodies for station wagons. They use plywood, made out of maple and birch. You people know that there is serious danger of depletion of the timber resources in that community. I am told that the timber is again being mined, with no thought to the future, as it was mined in the pine forests of Michigan 40 and 50 years ago.

You know what happened then to the communities which had developed around the forest industries. You know what happened to labor, to business, and to the general public. You know better than anyone else that Iron Mountain faces the same prospect unless a permanent, sustained-yield program is developed for the utilization of its timber resources.

Neither you nor I want to see Iron Mountain collapse as did hundreds of other towns in Michigan two generations ago.

PERMANENT FOREST INDUSTRIES ESSENTIAL

I do not know the answer to the Iron Mountain problem. But it seems to us that the public interest, the general welfare if you will, demands that the timber owners and operators conform to cutting practices which would maintain the timber. And if the owners cannot or refuse to conserve—if they are not conservatives—then we feel the Government should step in. We have no program for Government intervention. You people have developed and must develop more of the answers. The Iron Mountain case is more typical than exceptional. As director of the legislative department of our union, I have noticed with satisfaction the recent passage of the Sustained Yield Unit Act which takes an important step toward making forestry a permanent industry through the pooling of Government and private timber.

We believe the type of program recommended by the Joint Forestry Committee of Congress is needed for the same reason. And while I am on the subject of the Joint Forestry Committee, I should like to call your attention to the significant evidence introduced in their hearings to prove that the future of the Nation's forest resources is inextricably bound up with labor conditions in the woods. You will find evidence that the worst cutting practices occur precisely where the labor conditions are the worst. This is no mere coincidence. The fly-by-night operator is no more concerned about his labor than he is about his timber or his community.

The Joint Forestry Committee went beyond the easy step of fixing the blame for these condition on the peckerwood mills. The striking part of their findings, which have been confirmed by United States Labor Department inspectors, is that these conditions are the direct results of procurement and production policies of some larger operators. You people know this to be true—not only in the lumber industry, but in other forest industries such as pulpwood, chemical wood, etc., where the real employers evade their responsibilities for labor conditions and for cutting practices by the use of the independent-contractor device. The operations of such firms as Crossett in Arkansas show what can be done. They pay a fairly decent wage (helped by the presence of the union), and they accept their responsibility for labor conditions in the woods. And they cut their timber on a sustained yield basis.

I cannot speak for the lumber and logging workers. But I feel safe in saying that they are willing to accept part of the responsibility of helping to maintain a permanent forest industry. They and labor generally gladly cooperate as taxpayers in the maintenance of the Forest Products Laboratory for the development of the industry. They support with real interest the United States Forest Service and the various State forest services in their work.

LABOR'S CONTRIBUTION TO A MORE STABLE FOREST ECONOMY

We in the Auto Workers, of course, have very little direct contact with the forest industries. Even though you may somtimes feel that your car is made with wooden springs, ours is a metal industry. But as America's largest union we have a responsibility for helping to maintain a stable economy. We have a responsibility for helping to maintain our natural resources. We would welcome your suggestions as to how we could help more directly.

Meanwhile it occurs to me that we are helping indirectly to establish a permanent American forest industry by the following:

1. First and foremost, we are doing everything we can to help win the war and win it soon, which is the basic condition for the survival of all American industry.

2. We, along with the rest of the C. I. O., are seeking an annual wage. This would help stabilize the forest industries and all American industry. More specifically, a guaranteed annual wage would provide a vast market for homes—and thereby open the largest single potential outlet for lumber.

3. By our payments of dues to the C. I. O. we are helping to organize the largely unorganized lumber industry. We believe that organization will eliminate sweat shops. The elimination of sweatshop conditions, you will agree, will help stabilize the industry.

4. We are not awaiting the outcome of our fight for an annual wage to press for a decent housing program. Our union is working actively with public and private housing groups to develop a public and private housing program which would meet some of the country's vast needs and provide a steady market for lumber. In this task we seek the advice and guidance of wood technicians such as you have at the Forest Products Laboratory and elsewhere.

5. We actively support the Government's priority, rationing, and price-control programs which limit the sale and prices of lumber as well as other materials. In fact, we have, as industry has, spent many thousands of dollars and assigned some of our best brains for the preservation of these wartime controls. Without these controls, and especially price control, I suspect that destruction of the forests would have been much more serious than it has been during the war.

We are entering into the final period of the war. Now, more than ever, national unity is imperative. Such unity among all classes of people will be just as imperative after the enemy surrenders, if we are to gain a decent peace, prevent future wars, and obtain full employment in America. I hope that the traditional indifference or hostility of professional and technical people toward organized labor will melt during the crucial days ahead. What we seek for our people should not create fears in the hearts of any section of the population, whether it be business, government, the middle class, farmers, or technical men. I repeat that we wish the greatest good for the greatest number, and—with a bow to you—for the longest period of time.

POST-WAR RECONVERSION

The labor organizations are today engaged in a campaign to obtain passage of legislation for an orderly reconversion from war production to civilian production. In backing the Kilgore bill we are not seeking a dole, as the newspapers would have you believe. We approach this problem with certain cold facts in mind.

First, the best estimates place surplus war property at seventy-five to one hundred billion dollars, including plants, equipment, and supplies. It is officially estimated that 20,000,000 jobs will disappear at the end of hostilities. Ten million jobs will be needed for demobilized servicemen. For full production and employment, United States industry must turn out 60 to 70 percent more than in 1939, or approximately the current dollar volume of production.

To meet these gigantic problems, the Kilgore bill would:

1. Establish a single authority to deal with full production and employment problems.

2. Coordinate easing of Federal wartime controls, with full production as an objective.

3. Establish a national production-employment board with industry, labor, farm, and Government representatives.

4. Set up programs for orderly resumption of civilian production, surplus-war-property disposal, and retraining of war workers and veterans.

5. Compensate the unavoidably unemployed, including war veterans.

6. Continually review the effectiveness of these measures.

In a C. I. O. booklet on the post-war outlook, we call the surplus war plants a new form of public domain, as important as the western lands which the Nation owned a century ago. We believe that this vast so-called surplus property should be treated as public domain and not as surplus. The very word surplus suggests that we regard it as something burdensome, as a distant relative thrown into a household, something we want to get rid of at the earliest possible moment, without caring particularly how we get rid of him or it. We believe that labor should have a voice in the disposal of this property;

that the persons buying the property should be required to operate under decent wage standards and working conditions, and above all with some guarantee that they will operate it and not permit it to be idle. We think this program is essential if we are to avoid chaos after the war ends.

FRIENDSHIP AND COOPERATION

I thank you for this opportunity to get acquainted and give you our aims. I am happy to offer you the hand of friendship and cooperation from ours, the largest labor organization in America. I hope we can work together.

The Tydings Amendment

EXTENSION OF REMARKS
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. AUGUST H. ANDRESEN. Mr. Speaker, for the benefit of the Members who are not familiar with the Tydings amendment relating to the deferment of essential agricultural workers, I am including the amendment as a part of my remarks:

TYDINGS AMENDMENT

Section 4 (k), Public Law 772, Seventy-seventh Congress, which amends section 5 of the Selective Training and Service Act of 1940:

"(k) Every registrant found by a selective-service local board, subject to appeal in accordance with section 10 (a) (2), to be necessary to and regularly engaged in an agricultural occupation or endeavor essential to the war effort, shall be deferred from training and service in the land and naval forces so long as he remains so engaged and until such time as a satisfactory replacement can be obtained: *Provided*, That should any such person leave such occupation or endeavor, except for induction into the land or naval forces under this act, his selective-service local board, subject to appeal in accordance with section 10 (a) (2), shall reclassify such registrant in a class immediately available for military service, unless prior to leaving such occupation or endeavor he requests such local board to determine, and such local board, subject to appeal in accordance with section 10 (a) (2), determines, that it is in the best interest of the war effort for him to leave such occupation or endeavor for other work."

I am also including as a part of these remarks, the clarification order issued by General Hershey under date of January 22, 1945, to the State Selective Service directors, which restores congressional intent contained in the Tydings amendment and places upon each local board the responsibility to determine, subject to appeal, in the case of the individual registrant whether or not the registrant meets the requirements prescribed by the Tydings amendment.

GENERAL HERSHEY'S CLARIFICATION DIRECTIVE TO STATE DIRECTORS AND LOCAL DRAFT BOARDS OF JANUARY 22, 1945

Questions of interpretation of State directors advice No. 288 have been brought to my attention by Members of Congress and by others.

The directive of January 3, 1945, State directors advice No. 288, did not change or modify in any manner the Tydings amendment. The opinions and findings contained in State directors advice No. 288 were for the consideration of the local boards in determining the classifications of registrants in the age group 18 through 25.

Section 5K of the Selective Training and Service Act, known as the Tydings amendment, places upon each local board the responsibility to determine, subject to appeal, in the case of the individual registrant whether or not the registrant meets the requirements prescribed by this section.

Notify all local boards immediately.

Dated January 22, 1945.

I want to stress the importance of General Hershey's clarification directive, for it restores to local draft boards the exclusive authority, subject to appeal, to determine whether or not a registrant meets the conditions of the Tydings amendment to be qualified as an essential agricultural worker. No letter, directive, or order from the National Director or State director can set aside the exclusive authority of the local boards to apply the tests specified in the Tydings amendment. The only manner by which either the National Director or State director or any other officer of the Government can override the decision of the local board in respect to the application of the Tydings amendment, is for such officer to take an appeal to the appropriate appeal board and to be sustained by such appeal board.

A Bill To Preserve Peace in the Western Hemisphere

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. MUNDT. Mr. Speaker, today I have introduced in the House an amended version of H. R. 2034 which I introduced during the seventy-eighth session of Congress. This bill provides for the financing and allocation of exchange-student teachers selected from among the teachers colleges of the American republics. It has the support of several officials in the State Department and of a great many American educators. Its new number is H. R. 1740 and it has been referred to the House Committee on Foreign Affairs, of which I am a member.

Mr. Speaker, I expect to ask for hearings on this legislation before our committee at the earliest available opportunity. While my bill was introduced early in the last session the State Department at that time expressed only a mild interest in the legislation and while seemingly favoring it the Department was inclined to believe that since little could be done about the exchange of students during the war there was no need for pressing for early action. Consequently, the chairman of our committee failed to schedule hearings. Mr. Speaker, I think it is now generally agreed that this is the time to begin laying the plans and preparing the procedures for maintaining increasingly friendly relations with our sister American republics after this war. Surely, there is nothing to be gained by delay on a project which has general approval.

It is my hope that, under its new leadership, our State Department will follow the forward-looking and progressive policy of supporting legislation which looks beyond the war and which can produce immediate dividends of good will whether or not it is possible immediately to put the mechanics of the legislation into operation. I have discussed H. R. 1740 with members of the State Department, and knowing the officials of the Department as I do, I have every confidence that they will join me in this session in support of my proposal to establish exchange scholarships among the American republics.

In his able address of last Sunday, which many of us heard in the Washington Cathedral, Dr. Peter Marshall said in part:

If we want ripples to spread over a pool, they must begin with a minute circle in the middle and spread outward. There is no other way.

Mr. Speaker, that is a splendid text upon which to build an argument for the passage of H. R. 1740. There is no better way to start ripples of friendship and mutual understanding spreading out among the common citizens of the American republics than by beginning with a minute circle of student teachers, who in turn will go into the schools of our republics and convey to boys and girls of school age the information and inspiration which these exchange teachers will thus have acquired. In no other way can we bring knowledge and understanding to so many by making these attributes available to so few.

My bill provides that each year 1,000 students from the recognized teachers colleges of the United States shall be selected for a year's residence and training in similar institutions of the republics of Central and South America. It also provides that a like number of student teachers will be selected from the teacher-training institutions of the republics to the south of us for residence and training in the teachers colleges of the United States. Once this bill is adopted, I expect to supplement it with a legislative proposal which will establish a similar exchange system for student teachers of Canada and the United States.

These student teachers are to be selected during their freshman year, but their year of residence and training away from home will not come until their junior year in college. This is proposed so that the students selected will have their sophomore year in which to study the language of the country they are to visit and to acquire a background of information about the habits and mores of the people with whom they will be associated in college. In turn, they will be back on their home campuses during their senior year so that they can enrich their own student bodies by their experiences in the college of a friendly and neighboring republic.

Mr. Speaker, while many citizens both in and out of the educational profession have expressed an interest in this bill, I am especially indebted to the forward-looking faculty of Indiana State Teachers College, of Terre Haute, Ind., inasmuch as members of this group have worked with me closely in the preparation of this legislation and in bringing it to the attention of other educational centers. I also appreciate the assistance given this project by Mr. Nelson Rockefeller when he was Coordinator of Inter-American Affairs, and I am sure that it will continue to have his support now that he has received a well-merited promotion to an administrative position in the Department of State.

Finally, I hope that Members of Congress with teachers' colleges in their States or districts will send copies of this legislation to these institutions and that, in turn, educators throughout this country will contact their Representatives in Congress with letters expressing their reactions to this proposal.

It is my sustained conviction, Mr. Speaker, that a few pennies spent in cultivating the garden of peace will prevent the necessity of spending billions of dollars in eradicating future weeds of war. Hence, the annual cost of $3,000,000 proposed by H. R. 1740 is indeed a pittance in terms of the rich dividends of sustained peace and better understanding which it will help provide among the republics of the Western Hemisphere.

Despite Great Wartime Increase in National Debt, American Taxpayer Better Able To Carry His Share of Debt Retirement Load Today Than in Former Years—Increased National Income and Prudent Management of Government's Financial Programs Combine To Make This Possible

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. PATMAN. Mr. Speaker, the prophets of gloom and the critics of this administration would have us believe that the great size of our present national debt creates a tax load under which the American taxpayer must eventually stagger and fall into personal and national bankruptcy. A careful analysis of the true facts in the case shows the utter falsity of this assumption. We must keep the debt down as much as possible, but we should continue to use money and machines to save men. We should not, in this war, send a man to do a hazardous job against the enemy when a machine could be sent, regardless of the cost of the machine.

It is true that the Federal debt in 1944 is nearly 10 times its amount in 1920, nearly 13 times its 1928 total, about 7 times its 1936 total, and more than 5 times its 1940 pre-war amount. Without further examination of other pertinent data one might readily jump to the conclusion that the individual taxpayer and wage earner was being subjected to a personal tax load which he could not possibly support. Again I point out that this does not coincide with the true facts.

In 1920, for example, the United States Government was obliged to pay an annual average interest rate of more than 4.3 percent on its bonds and other borrowings. Through the administrations of Presidents Harding, Coolidge, and Hoover, the annual average interest rate paid by the Government declined only slightly from this figure and, in 1928, the year of alleged great prosperity, we were still obliged to pay more than 3.9 percent for our Federal obligation interest rate.

FIFTY PERCENT REDUCTION IN INTEREST

During the administrations of the present incumbent in the White House, under the able management of Mr. Henry Morgenthau, this interest rate has been steadily reduced until today we can look back and see that we only paid an average annual interest rate of 1.919 percent on all Federal borrowings outstanding during 1944. This reduction of more than 50 percent in the Government's cost of money hire is one of the great offsetting factors to the fears of the prophets of gloom and is a tribute to the prudence and foresight of a great Secretary of the Treasury, Henry Morgenthau. It is an obvious fact that the amount of the interest charge is the greatest single factor in determining the total amount of the annual over-all debt service charge. With low interest rates at the Government's command, more of the principal can be retired each year and the burden upon the individual taxpayer is proportionately lessened thereby. Full production and full employment will keep our national income up which will make our large national debt easier to pay.

In 1920, the Government paid out $1,032,000,000 in interest charges on the public debt. In 1944, with the debt nearly 10 times greater, but with greatly reduced interest rates, the Government paid out only $3,002,000,000 for interest.

BURDEN LIGHTER ON TAXPAYERS IN 1944 THAN IN 1932

In 1920, the national income per capita was $656. In 1932, under the Hoover administration, the per capita national income was only $320. In 1944, this figure rose to a per capita income of $1,132. How much easier it is for the average wage earner and taxpayer to carry his pro rata share of the national debt burden under these circumstances is obvious to all. It is easier for a wage earner who receives $1,132 a year to pay 1.91 percent of it or $21.62 as his part of the annual interest on the national debt than it was for a $320-a-year wage earner in 1932 to pay 1.59 percent or $5.08 as his share of the interest on the national debt for that year.

This increase in the Federal debt has been matched by the increase in savings of consumers, business, State, and local governments and the debt is a safe place in which consumers have invested their savings. These savings will obviously increase the demand for goods after the war, thus increasing the production of civilian and other goods and concurrently helping us to maintain the present high level of national per capita income so essential to the easy liquidation of the public debt and for other purposes. I am not advocating a huge debt, I am showing it is not as bad as some believe. Personally I favor paying more of the debt than we are paying during this war.

As Mr. James H. McGraw, Jr., president of the McGraw-Hill Publishing Co., and a noted writer on business subjects from the viewpoint of the businessman, writes "A huge debt may so draw out the hidden powers of a people that it makes the Nation wealthier rather than poorer, stronger rather than weaker."

Of course, as the President points out in his Budget message, the manner in which the public debt is retired is the essence of this matter. As he so clearly states it, I quote as follows:

> The management of the public debt is bound to have a profound influence on the economy for a long time to come. Retaining high taxes on the masses of the consumers for general reduction of debt held by financial institutions may destroy purchasing power and create unemployment. But the use of progressive taxes for the redemption of bonds held by millions of individual savers may have a stabilizing influence on incomes and employment. I favor a policy of orderly but steady debt reduction, consistent with the objectives of long-run economic policy. The mistakes in debt management and tax policy after the last war should not be repeated.

In his long-range view the President is supported by a well-known business expert on taxation and debt retirement, Mr. Beardsley Ruml. A few months ago Mr. Ruml, who is generally credited with reflecting the taxation views of large business interests, had the following confirmatory statement to make:

> The retirement of the debt and its liquidation should in every case be consistent with the maintenance of a high level of employment and production. If we keep that as our cardinal feature, we will have no problem with respect to the management of the debt, except technical problems I am sure can be overcome.

Thus I say, as has been better said before me, "The only thing we have to fear is fear itself," and I trust that taxpayers, one and all, will examine all of the facts before accepting at face the doctrine of the prophets of gloom who would have us believe that the great wartime debt of today is a crushing load and cannot be borne by the American taxpayer.

In conclusion, I submit pertinent statistics in support of my personal optimistic view of this situation. These statistics are computed from information contained in the various publications of the Treasury Department and the Bureau of Foreign and Domestic Commerce and may be easily checked by those who desire to verify them. The figures are as follows:

Population, national debt, national income, and interest on the debt for selected dates, 1920–44

Year	Population	National debt at end of the year		Interest paid		Average interest rates at end of year	National income		Interest on national debt as percent of national income
		Millions of dollars	Per capita	Millions of dollars	Per capita		Millions of dollars	Per capita	
1944.....	138, 740, 000	230, 630	$1, 662. 68	3, 002	$21. 64	1. 919	157, 000	$1, 132	1. 910
1940.....	131, 970, 224	45, 030	341. 21	1, 078	8. 17	2. 596	77, 574	588	1. 390
1936.....	128, 053, 180	34, 407	268. 69	795	6. 20	2. 570	64, 924	507	1. 224
1932.....	124, 840, 471	20, 806	166. 66	638	5. 11	3. 407	39, 964	320	1. 596
1928.....	120, 501, 115	17, 310	143. 65	708	5. 87	3. 903	88, 200	666	. 882
1924.....	114, 113, 463	20, 979	183. 84	917	8. 04	4. 134	70, 100	614	1. 309
1920.....	106, 466, 420	23, 982	227. 39	1, 032	9. 69	4. 311	69, 800	656	1. 478

President Again in Error

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. HOFFMAN. Mr. Speaker, in his inaugural address, the President referred to those Americans who wished to avoid war, who are not enamored of the New Deal, as "ostriches" and "dogs in the manger.

As usual, he assumed that he and those who agree with him are the possessors of all knowledge and foresight; are the only truly good, kindly people in the world. That assumption is a characteristic of those who are intolerant, egotistical and self-satisfied.

Many of us who would be classed by the President as "ostriches" thought we knew very well what was coming. Some of us believed we saw, as the result of the President's foreign policy, inevitable war. Many of us believed then, as we believe today, that, America never having tried a policy of isolationism, might well do so when this war is over, instead of following a course which has already involved us in three wars; seems certain to keep American youth indefinitely policing Europe, fighting to maintain first one nation, then another in a position of power.

Many of us are quite certain, and we have Churchill's statement that we are the most powerful nation in the world to strengthen our belief, that no nation or combination of nations can successfully invade the United States of America.

As for the statement of the President that some would act as "dogs in the manger," it is matter of common knowledge that the United States has always been first to extend aid to every nation which suffered either from earthquake, fire, famine, or war.

This is the land—and the only land—to which the oppressed peoples and the oppressed nations turn for and get unselfish aid in their days of adversity.

The thought is so well expressed in an editorial from yesterday's Chicago Tribune that it is printed herewith:

WHAT OSTRICH AND WHAT DOG IN THE MANGER?

"We have learned," said Mr. Roosevelt in his fourth inaugural address, "that we must live as men, not as ostriches nor as dogs in the manger."

We'll take these one at a time, and ostriches first. Mr. Roosevelt's simile was intended to say that those who opposed his foreign policy were so misguided as to pretend, in the presence of overwhelming danger to their country, that there was no danger.

But, in fact, were they so misguided? They said there was relatively little reason to fear an invasion of this continent, even by a victorious Hitler, and events seem to have borne them out. It hadn't been proved in 1940, though it seemed probable, that our Navy and our Air Force could prevent an invasion. We know it now. We know now, with as great certainty as anything can be known, that our safety is in nowise dependent upon the support of the British Fleet. In other words, neither Germany nor Japan, nor Germany and Japan in combination, presented a threat of invasion to us that was so grave as to require a preventive war.

Moreover, we know now, as the opposition suspected at the time, that Hitler could have sat on the occupied countries for a generation without crushing their will to independence. That being so, he would have risked everything he held in Europe if he had undertaken an attack on America, for the moment he turned on us all Europe would have risen against him.

Mr. Roosevelt says that before Pearl Harbor, while the great debate over foreign policy was still in progress, his opponents had their heads in the sand. But it was Mr. Roosevelt who said, again and again, that his policy would never lead this country to war. And it was the opposition who reminded the country that war meant huge casualty lists and a debt of hundreds of billions. Who was looking facts in the face then, and whose head was in the sand?

And, for that matter, whose head is in the sand today? Those of the opposition who, seeing what is happening in Poland, Greece, Bulgaria, Rumania, Yugoslavia, Italy, Lithuania, Estonia, and Latvia say that another unstable peace is in the making? Or Mr. Roosevelt, who refuses to face these realities and pretends that the next peace is going to be inherently durable?

Mr. Roosevelt says, also, the members of the opposition were dogs in the manger; that is, they selfishly sought to deprive the rest of the world of the peace and plenty enjoyed by the American people.

There was one moment in this generation when the American Government unquestionably acted the part of a dog in the manger. It was in the spring of 1933, when Mr. Roosevelt broke up the London economic conference because he didn't want to sign an agreement that might restrict American currency manipulations. He thought he saw in his policy an advantage to be gained for the United States at the expense of all other nations. Mr. Hull was horrified, as he had every right to be. The best change to avert the present war, as we can now see, was lost by Mr. Roosevelt's short-sighted selfishness.

Foreign nations accuse our Government of selfishness in its tariff policy, but that surely cannot be charged to Mr. Roosevelt's opposition. He and his party have been in power for a dozen years. If there's anything wrong with the tariff it's their fault.

Were we dogs in the manger when we stayed out of the League? After 1920, Mr. Roosevelt didn't raise his voice on behalf of the League, and neither did his party.

As might have been expected, the British press rejoiced at Mr. Roosevelt's reference to the dog in the manger. Well, who has been playing dog in the manger lately in Greece and Italy? Who has played dog in the manger in Africa, India, Burma, Hong Kong, and a great many other places, and who, as the King's first minister, intends to keep on doing so? Perhaps the Russians, likewise, were rejoiced; if so, their attention is invited to what they are doing to eastern Europe.

It might be well if those who have never been shot at in any way—although some of them have had an opportunity to take an active personal part in four wars—would do a little of the fighting, less of the talking which leads to war.

How American Will the Un-American Activities Committee Be?

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1945

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address made by me over the Columbia Broadcasting System Tuesday, January 23, 1945:

Last week, over this station, Representative RANKIN looked upon his work in resurrecting the Committee to Investigate Un-American Activities, and found it good. I cannot match his enthusiasm for the past accomplishment of the Dies committee. It did not, as far as I can see, trail any clouds of glory.

The Committee to Investigate Un-American Activities is now a standing investigatory committee with power to initiate legislation.

I mean this to be a direct talk. The vaudevillian antics, the brass band tactics, the star chamber proceedings of the Dies committee have put all of us on notice. Bluntly then, the present committee can make its choice. It can either adopt the Dies course of unfounded character assassinations, lynch-law, prosecutor-jury and executioner all in one, or it can proceed in a manner consonant with the American tradition of the right to be heard, the right of counsel and the right of confrontation of witnesses, placing emphasis on investigation of all foreign isms with honest judicious objectivity. If we are to have again an extravaganza of persecution, a deep-seated mania of embracing some individually conceived notion of alienism, we face again a betrayal of our basic constitutionally guarded rights. The power to investigate is a great public trust. And we ask the newly constituted committee not for one instant to forget that.

In the final count, it remains with the American people whether it will countenance the continuation of the former practices of the Dies committee. Illegality will never solve the problem of political lawlessness. As we have seen so clearly demonstrated in Europe, hate breeds hate and the vicious circle revolves with all its attending madness.

Let the over-zealous be reminded of Hawthorne's description of those "who go all wrong by too strenuous a resolution to go right."

You will remember without difficulty the publicity pursuits of the Dies committee; how reports by the chairman and paid employees, without knowledge of the whole committee, gained credence as a studied committee report; how the Consumers Research was written off as a Communist-front organization without a single hearing and without a single accused person called to the stand. You will recall how thousands of Federal employees were publicly listed as engaged in subversive activities without even a chance to defend themselves.

Accusations get headlines; denials come too late.

You will remember the untidy proceedings of the Dies committee concerning Goodwin B. Watson, William E. Dodd, and Robert Morss Lovett wherein the committee actually succeeded in having passed a bill of attainder, that is, the imposition of punishment without a trial, an act expressly forbidden by the Constitution. You recall as well, I am sure, the unsavory incident of Shirley Temple, the then child actress.

From a study made of the Dies committee and signed by over 100 distinguished attorneys, I quote the following: "That the Dies committee, while giving lip service to impartiality and fair play and proclaiming its devotion to Americanism and American institutions, used its hearings, the forum provided by Congress, for the dissemination of irresponsible slanders against honest public servants and private individuals and against public-spirited organizations, one testimony consisting of surmise, conjecture, unfounded opinion, unsupported conclusions, and unwarranted deductions, without any attempt at verification or confirmation, all of which no self-respecting fact-finding agency anywhere would consider—a proceeding wholly unworthy of the committee of the legislative body of a great and free republic."

In a particularly careful study of the Dies committee by Brother August Raymond Ogden published by the Catholic University of America Press in 1943 we find: "The study of the Special House Committee for the Investigation of Un-American Activities indicates that the said committee is neither an ideal nor a desired means of exposing subversive activities."

Thus for 7 years a total of $625,000 of the taxpayers' money has been spent mainly for looking for ghosts under the bed, to chasing only those tidbits that make lurid headline reading, to, indeed, establishing precedents in congressional investigations that must necessarily destroy that which the committee professed to protect—namely, the democratic processes in the United States.

It has been charged that 600,000 individuals engaged in subversive activities are abroad in this land. If this is actually so, then the Dies committee has been woefully derelict in its duty. How many convictions had it obtained? How many of those alleged 600,000 are now lodged in jail. I fear me that the Dies committee has labored like the mountain and has not even brought forth the mouse.

I want to point to another instance which has just come to light. A political advertisement inserted in the San Francisco Chronicle of Monday, October 30, 1944, carried false accusations of communism against Representative FRANCK HAVENNER, then running for reelection to Congress in which was set forth unsupported testimony given before a so-called Dies subcommittee on July 16, 1940, in Beaumont, Tex., at which Mr. Dies was the only member of the committee present. On January 11, 1945, Mr. HAVENNER, Representative from California, rose on the floor of the House and stated: "At the time of this meeting of the subcommittee I was a Member of the House of Representatives and had been for 3½ years next preceding that date. I had never received any notice of this hearing prior to the time it was held and have never received any notice of the hearing up to the present time. The first knowledge I had that such a subcommittee meeting was held was more than 4 years later, when I read this political advertisement * * *. I have never been given an opportunity to appear before that committee to face my accuser or to reply to his testimony. If the chairman of the committee believed that this sworn testimony was true it was his duty to report it to the House of Representatives and recommend that I be brought before the bar of the House and expelled. If there was any doubt in his mind as to the truth of this testimony, it certainly was his duty to notify me and call me before his committee to disprove the testimony if I could * * * instead, the record of this * * * secret meeting was pigeonholed for more than 4 years, when suddenly and mysteriously it was made available for use against me in a political campaign."

The whole episode speaks for itself. I might add here that only through a newspaper article published the other day did I find out that I, together with Senator PEPPER of Florida and Senator THOMAS of Utah and other Members of the House, am the subject of one of the Dies committee's files.

Time will not permit the pointing out of additional illustrations of these "riding out on a rail" tactics. I am reminded of an old comment: "The more you poke an old pile, the worse it smells."

It is not my purpose here tonight to hark back to the past. I seek only to clarify the dangers that await us if all of us, you and I, complacently and unquestioningly, accept the activities of the newly constituted standing committee without examining its effects upon the structure of our Government.

Let the committee be guided by a true knowledge and understanding of the individual rights of citizens. Because a man does not agree with you is no basis for calling him un-American. It was for this very purpose, this protection against governmental tyranny, that the Bill of Rights was written into the Constitution.

Secret investigations against private individuals, organizations, public officials, and Members of Congress without opportunity of rebuttal are Gestapo methods. We want none of that here. Consider its danger to parliamentary government in the United States when Members of Congress investigate other Members of Congress, making accusation against them without their knowledge and without opportunity of defense and discussion. It is a tragic threat against the freedom of expression and the free exchange of thought both in and out of the Halls of Congress. It is a stifling of freedom of speech and press. The fear of reprisal, secretly activated, may deter many an honest expression of thought. The consequences to democratic processes can be foreseen by every thoughtful American. Congress would become a House divided—subject to civil strife.

What is Americanism? It has been partly defined as "being able to preserve one's status as an individual potato instead of being forced to lose one's identity by being mashed." But Dies' theory was to smite and mash all who disagreed with him. I do not want to speak in premature condemnation. There is work, much work, to be done in uncovering subversive activities in the United States. The scope of a congressional investigating committee is wider and freer than the scope, let us say, of the F. B. I. or a court of law which are rigidly bound by the strict rules of evidence. The standing committee can work harmoniously with the executive branches of the Government. It is no secret that the Department of Justice could not work with the Dies committee, which so often tumbled all over itself to spill some juicy item for headline purposes before full evidence was gathered, hindering in many instances the F. B. I. in its round-up of legal evidence. The Attorney General called the Dies committee a committee of espionage.

The new committee can and must work as a whole committee without permitting the self-aggrandizement of one member or two above all others. The bias and bigotry and special peeves of individual members cannot take precedence over the considered judgment of the whole committee.

It is the judicious mind that the committee needs most. Its counsel and investigators should be chosen only after the most careful scrutiny as to their impartiality and their ability to separate the wheat from the chaff. Irresponsible informants, indeed all informants, should be made to submit their complaints in writing and under oath lest the committee be turned into a nice comfortable back room where each personal little ax can be ground. Hearsay and unreliable testimony must be given its proper weight and the right to cross-examination should not be denied.

The new committee should not cry out against one ism to the exclusion of others. It must not focus its attention only upon Communists and overlook the Fascist and Nazi dangers, and vice versa. We have as much to fear from one ism as from the other.

The new committee dare not withhold its fire against the many anti-Catholic, anti-Semitic, anti-union, anti-Negro propaganda groups and especially those bigots who peddle the anti-religious and anti-racial poison under the false label of "constitutional" and "good" government.

If the new committee remembers that it is a committee and not a backdrop for a one-man show, much useful work can yet be done.

It is fervently to be hoped that the Dies committee will have served at least one useful purpose in its sorry career, that of being a constant reminder to the new committee how not to conduct its affairs.

March of Freedom

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. BEALL. Mr. Speaker, Bethesda-Chevy Chase Post, No. 105, of The American Legion, has purchased land in my district on which it intends to build and equip a home of its own. Pursuant to unanimous consent granted by the House, I submit, for publication in the CONGRESSIONAL RECORD, a self-explanatory letter from one of its members, James Patrick McGovern, of the District of Columbia Bar, who served as a captain in the A. E. F. during the First World War, together with its accompanying and thought-provoking poem entitled "March of Freedom":

WASHINGTON, D. C., *January 21, 1945.*

Hon. JOSEPH A. CANTREL,

Commander, Bethesda-Chevy Chase Post, No. 105, The American Legion, Bethesda, Md.

DEAR COMRADE: I am enclosing my check for $100 as a contribution to the fund being raised to build and equip a home for our post. On this occasion I offer to The American Legion the accompanying poem, entitled "March of Freedom," which may be found expressive of the American ideals our country

has fought for in the past, is fighting for in the present, and is destined to fight for in the future.

With every good wish to all, I am,

Yours to command,

JAMES PATRICK MCGOVERN.

MARCH OF FREEDOM

Our valor now makes live each yesterday
Of bitter struggle wreathed with heroes' deeds.
Since first our fathers blazed their dauntless way
Through virgin tracts and sowed their hearths' new seeds.
Our homes then grew in beauty, love, and peace
Within the fortress of our fruitful land,
Which promised that our State would never cease
As long as justice ruled the heart and hand.
But freedom is an ever restless sea;
It must be always wooed and won again.
To change is life, to strive is destiny;
The rust was never deep for sword and pen.
Our future thus must give our past its due
Of victory again, of peace more true.

—*James Patrick McGovern.*

The Ship-Air Transport Issue

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, January 6, 1945

Mr. GEARHART. Mr. Speaker, pursuant to unanimous consent of the membership, I am causing to be spread upon the pages of the CONGRESSIONAL RECORD as a part of my instant remarks, an editorial of the utmost importance, an editorial which appeared in the San Francisco Examiner of January 4, 1945, under the significant title of "The Ship-Air Transport Issue."

As the question of whether or not the American Merchant Marine, now the master of the seven seas, is to be permitted to continue to exist in the post-war world, a survival that can only be assured through the removal of the fetters which render it impossible for American shipping to compete successfully with foreign-operated lines, will soon be presented to the Congress, the arguments which are contained in this editorial expression will be, I am quite sure, not only helpful to the membership but informative as well.

The editorial to which I have just referred, Mr. Speaker, is the following:

THE SHIP-AIR TRANSPORT ISSUE

The Merchant Marine Committee of the House of Representatives has unanimously recommended to Congress that American steamship companies be given the right to augment their services with supplementary air lines after the war.

This is a realistic recognization of the conditions under which American foreign commerce will have to be conducted when peacetime competition is resumed.

"All the other great maritime powers," the committee reports, "have already cleared the way for combined ship-air operations by their merchant fleets.

"The American merchant marine should not be handicapped by denying it the right to use aviation service."

The United States has, of course, a great opportunity in the field of post-war foreign commerce—but it must first get in a position to take advantage of its opportunity.

The plain truth, as this alert committee of Congress has pointed out, is that other nations, while lacking our present equipment in ships and planes for foreign trade and other capacities for producing more and better ships and planes in the future, are offsetting these factors.

British interests, for instance, are getting out ahead in several important ways.

In the matter of ship-air operations, as we learn from the report to Congress, the British already have an advantage.

They are constantly making other advantages.

In evidence of this is the British program, as the London Daily Mail recently said, for:

A national pool of air lines from which companies, whether publicly or privately owned, could charter the planes they need for air line operations all over the world.

That provides a measure of the ambitious competition British foreign-trade interests are contemplating.

The same British publication further discloses:

"The organization might be expanded still further for the convenience of dominion airline operators and even for foreign lines wishing to use British planes and equipment."

In fact, says the Daily Mail:

"A powerful cooperative scheme between Empire air services all over the world is * * * being worked out quietly behind the scenes."

Plainly, American foreign-trade planners are going to find themselves competing with experts in the post-war field of international commerce.

It will stand them in good stead to become experts on their own account, for it is the considered and competent opinion of American authorities best informed about this situation that 5,000,000 Americans will depend on foreign trade for their post-war living.

And much more than American prosperity will depend on realization of our advantages and opportunities in our future commerce with other nations, for as Mr. John W. Davis, vice president and trustee of the Carnegie Endowment for International Peace, has said:

"Our exports of American goods after the war, with their related imports, will not only assure us an expanding trade that will be reflected in prosperity at home—such trade will serve in a practical way to cement our friendly relations with the nations of the world."

The House Merchant Marine Committee, in its advocacy of an American ship-air foreign-trade policy preserving the advantages and opportunities accruing to us by reason of our present great maritime and aviation establishments and our even greater productive capacities, has demonstrated commendable understanding of its responsibilities.

The Future of 50,000,000 Tons of United States Ships

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Business Forum radio broadcast No. 78 by the Commerce and Industry Association of New York, Inc., over Station WMCA, New York, January 17, 1945. Mr. Neal Dow Becker, president of Intertype Corporation, and also Commerce and Industry Association president, acted as moderator. The speakers included W. N. Westerlund, president of Marine Transport Lines, Inc.; Almon E. Roth, president of the National Federation of American Shipping, Inc.; and myself.

The program follows:

ANNOUNCER. Business is the foundation of American democracy. Upon the welfare of commerce and industry depends the welfare of you and your family. We, therefore, invite you to listen to the business forum—devoted exclusively to the problems of business. This program is presented as a public service by WMCA in cooperation with the Commerce and Industry Association of New York. Tonight the forum will discuss the future of 50,000,000 tons of United States ships. And now may we present Mr. Neal Dow Becker, president, Commerce and Industry Association of New York, who will moderate tonight's forum. Mr. Becker.

MODERATOR. Good evening, ladies and gentlemen. According to a recent survey brought to my attention, I understand that the post-war competition for both the domestic and foreign branches of the American merchant marine will be the keenest the country's shipping operators have ever faced.

For our discussion tonight, on the future of 50,000,000 tons of United States ships, we have a most capable and informed panel of speakers: Congressman EMANUEL CELLER; Mr. Almon E. Roth, president, National Federation of American Shipping; and Mr. W. N. Westerlund, president, Marine Transport Lines, Inc. I present now our first speaker of the evening, the Hon. EMANUEL CELLER, Mr. CELLER.

Mr. CELLER. By the end of 1945, under present calculations, more than 5,300 merchant vessels of more than 50,000,000 tons will have left the ways. This tonnage will be 5 times that of our pre-war fleet. The cost to us will have been more than $18,000,000,000.

The slogan has already been heard, "Don't give up the ships." Of course, slogans will not run ships; slogans are no substitute for cargoes. Cargoes are necessary to keep the ships going. But this is certain, America is back on the seas to stay. The spirit of the old clipper ships has been revived.

Admiral Land, the redoubtable and able head of the Martime Commission believes that we can profitably use from fifteen to twenty million tons of our fleet after the war ends.

Not all of our merchant marine fleet would be engaged in foreign commerce because normal peacetime requirements incident to domestic transportation necessities alone would absorb a considerable volume of the proposed tonnage.

In addition to those ships needed in domestic and foreign commerce, there would be the need for maintaining a substantial stand-by fleet. This would comprise mainly Liberty ships which could not be operated for commercial profit. They would be held "in sanctuary," sterilized, and only used in cases of a national emergency. They would be a sort of national defense reserve.

The Army and the Navy would continue to maintain a personnel to transport supplies and equipment to our possessions and island bases. This might involve an additional 3,000,000 tons. I personally believe that these ships should be operated by private companies.

This will leave roughly 30,000,000 tons of cargo vessels.

We will suffer again unless we heed the lessons of the past. Post-war international cargoes will be dependent upon our national commercial policies and the directions of our foreign trade. This will involve loans, tariffs, quotas, barter, subsidies, discriminatory treaties, preferential systems, and commodity controls.

Remember, however, rising tariffs at home and abroad will spell reduced cargoes and idle ships. High tariffs are a luxury we can no longer afford. They invite retaliation by our foreign competitors. We thus cut off our nose to spite our face. Unless goods cross borders, armies will.

As President Roosevelt stated in a letter to me, "The principal consideration, of course, will be our willingness to take the products of other countries. This has been true to some extent for many years; it will be even more true after the present war."

MODERATOR. Thank you, Congressman CELLER, for your very informative views on this most vital subject, and after we have heard expressions from our other speakers, I am going to ask you to expand on some of the facts you have just mentioned. Our next speaker of the evening will be Mr. Almon E. Roth, president of the National Federation of American Shipping. Mr. Roth.

MR ROTH. There is hardly a family in this broad land which does not have a very direct and personal stake in the adequacy of our American merchant marine. Millions of our sons and daughters have been carried to far-distant shores in merchant ships. The speed with which they will be returned to their homes and families, when the war is ended, will depend largely upon the number of ships available for their transportation. In the meantime, their comfort, their health, and their efficiency as fighting men will depend upon our ability to furnish them with requisite equipment and supplies. No single factor bears more directly upon the probable length of this war than our ability to transport men and equipment by ships and to keep them properly supplied.

At this very moment our commanders in both the European and the Asiatic theaters are pleading for additional ships to meet their most urgent requirements.

As a result of the difficulties which we have faced due to the lack of shipping, and because of the important role which merchant ships will continue to play throughout this war, the American public is for the moment merchant marine-minded.

But we must not be misled into false security.

If history repeats itself, the popular interest of the moment is no guaranty of continued support for a strong merchant marine once the war has ended.

The First World War, like this conflict, found us woefully unprepared with shipping facilities. Then, as now, we built shipyards and ships, without regard for cost, in a frantic race against time.

When the war ended we immediately folded our hands and allowed our new merchant marine, built at such great cost and effort, to rust and rot.

If we have learned anything out of the bitter experiences of this war, it should be the folly of repeating this mistake.

MODERATOR. Thank you, Mr. Roth. You, too, will be questioned further after we have heard from our third speaker. * * * Mr. W. N. Westerlund, president, Marine Transport Lines. Mr. Westerlund.

Mr. WESTERLUND. Our minimum ocean-carrying needs must be gaged by national-security considerations. So far as I am aware, military authorities have not declared the needed merchant-ship capacity related to our Nation's responsibility for maintaining peaceful world conditions and to provide minimum transportation insurance for military emergencies. Early efforts in this war were handicapped because of ship scarcity. Probably more than 50,000,000 dead-weight tons of American ships will survive the war, with carrying capacity exceeding five times our pre-war fleet. Minimum requirements for national security should be operated as a going fleet, manned with trained personnel, and kept modernized by new construction. Admiral Land has offered a target of 15,000,000 dead-weight tons as the size of a post-war going fleet. The stated objective points the need of increasing our carrying about 60 percent over pre-war levels. Furrows are deepening on the brows of those pondering the problem of employing such a fleet.

About two-thirds of the United States fleet was engaged in domestic trade before the war, therefore, the domestic field should offer the best hope for increased ship utilization. A program looking toward promoting maritime transportation in the domestic service should become part of our national shipping policy. Additional ship employment will develop in servicing our increased world-wide Naval and Army activities, and United States vessels should have a greater share in overseas-commercial trade. In 1939 the enemy nations had 14,000,000 dead-weight tons of ships. How much will be permitted then after the war is conjectural but it is assumed that their trading will be substantially curtailed, with resultant advantage to United Nations and neutral shipping. Nonliner services carried about one-third of the traffic between United States and foreign lands in 1939. American ships competed only for liner business before the war. We must provide nonliner transportation as well as regular lines to meet foreign competition and to attain the objective of carrying one-half American foreign commerce. Nonliner employment would mean brand new business for United States ships. American ships have participated but little in trade between foreign nations. Such interforeign transportation also offers a field for increased American ship employment.

MODERATOR. Thank you, Mr. Westerlund. And now we return to Congressman CELLER. Mr. CELLER, assuming that we are going to be faced with the problem of surplus ships, just what would you propose doing with them?

Mr. CELLER. Of course, Mr. Becker, the present inventory can be whittled down quite a bit. Some of the vessels will be overaged and ancient, and can and should be readily scrapped. A number of ships taken from countries like Norway and Denmark will be returned.

The present shipping companies should be given every favorable consideration by the War Shipping Administration in the transfer to them of all the ships they need.

Every inducement should be made to develop tramp ships under the American flag. Most of the tramp shipping in the past was in the hands of the British and Norwegians and some in the hands of the Japs and Greeks. American shipping companies were unable to compete because of low seamen's wages. Encouragement of tramp shipping will involve subsidies.

In Great Britain, in Norway, the Netherlands, Belgium, France, and Greece, there is a market for our war-built ships. These countries have lost heavily and have built little.

We agreed with Britain that she would confine her efforts mainly to naval construction while we would be builders of merchant ships. We are somewhat under moral obligation to bareboat some of the Libertys to the British, the Dutch, the Belgians, the Chinese, and so forth. Such a plan will involve a maritime headache since these ships will compete with our own in foreign trade. Therefore, there should be a limitation that no fast ships should be sold or chartered to foreign operators and there should be as many guaranties exacted as may be necessary to safeguard American interests.

Whatever surplus ships remain should be sent to the bottom of Davy Jones' locker as war casualties. If this is not done, these idle ships, aside from ships kept on ice, will hang over the shipping world like a Damoclean sword.

MODERATOR. What should be done with the ships of the Axis Powers?

Mr. CELLER. As part of reparations, I humbly believe Japanese, Nazi, and other Axis ships must be scrapped and dismantled and put out of the service. Axis shipping trade should be redirected as follows: One-third to the United States and two-thirds to the Allies. There should be a ban on any future building of Axis ships for a period of years.

MODERATOR. Mr. Roth, I have seen published estimates of the probable size of the United States post-war merchant fleet ranging from 12,000,000 dead-weight tons to over 40,000,000 dead-weight tons. Can you give us your estimate of the size of the American post-war fleet?

Mr. ROTH. Under the Merchant Marine Act of 1936 it is the declared policy of this country to maintain a merchant marine adequate for purposes of defense and sufficient to carry our domestic water-borne commerce and a substantial portion of our foreign trade. Unfortunately, at this moment it is not possible to translate these requirements into actual tonnage, owing to many uncertainties and imponderables. So far as I know, no one in authority can say at this time what our defense requirements will be, nor what the world-trade opportunities will be. Our defense requirements will depend in large part upon how successful we are in developing world-wide machinery to insure peace. Our trade opportunities will depend upon such uncertainties as the time required for economic rehabilitation of the foreign nations; the volume of their national incomes; the ability to finance purchase of goods, and the extent to which restrictions upon the freedom of commerce, such as tariffs, embargoes, and quotas are established. I must, therefore, decline to attempt any estimate of the specific tonnage. I am sure that everyone, including the man on the street, is convinced of the need of a more adequate American merchant marine than the one which we operated at the beginning of this war.

MODERATOR. Mr. Westerlund, you have suggested that domestic shipping should be encouraged. Do you have in mind legislative steps which might be appropriate to accomplish the end suggested?

Mr. WESTERLUND. Legislation over the past few years has tended to restrict ocean-shipping opportunities in domestic trades. Administration of regulatory laws so as to prevent judicial ratemaking and restrictive conditions of operation would promote greater expansion of coastwise and intercoastal shipping. Members of the shipping industry have advocated that regulation of domestic shipping be under the United States Maritime Commission, which has the mandatory duty of promoting and encouraging American ship operation.

MODERATOR. Mr. CELLER, what would be a reasonable amount of post-war export trade and how would it affect our ships?

Mr. CELLER. Our exports are now about $12,000,000,000 annually; I believe that includes lend-lease. They will, undoubtedly, decline. We cannot allow them to drop to the pre-war level of two or three billions. We need not do so. They should be at least $10,000,000,000. The rest of the world will need an unprecedented quantity of American goods. Our productive capacity can fill the needs of western Europe, Russia, China, India, and Latin America as a hand fills a glove. Fifteen to twenty million tons of ships should be the transmission belt of these goods. But it will not be so unless our customers can be possessed of the American dollar. For this purpose we must square lend-lease accounts, stabilize international currencies, encourage private investment abroad, repeal the Johnson Act to encourage private

loans to countries now in default, make foreign loans abroad through the Export-Import Bank and the Reconstruction Finance Corporation, and, above all, we must purchase increased quantities of foreign goods and services. As to wiping the lend-lease slate clean, we should bear in mind the President's words, "victory and a secure peace are the only coin in which we can be repaid."

If we do all these things, the rest of the world will have plenty of American dollars to buy our goods and keep our ships afloat.

In addition, we must avoid the Hawley-Smoot tariff which was a terrific "left to the jaw" of our British and Canadian trade. England replied with a solar plexus blow with her Import Duties Act of 1932 and Imperial Preferences. These acts of mutual trade hostilities snuffed out a large volume of trade with Britain and her dominions. Giving tariff blow for counterblow is a negation of our good-neighbor policy with South America.

MODERATOR. Are reciprocal trade treaties a material aid in foreign trade?

Mr. CELLER. Mr. Becker, reciprocity treaties have accomplished much good. But the logic of our present condition requires a broader base of operation. Reciprocal trade agreements and bilateral bargaining are slow and cumbersome and too limited. Far preferable are multilateral conventions whereby all nations pledge expeditious action in the simultaneous and sharp reduction of all trade barriers. This would be in line with the Atlantic Charter which speaks of free access to the raw materials and production of all lands. It means foreign trade is not a one-way traffic. One cannot continue to sell unless one buys.

MODERATOR. You have stated, Mr. Westerlund, that American vessels should have a greater share of overseas trade. In view of the fact that it has so often been claimed that American ships should carry 50 percent of the traffic between the United States and foreign countries, and I understand that during the last pre-war years our vessels had less than one-third of such trade, would you care to mention some specific steps that appear practicable in seeking the increased share of this American foreign transportation which is implied in the goal of 50 percent participation?

Mr. WESTERLUND. We must carry our commerce, both export and import, at no greater cost to the shipper than foreign competitors are able to offer. Disparities in operating costs, notably ship wages have long militated against American ships in foreign trade. Steps should be taken to achieve parity of costs. Emphasis has been placed on the need of balancing our exports and imports. American shipping companies should be thoroughly aroused to the part that they must play in informing our shippers and foreign traders of opportunities in their areas of service. A program similar to the railroad measures of extolling advantages to new industry and other activities along their rail lines would be fruitful in promoting our foreign commercial opportunities. If we are to develop our trade opportunities on a level with other nations, we should follow their example by encouraging our people to live abroad to a greater extent, at least for a part of their lives, as do the nationals of the great trading countries, for the purpose of relating the homeland opportunities to those of other lands in an intimate and much better informed manner.

MODERATOR. In considering the post-war position of American shipping a number of writers have touched upon the fact that foreign countries pay in part for exports from this country with dollars earned by carrying American goods. They then draw the conclusion that the United States cannot afford to maintain a large merchant marine since this would involve a disastrous loss in exports. Do you agree with this philosophy, Mr. Roth?

Mr. ROTH. I certainly do not. The importance of foreign shipping services as a form of exchange in payment for American exports has been grossly exaggerated. From statistics issued by the Department of Commerce, it appears that net foreign earnings from transportation did not cover, on the average, in the period between World Wars No. 1 and 2, more than 1 percent of the value of our exports. Furthermore, even if it could be shown that there would be a reduction in the relative volume of our exports brought about by smaller earnings of foreign shipping, this would be counterbalanced to a great extent by increased domestic employment due to the existence of a larger American merchant fleet and the stimulation which improved American shipping lines would give to export trade.

MODERATOR. Mr. Westerlund, you have stressed the greater importance of domestic water-borne traffic in ocean vessels. You did not mention the liquid cargoes, principally petroleum and its products carried in ocean tank vessels, and we would be interested in knowing whether this tanker transportation was included in your general reference to domestic traffic.

Mr. WESTERLUND. Yes; ocean tanker traffic was taken into account in my general observations concerning domestic trade. Over 3,000,000 tons of ocean tankers were in the domestic trade in 1937. Post-war use of the emergency pipe lines would materially reduce the traffic for tankers and in order to maintain tankers in operation and available for military emergency, it is important that we refrain from operating the pipe lines. Of course, the pipe lines should be kept in good condition for future emergencies. Idle tankers would deteriorate far more rapidly than idle pipe lines.

MODERATOR. Mr. Roth, you haven't mentioned the domestic shipping as yet. Would you care to comment on the importance of this branch of our merchant marine?

Mr. ROTH. There is a tendency on the part of the public to think of our merchant marine problems solely in terms of foreign competition and prospects for international trade, and to pay little attention to the fact that domestic shipping is concerned with competition with rail lines, trucks, and buses.

In this connection it is important to note that as of June 30, 1939, our active American merchant marine amounted to 9,303,228 tons of which only 2,803,900 tons were engaged in foreign commerce. The balance, or roughly 70 percent, was employed in domestic trades.

If we are to have an adequate American merchant marine, both domestic and foreign shipping must earn a reasonable profit under competitive conditions which are quite distinct and different.

MODERATOR. Mr. Roth, is it true that the American merchant marine is the only transportation industry engaged 100 percent in war operations?

Mr. ROTH. That is true. The shipping industry began converting to a full wartime basis long before Pearl Harbor. Every one of its ships, practically all of its facilities, are engaged in full-time war pursuits. Not many Americans understand that the major portion of our tonnage is actually operated by American private shipping firms. In cooperation with the War Shipping Administration our private operators have kept American ships moving in all the seven seas. At the moment, this country is operating in excess of 40,000,000-deadweight tons of shipping, which is equivalent to about four times the amount of overseas shipping which we had at the beginning of the war.

MODERATOR. Mr. Roth, how has it been possible to obtain the personnel required to man this enormous number of ships?

Mr. ROTH. The crews of these vessels have been obtained through voluntary enlistments. With the rapid expansion of our merchant marine and the drain upon our national pool of manpower, it is becoming increasingly difficult to recruit the number of experienced men required to man our merchant fleets. The Maritime Commission has done a marvelous job in training men, and the 160,000 seamen who sail our ships are entitled to much credit for the fact that we have driven both the Japs and the Germans back to their own doorsteps. More than 6,000 of these brave men have already lost their lives. Their magnificent achievement will be recorded as one of the most dramatic stories of courage and devotion to duty in all our history.

MODERATOR. Mr. CELLER, in your opinion should maritime companies be permitted to operate airplanes?

Mr. CELLER. I say "Yes" emphatically. I am opposed to the present attitude of the Civil Aeronautics Administration which seeks to keep maritime transportation separate and distinct from aerial transportation. Railroads operate busses; busses operate trolley companies; some railroads operate ships and for the same reason shipping lines should be extended to include airplane routes. Otherwise, maritime companies will be unable to compete with foreign cotraders. For example, the Cunard Line and Holland Lines might operate air lines across Africa or the Dutch East Indies. The American company stopped at the sea coast might be compelled to avail itself of these competing airways and be forced to pay hijacking rates. Under reasonable restrictions both levels of transportation, air and water, must be operated by maritime companies.

MODERATOR. Are free ports or foreign trade zones an aid in keeping ships afloat?

Mr. CELLER. Yes. The ancient idea of free ports has always been a boom to foreign trade. They were availed of by Germany, Scandinavia, and the low countries. Although the United States has been "Johnny-come-lately", in this field, the foreign trade zone in the port of New York has activated in the retransshipment and consignment of goods millions of dollars of foreign trade which otherwise would have gone to other nations.

Diverse international trade currents converge at the foreign trade zone and contribute to the growth of our foreign trade.

MODERATOR. You have stated, Mr. Westerlund, that the participation of United States vessels in carrying trade between foreign lands has been negligible, and I believe this is what is referred to as indirect trade. Would you mind commenting upon the reason why American ships have not engaged in this indirect or interforeign traffic?

Mr. WESTERLUND. Under the Shipping Act, American vessels in indirect trades would not receive subsidy payments to equalize the cost of operation against foreign competitors. Equalization allowances have been confined to trade between the United States and foreign countries and then only to the extent of operations on what have been certified by the Maritime Commission as essential liner routes. It seems clear that some system of parity payments would be needed to advance American shipping employment in the indirect trades and in nonliner transportation between the United States and other countries.

MODERATOR. Mr. Roth, you've referred to the wartime functions of the American merchant marine. How about its peacetime functions?

Mr. ROTH. The peacetime functions of our merchant marine are of vital importance to this Nation, even though they are not so obvious or spectacular as its wartime usefulness. The importance of an adequate peacetime merchant marine as insurance against war has not been sufficiently stressed. All potential aggressors realize that our naval forces would be of little value without an adequate tonnage of supply and auxiliary vessels. Unless we have such auxiliary vessels the effectiveness of our great Navy, as

protection against war, will be greatly minimized. No one can doubt that Japan's decision to wage war was predicated upon the knowledge that this country lacked not only fighting ships, but also the merchant ships which would be required to wage an immediate and effective war in the far-distant reaches of the Pacific. No doubt Germany, by the same token, counted upon the inadequacy of the Allies' shipping facilities, including our own, in appraising her chances for success when she plunged the world into conflict.

MODERATOR. Thank you, Congressman Celler, Mr. Roth, and Mr. Westerland for your views on this most interesting and complex subject of the future of 50,000,000 tons of United States shipping.

ANNOUNCER. You have been listening to the Business Forum—a weekly series of programs devoted to the interests of business. This program is presented in cooperation with the Commerce and Industry Association of New York.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas the St. Lawrence seaway project has recently received consideration in the Congress of the United States, and this great and meritorious project will again be placed before Congress for consideration in the next session; and

Whereas the development of the St. Lawrence Navigation and Power project will provide vast quantities of low-cost hydroelectric power; will extend the benefits of direct ocean transportation to the city of Milwaukee, the State of Wisconsin, and the entire Great Lakes area; will permit Milwaukee industries to import raw materials at low cost, and by utilizing direct ocean service, to expand greatly their foreign trade and to reach new foreign markets; and in general will enhance the economic prosperity and well-being of the Great Lakes area and the entire Nation; and

Whereas the present world conflict has demonstrated the absolute necessity of the St. Lawrence seaway for the national defense and the military security of this Nation by providing a safe and landlocked basin for national defense industries, for storage of strategic materials and for construction of naval and merchant vessels; and

Whereas the agricultural and industrial resources of the Great Lakes area could have been more effectively employed, and the present conflict could have been appreciably shortened had the St. Lawrence seaway project been completed and available for use at the outbreak of hostilities: Now, therefore, be it

Resolved by the Common Council of the City of Milwaukee, That we commend Senator GEORGE D. AIKEN, of Vermont, for his statesmanlike presentation of the St. Lawrence Power and Navigation project to the Senate of the United States; that we commend Senator ROBERT M. LA FOLLETTE, of Wisconsin, and other Senators who have demonstrated their vision, enterprise, and statesmanship by joining Senator AIKEN in the fight to make this great project a reality; and that we urge all Senators and Representatives from Wisconsin to lend their best efforts to assure the construction of the seaway as an early post-war project to assure adequate employment in the post-war period, to permit expanded foreign trade, and to insure the national defense; and be it further

Resolved, That his honor, the mayor, and the board of harbor commissioners are authorized and instructed to continue their efforts to advance the St. Lawrence seaway project to completion as quickly as possible, thereby reaffirming the unalterable belief of the city of Milwaukee and its citizens in the merits of this great project which holds vast potentialities for the future welfare and prosperity of the city of Milwaukee, the State of Wisconsin, and the Nation at large; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, to the Governor of the State of Wisconsin, and to Senators and Representatives from the State of Wisconsin.

Hon. Hallett Johnson

EXTENSION OF REMARKS

OF

HON. FRANK L. SUNDSTROM

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. SUNDSTROM. Mr. Speaker, it is a privilege for me today to speak of a former resident of the Eleventh Congressional District of New Jersey, Mr. Hallett Johnson, who has recently been appointed United States Ambassador to Costa Rica.

His grandfather, Watson Matthews, lived on Vose Avenue in South Orange for many years.

His father, J. Augustus Johnson, served as consul general in Beirut as a young man, and thereafter practiced law in New York, where he became the president of the Federated Government Clubs. He was active in the campaign which secured the election of Seth Low as mayor of New York.

In the early part of this century he built a house on the corner of Scotland Road and Montrose Avenue, where he and his family lived until he died.

Hallett Johnson lived in South Orange until he entered the diplomatic service in 1912. He had many friends in that part of the State, and he also has many friends from the State who are in Washington.

His first post was that of third secretary of Embassy in London, and he has served as either second secretary, first secretary, or counselor of Embassy in Constantinople, Santiago, The Hague, Brussels, Stockholm, Madrid, and Paris. In many of these positions he was Chargé d'Affaires when the Chief of Mission was absent. For the last 4 years he has been adviser in one of the economic political divisions of the Department of State. He will leave shortly to assume his new duties.

The Foreign Service of the United States today consists of a hard-working, trained group of men who exert themselves to the utmost to forward the political and commercial objectives of the Government. In the difficult world situation of today, it is obviously necessary to increase and strengthen our representation abroad, and it is gratifying to see a man with the experience and ability of Hallett Johnson named Ambassador.

The Threat of Cartels

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. VOORHIS of California. Mr. Speaker, on January 10, Mr. Thomas L. Stokes wrote in his regular column under the heading "The threat of cartels." What he had to say in that column is of such significance at the present time that I am asking consent to include it with my remarks in the RECORD:

THE THREAT OF CARTELS

(By Thomas L. Stokes)

WASHINGTON, January 10.—A paragraph in President Roosevelt's message to Congress, which attracted little attention generally, was nevertheless most gratifying to quite a number of people in Congress and the Government concerned with a major post-war economic problem.

It reads:

"We must make sure that private enterprise works as it is supposed to work—on the basis of initiative and vigorous competition, without the stifling presence of monopolies and cartels."

The groundwork for a campaign to enlist American business and the public in support of moves to outlaw cartels, those international monopolies which stifle trade and free enterprise, is being laid in special committees of Congress—the small business committees of both Houses and the Kilgore committee in the Senate.

CAN BE DANGEROUS

Available to them is the comprehensive story of the operation of these giant international monopolies dug out over the last several years by the Antitrust Division of the Justice Department, first under the direction of Thurman Arnold and later under the present head of that Division, Wendell Berge.

In a series of antitrust suits—of which there are still more to come—it was revealed how these private international monopolies, operating beyond the pale of law, so to speak, handicapped our preparation for war by restricting and cornering strategic materials of all sorts, so that we were faced with crippling shortages. This was a well-planned phase of the Nazi war program.

They can be dangerous, similarly, after the war. They threaten all the plans now being discussed so hopefully for freedom of commerce, for access to raw materials.

THREAT NOTED

Businessmen have become aware of this threat to free enterprise, it is indicated, when even the National Association of Manufacturers condemns cartels. There are other signs of an awakening among businessmen.

But, along with this, there is also a lot of lip service. For running parallel to it and particularly noticeable lately there is begin-

ning to creep in a tendency to rationalize, to compromise. It is cropping up in propaganda stressing the difficulties of doing away with cartels. This is dangerous.

There is much being said and written these days about the spread of totalitarianism through planned economies, with emphasis on the danger in this country. What is not always realized is that international monopolies, with their restrictions, also beget monopolies and restrictions within individual countries, calling for all sorts of regulations of domestic economy. This promotes and hastens a completely planned economy.

TRADE BARRIERS

There were two developments toward this end in the twenties and the thirties, in which, incidentally, were the seeds of the war. There was the rise of nationalism, with nations raising trade barriers against one another, so that each in trying to live to itself necessarily had to plan its economy. At the same time, there were the restrictive cartel agreements among big business enterprises across nations' borders which, in the case of Germany, were fitted right into the national economy with government backing. Both developments stifled trade and enterprise, requiring each nation to regulate its domestic economy more closely.

That happened in this country under the New Deal, as it happened elsewhere.

Continuation of monopolies and cartels will only mean the continuation of this process, as President Roosevelt recognized in touching upon this subject in his message to Congress. Businessmen often are inclined to overlook this in the temptation to enter restrictive agreements which make their operations easier by eliminating competition.

It is to their advantage to uphold the President in seeking to eliminate the monopoly and cartel economy.

Questions of Manpower

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Labor Press of January 18, 1945:

QUESTIONS OF MANPOWER

With the cry for increased manpower—directed mostly against labor—it might be well to look into the question of whether some of our manpower is being wisely and effectively used.

The armed forces—and goodness knows, nobody for a moment would deny them the use of every man actually needed in this war—at times seem to be hoarding manpower much as some industrial users of labor do. For instance, we have a lot of public relations men; press agents, to be plain. This office, for instance, has been receiving for months letters, including a franked return envelope to send clippings about doings of officers at Glenview, Ill., hardly a single one from the Milwaukee area.

Two young newspaper men from Milwaukee were inducted into one of the services. They both appear fit for combat work, but they write stories about their services. One even found time to write a history—for public sale—about the service he was in.

Some public relations work, from a morale standpoint, at least, may be needed. But if the Army combed as carefully through its ranks for manpower as it expects industry and labor to do, it might find some of those men Secretary Stimson declares are so badly needed.

The Poisons of Intolerance

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. JUDD. Mr. Speaker, the following editorial was voted first place in the Nation-wide Americanism newspaper editorial contest sponsored by the National Americanism Commission of B'nai B'rith. It was written by Mr. Bradley L. Morison, editor of the Minneapolis Daily Times:

THE POISONS OF INTOLERANCE

The program sponsored by Governor Thye's interracial committee at the State fair on Monday reaffirmed the eloquent truths of brotherhood and justice that must always stand, like a foundation stone of granite, under every great democracy.

As a Nation we cannot look upon those truths too often, nor strive too hard to perpetuate them in our daily life. For unless we do perpetuate them, we must ultimately see our American democracy shaken and racked by the most violent forms of minority intolerance, and in that day, having forsaken the spirit of democratic justice, we shall find the whole structure of our greatness crumbling about us.

Governor Thye is magnificently right: "While we are going to win the war on the battlefields, we will sustain a major defeat if we permit the Nation to become tainted with hatred."

It is one thing to speak of maintaining cordial and cooperative relationships with the nations of the world, and to stand as a country united on the solid ground of international collaboration. That is fine. We must do that at all costs, if we are ever to play our part in a world order marked by peace and justice.

But at the same time we must not neglect the equally important business of maintaining cordial and cooperative relationships among ourselves.

We must be as vigilant in combating the ugliness of racial and religious intolerance at home as we are militant in combating the ugliness of war and lawlessless on the world level.

Otherwise, we shall grow weak and divided at home, a Nation retched by the poisons of minority prejudice and hatred, and as such we cannot hope to sustain a good and vigorous role in any decent post-war order.

We think that the great majority of Americans reject these poisons, and abhor the despicable uses to which they are put. But a passive rejection, or a passive abhorrence, is not enough.

If we are ever to eliminate these poisons from the body politic, we must deal with them positively and actively, discouraging all the vicious innuendos that are craftily spread about minorities, helping in the enlightening tasks of education, insisting at every step of the way that the rights and privileges of our democracy shall be shared to the greatest possible extent.

It is not enough for anyone to say: "I am against racial and religious intolerance." The good precepts must be absorbed into the very lifestream of the individual, the family and the Nation.

If there is one thing that we should have learned from the experience of war, it is this: That Americans of all races and religions and colors are fighting and dying in it to preserve the liberties of Americans, and that without exception, the representatives of every minority group have proved their essential courage, dignity and worth.

To recognize this fact, and to proceed from it to a broader base of minority justice and tolerance than we have ever known before, is one of the most urgent tasks ahead of us.

The few who vent their un-American intolerances in the smashing of windows or in retailing gutter nonsense about the "international Jews" render a poor service to the nation. For as a house divided, we can never hope to stand up beneath the strains and stresses of the post-war world that looms forbiddingly ahead of us.

First Combat Infantry Band

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald:

INFANTRY BAND DELIGHTS AUDIENCE WITH G. I. HITS

(By Glenn Dillard Gunn)

The First Combat Infantry Band, under sponsorship of the Surgeon General, played a concert last night in the departmental auditorium that delighted a capacity audience.

The members of this group have all served overseas, some in Africa and Italy, some in the Pacific. Not all of them served as musicians. Many were riflemen or machine gunners, or attached to some other branch of the Infantry. They have been assembled under the leadership of Warrant Officer Whiting, who also saw service in the Pacific.

They played music such as pleased the majority of G. I.'s—popular songs, excerpts from Oklahoma and other Broadway hits, Gershwiniana, a Strauss melody, swing version, and some stirring marches, including one by their leader entitled "Americal," and written on Bougainville while the Japs were bombing and strafing. It's a good march, one might add, and doubtless will find a permanent place with other music that belongs especially to the Infantry.

SONGS FOR MEN IN LINE

For part of the program these returned fighters formed themselves into a glee club to sing songs that have cheered the men in the line. Some of these were new, like Isa Lei, to a text in some South Sea language. Some were ancient, like the fifteenth century Flemish war song which they sang in the original language.

One, simulating the various instruments in the band, was, I am assured, of Polish origin. There was also a highbrow, or "long hair," moment on the program when Corp. Stanley Weiner came forward with his violin to quote Hora Staccato, Danse Espagnole, and other items from the Heifetz repertoire.

What these returned warriors sang and played was of less importance than the spirit in which it was done. They were confident,

even a bit cocky. They imparted a certain swank and swagger to the entire program and this in turn stimulated a reaction from the public that indicated the maximum of listener participation. Everybody liked the First Combat Infantry Band and all its members and everybody was determined to prove it.

Mr. Biddle, Mr. Corcoran, and Settlement of Savannah Shipyards Case

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. SMITH of Wisconsin. Mr. Speaker, I am submitting for the RECORD another excerpt from the memorandum submitted by Mr. Norman Littell to a Senate committee on January 8, 1945. It will supplement that part of the memorandum submitted by me in the RECORD on January 22, 1945, at pages 426-430.

It is my opinion, Mr. Speaker, that this report is highly important to the United States. Every citizen should be made aware of its existence for it is an effort by a former conscientious public servant to show what has been going on in a very important governmental agency. It hardly seems possible that it could have occurred in this country.

In the excerpt, hereinafter set forth, the truth and veracity of the Attorney General, Mr. Biddle, have been put in issue on his own statement. This calls for a full investigation in this matter. If Tommy Corcoran is as influential in the office of the Attorney General as appears, then the people should know about it. The amazing story of Savannah Shipyards and Tommy Corcoran follows:

1. Tommy Corcoran's representation of Savannah Shipyards Co.: Mr. Biddle says (p. 63) that Corcoran did not represent the Savannah Shipyards Co., but represented certain interests in the Empire Ordnance Co., the parent company of the Savannah Shipyards. Either Mr. Biddle is not telling the truth or he has been imposed upon by his good friend Tommy Corcoran, as the following facts reveal:

I did meet with counsel for the Savannah Shipyards Co. to talk settlement on April 29, 1942, after we had filed condemnation proceedings to acquire the property. We reviewed all costs of construction claimed as compensation. Among these costs were excessive salaries for inexperienced executives in the Frank Cohen Get-rich-quick Wallingford Co., and also legal fees for seven law firms located respectively at Savannah, Indianapolis, Chicago, Cleveland, New York, Newark, and Washington, D. C. Fees for all, with interest at 7 percent were demanded, together with promotion costs for a bond issue which was never issued, and $73,000 charged by the Chatham Construction Co. (another wholly owned Frank Cohen-Empire Ordnance creation brought into being for the specific purpose of building the Savannah shipyards, also wholly owned by Frank Cohen, at 17½ percent commission—later reduced to 7½ percent). In this set-up, the left hand was charging the right hand for cooperation—shipyards which had never launched a ship, with a school-book publisher as president, with construction work so defective as to challenge an investigation for sabotage except that incompetence was so obviously the cause, was the subject of every conceivable charge in the costs of construction. No ships, but six law firms were launched—among them, Dempsey & Koplovitz, Tommy Corcoran's associates.

Mr. Biddle says Tommy did not represent the Savannah Shipyards Co. This is not true. Before I dropped the conference of April 29 and told counsel that we would meet them in court before paying any such extravagant claims, I inquired about the legal fees of Dempsey and Koplovitz and Tommy Corcoran. My notes of this conference on April 29, 1942, show the admission of William Koplovitz that the firm had up to that date received $10,000 for legal fees from the Savannah Shipyards Co.; they had also retained Tommy Corcoran to consult with him from time to time because of his special experience with R. F. C. Koplovitz said they had already paid Tommy Corcoran $5,000 [1]—that was Tommy's cut up to that date.

It is perfectly clear then that Tommy did represent the Savannah Shipyards Co. Furthermore, he sat in the conferences in Washington, D. C., when arrangements were made to procure from the Maritime Commission a contract for constructing ships.

Mr. Biddle said that there was "some kind of interlocking interest between Empire Ordnance and Savannah Shipyards" with which he was not familiar (p. 63), but it is contrary to ordinary reason that at this late hour Mr. Biddle should not be fully advised that the Savannah Shipyards Co. was wholly owned by Frank Cohen and the same associates who owned Empire Ordnance Co. Mr. Biddle is an extremely naive man if he has never asked that question of his "good friend" Tommy Corcoran. For all of these reasons, it is, therefore, quite impossible that Tommy Corcoran should have been, as Mr. Biddle said, an "outsider" in the Savannah Shipyards matter. Plenty of additional evidence can be submitted on this point.

Mr. Biddle says (p. 65) that he never saw Tommy Corcoran in regard to this case "nor have I ever discussed the Savannah Shipyards case before or after with Mr. Corcoran in any way, nor with Empire Ordnance. I never discussed either case with Mr. Corcoran merely asking that Littell be required to confer with Dempsey and Koplovitz in regard to settlement of the Savannah Shipyards case" and expressing the belief that "it could probably be settled for about $1,000,000" (p. 64).

Again Biddle's story is at variance with the records and files of the Department of Justice. The defendants claimed in their answer $2,187,000 for the ship yards. Dempsey and Koplovitz in the conference which was called by Biddle in his office on June 3, 1942 (see my memorandum of Nov. 27, 1944, p. 4), talked about $1,900,000, admitting they would cut that somewhat "in the interest of being fair." Neither Corcoran nor his "front" firm ever offered to settle for $1,000,000.

I was ready to recommend that the Government settle for $1,000,000 plus interest, the Government's valuation, but the defendants never went that low. Lest this seem self-serving at this late date, let me remind Mr. Biddle of Admiral Land's letter of July 16, 1942, which said:

"MY DEAR MR. ATTORNEY GENERAL: Settlement of the case of United States of America against a certain tract or parcel of land in Chatham County, Georgia, et al., has been the subject of several conferences between the Commission and the Lands Division of the Department of Justice.

"At a meeting of the Commission on July 4, 1942, Assistant Attorney General Norman M. Littell recommended to the Commission that the case be settled for $1,000,000, plus 6 percent interest from January 3, 1942, the date of taking of the property. The Commission agreed that it would concur in a settlement for this amount, or a somewhat greater amount if recommended by Mr. Littell.

"Since that time the Commission has been advised that Mr. Littell offered to settle the case at $1,000,000, plus interest from January 3, 1942, that this offer was refused, and that the case has now gone to trial at Savannah, Ga."

The telephone conversation which Biddle admits with Tommy Corcoran, which started Biddle's personal negotiations with me as early as May 1942, could not possibly at that date have discussed a $1,000,000 settlement.

In any event, that one telephone conversation with Tommy was extremely successful because it kept the Attorney General of the United States hopping on the settlement of this matter from May 13, 1942, when Jim Rowe first telephoned me at the Attorney General's instructions, and May 14, when the Attorney General himself called me in regard to it, and May 22, when Jim Rowe took me aside at the Attorney General's house to discuss settlement at Biddle's request because they (Corcoran, Dempsey, and Koplovitz) were "our friends" and we had to do something about settling this case, and June 3, when we conferred with Dempsey and Koplovitz, through June 30, when there was a final conference with Biddle, when on my insistence he dropped his attempt to settle because "it would be another Sterling Products case."

It was common knowledge that Tommy Corcoran had been in and out of the Department every day for several days, as one of the Attorney General's close advisers twice told me in urging me not to permit settlement of the case in the interest of the Department of Justice and in order to protect the Attorney General himself. (See my memorandum of November 27, p. 5.)

Maritime Commission declines settlement: To conclude the point briefly, there was an offer to settle the case for $1,085,000. In a letter of July 20, 1942, drafted by myself, signed by the Attorney General, and addressed to Admiral Land, I stated that I would be happy to approve a settlement in about that amount if the Maritime Commission recommended it on the grounds that they were unable to spare, as witnesses during trial, men who were vitally needed for constructing ships. The Maritime Commission declined to make such recommendation. Other facts in my possession, bearing on value, as stated by Government counsel, did not justify settlement at that figure.

3. Questions for Mr. Biddle: As stated above, the jury brought in an award for $1,285,000 to be paid to the Savannah Shipyards Co. for its properties, although all but two or three of the jurors (as counsel later found out) favored the Government's figures of about $1,000,000 until the night before the verdict was reached, and yielded only to effect a compromise, with two jurors insisting upon a higher award. If Mr. Biddle considered the award of the jury to constitute a loss to the taxpayers of about $300,000, let him answer the following questions:

(a) When Mr. Biddle went to Savannah, Ga., not long after the trial and discussed this matter with Judge Lovett, who was "surprised" at the Attorney General's knowledge of one case in the district court, why did Mr. Biddle express himself as personally pleased with Judge Lovett's instructions to the jury and with the outcome of the case and state that there would be no appeal? (For the Attorney General thus to pass upon a matter of appeal was just as much out of

[1] Corcoran admitted this payment in testimony before this committee. See Truman committee report on Empire Ordnance Co.

order in the Departitent of Justice as to attempt to negotiate a settlement of the case in the first place. Recommendations for and against appeal proceed from the division in charge of the case to the Solicitor General and are within the latter's jurisdiction).

(b) After I succeeded in having the case appealed to the circuit court of appeals from the district court in Savannah, in spite of this irregular commitment to the contrary by Mr. Biddle, and after the circuit court of appeals had stated clearly that the allowance for attorneys' fees, bond promotion charges, and an item of $73,000 to the Cohen-owned Chatham Construction Co. were wholly improper and should not have been allowed by the district judge as elements of cost in constructing the shipyards, why was not Mr. Biddle zealous to take the case to the Supreme Court of the United States, as I recommended to the Solicitor General of the United States? These items total $125,000. The circuit court holding confirmed as a matter of law what I had said at the conference with opposing counsel on April 29, 1942. While there may have been doubts in this case, as there usually are in most cases, as to whether a petition for certiorari should have been filed, a member of the Solicitor General's staff, who worked on this case, agreed with me in recommending that a petition for certiorari to the Supreme Court of the United States be filed, but it was not filed. Mr. Fahy apparently agreed with Mr. Biddle.

(c) Why, if Mr. Biddle regrets this alleged loss to the taxpayers of the United States, did he not seek to file suit for damages against the Savannah Shipyards Co. for breach of its contract with the Maritime Commission to construct ships, as requested in letter of July 16, 1942, from Admiral Land to the Attorney General recommending as follows:

"Mr. Littell has advised the Commission that it is not practical to offset damages which the Government has suffered by reason of the breach of the contract between the Maritime Commission and Savannah Shipyards, Inc The Commission recommends, therefore, that if, in your opinion, it is legally advisable, the settlement of this case be followed by the institution of a suit by the United States against Savannah Shipyards, Inc., its officers and directors, for damages, based upon the breach by the Savannah Shipyards, Inc., for the contract between Savannah Shipyards, Inc., and the United States of America represented by the United States Maritime Commission, dated November 25, 1941."

Attorney General Biddle replied by letter of July 20, as follows:

"In respect to the comment in the last paragraph of your letter, in regard to offsetting damages which the Government has suffered by reason of the breach of contract between the Maritime Commission and the Savannah Shipyards, Inc., Mr. Paul Page, your counsel, concurred with Mr. Littell that it was not practicable to advance any such claims in this case; consideration will be given to your suggestion that such damages be made the basis of a separate action."

Lest this matter be overlooked in the pressure of other matters in Mr. Biddle's office, I sent a memorandum on July 28, 1942, to Frank Shea, Assistant Attorney General in charge of the Claims Division, which division would normally handle such a suit for the United States Government, suggesting that this matter be explored for the purposes of recovering damages from the Savannah Shipyards Co. Nothing has been done on that score. Why?

These are not the only questions which Mr. Biddle must answer in contending that my failure to settle the case resulted in a loss. He confronts far more grave responsibilities to the taxpayers, as set forth below.

4. Failure of S. E. C. to give results of its investigation of Savannah shipyards to Department of Justice for fear they would pass right through to Tommy Corcoran, due to Biddle and Rowe.

(a) Admission of Ganson Purcell on March 4, 1942: As pointed out in my memorandum of November 27, 1944, to this committee, attorneys for the Securities and Exchange Commission declined to make available all information bearing upon the Savannah Shipyards case in spite of an order from the White House to do so, when Government counsel were preparing the condemnation case for trial. The records and files of the Department of Justice so show. It was finally admitted just before trial that the reason for this evasion was that the S. E. C. did not have sufficient confidence in the Department of Justice and feared that any information given would "pass right through to Tommy Corcoran" due to the close association of Biddle and Rowe to Tommy Corcoran. Mr. Ganson Purcell, chairman of the Securities and Exchange Commission, admitted this in reply to my questioning in a conference held in Mr. Biddle's office on March 4, 1943, at 5:35 p. m. (See my memorandum of November 27, 1944.)

Never before the present time was this admission by Mr. Purcell challenged in any way, but the Attorney General now says, "I am authorized to say specifically on the record, by Mr. Ganson Purcell, that such a statement is absolutely unwarranted, and that after careful inquiry with other members of his staff and the Commission, that Mr. Purcell is convinced that such is not the fact."

Before commenting on this startling reversal by Mr. Ganson Purcell, let me assure the committee that I will prove at any time desired that the reason assigned for withholding the S. E. C. information regarding the Savannah Shipyards Co. from the Department of Justice was fear that such information would "pass right through to Tommy Corcoran." (At the moment I wish to relieve subordinates in the S. E. C. and Department of Justice from the embarrassment of having their names mentioned.) That this admission by Mr. Ganson Purcell of the reason for withholding the S. E. C. information was made in the conference of March 4, 1943, in the Attorney General's office, is clearly set forth in my personal notes of that conference and was also stated in a memorandum of April 3, 1943, to James Rowe, Jr., the Assistant to the Attorney General in connection with another issue. The material portion of the latter memorandum is attached hereto as exhibit E. A copy of this memorandum was sent to Mr. Biddle and later discussed with him. The admission by Mr. Purcell was never denied by Mr. Biddle or by Mr. Rowe, until now.

It is therefore shocking indeed that Mr. Biddle and Mr. Ganson Purcell now join in this assertion by Mr. Biddle "that such a statement is absolutely unwarranted * * * and that such is not the fact." It, therefore, becomes necessary to consider whether Ganson Purcell may have had such a connection with Tommy Corcoran as to compel his alinement with Biddle and Corcoran, even to the extent of joining with Mr. Biddle in not telling the truth about the conference of March 4, 1943.

(b) Ganson Purcell, S. E. C., the New York Stock Exchange, and Tommy Corcoran: Why was Purcell, a young man of 35 years, appointed in 1941 as a member of the Securities and Exchange Commission over men who were his senior in years and experience? One year later he was made Chairman of that board.

If the committee looks into this matter, they will find the following: Ganson Purcell was the head of the Trading Section of S. E. C. in 1941. On his desk was evidence that Charles Harding, chairman of the board of the New York Stock Exchange and a member of the firm of Smith Barney & Co., one of the most powerful companies having seats on the exchange, had violated the law and the stock-exchange regulations, such as by "trading against the book." Purcell was pressing for Harding's prosecution. Following so closely on the Whitney scandal, there was a great desire within the stock exchange to avoid another shock to public confidence. Tommy Corcoran, who had left the Government in the summer of 1940 and was "practicing law" in Washington, D. C., arranged for Emil Schram, then at R. F. C., to become president of the stock exchange. Mr. Purcell was elevated to a position on the Commission, and the charges against Harding were not pressed.

Has Purcell's indebtedness to Tommy Corcoran anything to do with his present rallying to the cause of Mr. Biddle and his "good friend" Tommy Corcoran by denying now a clear and unequivocal admission which Purcell had previously made on April 3, 1944?

A very challenging further question is raised as to whether or not there was not a conflict of forces within S. E. C. at the time when I was endeavoring to secure material information for the trial of the Savannah Shipyards case. Perhaps faithful public servants in that organization were genuinely concerned, as I know some of them were, lest information given to the Department of Justice should "pass right through to Tommy Corcoran," thereby aiding him in resisting the threatened indictment of his client, Frank Cohen, and others in the Empire Ordnance Co. On the other hand, one is compelled by Mr. Ganson Purcell's present aid to Biddle and Corcoran to wonder whether or not he may have been willing for quite different reasons to have the material information withheld from Department of Justice attorneys.

In any event, the S. E. C. did not render any material assistance to the Department of Justice Lands Division attorneys to win a case against Tommy Corcoran's client, the Savannah Shipyards Co. What were the consequences?

(c) Consequences of S. E. C. refusing information to Department of Justice: While I have already fully answered the Attorney General's charge that my refusal to settle the Savannah Shipyards case for $1,085,000 cost the taxpayers about $300,000, the failure of the S. E. C. to give the results of the investigation of the Savannah Shipyards Co. to the Department of Justice attorneys, as related above, placed upon Mr. Biddle very considerable responsibility for the jury's award of $1,285,000 for the following reasons:

(1) Financing construction costs of Savannah Shipyards Co.; lend-lease funds diverted by Empire Ordnance Co.: In one of the statements of the Savannah Shipyards Co. made in reference to securing a contract to build ships it was said:

"We borrowed no money from the Government; we got no money from any public; all the money invested in the Savannah Shipyards came from our own resources and from our own companies. * * *

"When we came to the Maritime Commission and told them that we would build the yard, and that we could not afford more than $40,000 or $50,000 per week. We told them that this money would be invested by the various affiliated companies of the Empire Ordnance Corporation."

Such assertions were not true. Had the S. E. C. investigations been made available to Department of Justice attorneys it would have revealed that the construction of the Savannah Shipyards was financed in the first instance by diverting lend-lease money advanced to the Empire Ordnance Co. for other

purposes. While the British Purchasing Commission brought an end to this practice after discovering the diversion of funds advanced the Empire Ordnance Co. for the manufacture of guns, nevertheless, several hundred thousand dollars of lend-lease money were used to finance the construction of the Savannah Shipyards—all of which would have been revealed in detail by the S. E. C. report which was not made available to me before trial of the Savannah Shipyards case.

Government counsel in charge of the trial of the Savannah Shipyards condemnation case wished to have all such information in regard to the financing of the construction costs, and might successfully have contended, if such information had been available, that no reimbursement of costs should be made by the Federal Government to the extent that diverted lend-lease money was used, on the theory that a resulting or constructive trust was created in favor of the United States—and most certainly, no interest would have been allowed by any court on such expenditures. Interest alone was a substantial sum. One cannot now appraise the effects on the outcome of the case if Government counsel had possessed this evidence, but certainly the verdict of the jury of the amount paid by the Government would have been materially less.

Furthermore, other aspects of inter-corporate financing between the various subsidiaries of Empire Ordnance Co. and below the level of the audit in respect to which the S. E. C. had been requested for information might well have affected the Government's case and reduced the amount of the verdict. We know that there was great difficulty in getting access to the books of the Savannah Shipyards Co. and that a special set of books had been prepared for the purposes of the case. Government counsel wished to know what write up in the prices of materials might have been made in the sale of equipment from one subsidiary of the Empire Ordnance to another. There was every reason to be suspicious in the matter as Frank Cohen, president of the Empire Ordnance, had started the company with a shoestring personal investment of $5,000 as exposed by the Truman committee and he had been under investigation by the S. E. C. on numerous occasions.[2]

What the effect of full disclosure of the intercorporate relations of the Empire Ordnance Co. and its subsidiaries with the Savannah Shipyards Co. might have been, and what effect the possession of this information by Government counsel at the time of trial might have had in reducing the verdict of $1,285,000 is, of course, a matter of speculation; but it must be remembered that the failure to get this information was due to Mr. Biddle's connection with Tommy Corcoran, as stated to counsel for the Government just before the Savannah Shipyards case went to trial. It is also appropriate to ask Mr. Biddle what he did with the full and final report of the S. E. C. investigation regarding Frank Cohen's Empire Ordnance Co. and its numerous subsidiary and affiliated corporations, after the report was referred to the Attorney General from the White House. Did he have the report examined to see whether the Government could, to any degree, recoup its position by proceedings of any character against the Savannah Shipyards Co.?

[2] Frank Cohen was seriously involved in high financing in the life-insurance business, particularly in respect to an Indiana life insurance company. He was the subject of an indictment in the State courts of New Jersey where the cases were not brought to trial and he is barred from engaging in the life-insurance business in about 26 States.

Strain of War Seen Affecting Churchill

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence from Washington Evening Star of January 20, 1945:

STRAIN OF WAR SEEN AFFECTING CHURCHILL—MISSES POINT OF UNITED STATES CRITICISM ON "POWER POLITICS," SAYS WRITER

(By David Lawrence)

Prime Minister Churchill is apparently beginning to show some of the effects of the war strain. His latest speech indicates not only a certain amount of irritation over what has been said in the United States, but it also may indicate that, with all the vast sources of information which the British may have in this country, their officials are inclined to do too much wishful thinking, and evaluate information from America on the basis of what some of their ardent friends and champions tell them rather than what is really disinterested public opinion here.

Certainly it seems that Mr. Churchill has completely missed the point about American criticisms of what is commonly called "power politics." In his speech, Mr. Churchill says:

"The expression 'power politics' has lately been used in criticism against us in some quarters. I would anxiously have asked the question, 'What are power politics?' I know some of our friends across the water so well that I am sure I can always speak frankly without causing offense.

"Is having a navy twice as big as anybody else's in the world power politics? Is having the largest air force in the world with bases in every part of the world power politics? Is having all the gold in the world power politics? If so, we are certainly not guilty of this offense. I am very sorry to say that they are luxuries far away from us."

IMPRESSION ON AMERICANS

The foregoing might create the impression on American readers that the United States deliberately built up the biggest Navy and Army and Air Force in the world in order to accomplish some purpose connected with our own commerce or trade or political objectives in this world. Yet, Mr. Churchill should know, above all other things, that when we did the same thing in the World War in building up our Army, Navy, and Air Force to an unprecedented size, we immediately thereafter went back to a peacetime basis, and nobody can point to a single square foot of land annexed, either directly or indirectly, to the territories of the United States as a consequence of the World War.

When the United States made its pledge last time that it did not want to annex any territory, it kept that pledge. But Great Britain obtained a mandate covering all the German colonies in Africa and various other territories in the world which have since been practically annexed to the British Empire. The misuse of that power of mandate is an example of power politics. Will it happen again?

Furthermore, the American people do not like to see alliances between Government and private business such as have called forth the criticism of "imperialism." This is a term the British do not understand because they believe in using the power of their Government in a political and diplomatic sense to extend their trade and commerce, whereas, in the United States, under the New Deal particularly, the tendency is to scuttle foreign investments and keep the American Army, Navy, or Air Force from being used as a tool of commercial interests.

Mr. Churchill quotes approvingly President Roosevelt's definition of power politics and says that the British are in agreement with it. That definition, expressed in the President's annual message to Congress recently, is as follows:

"In the future world, the misuse of power, as implied in the term of 'power politics,' must not be a controlling factor in international relations. That is the heart of the principles to which we have subscribed. We cannot deny that power is a factor in world politics any more than we can deny its existence as a factor in national politics. But in a democratic world, as in a democratic nation, power must be linked with responsibility, and obliged to defend and justify itself within the framework of the general good."

DEFINITION AND PRACTICE

But is Mr. Roosevelt's definition and British practice the same? The British policy in Greece was to some extent aimed at the maintenance of the royal family there, and the British policy in Italy had similar characteristics. England has confessed to a desire for a "sphere of influence" in the Mediterranean, and it is often sarcastically flung back at Americans that the United States has a similar "sphere of influence" in Latin America.

The truth is that the United States Government has never at any time had or asked for a special preference position in the matter of trade with any country in South or Central America. Likewise, the famous "open-door policy" which has been America's traditional position toward trade in the Far East has always been based upon equal opportunity for all and special preference for none. This is a far cry from the British conception of "sphere of influence."

It might have occurred to Mr. Churchill, too, that the United States does not today possess the biggest Army, Navy, or Air Force because of any premeditation. The fact that the British did not build up their Navy, Army, or Air Force to meet the German threat from 1933 to 1939, and the fact that France failed likewise has placed upon this country the burden of becoming the "arsenal of democracy."

It seems passing strange that the Prime Minister who begged America to help save Britain is now hinting that perhaps all this was done in order to gain some advantage in world politics even in its finer sense. Merely to state the record is to reduce Mr. Churchill's proposition to absurdity, and Americans can only hope that the war strain will be lightened so that the Prime Minister, who knows America so well, will not be tempted again, even for reasons of clever debate, to imply that the United States has any imperialistic or "power politics" purpose in fighting this war against Germany and Japan.

A Tribute to Poland

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following resolutions adopted by citizens of

Greater Boston January 14, 1945, at their mass meeting in Faneuil Hall, on matters confronting the United Nations, with particular emphasis on Poland:

Whereas Poland, the first nation in Europe to reject appeasement, was the first to fight Nazi tyranny in the cause of freedom and civilization; and

Whereas Poland continues to fight valiantly on land, sea, and in the air for her cause and that of the United Nations; and

Whereas Poland is a country whose people have always throughout its history guarded the achievements of western civilization, and the democratic traditions of individual liberty and the freedom of conscience; and

Whereas Poland, in this tragic hour, despite her efforts in the cause of the United Nations, is being threatened with partition and the possible loss of her independence through the disregard of justice, international law, and the principles of the Atlantic Charter: Be it

Resolved, That we, citizens of the United States, gathered at Faneuil Hall, the cradle of liberty, on the 14th day of January 1945, at Boston, Mass., firmly condemn a policy of settlement and power politics in the course of the prosecution of the war.

Resolved, That while it is in the best interests of the Allies to maintain unity and to fight together in loyalty for their cause and for the hopes that have rallied 36 nationalities in the 6 continents to the banner of the United Nations, we declare it is equally important that the peace settlement reached after the war is won shall be based on the democratic principles of justice, law, and the respect of the rights of all nations.

Resolved, That a copy of these resolutions shall be sent to the President of the United States of America, to the Secretary of State, and to each of the members of the Foreign Relations Committee and the Foreign Affairs Committee.

ROMAN F. PUCKO.
LILLIAN J. NEMEAOSKI.
FRANK NOWAK.
GLADYS PIEKARAKI.
ELAINE H. PROABOSAGCZ.
JOHN SOKOBOUSKI.

A Resolution in Praise of the Public Service of Gordon L. McDonough, a Representative-Elect From California

EXTENSION OF REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1945

Mr. GEARHART. Mr. Speaker, among those who will this day for the first time take the oath as a Member of this deliberative body will be the Honorable GORDON L. MCDONOUGH, a Representative-elect from California, a Member who will, I am quite sure, rapidly gain stature as a statesman of no mean ability.

Prior to his election to the Seventy-ninth Congress, the gentleman from California [Mr. MCDONOUGH] served for 10 years as an elected member of the Los Angeles County Board of Supervisors, the governing body of a rapidly growing community of almost 4,000,000 people. Upon his retirement from the chairmanship of that governing agency to become a Member of this deliberative body, his colleagues in his former service, those who remain upon the board, passed a resolution in high praise of his public service which should find a place in the record of this day's proceedings. It is one of which he can be justly proud.

In accordance with the unanimous consent of the membership just hereinbefore expressed, I hand a copy thereof to the Public Printer and ask that it may be spread upon the pages of the CONGRESSIONAL RECORD as a part of my instant remarks.

The resolution to which I have just referred, Mr. Speaker, is the following:

Whereas GORDON MCDONOUGH has rendered outstanding public service as supervisor of the second district of the county of Los Angeles since August 1933; and

Whereas as chairman of the board of supervisors from December 1942 to December 1943, Supervisor MCDONOUGH's enlightened leadership assisted greatly in improving the standards of county service and elevating the public esteem in which they are held; and

Whereas by his natural ability and understanding, his untiring zeal to better human welfare, and through his integrity and fairness and courage, he has set an example of public service which will always be remembered; and

Whereas Supervisor MCDONOUGH has particularly endeared himself to the many thousands of county employees by the sympathetic interest which he has always shown in the improvement of employees' relations; and

Whereas these high qualifications have been recognized by an appreciative electorate which has chosen him as its Representative in Congress from the Fifteenth District: Therefore be it

Resolved, That the board of supervisors, in recognition of his splendid record, expresses its appreciation and esteem.

WILLIAM A. SMITH,
Supervisor, First District.
JOHN ANSON FORD,
Supervisor, Third District.
RAYMOND V. DARBY,
Supervisor, Fourth District.
ROGER W. JESSUP,
Supervisor Fifth District.

Living to Work

EXTENSION OF REMARKS
OF
HON. JAMES M. CURLEY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. CURLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of his excellency the Most Reverend Richard J. Cushing, archbishop of Boston, at Boston Chamber of Commerce members' luncheon, Thursday, December 21, Imperial Ballroom, Hotel Statler:

There was once a man who was found sitting on the pavement beating his head against a wall. Someone said to him: "Why on earth are you doing that?" The man replied: "Because it feels so good when I stop." Many people think of work like that. They live for the moment when they can stop. Work, for them, has become something to escape from, not something to honor and cherish. They think of work as a necessary evil because it is a means of making money; and if they could only make enough money, they would never do any more work. You may know of people who came into money and so gave up their life-work, whatever it was, and then retired into a state of unhappy boredom. When they stopped working, they really stopped living.

Now, there is something wrong with that joyless view of work. Work is not merely an activity to produce external commodities; it was intended by Divine Providence to become a means of personal development. Unless you can build your life around some form of congenial work—unless you have what is called a career—you cannot live a full human life. Work which impairs human character, which stunts human faculties and results in human degradation, however productive of material effects it may be, contradicts the essential purpose of human existence. In the Christian view, we should not have to work just to live—that is slavery: we should live to work—that is freedom.

There are two great basic truths on which this view of work rests; first, everyone has a right to be a maker, a creator; second, everyone has a right to create something that will serve society.

Everyone has a right to a life-work, and to a life-work which is a congenial form of making something, of producing something. Such work is not just a job. It is life, the life of an artist painting a portrait on the canvas of time. I am not saying that we all ought to be poets or painters or authors or inventors. That is one of the weak things about society today; we think of makers as a very small group of painters, poets, musicians, and so on. But in the Christian view of work, the artist is not a special kind of man, but every man is a special kind of artist. And I am not insinuating that we all ought to be making pots and pans—things with our hands. If we can sail a ship well, if we can cook a good meal, if we can drive an engine, plow a field, be a lawyer, a doctor, a street sweeper, or a businessman—if we can do any of these things, we are makers.

In addition, men and women have a right to that sort of work which enables them to make something for the betterment of society. Of course, there are endless ways in which you can be such a maker. Most people, if they are going to be fully alive, need the kind of making which consists of marrying, of having a family, of helping to build up the life of their community, their town, their country, and the world. You are businessmen; your happiness depends on your success as makers of something that enriches society. For example, you make it possible for the average man to buy what he needs. You make it possible for your employees to be makers in your business, which in turn brings added service to the community. You are living to work, not working to live.

Now, you do not have to be a college graduate in order to make something for the betterment of society. God has given some sort of creative talent to everyone. Every living, breathing mortal was created by God to live on this earth and to enjoy his work, with the consoling conviction that no matter what kind of work he was doing he was contributing to the well-being of the community. Most of us who are in the priesthood, for instance, came from the poor. Probably some of our fathers, who made possible our education, were in the employ of some of you. They were workers, but workers with an aim, a goal. Their goal was to give their sons and daughters what they did not receive—an education to equip them for the higher things in life. And if you would like to know of their success in reaching that goal, let me reveal to you a startling fact—as far as I know, there is only one Catholic bishop in all this country, in all the United States, who is the son of a man who ever set foot inside

a college. I would hazard the opinion that a similar statement could be made of other professions. Work like that, however humble it may be, springs from the serene and unshakable conviction that the goal of the worker is a benefit to society.

The extent of large-scale production in our society presents a spectacle unique in human history. Other civilizations have brought together large numbers of workers in colossal projects like the pyramids and the Roman roads, for instance. But these were feats extraordinary in their day, uncommon. In our day a plant which assembles vast numbers of human beings for the task of production is a commonplace. In 1929 for example there were 210,959 manufacturing establishments in the United States. One hundred thousand employed 90 percent of the workers in the manufacturing industry. Two hundred and six establishments employed 2,500 workers or more, 996 establishments employed 1,000 workers or more.

Large-scale industry is the sheltering framework within which most of our population (laborer and professional man alike) must find the means wherewith to live. But can a man find a fully human life within this framework? Can he live to work, to make, to create? Can he create in the secure knowledge that what he makes will benefit society? The present pattern of our industrial system is a pyramid with responsibility allocated in a diminishing scale from top to bottom. Creation, making in its truest sense, work in the Christian sense, belongs in fullest measure only to the manager, to the executive, to the man at the top. He has responsibility, not only for his own actions but for those of thousands of employees under him. Creative making belongs only in its most truncated, diminished form to the man at the bottom—the man at the assembly line—the man who has responsibility only for a single minute and highly simplified mechanical operation.

Two things militate against a fully human life within this framework. First, it condemns large numbers of people to hard, uncreative work—to drudgery. Not the drudgery of physical work, which the machine eliminated, but the mental drudgery of endless monotony. Second, it assigns human labor to an inferior place in the scale of human values.

There is a great difference between drudgery and hard work. Drudgery is hard work without the joy of accomplishment; and nothing more. If that is all we have we are in a sorrowful plight. Making things is hard work, too; only it is fascinating, because at the end you can say: "That is my handiwork; that is my creation." That sort of hard work is stimulating and therefore good for us. We hear a great deal nowadays about the danger of developing tensions; about the value of relaxing. Yet—after all, when you're totally relaxed you're dead; to win a baseball game, to run a mile, to beat last year's sales record, to plan next year's production peak—you have to be full of tensions; alive; living to work.

In earlier days, man was concerned with the making of the necessities of life. The doing of those necessary works called forth the creative and contemplative faculties of man. The old-fashioned maker of bricks, who made them one by one with the simplest of apparatus, had to have in his mind an image of the brick he was about to make and, strange though it may seem, that image had to be called up afresh each time. In the days when nails were made one by one, the same applied even to nails. But—the demand for bricks and nails and such things increased. Brickmaking and nailmaking became routine work. Brickmakers and nailmakers used less and less imagination. Creative making gave way to the physical drudgery of the first factories.

Machinery destroyed physical drudgery; it replaced it with a mental drudgery which is no less irksome. To reproduce thousands of copies of a newspaper in the days before the steam printing press was undoubtedly a grinding toil, but, if your physique would stand it, it is probable that you would rather spend 12 hours a day sawing wood than 12 hours a day pushing one button in and out. It is hard to imagine anything more stultifying, more demoralizing than a prolonged routine mechanical operation. It makes people as depersonalized as the man in the production line who was interviewed by a reporter. The newspaperman was visiting one of our large mass-production industrial plants to gather material for a human-interest story. He walked beside the long conveyor belt and chatted with each man in turn. He asked their names and the nature of the small operation that each man was performing. Finally, he came to one fellow and asked him who he was. And the man replied "I'm nut 39." Today one hears much about the ideal of the leisure state; if that means abolition of drudgery, it is indeed an ideal, and let us hope that it may come about; but if it means the abolition of personal "making," it would be practical slavery, because we should soon be half dead, half dead from boredom, half dead from standing watch at a belt line.

Drudgery, like taxes, is always with us. Most jobs are a mixture of drudgery and making, and we manage to take the first in stride because of the fun of the second. But if there has to be work which is sheer drudgery, whether mental or physical, then it should be distributed, just as it is shared in any decent family. And why? Because we are a family. We talk about the brotherhood of man, and we ought to mean what we say. We are our brother's keeper. As businessmen and employers you can render a great service to the joy and happiness of your employees by convincing them that their daily task is not one of monotonous, hopeless drudgery, but that it is the work of a maker, of a creator, the work of one who shares, the work of one who is making a definite, constructive contribution to the business that employs him and also to society. Such employees are contented and happy, helpful to one another and to all about them. They, indeed, work not to live, but they live to work. And the business is prosperous.

If drudgery stultifies human faculties, a system geared exclusively to the profit motive reduces human labor to the status of a commodity—something to be bought and sold on the sole basis of supply and demand. The grossest outrage committed against the worker in our time has been the materialistic philosophy that the pursuit of wealth and station is the highest and most honorable pursuit that a man can follow; the philosophy that ascribes a halo of rightenousness to men who have achieved material success, regardless of the methods which they may have employed to gain their end. Here is the way a wag once expressed it by paraphrasing the comparative degrees of an adjective: "Young man, get on; get honor; get honest."

That philosophy leaves out one great fact; the highest type of Christian humanity is Christ Himself, a worker with His hands, the son of a worker, the friend and associate of workers. By choosing the vocation of a carpenter He dignified manual labor for all time. The work of the craftsman's hands produces wealth, it is true; yet it has a true nobility of its own as the worker has been inspired by his love for the work, as long as he is living to work. But if he is motivated solely by the spurs of avarice, the nobility of his work vanishes into thin air.

You are probably saying, how about the profit motive? There is nothing wrong with the possession of honestly gained wealth; but wealth brings social obligations and social responsibility; the selfish possession of wealth is degrading. This idea of responsibility was once expresed like this: "If a man will not work, neither let him eat." Karl Marx didn't write that; St. Paul did It means that you have a right to a reward in terms of wages or profits or interest if you have done something for society that merits a reward; if you have been a maker, a producer of something that betters society. You have the right to enough prosperity to secure for yourself and your family a dignified and fairly comfortable way of life.

But—and it is a big "but"—while there is nothing wrong with the profit motive, there is everything wrong with a society built exclusively on the profit motive. First, there is everything wrong with the man who says, "My only motive in working is to make money." Secondly, there is everything wrong with the man who says, "This is going to pay, and that is all I care about it." If you want to do a thing because it pays, all right; but you must make sure that it does not harm society and that it is just in itself.

So, within the framework of our modern industrial structure two factors, drudgery and the extreme of the profit-motive, militate against a full human life. What is the remedy? For joyless, mechanical, slaving hard work of drudgery, I would substitute the thrilling joy of craftmanship, of creative making. For overemphasis on the profit motive I would substitute a new emphasis on love of God and neighbor.

Man, like God, stamps his image on his works. Something of our personality, something that no other force in the universe can contribute, goes into our labors and makes them really a part of ourselves. This is the foundation of the price, the affection, even the tenderness of the true craftsman for the finished product of his labors.

We have lost much of the exquisite joy of the old craftsman who would leisurely run a hand over the smooth perfection of the work he had just completed. What a time he had getting this particular part of the work done; how he planned, dreamed, worried; how eagerly he went back to the job as his dreams began to take shape; what secret pride there is in this child of his genius, even though none of his works seem quite to catch the elusive beauty and breath-taking grace of his dreams.

Watch a carpenter (a real carpenter); he never bullies the wood, he never mauls it or forces it against the grain; he knows its qualities and treats them with respect. And so what he makes, he makes well and beautifully If we believe that the wood is God's creature, like ourselves, and that what we make is our offering to God, there will be a dignity and warmth about what we make, even if we are not first-class workmen. It is because careful craftsmanship has lent beauty even to the pots and pans of bygone civilizations that we treasure them and keep them in our art galleries. Can you imagine future civilizations keeping specimens of our kettles in their art galleries, except, perhaps, as curiosities?

The craftsman worships God in his work. This keeps his work social. Experience has taught us that the economists were terribly wrong when they constructed their hypothetical "economic man" who would serve society best by serving his own selfish interests first and last. We are always tempted to play our own hands for our own sakes, regardless of the rest of the world. We may be devoted to the cause of humanity; but it is odd how easily that can become a devotion to one part of humanity and a hatred of other parts, unless we are continually being called to account by something greater than humanity. That something is God. And for that reason I would substitute for our present overemphasis on the profit motive a renewed and vigorous emphasis on love of God.

God must be in our work, in our business, in every phase of our daily life. We must become the sort of people fit to share the life of God. Then we shall in fact be just—and more than just, for the law of love goes far beyond the law of justice. Herein lies the essence of genuine happiness. It has been proved over and over again that if you set out simply to find happiness, you never find it. Just as you think you have it in your grasp it eludes you. It is only when you abandon the idea and set out to make other people happy, to do good unselfishly, that you suddenly discover that you are really happy at last.

I think the same is true of society. There may be trials and heartaches before us, and the problems that arise may be great, but we have the stuff of happiness within us. In helping others to happiness, we are on the road to the same goal ourselves. But if we set out simply to build a paradise on earth for ourselves, we shall surely fail. You remember the famous saying after the last war was over: "Now we're all brothers—all Cains and Abels."

A very practical application of the foregoing point comes to mind. Before many months will have passed, it seems inevitable that we shall have in our midst many young men who have returned from war bearing permanent evidence of their heroism on their bodies. Some of these fine young men will be partial casualties. They will probably come to you looking for employment. A war which was not of their making has seriously disarranged their life. Once they will have returned, they are going to look for a chance to begin again. It will be the most natural temptation to reject them, for it may seem that their physical handicap will seriously mar their usefulness. But I ask you to remember that a handicap may often be the incentive that will drive them on to even greater accomplishment than they might otherwise have achieved.

Recall, if you will, that the famous historian Francis Parkman suffered from nervous exhaustion and eye trouble which permitted him to write with difficulty but six lines a day for months at a time. Did Parkman abandon his ambition to become a historian, as many a one would have done under the circumstances? On the contrary, he dug himself in more resolutely, struggled for long hours over original manuscripts scarcely legible, through innumerable documents and volumes, and wrote his superb histories on paper with a wire screen to guide his hand.

In spite of ill health which baffled him every day for 40 years, Charles Darwin worked continuously over his data until, as he said, his mind seemed to have become a sieve for the sifting of facts, until from the travail there emerged his epoch-making book, The Origin of the Species, which furnished at least a generalization that has enriched all branches of biological science.

William Wilberforce was a small, frail man in the constant throes of ill health. Boswell went once to hear him speak in the House of Commons and said afterward: "I saw what seemed a mere shrimp mount upon the table; but as I listened he grew, and grew, until the shrimp became a whale." For 20 years he was obliged by his physician to resort to opium to alleviate the pain that wracked his body, but he had the courage never to increase the dose. His own sufferings enabled him to appreciate more keenly the lot of the afflicted and the downtrodden and to the mitigation of their misery he devoted the energies of a lifetime, fighting with a stout courage that would have done credit to the strongest of men. His labors won for him the title of "Attorney General of the Unprotected and the Friendless."

Over his tomb in Westminster Abbey is carved one of the noblest inscriptions to be found in the entire Valhalla of England's honored dead. "He removed from England the guilt of the African slave trade," it read, "and prepared the way for the abolition of slavery in every colony in the Empire." Here, indeed, was the conversion of the liability of continuous ill health into the assist of a glorious achievement. For if Wilberforce had enjoyed robust health, he would probably never have acquired, one suspects, that profound sympathy for the afflicted that constituted the compelling motivation of his life.

I would prefer his epitaph to any found upon the tombs of generals. For unlike military leaders who march to fame over the bleeding bodies of men, Wilberforce won his niche in the hearts of the people of England by lifting up from their condition of suffering and degradation the most unfortunate of God's children.

The great masterpieces of literature, oratory, art, and music have not come as a rule from some shining Apollo or robust Hercules free from the handicaps of ill health, poverty, and affliction. They have come from the handicapped and the shut-ins—from dyspeptics like Carlyle, from hunchbacks like Pope, from neurotics like Poe, from the blind like Homer and Milton, from initial stutterers like Demosthenes, from the deaf like Beethoven. They are the type of men whom history discloses struggling over blood-stained roads and

"Toiling up new Calvaries
Ever with the Cross that turns not back."

Robert Louis Stevenson, dogged by tuberculosis that sunk its teeth so deeply into his lungs that no medicine or change of climate could loosen their hold, could have become a sour cynic questioning the justice of the universe and throwing his pen away in futile disgust. But no! He teased from his affliction its hidden elements of value. It brought his thoughts more frequently to God and His providential government of the universe and of human life as well. More revealing became certain verses of the Bible to which he had paid but scant attention before, such verses as: "Are not two sparrows sold for a farthing? And not one of them shall fall on the ground without your Father. But the very hairs of your head are all numbered. Fear not, therefore, better are you than many sparrows."

A new tenderness crept into his poetry, a mellow wisdom and beauty into his prose. Into poetry of what wistful tenderness did he transpose the sentiment of St. Peter, "Casting all your care upon Him, for He hath care of you," when, with the shadows lengthening about him he wrote from his island home in the Pacific:

"The embers of the day are red
Beyond the murky hill;
The kitchen smokes, the bed
In the darkling house is spread,
And the great woods are still
So far have I been led,
Lord, by Thy will;
So far have I followed, Lord,
And wondered still.
The breeze from the embalmed land
Blows sudden toward the shore
And clasps my cottage door.
I hear the signal, Lord, I understand.
The night at Thy command comes.
I will eat and sleep, and will not question more."

Perhaps the physically handicapped young man who comes to you seeking employment will be a great craftsman. Nature always offers compensation after the loss of a faculty. The blind develop keen perception through the senses of hearing and touch. The young man who can no longer walk may acquire uncanny skill with his hands. And as you personally help him to live to work, you will surely be making a genuine contribution to society and your fellow man. You, too, will be living to work. For a man's life work is not only for himself. It is his way of helping the human family. And you will necessarily be happy because you are serving another, because you are doing good. You will have the loving patience of the true craftsman as you shape and mold this broken life into one of usefulness. You will have the happiness and satisfaction of knowing that you have spared a fellow man a life of drudgery; instead of working to live, you will have taught him how to live to work. You will stand amazed like the craftsman before the beauty of this work, wondering how you could have produced it.

In a program of this sort there will be failures; not all men will respond to your kindness or your training. But neither are all your investments good. Unless you are going to make profit the sole motive in all your dealings, you will be willing to chance a loss of this sort, especially when it pays such munificent dividends if the experiment works. It will make you a responsible and happy maker.

The war has brought us one tremendous blessing; it has restored to us a corporate sense, the feeling that we are a family. Many people are happy in a way they never were before in spite of all the horrors of war, for the simple reason that they are living something of a family life with their fellow men, helping them and being helped by them. It is absolutely vital that we should cling fast to that when the war ends. If we do not, if we sink back again into the old spirit of selfishness, we shall be in a sadder state than ever before. But if we do cling fast to it and set about remaking the world for God and for one another, perhaps we shall succeed beyond our dreams.

That form of making, however, means hard work It is no use to be idly wishing for it. It means hard thinking, and thinking togetner. It means a united and invincible will that, when the means are thought out, they shall not be made ineffective by stupidity or guile, by greed or selfishness; but they shall be put into effect with speed and thoroughness, so that America may be a land where all men may hold securely to their human heritage, the heritage of being makers, and therefore of being fully men, and therefore of being freemen.

All this means a revolution in our ways of thought. It means refusing to think in terms of cash returns, but trying instead to make as God makes—for the goodness and joy of the job. It means having the power and the courage to say, this or that is not worth making; this or that is not worth doing; and because such things are not worthy of us as free and responsible men, we cast them aside and will have nothing to do with them. But it means also having the will to declare ourselves in this fashion; and we shall not have the will unless we think like makers and not like servants of Mammon; we shall not have the will unless we live to work and not just work to live.

Let no one dare to say that it is impossible. It is not only possible, it is actually being done, now, at this very moment. When we are making weapons of war, we do not ask whether or not the job will pay. We ask one thing only, will the product be good? The revolution has been brought about perhaps without our realizing it. This is the danger; we did not bring it about and perhaps, when the pressure of events which brought it about has passed, we shall be ready to lapse back into the old ways. That is why a revolution is still necessary; a revolution within ourselves. How hideous it would be to have to confess that the thing that can be done under the pressure of the desire to kill cannot be done when the motive is to bring life and dignity to America. How hideous to have to say that once more we have chosen Mammon and rejected the Kingdom of God and His justice.

It is for us to say once and for all: "That shall not be." It is for us to see to it that it shall not be. It is for us to say:

"I will not cease from mortal strife,
Nor shall my sword sleep in my hand,
Till we have built Jerusalem."

the city where finance is made sound by serving industry, and industry is made sound by serving man, and man is made happy by serving God and neighbor and loving God and one another.

The World Rubber Situation

EXTENSION OF REMARKS
OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. JOHNSON of Illinois. Mr. Speaker, I wish to call attention of the Members of this body to the importance and significance of the current meeting in Washington, D. C., of the rubber study group of the Netherlands, the United Kingdom, and the United States.

This meeting, which opened on Monday, January 22, and which will continue through Saturday, January 27, is expected to form the basis for the future policies with respect to the world's rubber supply.

As a member of the House agricultural subcommittee investigating rubber, I am extremely interested in the present and future status of the rubber industry, with particular reference to the needs of the United States, the world's largest users of this vital material.

In this connection I wish to call attention to a study made by Mr. John L. Collyer, president of the B. F. Goodrich Co., of Akron, Ohio, who is a member of the United States group participating in the international conference.

Mr. Collyer is one of the world's outstanding authorities on rubber, and since his observations are so pertinent and timely I commend them to everyone of you. The salient points of his statement follow:

"What to do about rubber?" is a long-standing question that has compelled the attention and action of the American people. With the capture by the Japanese of areas which normally supply 90 percent of the world's natural rubber, this question took first rank among our country's wartime problems.

The United States can be proud of the way this problem has been handled to date. Industry, science, and government have teamed to provide a vast tonnage of American-made synthetic rubber to speed the United Nations' progress in a war that would have been lost but for this achievement. We have succeeded in solving our past rubber problems because we have dealt soundly and realistically with the factors involved.

We accumulated a natural-rubber stockpile because we faced the fact that we were then almost totally dependent upon distant sources and would need time in which to develop alternative sources if an emergency arose.

We spent about $700,000,000 for facilities to produce American-made synthetic rubber because we were up against the hard fact of an almost complete shut-off of natural rubber within a few weeks after Pearl Harbor.

Today America's giant synthetic-rubber program is approaching capacity operation. Production in 1944 reached a rate of 800,000 tons per year, and the practical capacity of approximately 1,000,000 tons a year.

This includes the annual capacity output of such important operating companies as the Copolymer Corporation, Firestone Tire & Rubber Co., General Tire & Rubber Co., the B. F. Goodrich Co., Goodyear Tire & Rubber Co., National Synthetic Rubber Co., and United States Rubber Co.

The output of privately owned American plants and of foreign plants will raise the world's total of synthetic rubber to about 1,200,000 tons annually. The world natural-rubber supply will total approximately 1,600,000 tons, including the output of the three largest producers of crude rubber, which are British Malaya with 620,000 tons, the Netherlands Indies with 620,000 tons, and Ceylon with 100,000 tons.

Thus the after-the-war annual potential rubber production of the world should be 2,800,000 tons.

That is more than twice as much rubber as the entire world used in the highest year on record—1941—when estimated world consumption was 1,300,000 tons.

There are many unknown factors in the long-range problems that situation will create.

First. The American people have spent about $700,000,000 on our synthetic-rubber program. Improved plants and processes might make the present facilities obsolete. Their value hinges upon the day-to-day progress of our scientists and men of industry in increasing the utility of synthetic rubber and in reducing its costs.

For the large tonnage uses, natural rubber today has the advantage.

But here, for example, is what happened to market prices per pound of three basic materials over a 25-year period:

	1918	1928	1935	1943
Aluminum	$0.33	$0.24	$0.22	$0.14
Magnesium	1.81	.55	.30	.20½
Rayon (yarn)	[1] 4.77	1.50	.57	.55

[1] 1919.

Synthetic-rubber costs are following a similar pattern, and no one can tell today what results will have been achieved by the time hostilities have ended and governmental controls are no longer required as wartime measures.

Second. The magnitude of our synthetic-rubber production may depend not only upon technological advances but upon the policies which the American people, through their Government, adopt for the disposal of our existing Government-owned synthetic-rubber plants.

Third. The peoples of the other nations have a large stake in the production of natural rubber. Our progress in synthetic rubber may be a major factor in determining to what extent large-scale plantation operation will prove economically profitable.

Fourth. For many years rubber has been America's No. 1 import in terms of dollars. Its post-war position in international trade will be affected by whatever action is taken by the nations of the world to reorganize international trade.

The American people have learned through bitter experience how vital an assured supply of rubber or synthetic rubber is to the maintenance of their military security. In our opinion they will require that a minimum annual production of 200,000 tons of American synthetic rubber be maintained—regardless of economic factors—purely as a national defense measure, just as arsenals, naval bases, and air bases are maintained. But the division as to how this insurance can best be provided in the future is yet to be determined by our people, and it undoubtedly will exert an influence on the world rubber situation.

But certain facts are known today, and certain developments may occur in the reasonably near future. Some new factors should now be taken into consideration:

No. 1. The United Nations in the coming months may gain access to major natural-rubber-growing areas while the war is still on. The trend of war in the Southwest Pacific indicates recapture of Borneo, Java, Sumatra, perhaps even the Malay Peninsula, before the final defeat of Japan.

No. 2. Even if the rubber-growing areas of the distant east are reoccupied, the probability is that it will take at least 2 years before normal operations are restored.

No. 3. During this restoration period the United States and the world will require unprecedented quantities of rubber for military and vitally essential civilian needs.

It is our estimate that consumption of natural and synthetic rubber in the United States following recapture of the far-eastern plantations will average 850,000 tons; and that world consumption will approximate 1,600,000 tons a year.

No. 4. For at least 2 years from the date of reoccupation, this 1,600,000-ton annual world demand for rubber cannot safely be met with either synthetic rubber or natural rubber alone. Big as it is, our synthetic-rubber program cannot do it alone. Natural rubber and synthetic rubber both will be needed for at least 2 years after reoccupation.

No. 5. While both natural and synthetic will be needed during this period, the usage of natural rubber will increase and, unless the price of natural rubber rises sharply from the 1941 level of 18½ cents f. o. b. plantations, usage of synthetic rubber will decrease.

These important developments are brought out in the following analysis: If we assume that rubber trees in the plantation areas are found to be in reasonably good condition, but that equipment and labor will have to be obtained,

here is how we may expect natural rubber to come back:

	Receipts from unoccupied territories	Receipts from reoccupied territories	Total receipts
First year after reoccupation:	*Tons*	*Tons*	*Tons*
First quarter	46,000	28,000	74,000
Second quarter	47,000	46,000	93,000
Third quarter	47,000	76,000	123,000
Fourth quarter	48,000	145,000	193,000
Total	188,000	295,000	483,000
Second year after reoccupation:			
First quarter	40,000	192,000	232,000
Second quarter	40,000	230,000	270,000
Third quarter	40,000	268,000	308,000
Fourth quarter	40,000	305,000	[1] 345,000
Total	160,000	995,000	1,155,000
2-year totals	348,000	1,290,000	1,638,000

[1] This is at the rate of nearly 1,400,000 tons a year—higher than the total for any year in history.

But this 1,600,000 tons which we may expect to obtain in a 2-year period after reoccupation would equal only 1 year's estimated world needs for raw material. That is why we will still have to depend upon synthetic-rubber tonnage in addition to that required for national security.

The following figures show how much synthetic rubber will be needed to satisfy over-all consumption demand. They clearly indicate the tapering-off of the minimum need for synthetic rubber as large tonnage of natural rubber again becomes available:

	Estimated rubber consumption	Potential natural-rubber receipts	Minimum synthetic requirements
First year after reoccupation:	*Tons*	*Tons*	*Tons*
First quarter	375,000	74,000	301,000
Second quarter	375,000	93,000	282,000
Third quarter	375,000	123,000	252,000
Fourth quarter	375,000	193,000	182,000
Total	1,500,000	483,000	1,017,000
Second year after reoccupation:			
First quarter	400,000	232,000	168,000
Second quarter	400,000	270,000	130,000
Third quarter	400,000	308,000	92,000
Fourth quarter	400,000	345,000	55,000
Total	1,600,000	1,155,000	445,000
2-year totals	[1] 3,100,000	1,638,000	1,462,000

[1] Of this, United States consumption is estimated at 1,700,000 tons.

In formulating our rubber policies we should avoid making commitments extending beyond the emergency period which involve Government controls that compromise the basic principle, that America's long-range policy, for rubber as well as for other goods and services, is founded on the principle of competitive enterprise.

The advantage to the American people of a sound basis for dealing with natural- and synthetic-rubber production and prices may be appreciated from this fact:

A difference of 10 cents a pound in the price of the basic raw material—based on the anticipated American consumption of 850,000 tons a year when peace is restored—would mean a total difference of $190,000,000. These savings in 4 years would be equivalent to America's expenditure for the war-necessitated Government synthetic-rubber plants.

Such savings, moreover, would continue for many years if sound policy is adopted for maintaining natural rubber and synthetic rubber in an equilibrium based on efficient production and low prices.

It will add strength and flexibility to wartime production and transportation. The adoption of a sound policy to be put into effect at the time the far eastern rubber lands are recaptured will:

Provide time—perhaps 2 years—for fact finding and investigation of the long-range rubber problem.

Smooth the transition to normal peacetime operations for producers and consumers of synthetic rubber and natural rubber.

Reduce the costs of the war to the American people and to the peoples of the other United Nations.

Forestall the growth during wartime of trends which might lead to vicious price spirals and speculation in the early years of sharp demand, with tobogganing declines later on.

Serve as a guide to the handling of other similar problems involving the interest of the American people in efficient, low-cost production with benefits to their standard of living.

But more important than all these fruits of this action will be the foundation laid for the long-range rubber policy—a policy which will assure:

American military security;

Progress through competitive enterprise; and

Resulting lower-cost raw materials, making possible broader markets for rubber, increasing employment and a constantly rising standard of living for the peoples of the world.

The Farm-Labor Situation

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

PEVELY, MO., *January 22, 1945.*

Hon. A. S. J. CARNAHAN,

Member of Congress, Washington, D. C.

DEAR MR. CARNAHAN: I am a director for Sanitary Milk Producers, an organization of some 2,700 dairy farmers in 53 counties in Missouri and Illinois who supply inspected milk for St. Louis.

I have been recently selected by the organization to represent them on national legislation. Therefore I am interested in dairy farmers as a whole and not as an individual.

It is impossible to get farm labor and to complicate matters more than ever the only farm help we have are the men between the ages of 18 and 26 and are the ones who are on the very highest producing farms and have done an excellent job.

Some have already been called into service and the remaining few have all been placed in class I-A and ordered to report for preinduction examination in the very near future, which means if these boys are taken into the armed forces the dairy and agriculture industries are going to be crippled beyond estimation at the present and very likely permanent.

To give you a better picture of the situation, I am going to outline a specific case briefly:

This man is 24 years old and works on a 470-acre dairy farm. This farm has 38 dairy cows and 11 head of other cattle. In 1944 this farm had 80 acres of corn, 25 acres of barley, 7 acres of rye, 15 acres of alfalfa hay to harvest four times, 20 acres of soybeans, filled 125-ton silo with ensilage, and sowed 45 acres of wheat beside all fence repair and what other work goes with farming. I think this is only one average case, and there are many others equally as good as this one and some better, but our draft board has placed them all in class I-A and ordered preinduction examination.

Therefore, I think you, as well as myself, can readily see what the dairy industry is facing. I feel that this is something that must have immediate attention and I will appreciate very much whatever you can do to help this situation.

Yours very sincerely,

C. MONTE CRAFT.

Independent Tire Dealers Appeal to Congress

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. VOORHIS of California. Mr. Speaker, one aspect of the monopoly problem in America which should receive the immediate attention of the Congress is the plight of the independent tire dealers and independent filling-station operators of the country.

In this connection, I am including herewith, first, the front-page article appearing in the National Independent, a journal of the Independent Tire Dealers and Tire Rebuilders of America, for December 1944. Second, I include the article first printed in June 1941 and later reprinted in the December 1944 issue of this same paper to which reference is made in the lead article.

It is my earnest hope that Congress can take some constructive action on these very important problems in the near future.

The articles follow:

[From the National Independent of December 1944]

INDEPENDENTS DOOMED UNLESS CONGRESS ACTS

(By George J. Burger, tire-marketing consultant, representative of tire independents in the Nation's Capital)

On page 5 of this issue is reproduced the lead story of our issue of June 1941—the story which exposed the ties existing between major oil and major rubber companies.

This is an exception to our policy of not repeating. It's an exception because of its importance. Members of Congress must

know the facts—dealers must be reminded—if independent enterprise in the tire industry is not to suffer another severe set-back.

Let's look at the record. For 3 long years independent tire dealers have informed the Members of Congress of the nature of these rubber-oil hook-ups. All this led the Senate Small Business and Banking and Currency Committees to consider a bill, S. 1122. This bill, had it received action expected, would have meant freedom of enterprise to at least 300,000 independent establishments, tire dealers, automobile dealers, filling-station operators, and garages, in the rubber-tire field.

This bill was, naturally, opposed by the oil industry. The oil companies told Congress that their ties with tire companies were being made solely to enable their filling-station outlets to complete their retail lines. They told Congress of their interest in their retailers. They didn't stress the fact that by the tie-ups they were lining their own purses with much velvet. They didn't mention the overrides, the commissions, and special deals they were receiving. And they said little or nothing of coercion of their retail outlets.

That's past history. We considered those ties an evil—we still do. We say they must be broken. They should be.

Formerly it was the tire dealer who complained of these tie-ups. Now let's see who's doing the talking—

Filling-station operators themselves, as reported in the Gasoline Retailer (September 30, 1944) through their own association in executive session solemnly resolved to oppose the tire, battery, and accessory policies of the oil companies. They said that some major oil companies were bringing pressure, which amounted virtually to compulsion, on their outlets to handle tied-in lines. They admitted that this situation would become progressively more acute, especially in the postwar era when the oil companies planned expansion of these lines.

The above is from the retail gasoline trade. The article on page 5 is from the retail tire field. The facts in both are identical. The conclusions are inescapable, as we see it—

The relations between the rubber and oil companies will continue. Goodyear is tied in with Sinclair. Kelly is hooked up with Sun. Goodrich—through its Hood division—is connected with Tidewater. U. S. is making Atlas tires for Standard. Goodyear has another tie with Shell. American is tying with Mansfield. These are all in addition to similar ties which existed before Pearl Harbor. The trend is obvious.

If this condition continues it will mean that the position of independent enterprise in the tire industry will be further weakened—probably disastrously so.

The only thing that can save this situation is prompt, affirmative action by the Seventy-ninth Congress to examine and explode these rubber-oil ties.

[From the National Independent of December 1944]

RUBBER-OIL TIES AIRED—STATIONS ARE FORCED TO HANDLE ONLY APPROVED TIRE LINES—OVERRIDES STILL GIVEN OIL COMPANIES; FEDERAL TRADE COMMISSION RULING APPARENTLY IGNORED

(Reprinted from the June 1941 issue of the National Independent)

NEW YORK, June 14.—Unless independent tire men handle a line of tires that is approved by the major oil companies, they must regard the stations owned and operated, or leased, by these petroleum makers as a 100-percent closed market so far as their sales efforts are concerned. Such was the unanimous opinion of all reporting members of a representative Nation-wide group of tire dealers surveyed recently by the editors of this paper on the major tire manufacturer-major oil company relationships.

This, in effect, resulted in depriving all but 1 of every 10 replying dealers of the privilege of supplying those outlets which last year accounted for the sale of substantially more than five and one-half million replacement tire units. And it means that Goodyear, Goodrich, Firestone, and United States have, for all practical intents and purposes, a virtual stranglehold on the whole of the market.

GUARANTEE TIRE ACCEPTANCE

The major oil companies assure the tire manufacturers with whom they have relationships, of exclusive rights of successful solicitation by various means. For, despite the fact that the petroleum marketers are ever proclaiming their stations are operated largely by independent businessmen, it is not difficult to discover that so far as having the right to select a brand of tires is concerned this vaunted independence is, in reality, nonexistent. Dealers admit that the oil companies would not go so far as to send out any letter or written order demanding that the leased station refrain from handling any specific line of tires. But, as one dealer wrote: "Here is what happens to these leased stations. If they want a man badly enough they will, if he is a good boy, stands on his hind legs, jumps through the hoop, and rolls over and is an obedient dog, charge him for example, from fifty to one hundred dollars a month for his lease. But Lord help him if he even attempts to display his independence. In that event they would say 'All right, you handle any lines of tires, batteries, or tubes you want, but from now on your rent will be from $350 to $500 per month, so take your choice.'" Other dealers reported that in certain instances they had definite proof of threats to cancel leases unless unwanted brands of tires were removed immediately. The means of keeping the station operators "in line" seemed chiefly threats to jump rents or cancel leases. Their effectiveness was demonstrated in many instances by concrete examples.

WIDESPREAD CONTROL EXERCISED

Additional evidence of the widespread control exercised by the four major tire manufacturers (through their oil-company connections) over the tire-through-oil-station distribution set-up is derived from the following facts. There were, on the average, 274 filling stations selling tires and tubes in the average reporting dealer's locality. Of this number, on the average, only 60, or about 22 percent, were said to be free to buy their tire and tube requirements where they wanted, while, on the average again, 214 or approximately 78 percent were not free.

RECEIVE 5 PERCENT FOR DELIVERY

Eight out of every 10 dealers admitting that they effected deliveries to the leased stations claimed that they invoiced either the station itself or the oil company for sales, while on an average 2 out of 10 reported that their tire-manufacturer suppliers performed this task for them. For this service some report that they receive the magnificent sum of 5 percent for their services. Evidently this is not always in cash, for other dealers report that their commission is paid in the form of a warehouse credit issued by their suppliers. Still others report that they are reimbursed with credit given to them by the purchasing leased station.

Further proof of the extensive control which the 4 major companies wield over the filling-station field through their exclusive supplying contracts is found in a compilation of the relationships reported. For of the 15 tire-oil-company hook-ups noted, the major tire manufacturers controlled 13 and 2 smaller companies, 1 each.

SPECIAL ARRANGEMENTS EXIST

When asked whether or not they believe there were any special arrangements that the major petroleum companies had with the major tire manufacturers in the matter of deferred payments on tires and tubes sold to the consumer through leased or owned filling stations no few dealers cited the credit cards which are accepted only on approved brands of tires. Whether or not the oil company carried the burden of the credit assumed on these sales or whether the tire manufacturers did so was not made clear. However, these cards have a two-edged effect, in the first place they tend to discourage consumers from buying any other than the approved brand of tires from stations they may patronize, and in the second place, they make it most attractive for leased station operators to handle the line of tires specified, thereby discouraging buying of other makes. In some sections it was reported that certain rubber manufacturers had gone so far as to set up full budget departments in their leased station customer's premises. Taken all in all, dealers who reported had no doubt that many special sales arrangements existed.

OVERRIDES STILL GRANTED

Although the Federal Trade Commission in a report prepared some time ago for the Temporary National Economic Committee stated that "Investigations and complaints brought by the Federal Trade Commission have gone a long way toward eliminating the practice of tire companies of granting over-riding commissions" to the oil companies for permission to sell their stations tires and tubes, dealers feel that the major oil producers must still be receiving a quid pro quo for their efforts to induce their stations to handle only "acceptable" lines. That they must be is only logical in view of the efforts they exert. One dealer said that he had actual knowledge to the effect that one major tire manufacturer had up to 6 months ago at least, a petroleum company connection and allowed that oil concern a 10 percent cut-back for the privilege of selling its accounts. Other dealers report that that mutual agreement exists whereby the tire companies are able to purchase their oil and gasoline requirements at prices lower than those accorded oil station operators. Still others report, as proof of the existence of over-riding arrangements, that where the rubber company sells direct to stations the billing is done on industry program, but where the oil company bills the station it receives dealer prices, and the rubber company pays its dealers the delivery commissions.

CONCLUSIONS

From the evidence gathered in this survey three principal conclusions at once become evident. They are as follows: (1) through their relationships with the major oil companies, the four major tire manufacturers have an unquestionable, unbreakable, stranglehold on the tire-through-filling-station market, consequently successful competition with them for this market is impossible. (2) through these relationships those tire makers have not only closed the field to the smaller tire manufacturers and their dealers, but have also reduced their own dealers' potential profits on sales to the owned and operated, or leased stations, to the vanishing point, and (3) reciprocal relationship still do exist, and over-riding commissions are still being given the major oil companies by the major tire manufacturers as inducements for the former to permit the latter exclusive rights to solicit and service their stations.

One World Is Possible

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. BARRETT of Wyoming. Mr. Speaker, I am submitting an article prepared by Fred W. Layman, an attorney at Casper, Wyo. This article, One World Is Possible, sets out a plan for world peace.

The outstanding feature of his plan is that it goes back to the people themselves who fight the wars and suffer the ravages of wars.

Mr. Layman is an outstanding attorney in the State of Wyoming and has spent considerable time and thought on this subject.

The article follows:

ONE WORLD IS POSSIBLE

One world is possible through the adoption of the following compact by all the people on this earth.

THE COMPACT OF THE PEOPLE OF THE WORLD

"We, the people, desiring to promote perpetual peace for ourselves and our posterity, do hereby forswear war, as hereinafter defined, for ourselves, our posterity and the nations of which we are the constituents and whatever form such nations may hereafter take, territorially or otherwise, and by means of a plebiscite, with a greater than a majority vote registered by the people, under the principle that those who have voted against are nevertheless bound by this majority vote, have authorized and directed the governmental heads of the nations of which we are constituents to subscribe to this declaration for us and our nations, binding us and our nations against engaging in any act of war at any time in the future and in order to insure peace and promote harmony among ourselves and the nations subscribing to this declaration we hereby direct the governmental heads of the nations of which we are a part:

"1. To organize an International Police Force, drawn from our ranks, proportionately and by volunteers only;

"2. To organize a League of the nations of which we are a part;

"3. To maintain, through such League, such international police force and direct its activities;

"4. To maintain international peace by using international police force to arrest persons who, singly or jointly, disrupt international peace by damaging or destroying property or injuring or killing persons, and by meting out the punishment to such persons as may be directed by a proper board of the League and after their guilt has been established by a proper tribunal of the League: *Provided*, That this provision shall operate only when the nation of the people injured or where the damaged property is situated requests such action;

"5. And through such League to promote harmony among us and our nations by promoting the free flow of commerce throughout the world, and by conducting such other activities through such League as may be necessary to promote peace and friendliness among us and our nations;

"*Provided*, That nothing herein shall be construed to limit our right and the right of our nations, individually or collectively as nations, to bear arms and use them in the defense of our lives or property in such manner as not to constitute war as hereinafter defined, or to wage war against nations not signatory hereto.

"*Provided further*, That the internal affairs of the nations of which we are a part shall not be subject to regulation, control, or interference by the League or the International Police Force unless it be to enforce the provisions for permanent peace and the punishment of transgressors as herein provided.

"War is defined as the exercise of any force other than economic, by nations individually or collectively other than through the League, causing destruction of life or property either within the territory of another nation or its possessions or upon the high seas.

"This compact shall be signed by the governmental heads of the nations of which we form a part, who customarily sign and execute treaties between nations, and shall be dated, and sealed when signed, and shall become binding and effective as and when 20 nations have joined themselves together by this compact. Other nations may join this compact in the same manner as provided for the first 20, and shall become members of the League of Nations organized as provided herein, with equal status."

There are numerous plans for establishing world peace, but no plan has received public attention which is founded upon action of the people, the source of all political power. Neither is there a definite commitment in any plan whereby the nations forswear war permanently amongst themselves. This compact herein outlined is clear and specific on the question of future wars and it permits the people of the nations of the world to take a direct part in outlawing war and creating a league of nations. Power politics, where the big nations direct the destinies of the smaller nations, is still possible under this compact but the enforcement of the policies of the big nations can be carried out only by economic force or pressure. Economic pressure by one nation against another cannot be controlled or eliminated unless nations are willing to transfer their sovereignty entirely to a superstate and as yet the nations of the world are not prepared to ccoperate that far. Today and in years past no nation had a guarantee against economic pressure from any other nation unless it be by treaty. So far as the United States is concerned the people under the compact would decide, and not Congress, whether we shall forswear war and establish a league of nations. Once the plebiscite of the people of the United States was taken on this compact, Congress would fully understand what would be expected of it in supporting the provisions for creating a league of the nations.

Assuming that the people of all nations join this compact—what would be the result?

The answer is: There could be no wars. In case the governmental heads of a nation ordered its armed forces to invade another nation, and in so doing destroy property and lives in such nation, they and their armed force individually would be guilty of murder. It would then be the duty of the International Police Force to capture them, and for the League to mete out the proper punishment. A soldier of such armed force, ordered to invade another nation, could and probably would refuse to carry out such an order, knowing that such invasion would be a breach of international peace which the people of his nation had sworn to preserve, and his status would become that of a criminal. Nations could not use their armed forces to invade another nation to protect the property of its nationals. That may appear bad, but it has been many years since any nation tried to do that. Our relations with our South American neighbors would improve immeasurably when they realized they had no fear of the military power of the United States. Such problems would be for the League to solve. With the provision that individuals may still bear arms to defend their lives and property, a nation could still maintain an army and navy; but when it becomes apparent that a large force is not necessary in view of the efficient functioning of the International Police Force, there would be a steady shrinkage of the size of this force. The International Police Force would consist of an army and navy, its units scattered about the world in strategic places and in numbers according to danger spots that are known to exist. A secret police would operate in all countries, securing information on any plot to damage property or take lives of people in other nations.

Being cosmopolitan, the police force could be used in such a way that soldiers would never be involved in arresting persons of the same nationality in a breach of the world peace. Since the police force would be composed of voluntary enlistments, there would never arise the occasion where heads of governments could say "why should we interfere and lose the lives of our soldiers because an enlightened nation like Italy wants to subdue and conquer a nation of black people like Ethiopia?"

A league of all nations would be set up, and provisions would be made to improve commerce between nations. Other activities engaged in by the former League of Nations could be adopted. The heads of the League would be engaged daily first, in maintaining peace, and second, in administering other regulations of the League.

Assuming that the people of some nations refuse to join the compact and the League, then their refusal would be notice to those in the League to watch those nations for warlike actions and to maintain an army and navy commensurate with the forces maintained or being built up by those noncooperating people and nations. Under such circumstances no nation need be caught unprepared. The League might even arrange to defend any of its member nations against those uncooperating nations who might engage in war.

Like any new approach to the problem of attaining perpetual world peace, this plan is far from perfect; but it does offer the people of this world an opportunity to take part directly in the establishment of a world peace and, being founded upon their undivided participation, the results are more apt to be everlasting.

FRED W. LAYMAN.

CASPER, WYO., *November 15, 1944.*

Global Alphabet

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call attention of the House to a letter from former Senator Robert L. Owen, president emeritus of the National Popular Government League. Senator Owen explains his project of the global alphabet to which he is now devoting his time to promote world literacy and world knowledge of the English language. As an exponent of early governmental reform

and progress, Senator Owen's record is long and distinguished and filled with the strong desire for national progress. The letter follows:

NATIONAL POPULAR GOVERNMENT LEAGUE,
Takoma Park, D. C., December 25, 1944.
Hon. JUDSON KING,
Director, National Popular Government League.

MY DEAR JUDSON: When you and I organized the National Popular Government League in cooperation with Hon. George Norris, of Nebraska; Hon. William Kent, of California; Hon. Edward Keating, now editor of Labor, and others, December 6, 1913, it was with the avowed purpose of establishing processes by which to safeguard the bulwark of fundamental democratic popular government

We have sought the enactment in effective workable forms of such progressive measures as: the initiative and referendum; the recall; the mandatory direct primary; a more flexible method of amending the Federal Constitution; corrupt practices acts; publicity of campaign funds; protection of civil liberties; conservation of natural resources, including Federal control of the Nation's water resources, and public ownership and operation of electric power, and rural electrification by farmer cooperatives.

You will recall that during the years I was president of the league I was fighting in the United States Senate for the stabilization of money, for child labor legislation, for the equal rights of men and women, for public health laws and like progressive measures.

In the field of international relations we have opposed secret diplomacy and have pointed out the economic causes of war and the danger to permanent peace and world organization from private monopoly and international cartels.

I congratulate the devoted members of the National Popular Government League who have through foul weather and fair supported its work; and I congratulate you and Mrs. King with all my heart for your years of devoted self-sacrifice. In directing the affairs of the association, your integrity, your industry, your efficiency, and your disinterestedness have never been questioned.

We have all been privileged to do our part in a tremendous world movement springing from the people for political, economic, and social democracy which, as Victor Hugo long ago predicted, will make the twentieth century "the century of man." That movement is making great progress at this time.

I call your attention to the recent action of the United States Senate in supporting the principles of the Atlantic Charter. I call your attention to the unbroken commitments of our President to the principles of freedom from aggression, and the great organization to be established to protect and safeguard liberty throughout the world. I profoundly believe that nothing can now stop or prevent the establishment of these principles.

I call your attention to the frequent commitments of the Governments of the United States and of Great Britain, as well as the Governments of Russia, of China, and of the United Nations by the Moscow Conference, the Cairo Conference, and the Teheran agreement in support of these humane principles in which the dignity and rights of every human being in the world can be preserved.

We have already entered a new era with new forces in control of the world affecting public opinion on the entire globe, made possible and certain through the improvement of communications and transportation on land, sea, and air. The radio speaks to the whole world instantaneously.

In the United States, which represents only 6 percent of the world's population, we had about 1,700 broadcasting stations and 57,000,000 radio receiving sets as of December 1943. The airplane has put every nation in the world in close contact. All of the leading nations are now manufacturing these radio receiving sets, broadcasting sets, and airplanes.

The modern airplane has abolished space and made all nations subject to methods of destruction for those who dare deny the fundamental principles of human liberty to which we are dedicated.

The Kuo Ming Tang of China has accepted our principles, as the Chinese Minister informed our league at the Norris dinner, December 1939. The people of Russia are using such principles in their Soviet socialist system.

The suffering and agony of this global war now promises to guide the world into an acceptance of the truth of the unforgettable words of Christ on the night before his crucifixion, when he said to Peter, "Put up thy sword."

We have entered the new world in which illiteracy and poverty can now be supplanted by world-wide intelligence, abundance, understanding, and world peace. As you well know, I have been devoting myself to the development of the global phonetic stenographic alphabet. This alphabet can be learned in 1 day. It can be used to enable the people of the whole world to immediately print in their own language with the modern printing press letters enabling them to pronounce with comparative accuracy every word in any language, thereby giving the people of the world a further means of quickly understanding each other and learning each other's language within an incredibly short space of time and at a negligible expense. The compositor from the keyboard of the monotype and linotype machines can now set the type to print any language in the world in this alphabet. This plan has "revolutionary potentialities." It is capable of rendering "prodigious service" in the increase of human understanding, knowledge, and production.

I enclose Senate Document No. 250, of the Seventy-eighth Congress, just published by the order of the United States Senate, which explains this system.

I call the attention of the members of the National Popular Government League to this document and to Senate Documents Nos. 49 and 133, of the Seventy-eighth Congress, on the same subject.

With kindest regards,
Your friend,

ROBERT L. OWEN.

Mounting Tide of Resentment Against Activities of Committee for Constitutional Government, Inc.—Arkansas State Legislature Rescinds Former Action Favoring Adoption of Proposed Twenty-Second Amendment—National Education Association Journal Publishes Strong Article Condemning Gannett-Rumely Group—New Hampshire, However, Joins Lists of States Favoring Tax Limitation Proposal

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 24, 1945

Mr. PATMAN. Mr. Speaker, a mounting tide of resentment against the underhanded activities of the minions of the Committee for Constitutional Government is more apparent every day. As the true implications of the program advocated by this Fascist group are called to the attention of our State legislators by wage earners, white-collar workers, and small businessmen—those most vitally affected by this group's proposed twenty-second amendment to the Constitution—it is indeed gratifying to learn that one of our State legislatures has already rescinded its former action which favored adoption of this proposed amendment.

ARKANSAS REPEALS

I was very happy to learn that the Arkansas General Assembly has adopted, as of January 16, House Concurrent Resolution No. 4, introduced by Hon. Emory Thompson, which totally rescinds the prior action of the 1943 Arkansas General Assembly favoring the passage of this nefarious amendment.

NEW HAMPSHIRE HAS PASSED IT

On the other hand, since discussing this matter last, I find that the sovereign State of New Hampshire, through its 1943 legislature, did adopt in both houses a resolution favoring the adoption of this amendment. Little or no publicity was given this resolution or its purposes when adopted and I find now that several members of this legislative body were not informed as to the real purposes of this particular resolution.

NATIONAL EDUCATION ASSOCIATION OPPOSED TO PROPOSED TWENTY-SECOND AMENDMENT

The Journal of the National Education Association for December 1944 carries a splendid article by Joy Elmer Morgan denouncing this proposed amendment and its sponsors. The National Education Association article calls attention to the fact that persons opposed to this amendment are not organized while the forces working for the amendment are apparently highly financed. The article, in referring to the refusal of Dr. Edward Rumely to submit the names of the contributors to his organization—the Committee for Constitutional Government—to the House Campaign Expenditures Committee says:

If it is important for the public to know the source of funds used to buy elections, is it not equally important to know the the source used to buy amendments to the Constitution? Why should any group with an honest purpose object to giving the people, who in a democracy are the government, full information?

CONSTITUTIONAL CONVENTION NOT RESTRICTED

Another organization, Prentice-Hall, Inc., in a recent report to businessmen on taxation and Government regulations, gives impartial but noticeable treatment to this serious matter in its bulletin of January 22. Prentice-Hall's bulletin says:

What few people realize is that a constitutional convention would not be limited to the specific proposal urged by State legislatures. Convention would be "wide open." Seventeen States have already petitioned Congress to call a constitutional convention to consider this amendment. If 15 more (making a total of two-thirds) pass the same resolution, Congress must comply.

FORM OF RESCISSION RESOLUTION

So that the Members may know the exact form which this proposed resolution takes when it passes a State legislature, I append herewith a copy of the resolution passed in 1943 by the Arkansas General Assembly. This particular resolution, as I report above, was rescinded by that body, however, a few days ago. This typical resolution reads as follows:

Senate Concurrent Resolution 10

Concurrent resolution memorializing the Congress of the United Statets to amend the Constitution of the United States, relative to taxes on incomes, gifts, and inheritances; and providing limitations on taxes so levied; and repealing the sixteenth amendment to the Constitution of the United States

Whereas there is now pending in the Congress of the United States proposed legislation to repeal the sixteenth amendment to the Constitution of the United States, and to amend the Constitution of the United States relative to taxes of incomes, gifts, and inheritances; and providing for a limitation of taxes thereon; and

Whereas the people of the State of Arkansas are greatly interested in the passage of such legislation: Now, therefore, be it

Resolved by the State Senate of the State of Arkansas (the House concurring), That the Congress of the United States be memorialized as follows: That application be and it hereby is made to the Congress of the United States to call a convention for the purpose of proposing the following article as an amendment to the Constitution of the United States:

"ARTICLE 22

'SECTION 1. The sixteenth amendment to the Constitution of the United States is hereby repealed.

"SEC. 2. The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration: *Provided*, That in no case shall the maximum rate of tax exceed 25 percent.

"SEC. 4. Sections 1 and 2 shall take effect at midnight on the 31st day of December following the ratification of this article. Nothing contained in this article shall affect the power of the United States after said day to collect any tax on incomes, for any period ending on or prior to said 31st day of December made in accordance with the terms of any law then in effect"; be it further

Resolved, That the Congress of the United States be, and it is hereby, requested to provide, as the mode of ratification, that said amendment shall be valid to all intents and purposes, as part of the Constitution of the United States, when ratified by the legislatures of three-fourths of the several States; be it further

Resolved, That the secretary of state of Arkansas be, and he hereby is, directed to send a duly certified copy of this resolution to the Senate of the United States and one to the House of Representatives in the Congress of the United States, and to each Arkansas Member thereof.

The full text of the article in the National Education Association Journal and the quotation from the Prentice-Hall bulletin are as follows:

[From the Journal of the National Education Association December 1944]

SHALL THE PEOPLE SIGN AWAY THEIR BIRTHRIGHT?

"The National Education Association opposes any amendment to the United States Constitution which provides for a limitation on Federal income, inheritance, and gift taxes, and recommends to State education associations their vigorous opposition to such amendment."

This resolution, adopted by the N. E. A. at Pittsburgh, deals with a matter of the utmost urgency. A proposal is being pressed upon the State legislatures, which if adopted bids fair to turn the tide away from democracy at the very time our men are laying down their lives to safeguard democracy.

Great concentrations of irresponsible wealth have ever been the enemy of liberty. It was such wealth that financed Hitler and Mussolini during their struggles for power and supported the war party in Japan. And now in the very midst of a war which is being fought to protect their lives and property, we have a proposal to exempt multimillionaires from paying their share of the cost by limiting the power of Congress to tax incomes (corporation and private) and estates to 25 percent.

This proposal would repeal the sixteenth amendment to the Constitution, overwhelmingly adopted by the people, which went into effect in 1913: "The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration."

It would substitute a long, involved, and confused article limiting Federal taxes to 25 percent, with the exception that Congress by a three-fourths vote of both Houses, while the United States is actively engaged in war, might go above the limitation for 1 year. What a perfect dodge for enabling multimillionaires to escape paying their just share of the war debt.

As pointed out in the N. E. A. Leaders Letter No. 19, "while we believe the best business leadership of the country is opposed to such a measure, powerful interests are behind the drive. * * * The opposition is not organized. The forces working for the amendment are apparently highly financed. Turned down in Congress, their strategy is to go around Congress and concentrate on one State legislature after another. Their propaganda is clever and highly misleading. It is designed to appeal to bankers, small businessmen, and farmers against their own welfare, since the effect of the amendment would be to destroy private enterprise by concentrating wealth more highly and fostering gigantic monopolies. An estate of $100,000,000 under this amendment would leave $75,000,000 tax free so far as the Federal Government is concerned, and such fortunes would concentrate in States least inclined to tax them."

The resolution applying to Congress to call a convention for the purpose of proposing the tax-limitation article, to be known as the twenty-second amendment, was passed by the State Legislature of Wyoming in 1939. It has since been adopted by 16 other legislatures: Alabama, Arkansas, Delaware, Illinois, Indiana, Iowa, Kentucky, Maine, Massachusetts, Michigan, Mississippi, New Jersey, Pennsylvania, Rhode Island, Texas, and Wisconsin

A powerful drive is now under way, which would take advantage of the preoccupation of our people with the war and absence of our men overseas to get enough additional legislatures to act early in 1945 to make up the 32 needed to require Congress to call a convention proposing an amendment which would become effective when ratified by 36 State legislatures.

Propaganda for the proposal has been widely circulated by the Committee for Constitutional Government, 205 East Forty-second Street, New York City, referred to in newspape" headlines as the Gannett group. This committee, when called before the Committee on Campaign Expenditures of the United States House of Representatives on September 8, refused to reveal the contributors to its fabulous campaign funds. If it is important for the public to know the source of funds used to buy elections, is it not equally important to know the source used to buy amendments to the Constitution? Why should any group with an honest purpose object to giving the people, who in a democracy are the government, full information? Should the Corrupt Practices Act not require publicity for such funds?

One of the arguments for the tax limitation amendment is the old States' rights slogan. If States should attempt to place high taxes on inheritances and incomes, people of great wealth would establish their residences in other States where they could seek most favorable terms and most easily dominate the legislature.

This amendment would obviously benefit the superrich. Present surtax rates run as high as 91 percent on incomes above $200,000. If Congress were unable to apply higher taxes on larger incomes, it would have to increase taxes on smaller incomes and maintain them over a longer period of time after the war.

An article in Standard and Poor's Outlook for September 13, 1943, claims that the amendment would not unduly weaken the Nation's taxing power and argues that in a pre-war year it would have involved a theoretical loss of revenues of only $286,000,000. This is obviously a gross understatement since the war has profoundly changed the tax situation. But even if this figure were true, it could, if properly distributed, create 286 new millionaires each year in a Nation where wealth is already too highly concentrated.

A book which should be read in this connection is Divided We Stand, by a great historian and scholar, Walter Prescott Webb, of the University of Texas.

This is a matter of such importance to the future of our Republic that every citizen should give it his earnest attention. Every State and local education association should adopt as early as possible a resolution similar to the N. E. A. resolution and should urge lay groups to do the same. Send copies of these resolutions to your governor and to Members of State legislatures and Congress.

Members of legislatures in the States which have been misled into requesting Congress to support such an amendment should be urged to reconsider their action and to withdraw their request to Congress. Representative PATMAN, of Texas, calls the group working for this amendment "The most sinister lobby ever organized."

JOY ELMER MORGAN.

[From the Prentice-Hall Bulletin of January 22, 1945]

WHAT'S HAPPENING IN TAXATION AND GOVERNMENT REGULATION—WHAT'S HAPPENING IN WASHINGTON

TWENTY-FIVE PERCENT FEDERAL TAX LIMIT

Proposed twenty-second amendment provides that Federal taxes on incomes, inheritances, or gifts, shall not exceed 25 percent, except in time of war. With 44 State legislatures in session this year, the next few months may decide whether Congress must act upon this proposal. Seventeen States already have petitioned Congress to call a constitutional convention to consider this amendment. If 15 more (making a total of two-thirds) pass the same resolution, Congress must comply.

States that passed the resolution in both Houses: Alabama, Arkansas, Delaware, Illinois, Indiana, Iowa, Kentucky, Maine, Massachusetts, Michigan, Mississippi, New Hampshire, New Jersey, Pennsylvania, Rhode Island, Wisconsin, and Wyoming.

Six States have passed the resolution in but one house: California House, Louisiana

Senate, Nevada Senate, New York Senate, Ohio Senate, Virginia House.

Under article V of the Constitution, State legislatures may petition Congress to call a convention to propose amendments. To become effective, amendments must be ratified by three-quarters of the States (36), either by State legislatures or by State conventions as Congress may direct.

What few people realize is that a constitutional convention would not be limited to the specific proposal urged by the State legislatures. Convention would be wide open. It could reject the 25-percent tax-limit proposal which brought it into being; it could submit any number of other amendments; it could even undertake revision of the entire Constitution.

Sponsors of the 25-percent tax limit think the country's present mood is conservative and that any other proposals would be moderate. Most likely to be considered: Limit of two terms upon Presidency; treaty ratification by majority of both Houses; abolition of poll tax; abolition or revision of electoral college. However, sponsors really hope that Congress will not wait for a petition from 32 States. They want Congress to propose this amendment on its own initiative.

To the Leaders of the Allied Nations

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include a poem entitled, "To the leaders of the Allied nations," by Edna St. Vincent Millay.

TO THE LEADERS OF THE ALLIED NATIONS

(By Edna St. Vincent Millay)

Do you deceive us? Do you? Yes? No?
Speak. It is time to speak. You have talked enough.

This was a war for Freedom; so we thought it;
And so we fought it.
You knew this, all of you.
You promised us a new
World—a decent one this time, a world a man might live in without shame.
How is it going forward, this great enterprise, this plot
To outwit Evil?—Are the blueprints done?
And may we see them? No? Why not?

"The time is not yet ripe," you state.
We say: "The time is ripening fast."
We say: "Before the time is ripe, the time will rot
At the core, too late
For harvesting, the proper moment passed."

Speak! And speak soon! The time grows big and sweetens with our fate
Let it not wait
Too long! Let it be plucked, and placed
Where it can ripen to our will and to our taste,
Within eyes' easy reach, daily observed and turned, on a cool shelf
Beside the hot and hurrying mind; not
Ripen by itself, drop plop
Into the grass,
Or let a chipmunk push it from the twig, to be the feast of crickets, in our own unthrift and waste!

Surely you did not mean merely to mend—
Patch with a few bright patches here and there
Where most the wear and tear are shown:
Elbows, and knees, and seat of breeches—new cloth sewn
On old—bright patches which the faded fabric will not bear
For long, but will at every seam reject—
Oh, surely you could not expect
That we again, ever again, would wear
This garment, this Old World, by us so long ago outgrown?

What do you plot
In camera, behind closed doors?—
Something that we,
Your loyal citizens and subjects, doing our distasteful chores,
Not without, here and there, some bravery,
Would work, would die (for so you have concluded) more contentedly

If we do not,
Than if we should know?

For I have heard soft footfalls here and there
Running along beside the deeds you do,
Of some most furtive thing.
What can this creature be?—
Expediency?
Steel? Iron? Oil wells?
Intrigue? Cartels?
Come, fetch us forth its name!
We have a mighty, nagging wish to know.

Here it comes back again. I do not see it;
But I smell cat-fur.
Now, neighbors, let us beat about these fellows with stout staves—
And maybe we shall wound it; it will go,
Perhaps, in any case. If not, yet we may know
How, on the eve of Peace-to-be-Determined, it behaves; and so
Decide: whether we wish its paws to pad about them there at the long table; yes or no.

Gentlemen, you go too far. Believe me that you do.
There is no object, rumor, purpose, fantasy—no shore,
No myth, nostalgia, dream,
No nebula, no moon
Moving devotedly about some planet by us conjectured, at some time spinned off
From some great sun by us conjectured, through our greatest telescopes
Never seen—
There is no province into which the intellect may not with full propriety and calm decorum go,
No region it may not explore.

But you, gentlemen, the wielders (and the welders, so you told us) of all humankind,
Of you, my lords, we ask, oh, so much less!—
But just a little more.

We have appointed you:
Not with such wistfulness
About your recent, slightly sanded-over Past to roam.
We have appointed you: to stay right here
And now, upon this troubled planet we call Home!—
To deal with Us, the Living, with our Present, and its Future,
And our hopes.

But you have said soft words, to put to sleep
The minds of people that were thinking deep
Of what great issues this war must decide
If it, in any way, be justified.
Have you some pattern, you,
Our private sacrifice, our love, to halt, or to undo?—
We who at this war's end
Not only hope, but yes, by God, intend
To see our dreams come true!

Do you deceive us? Do you? If you do,
The more incautious you.
Come, gentlemen, the plan!—
Produce it. Spread it out before us. Show,
Though it be intricate, its prime simplicity:
Namely, that men and nations, shall be free.

We do not ask your plan in full—
You must revise it, you are bound to do,
From day to day, being subject to such accident and chance as may befall—
We only want to hear you say again
Some things you said before
And feel you mean them still, just as we felt you meant them then.
For the time being, for this difficult now, no more.

This is not capital, not labor, gentlemen,
Which now in this wide forum does address you in so great a throng:
We are the common men
Upon whose soil you sowed uncommon seed,
Swearing that it should grow.
Now: did you mean it when you swore it?
Answer yes or no.
But answer: we are many millions strong.

Out with it now. We have the right to know
What you are up to—we
Who placed you where you are, and pay your salary;
Who, for your waste, your blunders—broken crockery
By truckloads carted off—do dearly pay;
And for vast ovens, in their size and number every day increased,
Where sits and sulks a bread that does not rise, for you forget the yeast.

Unfold it, spread it out, the plan:
We have the right to see,
To bend above in study, question, scan;
Yes, we the people; we, the undistinguished man;
The Demos in the word democracy.

Address by Hon. Tom Connally, of Texas, at Presidential Electors' Dinner

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, January 25, 1945

Mr. McCLELLAN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the address delivered by the senior Senator from Texas [Mr. CONNALLY] at the electors' dinner in honor of the inauguration of Franklin Delano Roosevelt and HARRY S. TRUMAN, held in Washington on January 19.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, Mrs. Roosevelt, Mrs. Wilson, members of the electoral college, and guests, this distinguished assemblage bears eloquent proof of the fact that in the recent campaign the overwhelming verdict of the American people was cast in support of the foreign policy of our great President, Franklin D. Roosevelt. [Applause and cheers.]

Tonight, as we face the issues of winning the present war completely and crushingly, and then the establishment of permanent peace machinery, these issues are so challenging that they draw upon our courage,

upon our wisdom, and upon our will to achieve.

Tonight the planet is trembling under the marching feet of more armed men than were ever gathered under the banners of Alexander, Hannibal, Caesar, and Napoleon and all of the conquerors of the past. We have our heroic and courageous men fighting in many distant parts of the earth, from the scorching tropics to the snow and ice of the Arctic regions; upon the waters and in the air and on the sea they are marching on to victory, to crush and overwhelm our cruel and treacherous enemies.

The United States did not seek entrance into this war, but when we were treacherously and savagely attacked at Pearl Harbor, honor and security demanded that we accept the gage of battle and when we did so, Germany—Hitler's Germany—declared war upon us also.

Now, my countrymen, the American people not only want to win this war completely, but when it is won they desire that Hitler's Germany and Hirohito's Japan shall be completely and permanently disarmed. [Applause.] We propose to sterilize their war-making factories [applause]; we propose to strike down the places where the gods of war have been shaping and fashioning their instruments of destruction and aggression.

These are mighty tasks. Tonight we are fighting by the side of gallant allies—Russia, Great Britain, China, and others of the United Nations. [Applause.] If these great allies are worthy to stand by us and we by them in the line of battle to win the war, they are worthy to stand by us in bringing about a permanent peace, to shield the nations from the horrors and the treachery of another war. [Applause.]

It is our hope and ambition to set up an international organization to preserve the peace of the world. That organization must not wait until the final and definite treaty of peace is written. It ought to be set up now, and we are already at work upon its implementation through the Dumbarton Oaks Conference, and we hope that within a very short time there will assemble representatives of all of the United Nations to improve upon and perfect the work of the Dumbarton Oaks Conference so that it may be submitted to the nations for ratification. [Applause.]

There are certain points of incompleteness with reference to this instrument, some of which may be removed by the early conference of Premier Churchill, Marshal Stalin, and President Roosevelt. Let me say to you that a part of this plan has been most marvelous cooperation between the Executive and the Congress of the United States. [Applause.] Secretary Hull, during his tenure, for more than 2 years conferred almost weekly, sometimes more often than weekly, with the Senate Committee on Foreign Relations, the Committee on Foreign Affairs of the House, undertaking to enlist coordinated effort toward setting up this structure of international peace. [Applause.] All the world is saddened by the illness which struck down Secretary Hull and forced his retirement; but his successor, Secretary of State Stettinius, has carried on. [Applause.] He has carried on in the same fashion, and we have frequent conferences with the Secretary of State. Only this week he was before the Committee on Foreign Relations and spent 2 hours in discussing, after questions and general discussion, the whole field of foreign relations.

These mighty tasks attract the ambitions and the high and lofty purpose of peace-loving nations everywhere. Let me say that our efforts for international peace are going to cost something. The United States must accept its responsibilities and its duties. The final draft of the treaty will not be perfection. There will be those who do not like this feature and someone who does not like that feature, but I know of no constitution on earth, I know of no code of laws, that has not had criticism and objections.

There have been filed 3,000 proposals to amend the Constitution of the United States, and in every session of Congress thousands of bills are introduced to modify the statutes of the Republic. So I would say to those who are straining to find some defect that we must appraise the organization in the long picture and in the long years. It must be considered in its entirety, and it must be remembered that we are building it out on the frontier; we are building it in land where no traveler has ever left his footprints. It is true that prior to World War No. 1 President Taft advanced and advocated the League to Enforce Peace, and it is remembered that in the Treaty of Versailles the great, talented, and heroic Woodrow Wilson [applause] had written into the treaty the structure of the League of Nations, but we know with what tragic result it was received by the Senate of the United States.

But let me say to you that World War No. 2 has so vividly reminded us of the necessity for a world organization that I now believe that the overwhelming sentiment of the people of the United States is in favor of a world organization to preserve the peace of the world and to prevent armed aggression. [Applause and cheers.]

A brief word, and then I am done. As you know, the organization will consist of a council and then of an assembly representing all of the United Nations. We realize more than ever that the employment of peaceable measures, conciliation, diplomacy, and mediation by the organization will seek to compose many differences, but we have at last come to know that in certain emergencies, in certain critical periods, those mad ambitions of aggressors cannot be conquered or arrested by soft words, so that this organization in the final analysis, and for the emergencies, must possess power to employ armed force to prevent the violation of the peace and the rights of nations. [Applause and cheers.]

No power is given to the League for recklessly considering the employment of armed force, and all of the peace agencies must be first exhausted, but when a willful and a determined aggressor seeks to violate the laws of the nations and the laws of humanity with the sword, there is no other recourse to arrest the mad designs except by armed force. [Applause.]

Now, my friends, pending the final, definitive treaty of peace, there will be from time to time brought to the attention of the Nation many vexing and troublesome questions. It is my own view that matters of boundaries, the demarcation of boundaries, the transfer of territories, and all similar questions growing out of this war ought not to be settled by unilateral or bilateral agreements now, but must be submitted to all of the United Nations in the final treaty of peace. [Applause.] These are the things that cause wars; allocation of territories, and the demarcation of boundaries breed war. The present war, you will remember, so far as its acts of pretext are concerned, grew out of the Polish Corridor, the argument with Germany over the rights in the Corridor. So these questions ought to be resolved, not by the wishes or the will of one or two of our allies, but with all of the Allies, including the United States of America. We have fought the war together, and we have got to make the peace together, with America's voice heard in the councils of the nations. [Applause.]

Now, my countrymen, let me say to you that the President of the United States, President Roosevelt, is soon to go across the seas to consult with Marshal Stalin and with Premier Churchill, not alone with relation to military measures or pushing the fortunes of the war, but for all of the mighty problems relating to the war. God grant that he may have a safe voyage. [Applause.] God grant that when he goes into conference with these great figures, Providence may give strength to his arm and uplift his spirit so that he may feel that behind him is a united America, so that he may speak the voice of America and the view of America in this great world-wide forum. [Applause.] Let him speak not alone with bayonets and cannon in prosecuting the war; let him speak with a word of prophecy; let him speak with high trust in the future of the world and in the democratic processes of the world. Let Europe know and all the world know that while America seeks no spoils from this war, while we thirst for no indemnity, while we have no hunger to possess conquered lands and conquered peoples, we do have an interest in the security of all the peoples of the earth.

Our interest, primarily, of course, is in our own country, but when we give greater security to other nations, we are giving greater security to ourselves. When we assure the freedom of other nations of the world, we are assuring in greater degree the freedom of our own people and of our own land.

So, Mr. President, as you go into foreign lands, carrying your message to the great rulers and great figures of the earth, God be with you. God give you strength and courage that you may speak with the voice of a prophet until the views and the voices of America may be known in the councils of the world.

[The audience arose to applaud and cheer.]

Britain Writes a New Chapter in Hebrew Martyrdom

EXTENSION OF REMARKS
OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the American League for a Free Palestine, printed in the New York Post of January 8, 1945:

BRITAIN WRITES NEW CHAPTER IN HEBREW MARTYRDOM; RAISE YOUR VOICE AGAINST INTERNATIONAL INTIMIDATION

BEYOGLU, *January 2, 1945.*

PETER BERGSON,
Washington, D. C.:

Turkish Government was willing authorize use ship for refugees, but British sent note canceling promise Palestine visas Jews arriving Turkey. Also requested prevent ships from transporting refugees. Six hundred Rumanian Jews arriving 21. Steamship *Stalingrad* refused transit accordingly. Further stay unproductive. Recalling Klarman and desire return.

ERI JABOTINSKY.

The above telegram is from Eri Jabotinsky, special representative in Turkey of the Emergency Committee to Save the Jewish People of Europe. Mr. Jabotinsky's mission was to organize evacuation of as many as possible of the Hebrews of eastern Europe who are in dire danger of death or starvation.

His trip to Turkey was made possible by our own Government which provided him with

the necessary traveling facilities and priorities. After months of ceaseless endeavors and disappointments, he succeeded in obtaining permission of the Turkish Government to charter the steamship *Tari*, with a capacity of 1,500–2,000 passengers, to shuttle between Constanza and Palestine. The Rumanian and Bulgarian Governments expressed their willingness to cooperate to the full extent of their abilities.

The Russian authorities in Rumania were generous and humane in their attitude, adhering to the policy of the Soviet Government which saved hundreds of thousands of Jews by evacuating them from invaded territories into the Russian hinterland. The ship *Stalingrad* mentioned by Jabotinsky and which is scheduled to arrive in Turkey on the 21st, is a further proof of this humanitarian policy.

But the British Colonial Office not only keeps the doors of Palestine shut, but intimidates the Turkish Government, compelling it not to issue further transit visas. The result is that those who will manage to escape, even from occupied Europe, will be sent back to the Gestapo in the best traditions of the Struma and the Patria.

Yet Palestine is not even British territory—it is a mandated land of the League of Nations.

(The J. T. A. correspondent in Bucharest cabled on January 2: The Turkish Government today asked the Rumanian Foreign Office to prevent the emigration of Jews from Rumania to Palestine via Turkey and said that Turkish transit visas will not be issued to such emigrants. In making this request, the Turkish Government emphasized that it is no longer able to issue transit visas to Jews in view of the fact that the Palestine government is restricting Jewish immigration into Palestine. The Foreign Office has notified the Zionist leaders in Bucharest of the Turkish request.)

LEAVE OR DIE

Many outstanding men and women in this country, as well as in England, have placed great hope in Mr. Jabotinsky's endeavors, for before their very eyes a great illusion of humanity is being dissipated; the liberation of territories by the triumphant armies of the United Nations brings no cessation of the sufferings of the Hebrew people of Europe. In that valley of death of eastern Europe, where three or more millions of Hebrews were exterminated, the survivors are still in dire danger, starving, with no clothes nor shelters. The New York Times correspondent in Istanbul cabled October 22:

"Out of 270,000 Rumanian Jews who survived massacre, deportations, and forced labor camps, 150,000 face starvation or death from cold. They are without clothes or food, and without roofs over their heads. A vast majority of the children are undernourished and rachitic, while their parents are on the verge of tuberculosis. Medical supplies are nonexistent, and most of the sick are left to die."

Another representative of our movement, Mr. Joseph Klarman, in Rumania wires: "At least 100,000 Hebrews must leave immediately or die."

ANGLO-HEBREW ROUND-TABLE CONFERENCE IMPERATIVE

It is futile to delude ourselves any longer: the Hebrew people of Europe are no longer victims of German savagery alone. A new chapter of its martyrdom is now being written by a prominent member of the United Nations—a cosigner of the Atlantic Charter—Great Britain. Of course, not the Great Britain of the plain people who fought at Dunkerque, endured the blitz, and stoically faced up to the robot bombs; and of course it is not the Great Britain of Wedgwood, Strabolgi, Davies, and Lloyd George. It is the Great Britain of the Tories, of the Cliveden set, of the Colonial Office clique, of all those who for the sake of imperialistic interest "appeased" Hitler into trying to subjugate the world, and who now, when he has failed, proceed themselves in many respects to emulate his policy in Greece, Italy, Belgium, and Palestine. These and other lands in similar condition constitute a wide front of peoples fighting for freedom and self-determination. The Palestinian sector of this front fights not for freedom alone but first of all for mere survival.

Is humanity really ready to give up its freedoms? Is it ready to resign itself to the facts that the day of the Atlantic Charter is done, without a fair effort to implement it?

On the contrary, we believe that the Hebrew problem is a test case for humanity and democracy, that humanity and democracy have a chance now to cry out "halt!" before it is too late; to declare that the Hebrew people have a right to live and be free; that the Hebrew people must be recognized as a member of the United Nations, for it has been Hitler's first and paramount enemy and his greatest victim; that every Hebrew has a right to enter his national territory—Palestine—without restraint.

Join us in these demands. Back the request of the Hebrew Committee of National Liberation to President Roosevelt that he use his good offices to intervene in the present deadlock which has arisen in the conflict between the policy of the British Government and the interests of the Hebrew nation. Only an immediate Anglo-Hebrew round-table conference under the guidance of the President, or of another American delegated by him, can prevent further persecution or complete extermination of the Hebrew people in Europe.

Let your Government know that you are against the rule of international intimidation. Let your President know what you feel and think about this tragic problem. Let your Congressman know that you are for the survival and freedom of the haunted Hebrews of Europe, that you are for facilitating their entry to Palestine. Let your Senator know that the *Stalingrad* must go through. Let your Government know that you hope that the plans of the Emergency Committee in Turkey, where Jabotinsky must remain, and in Rumania, where Klarman must remain, will be carried out, because you believe in the sanctity of human lives.

We think the American people, heirs to a glorious tradition, keepers of a sacred flame of justice, we must take a firm stand on these demands. We must not nullify the ideals for which our sons and brothers are dying in France and Germany, in Italy, in the Pacific islands, and on the seven seas.

In the name of humanity, for which the America of Washington, Lincoln, and Tom Paine stands, won't you join us in our struggle to remove this blot from the record of the United Nations?

AMERICAN LEAGUE FOR A FREE PALESTINE, INC.

Mail Boxes—R. F. D.

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Washington Evening Star:

MAIL BOXES—R. F. D.

Some day a historian will write a history of country living in terms of the R. F. D. boxes that stand like inverted exclamation points along hundreds of thousands of miles of roads. No one who lives in cities and towns where the gray-uniformed man trudges up to the door and deposits the mail, can fully appreciate the meaning of the R. F. D. box on a country road 3 or 4 miles from the village.

It is a cosmopolitan sort of box. It has a range of style as comprehensive as the fashions that adorn milady's tresses. There are some R. F. D. receptacles that will hold half a bushel of newspapers, magazines, and the bulky mail-order catalogs. On these capacious boxes that sit on posts before big, prosperous farms, one often sees the name of the farm in red letters. In the last few years art with a capital A has come to the Rural Free Delivery containers. There are cute little bungalows and birdhouse styles; some like to use copies of old-time stagecoaches; a favorite is a reproduction of a covered wagon pulled by a pair of red-and-white oxen.

But the real, genuine, honest-to-goodness R. F. D. box is a humble, everyday sort of affair. It is rectangular with a curved top to shed rain and sleet. It has a small, red, metal flag that goes up to tell the mailman a letter is waiting for him. If he leaves something in the box, he puts the flag up. The box sits on a weathered, splintery post by the side of the road.

Through that plebeian gray box has passed a part of the heartbeats of a nation. Farm boys and girls write for the things that interest them. The family far from urban centers may use the mail-order firms for the things needed by humans and the farm. Boys and girls who have left home to seek the trail of life's adventures in distant cities write letters that come through it. And today, with lads fighting freedom's battles in foreign lands, mother watches from the kitchen window for the R. F. D. man. The mail box sitting beside the country road is a link of the chain that binds a nation into one people.

State Aviation Laws

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a short letter from Hon. L. Welch Pogue, along with a table showing the status of State aviation laws:

CIVIL AERONAUTICS BOARD,
Washington, January 20, 1945.

The Honorable LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: As requested in your letter of January 3, I am enclosing a table showing the present status of State aviation laws. This table brings up to date the similar table submitted to you with my letter of November 8, 1943.

Sincerely yours,

L. WELCH POGUE,
Chairman.

Government by Fiat

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. HOFFMAN. Mr. Speaker, after Hitler drove into western Europe, the call went out to draft before summer 900,000 young men to serve with the combat forces as replacements.

Was it because the Army and the Navy considered the farm boys more healthy, more brawny, and more vigorous than others, or because farmers as a class voted last November against the fourth-term candidate, that the President decided to take all farm boys off the farms? Mr. Byrnes was authorized by the President to write General Hershey that the President found that the further deferment of all men now deferred in the 18 through 25 age group because of agricultural occupation is not as essential to the best interest of our war effort as is the urgent and more essential need of the Army and Navy for young men.

Hershey immediately passed the word along to the State selective-service directors and Michigan's director, Brig. Gen. LeRoy Pearson, instructed local boards to place all qualified farm workers between 18 and 26 in class I-A.

The result was that many local draft boards immediately began to ignore the Tydings amendment and send essential farm workers who could not be replaced into the armed service. That course, if continued, would have resulted in a loss of food production which would have seriously interfered with all military operations.

Upon learning of General Hershey's instructions, which were based upon the President's statement as repeated by Byrnes, some 250 of us formed an unofficial committee and called Hershey to a conference in the Old House caucus room. General Hershey was unable to satisfactorily explain the President's position, or the legality of his instructions, and he finally agreed to notify all State directors that his previous order was erroneous and to instruct them to comply with the provisions of the Tydings amendment and defer every farm worker who was found to be necessary and regularly engaged in an agricultural occupation, or whose work was essential to the war effort, so long as he remained so engaged and until a satisfactory replacement could be found.

Whether General Hershey, State directors of selective service, and local boards will now comply with the law and defer farm boys, remains to be seen. The law is clear—there was no excuse for disregarding it, for sending hundreds of young men from the farms into the armed service, when they were expressly exempt by the provision of the Selective Service Act.

This is not the first time that directives have been issued without any legal authority back of them. The order of the War Labor Board, directing Montgomery Ward & Co. to incorporate a security of membership clause in its contracts with the unions, is now admitted by the Government to be without legal force and has so been declared by the courts. In that particular case, the Government now insists that, under the President's general war powers, he has authority to seize and operate retail businesses.

JONES VERSUS WALLACE

The President's letter firing Jesse Jones, a faithful, efficient, public official who had jurisdiction over the handling of some $40,000,000,000 and over many Government corporations, and stating that he had given that vital job as a political reward to Henry Wallace for supporting him for a fourth term, did not surprise anyone here in Washington familiar with the President's political maneuvers.

The letter was amazing only because of the President's confession that he was using a public office and public funds to pay a private political debt.

Back over the years the youth of our land have been told to look to the official acts of Washington and Lincoln as examples of honesty, of truthfulness, of faithful public service, devotion to one's country. The boys and girls were inspired to follow in the footsteps of those true Americans; to strive to be honest, truthful, self-sacrificing, and wholly devoted to our country and its institutions.

Franklin Delano Roosevelt's firing of Jones, whose record of disinterested public service he praised, to make available a highly important public office as a reward for political work, is a sorry, sordid, example to place before American youth. It tends to disillusion them, impair their faith in public officials.

Tribute to Hon. Elbert D. Thomas, of Utah

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Thursday, January 25, 1945

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the

Appendix of the RECORD an editorial on the distinguished senior Senator from Utah [Mr. THOMAS], written by Mr. McClellan Van de Veer, and published in the Birmingham Age-Herald of January 11, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THOMAS OF UTAH

One of the truly superior Members of the Senate is ELBERT THOMAS, of Utah. He is, we think, the kind of man—in character, in ability, in intellectual caliber—that a Senator of the United States ought to be. He is a scholar, having been a university professor of political science before he entered Congress. His is no dry and detached scholarship, but that highest type of learning which grows out of a passion for understanding the situation of man and bettering his lot in a mysterious and different world. His scholarship is not simply an end in itself, but a means of implementing his service. His grasp on the past gives the greater reality and scope to his high vision for the peace. His spirit and purpose are of the kind that immediately convey themselves and command confidence. He is a colleague to whom many other Senators turn for counsel. He is modest and quiet, yet forceful.

We are not campaigning for Senator THOMAS' reelection—that, fortunately, was recorded only last November. These words about him are prompted by his selection for the chairmanship of the Senate Military Affairs Committee. He brings great strength and capacity and a fine sanity to an important job.

Labor

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Birmingham News-Age-Herald of December 31, 1944:

LABOR

(By Robert W. Kincey)

William Mitch, president of district 20, United Mine Workers of America, strikes a broad and sound basis of reasoning when he calls attention, in a current statement, to what he terms special privileges enjoyed by Government subsidies which contribute to a comparatively few at the expense of all, especially the working man.

Taking the T. V. A. as an illustration of a Government-owned water-power project that victimizes the workingman, Mr. Mitch points out that cash, property, and revenues totaling more than $800,000,000 are represented; that in the fiscal year 1943 T. V. A. paid only $778,300 interest, whereas interest at 3 percent would have been $24,000,000.

"Thus," he says, "on this one item alone, T. V. A. enjoyed a special privilege worth to it more than $23,000,000 in 1943. The burden of supplying it with that special privilege fell upon all Federal taxpayers, but largely upon the workingman."

The statement emphasizes that T. V. A. and the agencies that distribute the power it generated have an investment of more than $550,000,000 in electric properties; that for the fiscal year 1943 they paid only $3,900,000 in taxes, none of which went to the Federal Government.

"Taxes," he said, "took a large part of the wages of the worker. Had T. V. A. and its distributing agencies paid taxes proportionately with others in the electric business, it is estimated such taxes would have amounted to $25,000,000 in 1943. Here is another special privilege that should be removed."

Pointing out that it is generally recognized that electric energy can be produced cheaper in coal-fired steam plants, now being erected, than it can be produced in water-power plants, Mr. Mitch analyzes the "special wallop" Government-owned water-power projects carry for the coal miner this way.

"The T. V. A. system, for instance, has an installed capacity of some 1,890,000 kilowatt-hours, only 365,000 kilowatts of which is steam-electric generating units. Such units supplement water-power capacity.

"When the war ceases it may well be that some or all of the steam units will stand idle. Thus the coal miner, the laboring man, has been and is being deprived of the market for his services necessary to mine the coal to supply 1,500,000 kilowatts of steam-electric generating capacity."

Mr. Mitch estimates that power produced at plants constructed by the Government or T. V. A. in 1943 totaled 7,173,574,810 kilowatt-hours, and that it would have required 4,375,881 tons of coal to produce that power.

"In an article in the September 1944 issue of Coal Age," he says, "the editor tabulates the output of bituminous coal per man shift for the years 1938 through 1942; and he estimates 1943 to have been 5.05 tons per man shift. Thus, according to these careful calculations, the operations of T. V. A. in the fiscal year 1943 displaced 866,000 man shifts.

"Certainly to supply the estimated 4,375,000 tons required to operate coal-fired units requires some hauling of coal by the railroads from mines to steam plants. It would be difficult to estimate the tons the railroads would consume, but it is easily seen they would consume a large number of tons. And the coal miner is being deprived of pay he would get for mining such coal.

"The only fair and democratic and economically sound thing to do is to remove these two great special privileges (1) by requiring T. V. A. and all Government-owned water-power projects constructed in the future to pay interest at a fair rate upon all funds employed in the building of the projects, and (2) by requiring T. V. A. and all Government-owned water-power projects to pay taxes—Federal, State, and local, just as others in like business are required to do."

Farm Labor

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, in connection with the report made by Hon. WILLIAM LEMKE, chairman of the committee of 11 appointed at the request of more than 200 Members of Congress who met spontaneously to protest the confusion in the drafting of farm labor, and especially the directive No. 288 to all State directors issued by General Hershey, I am glad to have been one of the members of that committee, and I believe that it is proper that the names of the Members of Congress who made up this Committee should be inserted in the RECORD. The committee was composed of the following Representatives: LEMKE, Republican, chairman, North Dakota; REED, Republican, New York; LARCADE, Democrat, Louisiana; O'Connor, Democrat, Montana; VURSELL, Republican, Illinois; RAINS, Democrat, Alabama; H. CARL ANDERSEN, Republican, Minnesota; ROGERS, Democrat, Florida; HORAN, Republican, Washington; O'HARA, Republican, Minnesota; WHITE, Democrat, Idaho.

As pointed out by Chairman LEMKE, as a result of the interest of this committee in this matter we were able to enlist the support of the House Committee on Agriculture, and after that committee called General Hershey before their committee, at which members of our committee of 11 were invited, General Hershey issued a clarifying directive to all State directors which will clear up the misunderstanding of the directive No. 288, which our committee urged had been misinterpreted by many of the draft boards throughout the country.

Mr. Speaker, representing one of the largest and most important agricultural districts in the United States, this matter was of supreme importance to my constituents, and in evidence of our argument I wish to include in the RECORD one of the newspaper reports on the drafting of farm labor, as follows:

[From the Jeff Davis Parish News of January 18, 1945]

TWENTY-FIVE FARMER YOUTHS SENT FOR TESTS—THAT NUMBER GO TO NEW ORLEANS YESTERDAY FOR PRE-INDUCTIONS—ALL UNDER 26—STILL RETAIN II-C CLASSIFICATIONS, BUT MANY WILL BE CALLED TO UNIFORMS

Twenty-five farm youths, all under 26, still retaining their II-C classifications, were sent to the New Orleans reception center yesterday for their pre-induction examinations.

With tightened demands for all youths under 26 for military service, it is probable that many will be sent later to the armed services. The group is aside from other farm youths who have already taken their pre-inductions and have been accepted as physically fit. In the group of farm boys going yesterday were:

Welsh—Dallas Lee Benoit, Gus Comeaux, Emerson Edwin Tate, Gilbert Meche, Elmer Guillory, Roy Adam Mott, Eugene Charles Todd, and Johnny Robert Benoit.

Elton—Frank E. Landry, Jr., Medwyn D. Garbarino, Elmer Henry Goebel, and Preston Miller.

Lake Arthur—Conrad Lee Hensgens, Maynard Milton Hartwell, Nicholas Anthony Hensgens, and Darrell Dwight Gillett.

Others going were Whitney William Manuel and Curtis William Langley, Kinder; Henry Lee Andrus, Alta Loma, Tex.; Wilbert Vidrine and Gwinn Bowers, Iowa; Wilbur Wade Williams, Thornwell; Allen Sylvester Keller, Fenton; Charles Dwight Precht, Jennings; and John Jasper Daigle, Lacassine.

Mr. Speaker, I could include others from all parts of my district, but I think the above is typical of the press reports on this subject, and I will not take up any additional space for that purpose.

Mr. Speaker, I would also like to include a copy of a letter received by me from the commissioner of agriculture of the State of Louisiana on this subject, to wit:

LOUISIANA DEPARTMENT OF
AGRICULTURE AND IMMIGRATION,
Baton Rouge, January 22, 1945.

Hon. HENRY D. LARCADE, Jr.,
Member of Congress, Washington, D. C.

DEAR HENRY: I am writing you in reference to the matter of drafting farm labor, and especially the indiscriminate drafting of those between 18 and 26.

You are well aware of the tremendous shortage that now exists and further inroads would jeopardize the production of the necessary food, feed, and fiber to take care of our armed forces and civilian population.

Hoping to have your cooperation in this matter, and with best wishes, I am,

Sincerely yours,

HARRY D. WILSON,
Commissioner.

Mr. Speaker, likewise I could include dozens of letters and telegrams from constituents from my district, but I think the above is sufficient to fortify my position, and for the RECORD.

The Parade Passes By

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by W. G. Vorpe from the Cleveland Plain Dealer of January 21, 1945:

AS THE PARADE PASSES BY
(By W. G. Vorpe)

I should like to depart temporarily today from my usual nostalgic reminiscences to turn attention to more serious discussion of current problems. I am persuaded to do this by the recent flurry over manpower both for the war front and the home front, a flurry that should have come much sooner. The message and radio talk of President Roosevelt, in which he advocated immediate action to get deferred IV-F's into service for war either at home or in noncombat activities, a national service act, and the drafting of nurses for duty will bring results that can't help but contribute much to the war effort, but he probably won't get all he asks for despite the need at a most critical time. Party politics, selfish interests and prejudices will erect barriers hard to hurdle unless Congress has the courage to do drastic things when only drastic measures will win this war within the next 3 years.

Speaking plainly, I am for immediate action on these three fronts:

Use of all IV-F's between the ages of 18 and 28 either at the fighting front in noncombat work or in a critical industry.

A national service act with proper restrictions that will keep it from being a political football and will insure men taken from a nonessential job into one more critical against financial loss or loss of their seniority rights.

The drafting of registered nurses for war work unless the volunteer method meets the present urgent need.

I suppose I am only one of many selective service board members who have long been dissatisfied with the procedure adopted in the case of many of the young men classified as IV-F. The fault has not been of the draft board's making. The registrants, for some reason or other, have been turned down by the medical examiners at the induction stations and the boards had no alternative.

These young men were deferred either for physical, mental, or moral reasons. For physical reasons many were turned down who really wanted to get into the service, even for noncombat work if they could not be used as fighters, but they didn't get a chance. Some persisted, and later processing got them an acceptance. Psychiatrists at the induction stations turned down, on rather flimsy grounds, many who were sent up by draft boards. And for a time all who had criminal records were turned back. Later the rules were lifted in cases of minor lawbreakers.

Now there is a desire to change all this. Boards are asked to review all who are classed IV-F, to put into critical industry all that can get jobs and send back for further preinduction examination those whose ailments seem to have been halted. Even those who had minor mental disturbances can be given another chance. These men, if not able to get into the combat line, will be utilized, if possible, as limited service draftees, though limited service as a classification was discarded some time ago by national selective service officials. Whether many of these IV-F boys will be used depends upon how strictly the Army authorities carry out the rules and follow the suggestion of President Roosevelt. As this is written, Congress is trying to shape legislation to correct the IV-F evil.

That some of the physical and mental IV-F's have suffered unjust criticism because of their deferment when they desired to give war service has been very apparent, but there are many cases of men deferred who have merely taken advantage of it to earn a good living in a nonessential industry. Young men who can play professional baseball, football, and hockey, perform for the entertainment of the public in the boxing ring or on the wrestling mat have been kept out of service and one wonders why. One who goes to a hotel or night club where a floor show is given sees husky young males of draft age dancing, singing, or otherwise entertaining the paying guests. Why are they at large? If they are disqualified for combat duty there ought to be work they might do which would relieve some better equipped young man for front line work. It seems likely that soon a lot of these will be either in critical war work or in line for the armed services.

But what is going to be done about the moral IV-F's, the young men with criminal records who are allowed to escape all war duties, free to roam about and menace the communities while honest and upright young men and fathers are fighting for their country? The Army and Navy says it doesn't want these men. Good soldiers object to associating with them, and we can't blame them. Yet these men can be used just the same. Why not segregate them under hard-boiled officers? One of the best fighting groups of modern times was the Foreign Legion and it was made up largely of ex-criminals or men with criminal tendencies. Service in that rough group made good citizens out of some of them. If they can't be used as fighters they can be sent to concentration camps, where under military regulation, they will do useful work. The Government should do something about it and at once. Maybe a national service act will solve that problem, and some sort of an act along this line is badly needed. It should have come 3 years ago. Such a law would save selective service boards severe headaches caused by irate neighbors who write or telephone constantly about some husky young fellow in their community who is swaggering about, loafing in poolrooms or driving his car and bragging that the Army can't get him. The draft boards are powerless because his past bad actions make him exempt. The public still doesn't know the rules laid down in Washington despite the fact that these have all been told many times in the newspapers.

The drafting of nurses is another serious problem, and the President favors such a method. I am inclined to the belief it will be necessary, though there may be a solution short of a real draft of women, which is a severe measure. There must be, however, either a large increase in volunteers for war nursing or a scheme evolved to allow enlistment of nurses who do not go through the Red Cross for war service. The only alternative is a draft.

In any discussion of nurses, a two-edged problem arises. At home every community suffers from their lack. Hospitals claim their staffs have been reduced to the danger point, yet it is evident that those who are wounded fighting for our country need nursing if they are to recover, and theirs is by far the greater need. At home we will have to depend more on women who will give a part of their week to helping in the hospitals. And any woman who is able should consider this a part of her patriotic duty in wartime.

In my opinion, national Selective Service officials should make a change in the act's classification of police and firemen. Under rules which were put into effect months ago, police and firemen were considered essential as contributing to the health and safety of their communities. Therefore, they went into the classification II-A. But now, under the directives, it is necessary for all draft boards to draw on men in the II-A class to fill their quotas for induction into armed services. Thus, no longer are police and firemen of draft age exempted. The depletion of their ranks has reached the danger stage. How long selective-service boards can defer these men who are really doing a great service is questionable unless a definite order for deferment is issued by the big boss in Washington.

Many board members believe these men should be in II-B as critical workers. How can we combat sabotage without an adequate police force, and how can we fight fires that may destroy plants making war products without sufficient firemen?

It is a serious question.

Bill To Establish Americans All—Immigrants All

EXTENSION OF REMARKS
OF
HON. EVAN HOWELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. HOWELL. Mr. Speaker, today I have introduced in the House of Representatives an amended version of House Joint Resolution 162, which I introduced during the seventy-eighth session of Congress. This bill provides for the institution of Americans All—Immigrants All program, and in order to fully acquaint the Members of the House of Representatives with the object and purposes of this organization I include herewith an address delivered by the Honorable Robert C. Moore, of Carlinville, Ill., who for 20 years was a member of the board of directors of the National Education Association and for 25 years the executive secretary of the Illinois Education Asscciation:

AMERICANS ALL—IMMIGRANTS ALL

We, the people of the United States and our allies must win the war—and the peace. This is the preeminent, world-wide objective

of the United Nations, and all other projects are now considered in their relation to it and their value is measured by their efficacy in promoting this paramount objective.

Before outlining a new project, let us consider the present world situation and some of its causes. Any statement of the present situation may seem trite; but it cannot be stated too often or too impressively, since it is apparent that many American citizens fail to realize fully its seriousness, the impending doom of civilization if we lose the war, the terrifying cost in money and lives, sacrifice and suffering, toil and blood and tears necessary to win, and the dangers in the myriad of baffling problems of the ensuing peace.

When we view the world scene, we observe that instead of international law we have international anarchy; instead of the orderly practice of civilized procedure we have confusion, turmoil, and chaos; instead of a reign of reason, justice, and humanitarianism, we have a jungle-like struggle of force, terror, and murder; instead of peace we have war. In the last 4 years millions of men have been slaughtered; millions of women have suffered all the physical and mental agonies that war can bring to sensitive womankind; and millions of innocent children have been starved physically, mentally, and spiritually for lack of food, education, and spiritual uplift, and their moral ideals have been perverted by the brutal strife of their elders. All these terrifying results were brought about by race hatreds, distorted ideas of superior races, class struggles, sectarian jealousies, the unleashing of predatory instincts, and the intensely selfish practices of greedy, aggressive nationalisms. These social and political vices resulted in the present immensely costly and destructive war and the hatreds incident to it, which in many respects have set back our civilization for a century.

Any organization having plans, purposes, and procedure tending to prevent or to remedy such a hideous situation as now afflicts the world should be welcomed enthusiastically by all our people; and if it is well adapted to prepare and condition our people to participate effectively in the peace and the rehabilitation of civilization after the war, it should be most heartily supported. Such an organization exists, and is called "Americans All—Immigrants All." As a creator of reciprocal understanding, tolerance, respect, goodwill, and cooperation among the various racial groups, nationalities, religious sects, and other classifications of our heterogeneous population, its efficacy has been proved by trial, and it has stood the test. At least one community testifies that it has furnished a revealing and inspiring interpretation to the phrase, "we, the people."

This movement had its origin and first test in Illinois. It was conceived in the mind of a dynamic young man only two generations removed from Mediterranean culture, who had been appointed by the Governor to serve as executive secretary of a State commission on citizenship and naturalization, and it was born in the labor of his problems and experiences in that position. It was entirely fitting and proper that it should have its origin and first test in Springfield, the shrine city of the great Lincoln who preached the doctrine of "malice toward none, with charity for all," "a house divided against itself cannot stand," and "government of the people, by the people, and for the people."

The name, "Americans All—Immigrants All" was inspired by the same thought as was expressed by Calvin Coolidge when he said: "Whether one traces his Americanism back 3 centuries to the *Mayflower*, or 3 years to the steerage, is not half so important as whether his Americanism is real and genuine. No matter on what various crafts we came here, we are all now in the same boat."

As compared with most other nations, America has had a brief existence and history. Only 400 years ago its only inhabitants were the American Indians with their very crude civilization. Therefore, as measured by historical time, we or our ancestors came to America only recently; and the designation, "Americans All—Immigrants All" is meant to imply that in a sense we are all immigrants, and in another sense that we can all, whether early or recent arrivals, be good Americans. It further implies that, since we are all now in the same boat, it will be well to eradicate all false distinctions of pride and prejudice and work together harmoniously as brothers and fellows in the great cause of true democracy.

The organization is based upon the belief that after the united efforts and participation in its program and activities by all the races, nationalities, sects, and other groups in a community, all these varied peoples will have a better understanding of one another's backgrounds, a higher appreciation of one another's cultural contribution to American civilization, and a mutual respect that will produce a more hearty cooperation and a greater solidarity to withstand the onslaughts of the enemies of democracy who disseminate suspicion and hatred.

The movement is essentially an extension of our educational system; and it has an appeal not only to the youth in our schools but also to mature adult citizens. It has in it elements of geography, of history, and of ethics, and a more potent element of civics or good citizenship. It teaches that, although America has a population of heterogeneous origins, they all have contributed to our greatness as a Nation. It tends to eliminate the feeling of racial inequality, to soften nationalistic hatreds, to eradicate bigotry and sectarian prejudices, and to cultivate a unity of purpose to be brothers in the common cause of Americanism. It develops the spirit of the Fatherhood of God and the brotherhood of man, and encourages the collective action that has made America a world power. Its activities generate the warmth that fuses into unity the contents of our melting pot.

Americans All—Immigrants All is incorporated as a nonprofit association under the laws of Illinois. It has a board of directors, president, secretary, treasurer, and other officers and committees necessary for its administration and the promotion of its purposes, which are modestly but plainly stated as follows:

1. To bring within the main stream of our population the many cultural and racial groups of this Nation without destroying the valuable contributions of which these groups are capable.

2. To promote through the various channels of education and publicity mutual understanding and appreciation among the several segments of our population regardless of the political affiliation, religious faith, or racial or national origin of each such segment.

3. To unify all racial and national groups residing in the United States.

The constitution and bylaws provide also that the general office shall be at Springfield, Ill., but that branches may be organized in other States and Territories with local chapters in communities interested. Annual dues are $1 for general membership, $5 for sustaining members, and from $100 up for patrons. The originator of the idea, who also supervised its first test in Springfield, was chosen executive director. Although it is necessary to have a complete organization for the general or national office, the founders realize that the actual achievement of its purposes must be through local organizations and community projects.

The literature of the organization outlines general directions for planning and operating such a community project; but it is realized that plans and procedure must be adapted to the size, character, conditions and resources of the various communities. The national office also has literature describing just how its plans and purposes were so successfully carried out in Springfield. In general it accomplishes its ends through an active local organization with an inspired leader, who enlist the newspapers, radio, and cinema; who promote discussions in public gatherings, class rooms, and lecture halls; and who plan and present community pageants which are wide in scope and dramatic in presentation.

An excellent example of the successful operation of Americans All—Immigrants All was its first test in Springfield in 1939. Its original promoters secured the support of the Governor of the State and several other civic-minded local leaders, and secured also the endorsement and cooperation of the United States Office of Education. Local committees were appointed, which secured the enthusiastic cooperation of the newspapers, the mayor of the city, local churches, schools, labor organizations, and many individual citizens. Weekly programs of activities were outlined for 26 consecutive weeks; and for that full time the newspapers headlined accounts of the activities, studies were made in the schools, sermons were preached in the churches, and there was a marked increase in the demand for library books. The sons and daughters of many nations and races flocked to the meetings to give testimony concerning (1) what motives had brought them here, (2) how they got here, (3) what they believed they had contributed to America, (4) what America had done for them, and (5) what their problems had been and what problems still remained.

This comprehensive program directed attention not only to the benefits and blessings of American civilization, but also to the contributions made to it by the various races and types of people making up our population. Different weeks were assigned to such groups as the English, Irish, Scots, Scandinavians, Italians, Germans, Slavs, Jews, French, Dutch, Russians, Greeks, Bulgarians, Lithuanians, Estonians, Rumanians, and Negroes. People of each and all these types participated in the programs, and their contributions to our culture and material progress were called to public attention by newspapers, schools, radio, pulpit, and forum. From all this there emerged a general public realization that their community is a product of the varied gifts of all laid on the altars of the arts, crafts, science, industry, education, religion and social progress. "We, the people," learned to know one another, to respect and understand one another, and to cooperate heartily in the support of community and American activities and institutions.

The culmination of the project was an Americans-all jubilee held in Springfield with the main program carried out in the spacious State armory. Here 340 talented amateur artists in colorful costumes and amid beautiful stage settings brought their varied contributions of music, folk songs, folk dances, and other expressions of art, all under the supervision of an expert pageant director. The performers were divided into 14 different groups of as many races and nationalities, and each group presented its characteristic program, opening with an Indian song by Illiniwek and closing with a grand finale with all groups on the stage and participating in the inspiring song, God Bless America. Each number was announced and introduced by a speaker costumed as Uncle Sam.

The armory was filled to its capacity of about 5,000 seated, and another 1,000 seated

in the aisles and standing around the walls; approximately 3,000 people were turned away when the doors were closed. On request a repeat program drew 25,000 people at the Illinois State fair grounds.

The people of the city and surrounding country considered the project a great success; and the community is still reaping the benefits of sympathy, understanding, reciprocal respect, unity, and cooperation resulting from it among its heterogeneous population.

The influence and effects of this demonstration extended far beyond the local community. The United States Office of Education cooperated by contributing a series of radio programs developing the basic theme and delivered over the Columbia Network; this series was voted by the Woman's National Committee as "the most original and informative radio program presented on the air during the radio season," and the series was awarded the gold medal for that season. The plan was endorsed by resolutions unanimously adopted by the municipal government of Springfield and also by the Sixty-third General Assembly of the State of Illinois. The newspaper accounts and the radio broadcasts of the programs attracted wide public attention and created much interest throughout the Nation, as was proved by the numerous letters received by the local management inquiring about the means and methods of devising and carrying out such a project.

In response to this widespread interest, the organizers of this movement are offering it to the Nation. They have a firm conviction born of experience that it is specially applicable to our country's needs in this time of war and its stress and strain. Our philosophers, statesmen, and other leaders all plead for unity, which includes the harmonizing of our racial and other differences, the elimination of class struggles, nationalistic prejudices, race riots, and all internecine strife that weakens our war effort and gives comfort and advantage to our enemies. These are the purposes for which Americans All—Immigrants All was instituted. No doubt the general public interest was inspired by a realization that the general dissemination of the organization and its teachings throughout the country would not only improve group relations in local communities but would also add much to the strength of the Nation, and would remove conditions that are harmful at any time but are actually perilous to our very survival in time of war.

After the shooting stops there will continue even a greater need for the teachings of this organization. The making of the peace, the reorganization of wrecked governments, and the rehabilitation of civilization will present the most intricate and difficult problems that ever challenged the mind and moral judgment of man. Order must succeed chaos, and good government must supersede anarchy. Practically all the people of the world earnestly hope that such a cataclysm of horror, death, and destruction as now afflicts the world shall never recur. Therefore, the paramount objective of the peace conference will be to banish war forever from the earth. But this most desirable end can be attained only by treaties whose integrity is sacredly respected, or by the enforcement of some kind of world government. Whatever plan is chosen will involve at least negotiation, probably cooperation, and possibly the establishment of a world government.

Americans All—Immigrants All has no blue prints to offer or definite plan to present for adoption in making the peace. It is not its purpose to advocate any certain plan until a plan is agreed to by our Government; but it is serving now by offering an essential national program of adult and youth education—education by actual participation in real peace activities. Its program and activities carried on throughout the Nation would not only promote understanding, good will, and unity among the people of our own Nation, but would also prepare and condition their minds to understand other nations and to support and defend whatever plan may be adopted by Congress and the President.

This essential national program is doing its part in unifying America to win the war, to participate effectively in making the peace, and to take its place among the nations in preserving the peace. And then after peaceable relations among the nations are permanently established, its principles and activities will help guide the spirit of America, and we hope of the world, toward the same noble ends as those listed in our American Constitution: "to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity."

The Chamber of Commerce in the United States

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, over 170 years ago the movement, later to be known as the chamber of commerce, had its beginning. Today such an organization is in existence in almost every city in the United States, both large and small. The record of these organizations is one of the great contributions to our American life. Through this movement great things have been accomplished in every community in which such an organization exists. Men have learned to pool their efforts in a common interest in behalf of the community in which they live. Such an organization is thoroughly indispensable in the community life of every city and town today throughout America.

Mr. Speaker, under unanimous consent, I include herewith an editorial from the Fargo Forum, Fargo, N. Dak., dealing with the history of the movement, the chamber of commerce in the United States:

WORKING TOGETHER

One-hundred-and-seventy-odd years ago a group of American businessmen conceived the notion that by working together they could do more for the betterment of trade and industry than could be achieved solely through their individual efforts. So they formed an organization in which they could pool their talents and energy and called it a chamber of commerce. The idea was a good one—it paid dividends—and other chambers were started as time went on.

Years later men decided they could not continue to do business indefinitely in any place unless they helped make it a better community. Their chambers then began to be active in civic affairs and gradually evolved into civic-minded bodies, interested in community development, as well as commercial matters.

Today the chamber of commerce is an accepted American institution—widespread, strong, active, and backed by nearly a million men and women. Its record of accomplishment for business, industry, community well-being, and national strength is outstanding.

And yet the possibilities for achievement through the medium of the chamber of commerce have never been fully utilized. Too many people still do not realize just how much can be done when united thought and action are applied to common problems. All too many others do not care.

The over-all aim of chambers of commerce in 1945 is a greater measure of achievement—to do more to end this war speedily and to prepare for peace. As always, the degree of attainment in every chamber will depend upon the extent to which those in the community are willing to work together. Boiled down, it is as simple as that.

And, as R. H. Barry of the Fargo Chamber of Commerce recently suggested, there should be a closer cooperation between the various communities for the good of the whole State. Commenting on Mr. Barry's suggestion the Valley City Times-Record recently said:

"Frankly, we think Mr. Barry has something there.

"There are times when cities pull against each other because prejudices from earlier arguments continue to rankle. There just is no denying that varying interests will find cities divided in opinion on some matters. For instance, the matter of roads, airports, the Missouri diversion—all these things can easily result in different ideas.

"It is expected that each community will fight for the things it considers to its best interests. What Barry urges, and what we concur with, is that after that fight is over, after the road has been built, the airport spotted or the dam built, then for Pete's sake why can't we forget that argument and pull together for a bigger and better North Dakota?

"No one would want a newspaper or a businessmen's group to sell its community short. The editor or organization who would do that is not entitled to exist. The community welfare is the first thing to be considered.

"However, after the heat of battle has died, and the smoke has cleared, the healthy thing to do is forget the water which has gone over the falls and join hands again in working collectively for those things which are good for North Dakota.

"A community rent by petty jealousies between its businessmen, torn by prejudices and dislikes, cannot succeed. Neither can a State in which its cities and towns spend half their time fighting each other."

Such sentiments put into practice will carry North Dakota forward to great accomplishments.

Roosevelt's Fourth Inaugural

EXTENSION OF REMARKS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. IZAC. Mr. Speaker, pursuant to my request for permission to extend my own remarks in the RECORD, I want to include therein the following editorial from the Philadelphia Record.

As long as this Nation remains a democracy and as long as the people assert their right to choose their own leaders, men of destiny will continue to direct the affairs of the Government. Our beloved friend and President was once again

chosen by the people of this country to lead us through the difficult years ahead. He is entitled to the support of us all. Why was he chosen for a third, and yet a fourth, time, unique among the chosen few of this Republic? In a splendid editorial, both lucid and honest, the Philadelphia Record gives the answer. Here it is:

ROOSEVELT'S FOURTH INAUGURAL—WHY DID UNITED STATES END TRADITION OF TWO TERMS?

Saturday was a date the historians will write down in their books with heavy emphasis.

For the first time an American President completed three 4-year terms and took the oath for a fourth.

Utterly unprecedented, Saturday's inauguration of Franklin Delano Roosevelt. No other President ever was nominated three times. Here is a man nominated and elected for not only a third term but a fourth. In office already for 12 years, his total span as Chief Magistrate will be 16, barring the unforeseen.

Why did a substantial majority of Americans thus smash one of our most cherished traditions—"Two terms are enough for any man"?

EXPLANATION

Viewing President Roosevelt and his works at close range—which, of course, is not in the historical manner—the Record believes it understands why this great Nation elected the same President four times:

Because, to a greater degree than any other President, he lived his Presidency in close understanding, even in companionship, with his fellow citizens.

Because he shared their aspirations and had the skill to turn at least a few of the people's dreams into reality.

Because in a world suffering the turmoil of revolution the majority of Americans were sure he was abler than any other American to lead his country to military victory and to help lead the world to a lasting peace.

ABNORMAL TIMES

Mr. Roosevelt could hardly have been elected to a third term, certainly never to a fourth, had his country and the world been progressing happily in a normal orbit. Nor would the man willingly have sought such honors.

He could not quit at the end of his second or his third term without leaving a tremendous task undone, without shirking the responsibility of allowing the American people to decide if they wanted him to finish it.

Lincoln was a minority President when he went to Washington in 1861. His majority for a second term was relatively small. Roosevelt's majorities in each of four elections have been resounding, though always he was opposed by rich and powerful interests. He has truly been beloved by millions of the common people.

MADE ENEMIES

Yet, like all our strong Presidents—Washington, Jefferson, Jackson, Lincoln, Theodore Roosevelt, Wilson—Roosevelt has made implacable enemies. To them he is the evil dictator, as was Lincoln to his foes; the muddleheaded nitwit in a job too big for his capacity, as they said of Jackson; an arch-radical seeking to destroy free enterprise, as Jefferson was described by his bitter opponents; an egomaniac with delusions of grandeur, as Philadelphia and New York editors often wrote of Washington.

Greater changes in the fabric of American life have taken place during the three Roosevelt terms than in any other Presidential era.

There is a school of philosophy which believes that events and circumstances beyond the control of man largely chart the course of human destiny; that even the most powerful and ablest rulers of governments may merely guide their craft advantageously through these storms not of man's making.

That can be true. If it is, then Roosevelt was a master helmsman of our ship of state in days of economic depression as well as in days of tyrannous oppression abroad.

His enemies declare he has destroyed the America that was. It is true that the America of the past is gone, and forever. It went in 1929. But for the majority of the people the kind of America we are looking forward to can be better by far than the so-called "glories" of a dead past which isn't so glorious except for a very few in high places.

We cannot be sure, of course. History must evaluate events and circumstances as well as men, in the future as it has in days gone by.

History, written calmly by intelligent men who reasoned objectively, has placed our Presidents of the past in their proper perspective. So they will place Roosevelt. A sound forecast is that his niche will be among the greatest.

Tribute to General Chennault

EXTENSION OF REMARKS

OF

HON. JAMES M. CURLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. CURLEY. Mr. Speaker, General Chennault's position in China, aside from his status as Commanding General of the United States Fourteenth Air Force, is unique, and could perhaps be termed as "unparalleled." As an unofficial ambassador of good will between the Chinese and Americans he has the admiration and very nearly the reverence of the Chinese people. To the Chinese, General Chennault symbolizes America and Americans. To most Americans, Chennault is a romantic and legendary character. The daring exploits and success of the American Volunteer Group are accountable for the American view of Chennault. But to the Chinese, both military leaders and civilians, the A. V. G. is only a part of the reason for his position and popularity in China today. As Chief of Staff for Air under the generalissimo his opinions and advice which are confined only to conduct of air operations of both Chinese and American Air Forces are accepted without question by the generalissimo and are carried out fully.

The Chinese do not place confidence lightly. They know Chennault as a man of careful consideration not given to snap or hasty decisions, who stands behind all of his judgments and decisions with implacableness and force. They know him for his even temperament and fairness. They know him for his kindly and yet blunt decisive way of dealing in all matters. But these qualities do not account for the implicit confidence which they have imposed in Chennault. That confidence is based on his proven ability as a great military leader. He has a keen insight and understanding of the limitations as well as the capabilities of the commanders, pilots, and men under his command. He has full and detailed knowledge of the performance, characteristics and operation limitations of all the types of aircraft in his command and he operates those aircraft strictly within those limits. An unusually retentive memory of topography, distinguishing landmarks and of generally existing weather conditions of localities where he has been but which have since been taken by the Japanese makes it possible for him to give instructions in close detail as to the conduct of missions of his bombers and fighter planes against Japanese targets. His close study of Japanese air and ground tactics, and the performance and characteristics of their aircraft over a period of 7 years, enables him to plan campaigns and missions against targets which could not be conducted successfully were this knowledge lacking.

General Chennault was retired from the United States Army Air Corps in 1935 as a captain. In 1937 he came to China, just 1 month prior to the outbreak of hostilities between Japan and China at Shanghai. In the role of air adviser to the newly formed Chinese Air Forces from 1937 to 1941 he devoted all his energies, not only toward the molding of the embryonic Chinese Air Force into an effective tactical unit, but also toward the elimination of Italian and German air advisers and methods which he was convinced were intended to cripple the Chinese efforts rather than aid them in their unequal struggle. During this period he organized and directed training schools for pilots, toured and flew the length and breadth of China to find suitable location for airdromes for future use, and also found time to study and analyze in close detail the methods and tactics of the Japanese Air Force which was at that time causing large scale destruction in Chinese cities and against Chinese ground armies.

Sensing that the Japanese efforts would in the future be directed against the United States, his efforts during the years from 1937 to 1941 appear to have entailed not only the planning and action for the needs of the moment but also a long-range planning and dispersion of air fields which would be strategically located for effective large scale offensive air effort in the future. The Chinese Air Force, although never large enough to defeat the Japanese air effort in China, still, under his tactical control created havoc with the Jap aircraft when operating defensively and made many offensive missions which were successful because of their unexpectedness, timing, and the tactics employed.

The record of the A. V. G. is essentially a part of the record of General Chennault. In the role of chief advocate for its birth and foundation, he spent months in Washington pleading, explaining, and exhorting Washington officialdom to support such an undertaking. In the role of instructor, the only instructor which the group had, to the small group of pilots which he had succeeded in obtaining from the United States armed services, he spent nearly 5 months in the jungles of Burma, holding daily classes in tactics, chalk in hand, before a blackboard, from which classes

the pilots would then take off in their planes to practice what he had taught them, while he watched for hours on end with his eyes glued to his binoculars to see how well they carried out the tactics he had taught them, which he was convinced would be most successful in defeating the Japanese airmen. During this period he also completed preparations at his advanced bases in China, organized his ground staff which for reasons beyond his control was both incompetent and inadequate, organized his command post radio net in China, and was engaged in the procurement of the supplies necessary to support the group's activities.

Although the A. V. G. was startlingly successful in its encounters with the superior forces of the enemy, and in a period of less than 8 months destroyed 293 Japanese aircraft confirmed and twice the number probables, the true contribution can perhaps never be accurately measured for it was a psychological factor at a time when it was most needed. The loss of the Philippines, Guam, and the Indies, the almost complete destruction of the Asiatic Fleet, and the rapidity and destruction with which the Japanese accomplished these victories, was not disheartening to the Allies. At a time when the Japanese air squadrons appeared to be nearly invincible, the A. V. G. met them in air combat in Burma with less than 15 planes, and in 3 combats between December 20 and December 24, 1941, shot down over 65 Japanese planes against the loss of 2 A. V. G. pilots and 3 planes. Understandably, the Chinese morale was low during the first months of 1942, but the news of the A. V. G. victories did much to dispel the pessimism and gloom which the sweeping Japanese victories over the American, Dutch, and British forces in the Pacific had undeniably caused.

The sparkplug of A. V. G. resistance in Burma did much to delay the fall of that country and enabled huge quantities of war goods to still reach China over the Burma Road, which would otherwise have been captured by the enemy. No reinforcements having reached the A. V. G., either in planes or pilots, during this entire period up to the last of April, the small remnant of the volunteers who were in Loiwing and who were flying almost continuously in Burma and were war-weary, tired, and discouraged, rebelled against the low-flying hazardous patrol missions which they were being asked to make and handed in their resignations en masse. Although they were in civilian status, and could not have been held against their will in either Burma or China, General Chennault, through sheer force of personal magnetism and character, dissuaded them from leaving the A. V. G. and they resumed their missions on the following day.

It is not a pretty story, but the pilots had been driven almost beyond human endurance in the effort to stem the Japanese advance through Burma, and with no reinforcements or replacements the outlook seemed rather gloomy. That General Chennault was able to turn them from their purpose and order them to resume their missions is but one of the many similar indications of General Chennault's character and ability as a leader, which I have observed.

The Japs finally broke through all allied opposition and drove toward Yunnan with incredible speed. All organized Chinese resistance in Burma had ceased and there were few troops ready in Yunnan which could stop the forward drive. Owing to the almost continuous daylight activity of the A. V. G. against the motorized, mechanized, and cavalry units which were driving up the Burma Road, and the destruction of thousands of troops by strafing with machine guns from the planes, the advance slowed down and stopped at the Salween, giving the Chinese a chance to reorganize and establish the Salween front from which General Stilwell's forces are now operating in an attempt to regain Burma.

Address by Hon. James A. Farley to Boy Scouts of America

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, January 25, 1945

Mr. WALSH. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by Hon. James A. Farley at the annual dinner meeting of the Fall River Area Council, Boy Scouts of America, Fall River, Mass., on January 16, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, honored guests and ladies and gentlemen, it is very encouraging to see so many people gathered at a function of this kind, laying aside their business responsibilities in order to show an interest in boyhood and in this great agency, the Boy Scouts of America. It shows a clear realization that especially now in time of war the growing boys are not only our responsibility here on the home front, but, as the citizens of tomorrow, are the bright promise of the Nation.

I believe this is typical of the feeling throughout the country today. We are all of us very much more aware of our responsibility to youth than we were a generation ago. When I was a boy, growing up in a small town, there were no such organizations as the Boy Scouts. We had no neighborhood clubs for boys. We went fishing, swimming, skating, coasting down hill, played baseball and now and then got together for a little social diversion. Nobody directed us; nobody assumed any responsibility for us; we just went along on our own power. But we were lucky at that. In the cities, the boys fared much worse. There were no playgrounds for children. There were very few parks. When cities did have parks they were usually removed from centers of population. The only places for recreation were the city streets, and the only recreation director was the corner cop. Only of course neither he nor the kids thought of it exactly that way.

Today the picture has changed. We realize that youth ought to have a number one priority on our devoted attention. Our young men are needed to fly our planes, to drive our tanks, to absorb the shock of battle. We need our young men desperately today, and we realize that when we ask them to take the brunt of battle, we have no moral right to accept their sacrifices unless we do everything under heaven not only to help them to get readjusted when they come back, but to educate, to train and provide the right sort of experiences for their younger brothers.

Now the Boy Scout movement invests in the future and it is one of great tokens of the fact that America is awake to her obligations to youth. Under God and the fitness of things, I believe that we ought to strengthen the oncoming generations of youth to repay the sacrifices which their older brothers are now making for them and for us, and we ought to highly resolve that our young people will be properly equipped to take the leadership that they will have to assume in years to come.

Well, what have our boys and girls a right to expect of us? Are we, you, and I really fulfilling our obligation to them? We pick up our newspaper and we read that juvenile delinquency is up 40 percent, 50 percent, and in some places I have seen it estimated as high as 60 percent. Why? Everyone has an answer. The war, the war conditions, overcrowding, this thing, that thing, the other thing. There is nothing the matter with our boys and girls today except the same thing that has always been the matter. The problem is not juvenile delinquency, but adult indifference. Boys want adventure. Of course they do. They always have. The thing to do is to give them the right sort of adventure. The time to stop juvenile delinquency is before the boy becomes delinquent.

There are four things to my way of thinking that play a very important part in the life of a boy, that have everything to do with fixing the way his future life will be. First is the home. In nine times out of ten if a boy gets into trouble, you will be able to trace the cause of it to bad conditions at home, bad example, indifference, neglect.

The second great influence on a boy is the church. It is impossible to overestimate that influence. Religion should be a real and compelling thing in the life of a boy. The time was when the atheist was just one in a mob who cried out, "There is no God!" But today in Nazi Germany atheism is organized and for the first time in the history of the world a new generation was educated on an anti-Christian and anti-God basis. We have seen the results in the lives of the young people in Nazi Germany, who were taught that the state is above God.

How much better off the whole world would be if all observed the twelfth Scout law. Let me read it to you. I know you are familiar with it, but I would like to emphasize it at this time. "A Scout is reverent. He is reverent toward God. He is faithful in his religious duties, and respects the convictions of others in matters of custom and religion." If that had been the law for boyhood all over the world, there would have been no racial persecution in Germany, and the world would not now be embroiled in the bloodiest war in history.

The third important influence on youth is the school. There is no need to elaborate on that. We all know how necessary a good education and vocational training are for the future of a boy. What the home and the church do for the heart and soul, the school does for the mind.

But in our complex modern life when the home, and the church, and the school have

done their part, there still is need for something more in the lifetime of a boy. He is a social being. He naturally looks for companionship, and he looks for adventure, something to do in his spare time. That is where the Boy Scouts of America comes into his life, and does a job which in my judgment, no other organization can do more effectively. What are some of the things that this scout program gives the boy to round out his equipment for life?

In the first place, the scout program gives him wholesome recreation. None of you, no matter how sold you are as leaders, on this movement, should ever kid yourselves for one minute that boys become scouts for any other reason than the fun they get out of it. You and I may know that a lot of other things are important, but to the boy today, just as to us, when we were boys, the great thing is adventure and fun. Now there are all sorts of commercial amusements available on every street corner—many more than when you and I were in our 'teens. There is the motion picture—a great institution and a powerful educational source for good, in its better phases, but there are also, unfortunately, cheap motion pictures that pander to the boy's love of excitement, without doing anything constructive for him. There are the pool room and the dance hall, harmless enough in themselves perhaps, but not constructive influences in the life of a growing boy. In contrast to these and other commercial amusements, the scout movement gives the boy the whole world of the out of doors—camping, a chance to sleep out in the open and to fill his lungs full of fresh air; a chance to cook his dinner over a fire; a chance to go swimming, to learn how to handle a boat and maybe to save a person's life.

That brings up the second thing that I think is valuable in the Scout program. It gives the boy things to do that appeal to him as worth while—that appeal to the man already beginning to take shape in him. He learns to take care of himself and he learns to help other people.

Not long ago there was an item in a New York paper, not a big item, only about a quarter of a column. The headline read, "Boy Scout rescues pair felled by gas." The article told about how his knowledge of artificial respiration enabled a 14-year-old boy to save the life of an elderly couple who had been overcome by fumes from a gas heater. When this boy came home from school in the afternoon he smelled gas as he entered the hallway of the apartment building where he lived. He traced the odor to an apartment on the fourth floor, and got no response. But he did not give up for this boy was a Scout. He knocked for one of the other tenants, climbed through the window of his apartment onto the fire escape and looking through the window next door saw the couple lying on the floor. With help from the neighbor he broke open the window. He took the pulse of the unconscious man and woman and started to work on the man because his pulse was weaker. At the same time he directed the neighbor how to revive the woman and yelled down the fire escape to someone else to send for help. By the time the police and ambulance got there both those old people had been saved, because a 14-year-old boy knew what to do and how to do it.

Now this is a common enough story. I dare say you can duplicate it many times in the pages of your local press and elsewhere all over the country. But think of the satisfaction that that Boy Scout and all the other Boy Scouts in his Scout troop, and in other Scout troops, get out of the knowledge that they have learned something worth while that enables them actually to save a person's life.

Right now in the city of New York, as here in Fall River, and in every other community, large and small, all over the country, young boys are having a chance to help our country win the war in ways that would never under the sun have been possible if it were not for the Boy Scouts of America. This is not only a very well worth-while service for our country, but is an important thing in the lives of these boys. Waste paper drives, bond selling, planting crops, helping the Red Cross, you see these Boy Scouts all over doing a man-sized job at a time when we have a serious manpower shortage.

Think of the inexhaustible energy of boys. What boundless capacity of energy, enthusiasm and vitality are wrapped up in boys. Think of their unspoiled powers. Not merely their bodily agility, but the surging tide of their youthful emotion, not spoiled by overexcitement—their active will power, eager and ready to give service to other people. All of this is utilized through the activities of the Boy Scout program.

Then another important thing that the boy gets in his scout troop is companionship. The right sort of companionship, the right sort of impressions, are of critical importance to a boy. I ask you men and women here to look back upon your own youth and consider honestly how much of what you are now has been affected by the friends and companions you had when you were in your teens. How important it is for every boy to have a wholesome recreation, and worth-while things to do, with the right sort of companionship. And I think you will agree that boys are tremendously susceptible not only to the influence of companions of their own age, but also to the influence of adults. Boyhood is perhaps the most important period in a man's life, then his ideals are acquired, his character formed. He needs to have the right kind of man to supply his ideals and to become his hero. Every boy is a hero worshipper, and he tries, albeit unconsciously, to make himself like his hero. If the men with whom he associates are cheap, are crooks, are gunmen or gangsters, that is the sort of hero the boy wants to resemble. It is up to us to see that he has the right sort of companionship and the right sort of leader to follow.

At this period boys are having a hard time. Their older brothers are away, their fathers in most cases are keeping longer business hours than ever before, and crowding in a lot of wartime activities also. Many of the wholesome things that the family used to do together are not possible now, because of war work, or restricted travel conditions, or gasoline shortage, or other reasons. Boys have time on their hands. Tens of thousands of boys are nightly on our streets looking for amusement, seeking a venture, yearning for companionship. This situation is a challenge to us on the home front. Is it not up to us to provide places where these boys can meet and play, be entertained and instructed, and at the same time be under the influence of men of the right kind?

This is a practical thing to do. It can be done. It has been done, thank God, all over America. But why are we not, in every community, undertaking it in a big way? All of you men and women here tonight are interested in boys and willing to work for them. That is why you are taking part in this occasion, but are you interested enough and do you care enough? If each one of you would lead a one-man crusade to provide more opportunities for the boys of Fall River to get the benefits of this Scout program, your city could be an immeasurably better place when your sons come back home than it was when they left.

This job is up to us. It depends upon us whether these boys will have the opportunity to learn how to be good and worth-while citizens, or whether they will be woefully neglected during these important formative years. We cannot turn our backs and ignore existing conditions. It is up to us to accept the challenge and lend ourselves for the task. It is a man's job, and it needs men of mettle, who will put something of themselves into the understanding.

In meeting our obligations to youth, we have come a long way over the conditions that prevailed a generation ago. But this is as critical a time for our youth at home as it is for our young men who are fighting on our battle fronts. We can all give some time; we can all spare some effort for boys. Let us put it where it can do a lot of good—into the Scout program.

It is my profound conviction that the boy who subscribes to your Scout promise, who has a chance to learn the things that scouting teaches him, and to associate with the right kind of man as leader, will go a long way to make an honest, upstanding straightforward citizen of this country, and that in the tomorrows which are coming he will be found in the very front line of the citizens who will maintain the cherished and sacred traditions of America.

Our World Aims

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, January 25, 1945

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Our World Aims," written by Mr. McClellan Van de Veer, and published in the Birmingham Age-Herald of recent issue.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR WORLD AIMS

Four United States Senators—PEPPER, of Florida; TOBEY, of New Hampshire; ELLENDER, of Louisiana, and CHAVEZ, of New Mexico—talked about America's war and peace aims in the Town Meeting of the Air Thursday night.

There was encouraging agreement among them on the necessity for international collaboration that a better world may be established.

As one Senator suggested, our war and peace aims may be summarized as complete defeat of the enemy nations and the establishment of a good and durable peace. Beyond that, there was the common idea of continuing cooperation among the nations to prevent a recurrence of conflict.

As in most discussions of that problem, the chief reliance seemed to be simply on power. There was emphatic insistence that the United States must maintain its own strong military establishment, at least pending the establishment of an effective international organization which would make possible the scaling down of national armaments. There doubtless is widespread support for this view among the people of the country. But, of course, there are grave difficulties in such a policy. How far can genuine international collaboration get if the great powers are unable to find a feasible program of mutual disarmament? If Germany and Japan are disarmed and strictly controlled after their defeat, against what particular dangers would the victorious nations maintain large armed forces? If there is fear of trouble among themselves and with any other nations, to what extent will large armaments aggravate distrust and apprehension?

If unilateral and group settlements of political problems of concern to all nations

are a handicap in the building of a system of general collaboration, would not extensive national military programs be a difficulty in the way of achieving an over-all system of international justice and lead toward a disastrous competition in armaments?

Suppose, for example, Russia maintains a vast military establishment outside the area of its understandings with other nations? Or suppose the United States does? Would that not, in the first place, imply a lack of faith in collective security which would be bound seriously to hamper its development? Would that not be comparable to unilateral political action by a member nation on an issue affecting all nations in the organization?

Yet, it may be logically asked, how can there be any individual disarmament until there is effective collaboration?

If there is any hopeful answer to that difficult question, it seems to lie in a great renewal of faith and the establishment of new power based on justice, reason and good will; and in a new pioneering to that end. But seldom has the world been more lacking in faith in the power of reason and good will. It seemed to the Age-Herald that the talks of the four Senators sadly emphasized that lamentable reality.

What did we hear from them in the way of specific ideas on getting into operation a system of international settlement and justice? On getting at the basic causes of war? On means of keeping Allied nations in unity? On improving economic and political conditions among all the nations?

It is definite ideas and techniques in such fundamental fields that are needed for a creative progress toward true peace. All else tends toward efforts at control by sheer power, which always involve the danger of deteriorating into embittering oppression.

The real problem in establishing a genuine and creative peace has to do with how faith in mutual cooperation can be established among the nations. That faith can be firmly founded only on a realization that honest collaboration is in the interest of all. Mutual faith will depend on evidences being given by nations, in attitude and action, that they are resolved to live up to joint commitments and are even ready to make some sacrifices in the interest of the world as a whole. Yet what we now mostly have from the nations are evidences of their own self-seeking.

Can that trend, so incompatible with true cooperation, be reversed? Can anything more be expected?

Certainly not without a great rebirth of spiritual leadership and faith.

Meantime, we can expect continued preoccupation with improvisations and expediencies in the sterile techniques of physical power. If the nations cannot achieve a higher level in their relationships, the result in all probability will be only a deeper and deeper hopelessness culminating eventually in new and still greater catastrophe.

Military Training for National Safety

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, January 25, 1945

Mr. GURNEY. Mr. President, I believe we are all indebted to Mr. Ben Hibbs, editor of the Saturday Evening Post, for the fine editorial from his pen entitled "Military Training for National Safety," which appeared in the issue of the Post of January 27. The editorial refers to the necessity for universal military training, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MILITARY TRAINING FOR NATIONAL SAFETY

Gen. George C. Marshall has proposed, for the post-war years, a citizen Army implemented by universal military training. The Saturday Evening Post endorses that proposal. It does so a little reluctantly, with certain frank misgivings, and only because such a course seems imperative for national safety. The Post has always hoped that this country would not have to adopt compulsory military service as a permanent peacetime measure, but, considering our experience of the past 3 years, looking at the probable world of the future, it is hard to see how we dare do otherwise.

I shan't attempt, in this editorial, to answer all the objections which have been raised against compulsory training. Some of the objections are valid. It can hardly be denied, for example, that, when all the able-bodied young men of a nation are trained in the arts of war, there is danger that in the end that nation may itself become warlike in its thinking and attitudes. It is a danger that we shall have to guard against the best we can—with all our heart and integrity. On the other hand, the accusation that universal training is a wicked plot contrived for their own interests by a selfish hierarchy of Army officers is nonsense. The same may be said of the cry that big business is at the bottom of the scheme because of the profits it would garner from the sale of equipment. The simple fact is that the cost in taxes—and business always pays the big end of the tax bill—would far outweigh the profits. I know a great many businessmen, including some manufacturers of military equipment, and I find them about as evenly divided on the question of compulsory training as are people in other occupations.

Universal military training is being advocated by honest people who have the welfare of America at heart. It is being opposed by equally sincere people. It would be a fine thing for the country if both groups would recognize this obvious fact and keep the debate on a high level. Anger and personal recriminations will get us nowhere.

The Post's reason for backing compulsory training is strictly one of national safety. Even today, more than 3 years after Pearl Harbor, few Americans realize how close we were to defeat throughout 1942 and during the early months of 1943. The Nation's attitude from the very beginning of the war—even during the black days of Bataan and Corregidor—has been one of confidence, and probably that is as it should be. It is through this high faith in ourselves that we Americans have always achieved. Yet the history books of the future will tell us that it was a near thing during the first year and a half of the war. The top men of the Army and Navy, who were in a position to understand our peril better than anyone else, know that this is true. The Post doesn't want to see this country, ever again, in such a desperate spot.

Furthermore, there is good reason to believe that if we had been really strong in 1941—if we had had a powerful navy and a mighty air force and a great reservoir of trained men ready to call to the colors—Japan probably never would have attacked. Even if she had attacked in the face of such odds, our strength would have materially shortened the war, and lives would have been saved. Because we were deplorably weak on December 7, 1941, and for 18 months thereafter, Japan was able to entrench herself strongly in the Western Pacific—so strongly that today, more than 3 years later, we are still a long, long way from ultimate victory in the Asiatic war. Surely, we are smart enough nationally to draw the obvious lesson from this experience. Surely, one of the best safeguards against war—and, by the same token, one of the best ways to keep wars short if they come, thereby saving lives—is to keep ourselves strong.

It is often argued that the adoption of peacetime compulsory military training would be a tacit admission that we have no faith in the peace we shall make when our two wars are ended or in the international organization we hope then to have. I do not follow such reasoning. I believe very earnestly that we must do everything under heaven to establish an enduring peace, and I also believe that we stand a reasonably good chance of success. On the other hand, I think it would be completely unrealistic to let down our guard and trust everything to diplomacy in a world where it is still entirely possible for madmen and international plunderers to run amuck, where the peril of mob mania still exists. Theodore Roosevelt's advice to "speak softly and carry a big stick" is as sound in 1945 as it was in 1900. We must try for a stable peace, but we should keep gun in hand for a long time, on the chance that statesmanship alone might fail. We dare not make too long a gamble. The future is too unforeseeable. The stakes are too high.

If these things are true, if we must stay militarily strong, then the alternatives seem to be either a citizen Army, rooted in compulsory training, or a very large professional Army. The Post agrees with General Marshall and with Brigadier General Palmer, the War Department spokesman who has written two Post articles on this subject, that the former is the better of these two choices—that a citizen Army would give us greater potential strength, that it would be more economical and more democratic, that it probably would be less likely to breed a warlike national attitude than a large standing Army.

The opponents of compulsory training, viewing the advance of technology, sometimes insist that in the future it will be quite futile to train our manpower in the arts of war. The argument is that the development of rocket bombs and other such terrifying devices will make large armies impotent if another war comes. The same claims for technology were made after World War No. 1, and yet in World War No. 2, it is still the Infantry that has to slug it out and take the objectives when all the chips are down. Also, the above argument is rather like saying that because a boy is going to medical school or engineering school, he should skip high school. Even if we assume that in any future war all soldiers would be technical men, handling amazing new types of weapons, they would still have to go first through their basic training. There are certain fundamentals that all soldiers must have. Part of the strategy of national defense, certainly, is to keep our military research going and to maintain a powerful Navy and Air Force, but those alone are not enough. We cannot be strong without trained manpower.

As yet, the Post has no very definite or detailed ideas as to how such a training program should be worked out. Obviously, it is to be hoped that certain educational objectives could be combined with soldiering, so that the proper preparation for civilian life would not be completely interrupted. Also, it should be understood clearly—and so stated in any bill which may be passed—that compulsory training is strictly for the purpose of national defense and is not to be confused with, or muddied by, sociological

experiments. The Post most definitely does not subscribe to the President's somewhat vague scheme to combine military training with some sort of vast youth movement or glorified C. C. C. program. If we are to train all our boys in the arts of war, let us have it understood that our reason for so doing is, quite simply, national safety, and that alone. Let us serve notice on the social planners to keep their hands off.

Finally, I should like to be a bit personal. I have a 10-year-old son, whom I love as any normal father loves a son. If we have compulsory military training, he will have to subtract 12 months of his life, along with millions of other boys, from the brightest years which God gives us—the incomparable years of youth—and hand them over to his country. I do not relish this thought. I get no comfort out of the argument that it will help make a man out of him. I still have enough faith in parenthood, and in our school system, to believe that a boy can be made into a man without military training. But I'd much rather see my son give a year of his life to peacetime Army training than to have him help fight another war. And, to repeat, I do believe most earnestly that one of the ways to keep the peace is to build, in the sight of all, such bastions of national strength that the madmen of this earth will think thrice before they set forth on the trail of blood and pillage.

BEN HIBBS, *Editor*.

Roosevelt Today

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Thursday, January 25, 1945

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Roosevelt Today," written by Mr. McClellan Van de Veer and published in a recent issue of the Birmingham Age-Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ROOSEVELT TODAY

Just as Lincoln's reelection in 1864 was the prototype of Roosevelt's reelection last fall—in being the result of a campaign held during wartime—so today's inauguration, particularly as it involves a presidential address in circumstances of unique solemnity, makes Americans understand why, in keeping with the tone and spirit of a modest ceremony Mr. Roosevelt's contribution to the occasion gives promise of being as brief and weighty as were Lincoln's words of dedication 80 years ago. Then Lincoln spoke in expectation of an early end of civil war, but while the fighting was still intense. Now Roosevelt speaks in expectation of an end to an international conflict, unprecedented in human history, which is still raging.

It is not surprising that the President is said to be planning to keep his speech within the scope of 500 words. Other things considered, he can scarcely go much beyond that mark. To keep such an address from being perfunctory is harder than to prepare an ampler statement. To make such an address consonant with the great hour is in the nature of a supreme test. Lincoln, it will be remembered, presented the moral significance of the Nation's plight and concluded with an immortal declaration: "With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right; let us strive on to finish the work we are in; to bind up the Nation's wounds, to care for him who shall have borne the battle * * * to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

History does not repeat itself, but it has its own rhythm. Mr. Roosevelt speaks today under the shadow of a wider conflict, but he speaks also at a moment when there is need for moral affirmation, there is need not for hatred but for justice, there is need for a resolute march to the goal of victory, there is need for making ready for the aftermath of war at home, there is need for "a just and lasting peace among ourselves and with all nations." Lincoln's address barely exceeded 600 words. Yet he spoke for the ages. Mr. Roosevelt, in terms of today, at least, is no less the historic figure. As he takes his oath of office at this pregnant hour, Mr. Roosevelt embodies the emergence of a new earth under an old heaven, a fresh dispensation of prophetic righteousness among men and nations under the beneficence of God.

The Important Facts Concerning the Drafting of Farm Boys

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. JENKINS. Mr. Speaker, the farmers of the Nation are tremendously interested in the controversy raging over the taking of necessary farm help into the Army.

To understand this controversy one must know the facts concerning three very important matters: First, the Tydings amendment; second, Director Byrnes' letter; and third, General Hershey's order after many protests were made from all parts of the country.

The Tydings amendment to the selective-service law proved to be of great benefit to the farmers. It reads, in effect, as follows:

Every registrant found by a selective-service local board * * * to be necessary to and regularly engaged in an agricultural occupation or endeavor essential to the war effort, shall be deferred from training and service in the land and naval forces so long as he remains so engaged and until such time as a satisfactory replacement can be obtained.

Director Byrnes in an effort to get more men into the Army wrote a letter to General Hershey, a part of which is as follows:

I have reported these facts to the President. He has found that the further deferment of all men now deferred in the 18 through 25 age group because of agricultural occupation is not as essential to the best interest of our war effort as is the urgent and more essential need of the Army and Navy for young men.

A fair interpretation of Mr. Byrnes' language would mean that the President was in effect advising that the Tydings amendment should be superseded because he, the President, considered agricultural work not as essential as some other kinds of work.

Following the receipt of the letter from Director Byrnes, General Hershey, by directive or some kind of communication, advised State directors of the President's finding with the result that many men were drafted contrary to the Tydings amendment.

After many protests were made because of the action of local boards, who apparently were trying to follow the President's wishes, were received by General Hershey and Members of Congress, General Hershey has sent out a telegram to the local draft boards of the Nation to the effect that the Tydings amendment is still in effect and that the findings and opinions of the draft authorities should give full consideration to the same.

The following is in substance a copy of General Hershey's telegram:

Questions of interpretation of State Directors Advice No. 288 have been brought to my attention by Members of Congress and by others.

The directive of January 3, 1945, State Directors Advice 288, did not change or modify in any manner the Tydings amendment. The opinions and findings contained in State Directors Advice No. 288 were for the consideration of the local boards in determining the classifications of registrants in the age group 18 through 25.

Section 5K of the Selective Training and Service Act, known as the Tydings amendment, places upon each local board the responsibility to determine, subject to appeal, in the case of the individual registrant whether or not the registrant meets the requirements prescribed by this section.

Notify all local boards immediately.

It is unfortunate that thousands of farm boys have been taken into the service while this controversy has been raging. Appeals from local boards to the district boards can be made, but when a boy has once been inducted into the service there is no appeal. Registrants should bring out before the local board all the facts upon which they rely to justify their claim for deferment. If they do not bring out any facts, they leave nothing upon which to appeal.

I hope that the agitation stirred up by the people and the Congressmen will have a salutary effect.

Older Farmers Can't Do It Alone

EXTENSION OF REMARKS
OF
HON. GEORGE F. ROGERS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. ROGERS of New York. Mr. Speaker, under the permission granted me, I include the following article by L. B. Skeffington, which appeared in the Democrat and Chronicle, Rochester, N. Y., January 11, 1945:

OLDER FARMERS CAN'T DO IT ALONE
(By L. B. Skeffington)

The other morning at Sodus 60 young men boarded busses and started on their way into military service. A few hours later they had

subscribed to the oath, had been inducted formally and were part of the Military Establishment of the United States. This happening was not unusual; the same events were taking place all over the country. But among the well-wishers, parents and others who saw the boys off from Sodus there was much reflection and some comment.

As stated by one man, a farmer, who for several years has worked literally night and day to overcome many and varied obstacles to produce food, it was something like this: "Every bus load of young men that leaves here for the Army and Navy makes us wonder more and more how we are going to get by on the farms this year."

When I talked with him, he was not resentful, he was not unpatriotic, nor did he in any way intimate that he was going to reduce his own efforts. But he wondered frankly where the dividing line was, or was going to be, between sharing manpower for productive and fighting needs.

The Sodus draft board covers the northern half of Wayne County. Another board operates in the southern half. Wayne is a rural county. There are no cities and few large villages in the county. Most of the population is engaged in agricultural pursuits; that is, in producing, servicing, or handling farm products and supplies. In most of the villages the major industries are food canning and processing plants, packing houses, milk plants, cold storages, and agencies that handle farm machinery, fertilizers, feeds, etc.

In normal times the county never had much able-bodied population in excess of that employed in these occupations and in the usual retail and service establishments found in every community. Before the war there was the usual trend of young people away from the farms. Some of the villagers worked in the city. Since the war this process has been speeded up. Large numbers of men and women have found jobs in city war plants.

Only with extreme difficulty have farm-labor requirements been met. Seasonal shortages have been particularly acute. So far the picture is about the same as many other agricultural counties. There has been little complaint upon the part of the farmers, for they are Americans engaged in war. Some nonfarmers who have heard the farmers worry out loud about their labor and production problems have shrugged it off with, "They have gotten by, haven't they?"

Now, in 1945, it looks as if the situation may "bite" into productive capacity of the farms unless there is understanding and careful consideration. The farmer I referred to summoned it up: "I am unable to agree with Judge Byrnes, war mobilization director, that older men can carry on farm production at the pace we have been going. Judge Byrnes says it is necessary to take our young men. At the same time he says it is necessary for farmers to maintain production at the peak levels of last year, because food is more necessary than ever.

"To farmers, no matter how patriotic or willing, this does not seem possible. Judge Byrnes says it will be necessary for the older man to produce the required amount of food. It seems possible that he has overlooked all the favorable elements of weather conditions generally for several years, but farmers know they cannot count on them. This may be the year when weather will delay our operations and reduce yields.

"However, let us assume that all the natural conditions will be nearly as good. We ought to have more men and more machinery to meet normal replacements, and to make up for the continuous drain of the draft on manpower. There is not enough new machinery available. Production has been restricted for several years and existing machinery requires more tinkering to keep it running. We can assume we are not going to get much more machinery in time to be of any use.

"Only by the fullest use of machinery have we been able to beat the labor shortage so far. It is the young men who operate the machinery on the farms. It is the young men who put in the longest hours, are most adept with repairs, and who can take the hard going. Anyone who has ridden a tractor around the fields 10 or 12 hours a day knows the riding is hard. Older men on farms avoid this kind of work as much as possible. They can't take it for as long hours as the young fellows.

"Taking out the young men on the farms now has more serious possibilities than ever before of crippling production. Farmers know there is not much sense in planning or starting work they cannot hope to finish. Until recently they had assumed their labor problems would be more difficult than a year ago, but they had not expected a specialized drive to draft the young men who have been doing a good job."

Several farmers have told me that they will have to know soon just which men they are going to lose or retain, so that they can plan accordingly. Many of the young men will not themselves make any effort to stay on the farms. They feel they have been singled out—as many of them have complained in the past—as draft dodgers. Their attitude is that the decision is up to Uncle Sam.

Consumers may just as well make up their minds that stripping the farms of able-bodied youths is something that concerns them.

Resolution of the Polish Welfare Council of Schenectady, N. Y.

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks, I include the following resolution which was unanimously adopted at a plenary meeting of the Polish Welfare Council of Schenectady, N. Y., comprising delegates of 55 fraternal organizations, held Thursday, January 4, 1945, at the Polish National Alliance Community Home:

We desire to commend the Government of the United States on the recent pronouncement relative to the continued recognition of the Polish Government-in-exile in London as the legal representative of Poland, despite the determined attempts of certain communistic elements in liberated Poland to set up a puppet government subservient to every whim of Soviet Russia.

The international political situation, as shown by recent events in Europe, has aroused profound apprehension throughout the Nation.

Mr. Churchill's recent speeches in the House of Commons clearly indicate a victory for the concept of spheres of influence contrary to democratic principles espoused by the United States.

A victory of the principles of the Atlantic Charter, reaffirmed in their validity by our President on December 22, 1944, as well as of the principles of the liberty of man and nations everywhere in the world, is not only the condition of a stable peace and of the survival of our civilization, but also the basic condition of American security.

The Polish Government in London, the only legal representation of the Polish nation is recognized because of the constitutional continuity by the United States of America and other democratic powers. This meeting urges you to continue its recognition.

The Polish Government in London cannot arbitrarily cede any Polish territory without or against the will of the people of Poland and must await their verdict after the determination of hostilities and the reestablishment of law and order in that martyred country.

Any repetition of the Munich appeasement methods in relation with any totalitarian power of aggression spells world catastrophe and the subjugation of freemen to serfdom and slavery.

A clear and definite support of justice, law, and decency by the duly elected representatives of the people of the United States in Congress assembled becomes imperative in the face of totalitarian threats to democracy everywhere in the world.

The declaration of the State Department over your signature can be interpreted only by every American as a reiteration of the principles of the Atlantic Charter and as an expression of the determination of Americans to reach the goal toward which we were aiming when as a free Nation we made our great decision to send our manhood to war for democracy and justice for the rest of the world.

Our sons are now offering their lives so that these aims be achieved. Our homes are full of sadness that can be relieved only by the hope and knowledge that this supreme sacrifice of our own blood shall not be in vain.

A fifth partition of Poland would indeed frustrate our efforts and shatter our hopes in the belief that out of this tragedy of mankind a new world would emerge, a better one, based on principles compatible with the tradition of the American Nation, on moral tenets and not on spheres of domination by force. We are convinced that the overwhelming American public opinion is opposed to unilateral and arbitrary settlement of international disputes, and in favor of extending the democratic processes to the international sphere as well as using them at home: Now be it therefore

Resolved, That this meeting of delegates of Americans of Polish extraction, representing 55 Schenectady organizations, authorize the undersigned representatives to present the contents of the hereinabove described facts, thoughts, and desires to BERNARD KEARNEY, Representative of the Thirtieth Congressional District of New York State, with the urgent request to lay this resolution before the House of Representatives and to act thereon in order that proper safeguards may be devised, instituted, and applied to counteract the plans of the fifth partition of Poland, for the subjugation of 30,000,000 of free Polish men, women, and children to foreign expression and slavery.

Respectfully,

JOSEPH CZYZEWSKI,
ADAM STEFAN, *Secretary*,
C. S. OGONOWSKI, *Chairman*.
Rev. LADISLAUS E. GUZIELEK,
For the Resolutions Committee.

A Soldier's Letter To His Parents

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. REES of Kansas. Mr. Speaker, under permission to extend my remarks

in the RECORD, I am including a letter from Pvt. (1st cl.) Ramond Gritton. The father of this soldier is employed with the House of Representatives. This letter is especially interesting. I believe it reflects the feeling of a good many of our boys who are fighting over seas. I trust you may take time to read it. Private Gritton is a member of the Eighty-first Chemical Battalion that helped take the Normandy beachhead on D-day. The members of his battalion were awarded citations for outstanding courage under fire and for maintaining the beachhead for 12 days until relief came. Incidentally, this citation, I am informed, is equivalent to the Presidential citation.

The letter follows:

GUESS WHERE, *December 2, 1944.*

DEAREST MUZ AND DAD: It is now only 6 p. m. and it's (as usual) raining like the devil. All I can say is that I'm dry and warm, and have been sleeping thus far quite a long time. We have really been on the move, but it is bringing the war closer to an end.

I have been reading the paper and see by it that there is a shortage of ammunition. I think it's bad enough to fight the weather as a hindrance, but to slow the war down because of the home front's negligence and stupidity makes my blood boil. We fellows are giving our all for the people at home, and I, for one, am very proud to be fighting for swell parents, a home, and country that have been undoubtedly blessed by God. We do our share of griping, but there hardly is any one of us who would stop now just because it looks like the job is done. No job can be called complete on appearances alone. If only the people at home, sitting snugly before a fire or a meal fit for a king, could be suddenly transported to the fighting front, to little holes in the ground, or spend the night in a house which had had Jerries in it the night before, they would be thankful for what they have.

May I say this: I am now a fervent believer in God. I pray sincerely—not from force of habit or to ease my conscience—every night to the Lord to keep my soul. I believe He is with me at all times; therefore, I am not afraid.

Contrary to many opinions, honest prayer to God can and does bring a soothing relief, and a comfort is found in this belief.

Yes; I have changed in that way. When I get home, I shall be only too happy to go to church where I can pray without hearing guns and shells screaming. Yes; peace is indeed wonderful.

Well, I am going to close this part of my letter, which you may term fanatic, and turn to a letter from you and one from dad which I received tonight.

First of all, may I say I have read many letters starting "Dear Son" but the sincerity and pride with which dad writes is most touching, and makes me the happiest guy in the world. And, Muz, the love and deep concern with which your pen moves in these welcome letters to me make me feel that all this is well worth it.

Dad, you said you had just finished some of those seemingly unending odd jobs around the house. Yes; winter is coming, and I hope the war ends before it hits full force. It won't be for lack of trying, that it doesn't end soon, believe me. You ask how much longer Jerry will hold out. That is a question which has bothered me since D-day. The Kraut is a good fighter, but we are better. We are fighting on the side of what is right. It will end when He says so, not before. To that I am reconciled. So I ask you to be patient, as I try to be. I'm not unhappy, just tired. We all want to say "The hell with it," but a Yank won't quit. It's not his nature. His uniform is worn with a certain amount of pride; that's as it should be. We are a powerful nation and are trying to show other nations how to live.

I, too, will be glad when I can sit back and relate verbally my many experiences, but patience is a virtue known well by the American soldier, because he knows he has no place to go for the present.

Muz, please don't worry about my hand, because it's O. K. now. My health is tiptop at present, and I want to keep it that way; so, Dad, you and I can have that wild party when I get home.

I am enclosing two propaganda leaflets dropped by Jerry. It shows the absolute ignorance the German higher-ups have of the American soldier. To think such trash could sway the determination in the minds of such proud guys as Yanks, does at least show the microscopic minds of the Germans.

Well, my mail comes pretty regularly, and I know you and dad are writing when you have some news.

As you have asked, I shall keep you informed as to whether or not I am still alive and kicking. I know how you must worry, so there's no use in asking you not to be so concerned.

Pleasant dreams, my darling Muz, and to you, dad. Goodnight; I shall be seeing you soon.

Your loving son,

RAY.

Is the O. P. A. Imposing on the Public Schools?

EXTENSION OF REMARKS

OF

HON. J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. CHENOWETH. Mr. Speaker, the parents of school children in Pueblo, Colo., are not very happy about the O. P. A. using schoolrooms to propagandize their program. Recently about a ton of printed matter was placed in the Pueblo schools by the O. P. A. for distribution to the children, from the primary grades on up. I presume this same attempt to reach the homes through the children is being made in every part of the country. The suspicion is created that the O. P. A. is seeking to perpetuate itself by creating the impression it is indispensable and an integral part of our Government.

One teacher made the observation that the O. P. A. is expecting the teachers to carry the ball for this agency, recalling that the teachers handled the registration for sugar, food, and gasoline ration books, and states they are now being used to peddle O. P. A. primers. It seems that several Mother Goose anti-inflationary rhymes were handed out, including one on jack-in-the-box as follows:

We don't like inflation
It causes alarm,
But if we don't start it
'Twill do us no harm.

For the sixth grade an O. P. A. price primer was supplied. This is a typical problem contained therein: "A grocer listed his ceiling price on sugar as 5 pounds for 35 cents. When Mrs. Jones weighed the sugar on reaching home she found it only 4½ pounds. What was her loss in money, and what was her loss when computed in percentage of sugar?"

I am advised that some of the teachers told the children to work these problems. Others threw the material in the waste basket. Certainly our teachers have enough to do without acting as agents for the O. P. A. to distribute their propaganda, to say nothing of the waste of paper and manpower involved.

I wish to include in my remarks an editorial from the Pueblo Chieftain which expresses my sentiments on this subject:

IS THE O. P. A. IMPOSING ON THE PUBLIC SCHOOLS?

No public institution supported by taxpayers' money has given more hearty cooperation to the Government in all of its many drives than the public schools, both officials and teachers, with scholars also doing their part in a splendid manner each and every time they have been called upon to do their bit to help win the war.

Recently, however, O. P. A. officials in Denver or Washington sent out to schools in both Pueblo districts several hundred pounds of miscellaneous printed matter containing about everything from a crossword puzzle to primary rhymes and other poetry. As usual, the teachers followed directions and did as they were requested, handing the literature to their scholars whether they agreed with the contents of the propaganda or not. That, however, is not the point. The point is that taxpayers' money is being wasted, paper is being wasted, and the time of both teachers and pupils is being wasted in trying to do what the Government, the O. P. A. section of it, wants them to do about 90 percent of which is absolutely nonsensical and unnecessary.

On some of the material sent to schools for distribution only one side of the sheet is used, and, on what is used, about 50 percent of the space is wasted, while boys and girls in all schools are doing their level best to gather up scrap paper to help win the war.

The Star-Journal and Chieftain have received many complaints about the O. P. A. trying to impose on the schools to put out such nonsensical propaganda. No complaint has been made against the schools, but there has been plenty against the O. P. A., and which, in our opinion, is entirely justified.

The Right Answer

EXTENSION OF REMARKS

OF

HON. MICHAEL J. BRADLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. BRADLEY of Pennsylvania. Mr. Speaker, under the unanimous consent which I have received I am submitting for printing in the RECORD an article appearing in the Philadelphia Record of January 23, by the Reverend Daniel A. Poling, pastor of Baptist Temple in Philadelphia. Dr. Poling is one of the best-known clergymen in our city and he has the affectionate regard of citizens of all

religious persuasions. I felt that this inspiring article would be of interest to all the Members of the House.

The article follows:

AMERICANS ALL

(By Daniel A. Poling)

THE RIGHT ANSWER

One night as I sat in a hotel just off Grosvenor Square in London, I received word that our son, first reported missing in action, must now be recorded "lost in action." At 9.30 the British radio unexpectedly blared the unwanted information.

The next day I went up to our SOS headquarters on the west coast of England. Two days later I was still in the daze of that announcement when I returned to London. My friend, the commanding officer, Lt. Gen. John C. H. Lee, invited me to come back with him. I occupied the apartment adjacent to his on the military train.

Where death is always so close to so many, matters such as mine are generally not subjects for conversation, but always in the service there is an understanding silence. A- I was retiring that night a knock came on my door and almost immediately the senior chaplain, Colonel Ternan, entered.

We sat together on the edge of my berth. He dropped a strong hand on my knee and said as though picking up a conversation previously begun, "Yes, it is so, sir. You will be helped to remember that God also gave His son. Tomorrow morning in the mass, I shall pray for you and his mother and wife and little boy."

He went out then and left me, but I was not alone. The Roman Catholic had comforted the Protestant.

On an island in the Pacific, a Catholic boy died in the arms of his Protestant chaplain—they had served together for more than a year and had come to know each other well. And now as may be under such circumstances and as he was trained to perform the service, the Protestant chaplain gave a modified form of the last rites of the Roman Catholic Church to the soldier.

The boy was bleeding to death and nothing could be done about it. His eyes were dim but he was not afraid.

Searching for his friend's face, gathering strength for his last words, he said, "Chappie, why can't we be like this—always?"

And the chaplain answered, "Son, we will be like this always."

Yes; that was the right answer. Where the boy was going and where he now is, there are no schisms and no divisions—all are one in the Father of us all.

Repeal of Daylight Saving

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. CANNON of Missouri. Mr. Speaker, in response to inquiries through the mail and from Members of the House, I submit herewith a letter from Chairman J. A. Krug, of the War Production Board, which is self-explanatory.

It will be noted that Chairman Krug says both he and Mr. Donald Nelson desire to remove these wartime restrictions as soon as the war-production picture justifies.

WAR PRODUCTION BOARD,
Washington, D. C.

Hon. CLARENCE CANNON,
Washington, D. C.

DEAR MR. CHAIRMAN: In response to your letter of September 14, 1944, enclosing excerpts from the CONGRESSIONAL RECORD approving the enactment of your bill, H. R. 4489, to restore standard time, I have had the material analyzed, as you have requested.

We have also received a great deal of correspondence on this subject in the past, and the objections to war time, which you printed in the CONGRESSIONAL RECORD, correspond very largely in tone, in origin, and in subject matter with about 90 percent of those which we have received. It is characteristic of such correspondence that more persons will write letters of protest than of commendation.

Two sources of criticism are particularly important, although they appear to be from a minority group: (1) The inconvenience to farmers whose dairy operations and truck-garden operations are least adaptable to war time has always been a matter of concern to us. We have, however, felt that much could be done by working out revised schedules of operation for some farmers, if not for all; (2) in the case of school children, the school hour has been turned back in many communities, we believe, to meet the crowded conditions in local transportation services caused by wartime restrictions on the gasoline supply of private motorists. The city of Washington, D. C., like many other cities, has staggered opening hours for Government, business institutions, and schools. The example given of local schools which do not open until 9:30 a. m. seems to us a very intelligent method of handling the problems created by morning transportation congestion and the inconvenience to little children who would otherwise have to get up and go to school in the dark.

The great mass of the correspondents are, because of personal inconveniences, opposed to war time and for the reasons set forth in Mr. Nelson's letter to you in the spring of this year, we feel that personal inconvenience is not sufficient to outweigh the great benefits to war production which we have derived from war time. There are some communities, however, which, because of their relative position in the time belt, have suffered inconvenience perhaps without any corresponding benefits to the wartime electric-power savings. The Interstate Commerce Commission has not seen fit to change the time belt, over which it has authority, with respect to the location of these communities, and the Congress refused to grant to the President in the original War Time Act authority, which he had requested, to exempt certain communities from war time. We, therefore, believe that there is no action which we can take on these communities' requests.

Mr. Nelson has expressed his desire in his letters to you and to other Members of the Congress to remove these wartime restrictions as soon as the war-production picture justifies removal of such controls. I share his opinion and his desire in this matter. As soon as I am informed that the progress of the war justifies relaxation of controls, I shall be only too happy to recommend the termination of war time. At this present critical period in the coming victory in Europe we are utilizing every resource at our command to complete the most urgent programs, particularly in ammunition and in trucks. The repeal of war time will involve either a dislocation of certain essential electric-power services or a rationing of electric energy for nonessential uses. I believe that many communities can make the necessary changes to avoid individual inconvenience, particularly in the case of schoolchildren and some farmers, so that the benefits of war time may be secured without any serious injury to the national health and morale, and without the need of additional rationing machinery.

I am very glad to have your friendly letter of inquiry on this matter, so that I may reaffirm both my belief that war time is still essential, and my hope that we shall soon be able to see such achievements in war production that we shall no longer need to retain these controls. The contributions of war time in the winter months are the most important of the entire war time savings statute. I understand the importance of your request, coming at this time of the year, but, having reviewed the entire situation, I have been unable to come to a conclusion now favorable to the enactment of your bill.

Sincerely yours,

J. A. KRUG, *Chairman.*

Mr. Biddle, the Breakers Hotel Case, and the Surplus Property Disposal Matter

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to revise and extend my remarks, I am incorporating herein, another excerpt from the memorandum submitted by Mr. Norman Littell, former Assistant Attorney General of the United States, to a Senate committee on January 8, 1945. This excerpt will supplement two other parts of the memorandum inserted in the CONGRESSIONAL RECORD on January 22, 1945, pages 426–430, and on January 24, 1945, pages A268–A270.

Mr. Speaker, at a time when the Government is engaged in the important job of rehabilitating our sick and wounded veterans of this war, when good hospital facilities are wholly inadequate, it is amazing to learn the real facts behind the Breakers Hotel case and the Attorney General's refusal to assist in keeping the hotel as a hospital. The facts in the Surplus Property case are just as surprising. So that the people may know the facts, I am incorporating them below:

THE BREAKERS HOTEL CASE, TRUMAN COMMITTEE

1. THE ISSUE

Mr. Biddle has not fully grasped the issues in his statement regarding this case. He gives the impression that this was wholly a War Department matter and that I intruded into it. The fact is that jurisdiction over the condemnation case by which the property was acquired was squarely and unequivocally in the Lands Division.

Having acquired by condemnation a leasehold interest for 18 months and having been unable to agree with the Florida East Coast Hotel Corporation on the rental value, the War Department, as usual in such instances, surrendered jurisdiction over the case to the Department of Justice Lands Division to determine the rental value by trial in court or by settlement negotiations. Liability for rental, plus the cost of conversion to a hospital and reconversion to a hotel might well

be so great as to suggest the wisdom of buying the property outright to continue this hospital for use during the war and resell it later, thereby avoiding a great economic loss. I telephoned to General Somervell on February 24, 1944, to point this out, and to say that a question of policy might well be raised thereby for the War Department. General Somervell invited submission of a memorandum after I interviewed the owners, appraisal witnesses, and lawyers on my staff in Florida.

Such memorandum was handed to General Somervell by me on March 14, 1944, and in a conference on March 23 in his office, he reaffirmed the decision to abandon the general hospital and turn it back to a hotel. He declined to consider buying it outright.

Considering the matter only from the economic viewpoint, this decision challenged consideration on a higher policy level than Somervell's, because it was wasteful of taxpayers' money and because many were convinced, as I was, that continuous pressure to return the property had been brought to bear by the Florida East Coast Railway and its subsidiary, the Florida East Coast Hotel Corporation, together with gambling interests in Palm Beach, which did not find such lucrative trade among wounded veterans as among the fashionable habitues of the famous Breakers Hotel. These interests wanted the hotel restored.

2. MR. BIDDLE AND THE TRUMAN COMMITTEE

The Truman committee was vitally interested. Mr. Biddle states positively that I had not been requested to furnish information on the Breakers Hotel, and that I had merely volunteered my statement; he also stated the belief that I had not testified before the Truman committee. These statements are untrue.

I had testified before the Truman committee on February 16 in executive session, with the approval of the Attorney General's office, on land-acquisition work in general and the Florida hotel acquisitions by the War Department in particular. The acquisitions of and subsequent disposal after short periods of time of the Breakers Hotel, the New Richmond Hotel, in Seattle, the Stevens Hotel, in Chicago, and other properties were specifically discussed as examples of wasteful "changes of mind" by the War Department. (See Truman committee report of March 4, 1944, regarding Florida hotel acquisitions by War Department.) Senator TRUMAN had himself visited the Breakers Hotel property and was strongly opposed to returning it to the hotel corporation.

It was most natural and wholly proper to give the Truman committee a copy of my report because of their continuing interest. That committee could and later did get all of the facts in a much broader investigation than my own. My report was a mere convenience to the committee.

When discussing Somervell's decision with counsel for the Truman committee, pursuant to past requests to keep the committee advised of developments, counsel asked for and I provided a copy of my report.

Although Mr. Biddle repeatedly labels my report as "confidential," there was no military secrecy involved; it was a plain matter of business judgment and a waste of taxpayers' money.

Again an apocryphal conversation is related by Biddle (p. 52) in which I am supposed to have told Mr. Fahy, then Acting Attorney General, "I don't think it was appropriate for me to take that down to the committee before asking the Attorney General about it." Sheer improvisation. I have always thought it was perfectly proper to provide the report and still do.

I said to Mr. Fahy however, that purely and simply because the Attorney General of the United States was so hypersensitive about testimony before congressional committees, that the submission of my report might possibly be construed by him as a technical violation of the Attorney General's rule against testifying without permission. If Mr. Fahy thought it was, I could get the report back. He did think so, and I did get it back.

This was a very foolish business, because my investigation of the matter and the existence of my report was well known. The evacuation of the wounded soldiers from the hospital had been postponed at Somervell's order from the end of March to the end of April in order to give time for Somervell to consider my recommendations, and this had been reported in the press. Of course, an official request was immediately written to the Department of Justice asking for my report and behind that request lay the power of subpena.

When the Attorney General put himself in the ridiculous position of refusing to surrender the report, it was subpenaed from him.

3. MR. BIDDLE AND SENATOR TRUMAN'S SUBPENA

Mr. Biddle says again that the subpena issued to him by the Truman committee was withdrawn. It was not withdrawn, and Senator TRUMAN so advised Mr. Biddle over the telephone. Mr. Biddle marked the original subpena canceled on phone before it went into the files and to the Lands Division, but this was not true. (The original subpena did not seem to be in the files later, but see photostatic copy attached as exhibit B). Neither was his statement to Senator TRUMAN that he did not have a copy—that Somervell had it. There were at least a dozen copies in the Department of Justice. Mr. Biddle furnished the report to Senator TRUMAN pursuant to subpena and there is no nimble way of escaping from that fact.

4. MR. BIDDLE AND GENERAL SOMERVELL'S ADVISORY COMMITTEE

While the Attorney General needlessly belabored the use of the word "confidential" in describing my report on the Breakers Hotel, and denied the report to the Truman committee on those grounds, at the same time he refused General Somervell's request to send me or another representative to a conference in the War Department on Monday, April 17, to review the entire matter because of the great public clamor against closing this hospital, on the ground that this had been my personal report. There was no reason, he said, to send a Department of Justice representative to determine the War Department policy.

While the War Department advisory committee appointed by Somervell was composed of subordinate officers who were not inclined to buck the decision of their commanding general, still there were conscientious men on that committee in the War Department who would have sought the truth only. Mr. Biddle's decision cut off from them the only objective analysis of the problem from outside of the War Department which was available to them, and which could have influenced the judgment of that committee. Naturally, Colonel O'Brien of the Real Estate Section supported Somervell's decision and gave figures to support that conclusion showing a much greater cost of acquiring the property outright than was justified by the facts in my opinion and in the opinion of disinterested experts in my staff who were the best qualified in every way to judge the matter. (See my memorandum of November 27, 1944, to this committee, showing that the hotel could have been bought for about $3,200,000 and resold after the war, thus minimizing cost and maintaining an excellent hospital while needed during the war, instead of paying about $1,400,000 for less than 2 years use. See also, Truman committee report on Breakers Hotel).

The advisory committee appointed by General Somervell therefore advised him to do what he had decided to do—turn the hospital back for use as a hotel. This was done even though the independent investigation by the Truman committee later reached the same conclusions I had reached—that the property ought to be acquired outright and used as a hospital at least until after the war. A major mistake in the war effort was thereby confirmed, the wounded men were removed and the restoration of the hospital to a luxury hotel has just been consumated at a great cost to the taxpayers—notwithstanding that the flow of wounded men from Europe is now rapidly exhausting hospital capacity to a point where new hospitals will be demanded.

Thus, a matter of vital public concern to the taxpayers, and of morale and principle in dealing with our wounded men, went by default without all available light being thrown on the subject in the War Department.

Mr. Biddle now says that he had no opinion on the merits of whether it ought to be kept, or whether it ought to be abandoned. Then he should not have denied to the War Department the competent well formed opinions of those experienced in the field.

5. MR. BIDDLE TAKES CHARGE OF THE CASE

It ought to be added that without consultation with me as to the history of the case, with no opinion on the merits, and acting with obvious and admitted exasperation over my supplying the Truman committee with a copy of my report, Mr. Biddle's first act on March 30, 1944, upon returning to Washington after an absence from the city during the controversy, had been to take the case entirely out of my hands. On Monday, April 3, written instructions were given that I should take no further action of any kind in the matter whatsoever.

I never at any time had a conference with Mr. Biddle in regard to the Breakers Hotel. In taking charge of the case—the only one which he ever took out of my hands—he acted in retaliation for my cooperation with this committee. It ought to be added that characteristically he thereafter did nothing in respect to the proper manangement of the case—the appraisal work and the highly complex problems of reconversion to a hotel being then in process of negotiations between counsel on my staff and counsel for the owners of the hotel. These matters hung in suspense for awhile until Mr. Biddle's attention passed on to other matters and then, in order to carry out the War Department's instructions to settle the case and turn the property back to the owners for hotel purposes by December 1944, the Lands Division finally resumed jurisdiction of the case. This has now been done, and the fashionable Breakers Hotel is again in full swing at Palm Beach, Fla.

SURPLUS PROPERTY DISPOSAL—TESTIMONY BEFORE TRUMAN COMMITTEE

1. REQUESTS AND AUTHORITY FOR TESTIMONY BEFORE SEVERAL COMMITTEES

The incidents relating to my testimony before this committee on August 17, 1944, respecting the penetration of the National Association of Real Estate Boards' lobby into the disposal policies of Mr. Will H. Clayton are recounted in my memorandum of November 27 and are well known to this committee. That week in Washington was journalistically called, "Surplus Property Week," as the Surplus Property bill absorbed almost the entire time and attention of Congress. Mr. Biddle was on the west coast.

Mr. Biddle implies in saying that these incidents "for some reason occur when I am away," that there was some sort of collusion between this committee and myself in regard to testifying, although as counsel and members of this committee know, the request by telephone to appear before your committee came to me out of the blue, with no advance knowledge whatsoever on my part. I promptly referred the request to Acting Attorney General Fahy and thereafter received instructions over the telephone from

him that my appearance before the committee was approved.

Mr. Biddle fails to see that after almost 6 years as head of the Lands Division, engaged in land acquisition work for all agencies of Government throughout the war effort, it was more than natural that any committee considering this subject would call me as a witness. When the request came from the Truman committee, I had already testified before the Manasco committee earlier in the year (with Mr. Biddle's approval), and again before the Manasco committee only a few days before the Truman committee hearing was to be held on August 17. I was also to submit a memorandum to, and possibly appear before the Military Affairs Committee in the Senate on the succeeding day, August 18, all with the approval of Mr. Fahy, Acting Attorney General.

Mr. Fahy had cleared with counsel for the Truman committee as to my appearing there. I never for one moment assumed that there would be anything but the broadest latitude of inquiry, just as there had been before the Manasco committee earlier in the year, nor did I doubt that I was fully at liberty to answer completely any questions the committee members saw fit to ask me. I stated the facts fully regarding the penetration of the National Association of Real Estate Boards' lobby into the counsels of Mr. Clayton, and these facts have not been refuted.

If Mr. Fahy confused the scope of this Senate investigating committee with the narrower technical questions which were to be discussed as to the Clayton bill pending before the congressional committee and the Senate Military Affairs Committee, this was not my responsibility.

2. MR. BIDDLE ON CLAYTON'S POLICY BOARD

Mr. Biddle complains also that he himself was on Will Clayton's Policy Board "composed of representatives of the various administrative bodies of the Government" and that Mr. Biddle was "a very active member of the board" * * * because "he thought it was so tremendously important." He sat on the policy board from February to August, and with all his tremendous interest, hadn't the slightest idea of what Clayton was doing or of what was going on in respect to the assignment of surplus agricultural lands for disposal by R. F. C. or the activities of the National Association of Real Estate Boards.

I was also tremendously interested. In fact, immediately upon returning from a business trip to the Pacific coast in June 1944, I called Mr. Clayton to inquire as to certain policies which I heard were being followed. In correspondence which ensued between us and in collateral inquiries from sources available to me, I discovered Clayton's devious methods of routing agricultural, grazing, forest, mineral, and miscellaneous lands into R. F. C. as a liquidating agency—also the extraordinary degree to which the National Association of Real Estate Boards' lobby was dominating the situation. My views were well known among trained land-acquisition men in the Government and Clayton's views were widely discussed.

When I was summoned before the Mead committee I stated these facts. With such vital legislation pending, I should have been remiss in my duties as Assistant Attorney General not to do so. The public interest was clearly served by my doing so. Nothing could have been accomplished by approaching Mr. Clayton directly; I had already done so and was as rudely cut off by him as the Secretary of Agriculture had been when he asked Clayton for consideration before assigning agricultural lands to R. F. C.

3. PUBLICITY

Again, Mr. Biddle is bothered by publicity and he objects "that the papers headlined it that Will Clayton, in league with the real-estate agents, wished to have lands sold by the R. F. C. instead of Agriculture. There was a blast in the newspapers * * *."

That was exactly true, but it was this committee and not the writer which held the open hearings and rightly so. Congress and the country needed to know the facts. Publicity was inevitable due to the significance of the facts and public interest in surplus disposal. Mr. Biddle was not concerned with the truth or falsity of what was said—and the truth still stands unshaken—he was concerned solely with "publicity."

4. BIDDLE'S AGREEMENT WITH MY TESTIMONY

At this late date he ventures to say, "I entirely agree with Littell's point of view in that. In fact, in none of these cases do I disagree with the results of his efforts or the purpose."

In the midst of "surplus property week" when Congress was trying to adjourn, as in the Elk Hills case, could it be expected that Congress would postpone its hearings on surplus property until the Attorney General returned from a trip to the west coast? If he had returned in time, would he really have said to Will Clayton, as he now claims (p. 58), "Will, I think it is a great mistake for the R. F. C. to distribute this land, and I am going to tell that to Congress," or would he have taken the position he did in fact take in his letter to Will Clayton of August 22, written by Acting Attorney General Fahy, at Biddle's instructions over the long-distance telephone, wherein he first instructed Mr. Fahy to say that my testimony expressed my "personal views only" and that he hoped the incident would not affect the cordial relations and cooperation which had existed between Mr. Biddle's office and Mr. Clayton's?

Only after the score was in and Mr. Biddle found that his only support in the press was in the trade papers of the National Association of Real Estate Boards, along with their heroic defense of the unhorsed Mr. Clayton, did he finally determine that I was right.

At the time it was overwhelmingly clear that my testimony before this committee was to be the subject of discipline. As Mr. Fahy said, when in contact with Mr. Biddle by long-distance telephone, this was "the third time this had happened" (i. e., testifying before a congressional committee)—once in the Elk Hills petroleum reserve matter, once in the Breakers Hotel case, and now in surplus property, and that as far as he was concerned it had "happened once too often" and that he "didn't care to consider the merits."

In what contrast is the Attorney General's present testimony to this effect: "I think it would not have been inappropriate for Mr. Littell to say to me, 'Don't you think, Mr. Attorney General, that land should be distributed by Agriculture or Interior?' before testifying before the committee. I would have said, 'You were dead right,' and I say so still. I would have said, 'Go down and say that.'"

A Judge Views Bankruptcy

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. Grover M. Moscowitz, United States district judge, eastern district of New York, at the annual banquet of the New York Members Association of the Commercial Law League of America, on December 11, 1944:

Before evaluating the system under which bankruptcy is presently administered, it is well that we look to the history which must form the backdrop for any current philosophy we may have on this subject. The concepts which were originally embodied in bankruptcy legislation have undergone revolutionary changes since the early English statutes in this field.

The first laws in England became effective in 1542[1] but it can hardly be said that they concerned bankruptcy in the sense that we now understand that term. They applied only to the class known as traders and were no more than an authorization to creditors to seize the property of a debtor who had either fled the Kingdom or "kept house." Following the acquisition of individual rights under Magna Carta, one of those most zealously treasured was the freedom from illegal invasion of one's house by officers of the Crown. As is unfortunately so often the case, unscrupulous traders soon capitalized on this sanctuary and concealed property in their homes. The word "bankrupt" comes from the Italian for broken bench or bank and referred to the termination of the trader's commercial activity by literally breaking the bench on which he plied his wares, the creditors seizing his property and dividing it amongst themselves. There were no exemptions nor was the debtor discharged of his obligations. In 1571, three more acts were added to those justifying the seizure of the debtor's property.[2] Outlawry and imprisonment for debt under the writ of capias ad satisfaciendum were two and the third was to fill a loophole; being precluded under the earlier law from keeping property at home, it seems that churches offered a haven for concealing assets and it required special legislative enactment to render this practice equally vulnerable.

The Constitution of the United States grants to Congress the power to establish uniform laws on the subject of bankruptcies[3] and Federal jurisdiction is paramount to the extent that Congress has chosen to assert it.[4] Prior to the act of 1898, pursuant to which, as amended, bankruptcy is today still administered, federal legislation was evidently for emergency purposes only. A national law on the subject was enacted following each of three major depressions and promptly repealed again upon the return of prosperity.[5] During this whole time, individual States had insolvency laws seeking to control various aspects of a debtor's embarrassment. For the short intervals of asserted Federal control, these State laws were merely suspended insofar as they were in conflict with the national legislation and were revived when Congress repealed its measures. It has been held that State insolvency laws are valid and continue operative to the extent that they do not conflict with the paramount Federal law.[6]

The first act of Congress (1800) embodied the concept that a bankrupt debtor is ipso facto dishonest, which had prevailed under the English system enforced in the Colonies

prior to the revolution. It likewise applied only to traders and a discharge of the debtor by his taking the initiative was unknown. It was not until the second Bankruptcy Act (1841) that the discrimination to traders was eliminated and that provision was made for a voluntary discharge, thereby recognizing that a debtor might be honest but unfortunate and that society might benefit most if such a debtor were given a chance to start anew with a clean slate.

The purpose of permitting a person in effect to compel his creditors to release him from obligations which he had consciously incurred is to enable an honest and well-intentioned debtor to relieve himself of a noose which might otherwise remain around his neck for life. Just as will be the case in many instances after the present war comes to an end, unpredictable circumstances sometimes catapult even a person of undoubted integrity into a state of financial stress from which he will be totally unable to extricate himself. In these cases, it is just and proper that a debtor be permitted to surrender all his nonexempt assets to the court for equitable distribution amongst his creditors and to be relieved of those claims. In contrast, the willful refusal to pay just debts should be zealously guarded against in administering bankruptcy laws.

Gradually the theory of composition and creditor control has gained a commanding position in our system of bankruptcy. The recent depression—perhaps the only one our youth permits us to remember—introduced the new philosophy of rehabilitation of honest debtors as the best means of serving the social and commercial interest of the Nation. It was realized that the dumping at sacrifice prices required by a forced liquidation only further unsettled an already disturbed market. To effectuate this new philosophy and to clarify and improve the entire administration of bankruptcy, the Amendatory Act of 1938, better known as the Chandler Act, was adopted.[7]

A number of rehabilitation schemes are provided for in the revised act. Arrangement proceedings under chapter XI take the place of compositions and extensions of unsecured debts under sections 12 and 74 of the old act, as amended. Chapter XII deals with real property arrangements by persons other than corporations and chapter XIII concerns wage-earner plans which have been designed to relieve wage earners from the harassment of garnishments and attachment proceedings and employers from the trouble and expense in connection therewith. The very important corporate reorganization provisions appear in chapter X, successor to section 77B. These rehabilitation sections apply to one who is insolvent in the equity sense; i. e., unable to meet his legally incurred debts as they mature, as distinguished from the ordinary insolvency, which is the inadequacy of the debtor's assets, at a fair valuation, to pay his liabilities That the constitutional grant of power to Congress to enact uniform laws concerning bankruptcies extends to these cases has been judicially passed upon and upheld.[8] The uniformity required is geographical and not personal.[9]

Bankruptcy might be defined as the status of a debtor declared by judicial process to be unable to pay his debts. This definition suggests the error of interchangeably using the terms "bankruptcy" and "insolvency"; one who is insolvent is not a bankrupt until his status has been judicially declared. Bankruptcy is an in rem proceeding, and insofar as the adjudication declares the status of the debtor it is conclusive upon all the world, and even strangers to the decree may not attack it collaterally, but it is not res adjudicata as to the facts or as to subsidiary questions of law upon which it is based except as to parties to the proceeding or their privies.[10]

Despite the valiant attempt by the legislators in the Chandler Act revision to minimize abuse of the true purposes of bankruptcy, inequities sometimes still appear but it is the creditors themselves who are in large part responsible. Lack of proper investigation before credit is extended and a general apathy toward the bankruptcy proceeding when the credit has gone wrong are two mistakes which business would do well to remedy. I suppose competition for customers in normal times brings about the former but that is out of my line and I shall leave it to you to ponder. The writing off of an account as soon as a petition in bankruptcy is filed, presumably with the thought that to pursue the matter further would be sending "good money after bad," is a showing of little foresight.[11]

Only by vigorous prosecution of bankrupts who violate criminal statutes or the penal provisions of the Bankruptcy Act,[12] will frauds be deterred. The United States Attorneys' office has an enviable record of convictions of bankruptcy fraud perpetrators, largely due to the indefatigable pursuit of suspects by the Federal Bureau of Investigation agents but the Government does not act until its attention has been called to a criminal violation. It has happened that creditors who filed specifications of objections to a bankrupt's discharge have been bought off, thereby permitting the unopposed discharge, since the statute in its present form requires the court to grant the applicant a discharge unless one or more of enumerated unauthorized acts is alleged and proved.[13] All unsecured creditors are to be treated alike and settlements with individual creditors are prohibited.

The theory of bankruptcy is creditor control and this is intended to mean by representatives of a majority. Yet it frequently develops that an active minority in fact controls the proceedings. All the creditors whose claims are scheduled are entitled to attend a meeting, of which they are given notice by the referee, and at that meeting to elect a trustee who will be charged with the duty of pursuing all the bankrupt's assets and converting them into cash for distribution. In practice, it too often happens that many creditors do not appear or take any interest in the matter, only to wake up too late to the loss which they have suffered by their indolence.

The Bankruptcy Act appears to set forth in unambiguous language the contents of a proof of claim entitled to be allowed.[14] But judicial emasculation has rendered this requirement nugatory and anything which a strained imagination may construe as apprising the referee that a claim is being made has been held to satisfy the statute, so as to permit amendment later in accordance with subdivision (n) of section 57.[15] Our Circuit Court stated only a few days ago that there has as yet been no authoritative determination of the question whether the Chandler Act has established stricter requirements which make inapplicable cases involving the liberal amendment of claims under the statute as it formerly existed.[16] There is thus no excuse for a creditor not filing some notice of his claim within 6 months after the date set for the first meeting of creditors, the time prescribed by the statute, and he may regret not having done so.

A rather harsh result possible under the old law of creditors not seasonably filing their claims was remedied by the amendment of 1938. The omission to file where there were few or no scheduled assets was not considered significant until assets were unearthed by the trustee after the time had expired for filing. Formerly, if the assets in an estate were sufficient, after administration expenses, to pay all creditors whose claims had been allowed, any surplus remaining went to the bankrupt. Section 57 (n) of the Bankruptcy Act (11 U. S. C. A. 93n) now provides that when all claims which have been duly allowed have been paid in full, the court may fix a time for the filing of claims which were not filed within the prescribed time and these, if approved, shall be allowed out of any surplus remaining. The Circuit Court of Appeals for the Second Circuit recently considered this section of the act and held that "paid in full" meant that interest was also to be paid on the allowed claims before application of any assets to the payment of claims of equal priority not seasonably filed.[17]

Another factor materially increasing the number of bankruptcies is the ease with which a corporation may be formed in New York and some other States and the absence of public control over its financial status. To the extent that it is our public policy to permit incorporation for the purpose of limiting personal liability,[18] we are all indirectly to blame for this situation. Individuals with no sense of moral responsibility are not seriously concerned when they can organize a corporation with few, if any, assets, incur obligations, and when the corporation is adjudicated a bankrupt, repeat the process with a new corporation. I am not suggesting the abolition of corporations as such but I do think that many of the abuses arising from dummy and fly-by-night corporations could be eliminated by requiring public disclosure of the assets to be invested upon formation and of periodic balance sheets thereafter.

Another result of the Bankruptcy Act in its present form which is glaringly inconsistent with its purposes is illustrated by this factual statement. A negligently[19] injures B in an automobile collision and a verdict of $10,000 is rendered against him on the trial. Though A have an annual salary of $15,000 or more, he may nevertheless file a voluntary petition in bankruptcy and be relieved of this obligation by relinquishing his present assets.[20] B is without a remedy, whatever his plight.

A proposal currently receiving considerable attention would go far toward curing some of the evils to which I have alluded and would effect a most significant change in bankruptcy

administration. I have reference to the suspension and conditioning of discharges, a practice which has been employed in England and in Canada for some time. The Committee on Bankruptcy of the Judicial Conference of Senior Circuit Judges, under the chairmanship of Judge Orie L. Phillips, recommended the adoption of this practice into our bankruptcy system and in its September 1944 report to the conference incorporated its preliminary draft of a proposed bill to amend the Bankruptcy Act to effectuate the suggestion.

The bill drafted by the committee would require the court to suspend the discharge for a period not exceeding 2 years if satisfied from such evidence as has been adduced "(1) that the assets of the bankrupt at the commencement of the proceedings were not of a value equal to 50 cents on the dollar of the amount of his provable debts, unless he satisfies the court that such fact has been due to circumstances for which he cannot justly be held responsible; or (2) that he contracted any provable debt within 4 months prior to the commencement of the proceedings without having at the time of contracting it any reasonable or probable ground of expectation of being able to pay it; or (3) that he has brought on, or contributed to, his bankruptcy by rash and hazardous speculations or by unjustifiable extravagance in living, or by gambling or by culpable neglect of his business affairs."

The bankrupt would be required to turn over to the trustee all the nonexempt assets which he had at the time of adjudication and all that he acquired during the suspension period, excepting a reasonable allowance, fixed by the court, for living necessities of himself and family and, if the court permits, property necessary for the conduct of a business in which he is engaged. The bankrupt would be required to submit to the trustee periodic reports of his assets, income, and expenses. If the court finds at the end of the period that the bankrupt has attempted in good faith to comply with the terms of the suspension order, he may be discharged; otherwise, the discharge may be denied.

I believe the proposed 2-year limitation on the period of suspension is too short. In England, for more reasons than the three embodied in the committee's bill, a discharge may be suspended for a period not less than 2 years, no maximum being prescribed. An exception is made where the only fact proved is inadequacy of assets at commencement of the proceeding, in which case the court may order suspension until such time as the assets attain the specified proportion. The English act also provides the additional feature of authorizing the granting of a discharge on condition that the bankrupt make prescribed payments out of future earnings, no reference being made to his personal or family necessities, although the court presumably would take that factor into consideration in setting the amount to be paid.

It is also interesting to note that since the act of 1914 a bankrupt in England incurs criminal liability if, being engaged in trade or business and having incurred debts therein, he contributes to his insolvency by gambling or rash or hazardous speculation during 2 years before the filing of the petition. Perhaps such an extreme damper would not be welcomed by the chance-loving American people, but it does seem advisable that at least some provision, such as the suspension of discharge, should be available to limit the speculation of debtors.

In one more respect the English bankruptcy law is more liberal to creditors than that of our own country. You all know that an involuntary petition may be filed against a debtor who is insolvent and who has committed an act of bankruptcy prescribed by the statute within the preceding 4 months. It may well be that the assets of an insolvent debtor will be dissipated before an act of bankruptcy is committed so as to justify the filing of an involuntary petition. The English law is similar but the act of bankruptcy most frequently relied upon is a "notice of bankruptcy," a summary device not provided for under our law. It appears to be no more than a notice by a judgment creditor ordering the debtor to pay, secure, or compound the debt within 7 days; failure to comply is an act of bankruptcy.

A heavy burden rests upon one who subsequently becomes a bankrupt to keep, maintain, and preserve books of account or records appropriate to the financial activities in which he engages. Creditors should not be required to guess, speculate, or surmise what disposition the bankrupt has made of his assets. A bankrupt who is engaged in business who has failed to keep or preserve books of account or records from which his financial condition and business transactions might be ascertained is not entitled to be discharged in bankruptcy.[21] At the beginning, when the bankruptcy law was first enacted, this provision was not so strictly enforced as it is now. In a recent prosecution for fraudulently concealing and transferring property from the trustee, it was held to be a proper inference for the jury to make from the keeping of inadequate books that this was done with an eye to future bankruptcy.[22]

A bankrupt who has obtained money or credit by making a materially false statement in writing respecting his financial condition is not entitled to be discharged.[23] The purpose of holding a bankrupt to strict accountability in filing truthful financial statements is to encourage greater honesty in business transactions and one who violates this requirement is given short shrift in the bankruptcy courts.[24] In one respect, this law may be too harsh. A person honestly seeking a discharge from substantial debts may have made a statement in applying for a $50 loan many years ago that he had no other debts, when in fact he owed another obligation. Both that obligation and the $50 may long since have been repaid but his having made that statement, which was relied upon at the time, will forever bar his being discharged in bankruptcy.[25] Some discretion should exist in the court to rule out such an objection. It has been suggested and not without force that an investigative agency be set up to look into the acts and conduct of a bankrupt who seeks a discharge. This would be particularly effective if the court were empowered to suspend or condition discharges.

The present war has become a factor in bankruptcy administration in more ways than one. Easy war money has left its mark on the bankruptcy courts. In 1943, the number of new bankruptcy cases brought in the United States was 33.4 percent less than in the year before and in 1944 the number declined another 44 percent, aggregating a reduction of 62.5 percent in just two years. In figures, the drop was from 52,109 new cases in 1942 to 19,533 during 1944. This leaves a lower number of cases pending than at any time during the past 30 years.[26] This situation has become a matter of serious concern to the referees, many of whom in our metropolitan areas devote their full time to their official duties and have become expertly familiar with the details of bankruptcy administration. It is desirable that they be retained for the performance of their functions when the inevitable recurrence of bankruptcy cases in normal numbers materializes after the war. At present, referees are compensated on the basis of fees only and with the decline of cases mentioned, many referees are not earning enough even to maintain their offices. A bill is pending in Congress (H. R. 1107) which would put referees on a salary basis and its advocates state that the present cost to the Government could be reimbursed from contribution of the parties in high volume years. Bills are also pending in Congress (H. R. 4131, 4132, S. 1620, 1622) which would carry into effect another current suggestion, which is that the existing prohibition against referees acting as United States commissioners be removed so as to permit expedient combining of the duties of these two offices.

The Soldiers' and Sailors' Civil Relief Act of 1940[27] seeks to protect the civil rights of persons in the armed services. The law provides for the temporary suspension of certain legal proceedings and transactions which might prejudice those rights and enjoins the entry of default judgments in some cases, requiring the court to appoint an attorney to represent the defendant who is or may be in the service. In what was apparently one of the first constructions of the effect of this legislation upon bankruptcy proceedings, I held that where there were a large number of bondholders in a chapter X reorganization, whose interests were all on an equal basis of priority, some of whom were directly represented by counsel and disinterested trustees who were appointed to protect the interest of all the creditors, the matter could proceed to final determination and title to real property would be marketable even though some of the bondholders not actively participating might be in the armed services. The mandatory provisions of the act do not apply to a chapter X proceeding. However, under the discretion vested by the statute in the court to appoint an attorney in any case, I appointed the attorneys for the indenture trustee to represent bondholders who are or may be serving in the armed forces.[28]

An interesting question incident to our wartime economy is whether the bankruptcy courts, in selling property of an estate, are bound by price ceilings promulgated by the Office of Price Administration under authority of the Emergency Price Control Act of 1942.[29] The Bankruptcy Act requires the sale to be at public auction to the highest

---

[21] Sec. 14c (2) of Bankruptcy Act, 11 U. S. C. A. 32c (2). My most recent occasion to apply this provision was In the Matter of Charles H. Schwartzman, No. 45511, opinion dated Nov. 25, 1944. See *Benjamin* v. *Jaspan* (2 Cir., 144 F. 2d 58), certiorari denied, Nov. 27, 1944.

[22] *United States* v. *Rosenberg* (2 Cir., 145 F. 2d)—decided Nov. 3, 1944.

[23] Sec. 14c (3) of Bankruptcy Act, 11 U. S. C. A. 32c (3).

[24] The Circuit Court of Appeals has gone so far as to affirm a holding, where a debtor answered in proceedings supplementary to judgment that she was not employed, when, in fact, she was earning a weekly wage of $25 that she had thereby concealed property with intent to hinder, defraud, or delay creditors which, under sec. 14c (4) of the Bankruptcy Act, 11 U. S. C. A. 32c (4), barred her discharge. *Kaganowitz* v. *Manufacturers Trust Co.* (2 Cir., 145 F. 2d 754), decided December 4, 1944.

[25] I recently applied this law in the matter of *Frank Savarese* (56 F. Supp. 927).

[26] These statistics were taken from the Annual Report of the Director of the Administrative Office of the United States Courts, September 1944.

[27] 50 U. S. C. A., App. 501, et seq.

[28] *In re Realty Associates Securities Corporation* (53 F. Supp. 1015). This case is discussed at length in (1944) 18 J. Nat. Assn. Ref. in Bankruptcy 117.

[29] 50 U. S. C. A., App. 901 et seq.

bidder,[30] so as to procure the greatest advantage to the creditors. Those who maintain that the limitations apply argue that the war powers acts are statutes enacted for the safety of our national existence and that Congress could not have regarded the rights of creditors in a bankruptcy proceeding as more important than the objectives of the war effort.[31]

Those holding the contrary view urge that the declared purposes of the war powers acts will certainly not be violated in a judicial proceeding. It is asserted that a court of justice will not be presumed to encourage speculative, unwarranted, and abnormal price increases or to do anything else that is not in the interest of national defense.[32] Under this construction the Bankruptcy Act is deemed to be a specific, complete, comprehensive statute, permanent and exclusive in its operation, whereas the price measures are temporary and general and thus cannot by implication repeal or supersede the Bankruptcy Act.

I could go on making more suggestions for better bankruptcy administration and giving you more views as to what creditors should do and what lawyers should not do, but in the long run it is only through the cooperative efforts of all those who play a role in this field that we may hope to achieve the objectives we have stated. Bankruptcy laws should aid the honest debtor and discourage dishonest ones. Creditors, attorneys, accountants, credit agencies, enforcement officers—all must recognize their obligations in the democratic system under which bankruptcy proceedings are conducted in our country. Vigilance reaps rewards, if not compensatory in a particular instance, certainly contributive to the improvement of bankruptcy administration as a whole and that result can only redound to the ultimate advantage of all.

---

[30] Sec. 30 of the Bankruptcy Act (11 U. S. C. A. 53) provides that all rules, forms, and orders as to procedure and for carrying the act into effect shall be prescribed by the Supreme Court. General Order No. 18 (11 U. S. C. A., following 53) states that "All sales shall be by public auction unless otherwise ordered by the court." General Orders of the Supreme Court have the effect of statutes. *Orcutt Co.* v. *Green* (204 U. S. 96, 27 S. Ct. 195, 51 L. Ed. 390). Competitive bidding is the essence of an auction and the highest price must be obtained. *Porter* v. *Graves* (104 U. S. 171, 26 L. Ed. 691.)

Lincoln-Douglass Address

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I include an address on Lincoln and Douglass by Lt. George W. Lee, one of the South's outstanding colored men, delivered over Station WMPS February 12, 1944, together with an introductory statement by Columnist Nat D. Williams.

INTRODUCTION

W. C. Handy placed the colored man's feelings in musical notes, and set a style in tunes which swayed the shoulders and tickled the feet of kings and potentates, who, even at their dizzy heights, could catch and hold the lowly but potent meanings of a lyric which says, "Been working on the levee for a dollar and a dime a day, gave the dollar to my baby and threw the dime away." Handy materialized the Negro's feelings in song.

When another Memphian, a friend and contemporary of Handy, not a musical troubador, but a staid and progressive businessman, not a musician who played with brass and tympanic instruments, but at heart a poet who caught the rhythm and emotional currents of his time and environment and curled them around words to produce a peculiar music of their own, he did for the Negro's feelings in words what Handy had done for them in notes of music.

His books, Beale Street (Where the Blues Began), River George, and Beale Street Sundown, constitute the one and only authentic and polished literary expression of the blues idiom of the Negro expressed by a Negro. Just as Handy took the white man's musical notes and apprehended and presented the emotions of his people, Lt. George W. Lee, Beale Street, author businessman, civic leader, and World War No. 1 hero, took the white man's language, and with unparalleled wizardry and an unmatched mastery for a neat turn of phrase expressed in the rhythm of the blues, the Negro's feelings in books.

Lieutenant Lee is chairman of the colored division of the Memphis-Shelby County War Finance Committee. His division in previous war-loan campaigns has made Memphis the Negro War bond capital of America, utilizing the lieutenant's unique flair for showmanship, a flair which has bobbed up with telling effect in each of the previous campaigns, tonight's program is an endeavor of the division to pay tribute to Abraham Lincoln and Frederick Douglass, whose birthdays are at hand, through encouraging the purchase of thousands of dollars in War bonds as a tribute to the memories of these two great Americans.

NAT D. WILLIAMS, *Columnist.*

ADDRESS OF LT. GEORGE W. LEE

My friends, both white and colored, I am speaking to you tonight on two great Americans. They are symbolic of the American communities, that like so many sunflowers turn their faces to the warming focal point of their ambitions and hopes.

One was born a slave, but in manhood's morning he broke the fetters that chained him to the black barge of miserable oblivion, and rose from bondage despite overpowering oppression and inhuman contempt. His name was Frederick Douglass. He was the finished painting of a glorious pattern, revealing a startling picture of what Lincoln saw, deep beneath the surface of the abject blacks. Through Douglass, the symbol of the American Negro, the Declaration of Independence, in whose text is found a divine flavor, was proved. The Constitution vindicated and freedom itself was loosed from the ugly grasp of night.

The other was born in the lap of freedom, but was handicapped by economic slavery. He was nursed in a cradle of despair and grew up in a windowless cabin on a hard dirt floor, as a gangling farm boy. Something occurred in the life of this farm boy and he became conscious of his inner powers; powers that lifted him gently on to the towering peaks of his Shangri La. No one knew when the eternal miracle occurred in the life of this boy. It may have been at the noon, when he plowed along through the field, turning up the fresh brown earth, or it may have been on a flat boat drifting down the river through the dreamy woods and the lonely countryside, it may have been in New Orleans, where he saw slaves exchanged for whole cotton fields, pressed into silver coins.

The world knows him today as Abraham Lincoln. A plain homespun American, with simple rugged honesty. He was the personification of the common people, the embodiment of all that was, and all that is, distinctively American. He saw through the experience of suffering, and appreciated all that suffered. He felt the touch and pangs of sorrow, experienced by every creed, and extended a hand as ancient as the sun. His was a lifetime of ceaseless struggle, to lift all humanity out of the quagmire of a lowly existence. He carried with wisdom the understanding of unspeakable divinity, and like a tree planted by the water, could not be moved by the ceremonies of human judgment. He heard the cry of a people borne down with distress, and comforted them in dark and troubled hours.

Carl Sandburg in describing him said, "That when light sprang into the grey eyes and fires of emotion flooded out over the sacred tissues, then sometimes it appeared as if Lincoln's soul was fresh from the Creator."

Lincoln was not of the North, he was not of the South. His country was the universe, and all humanity was his brother. He stood in the center of two extremes, the extremist of the North and the extremist of the South. His love lingered with the South, but destiny called him to the North, to Illinois, where the stage was set for him to carry out the lonely and majestic task that had been started by Thomas Jefferson, of Virginia. Thus, Virginia and Illinois became twin sister of Liberty.

Both Douglass and Lincoln were called upon to make two great decisions upon which the whole course of their lives would be determined. The decision that Douglass made when he refused to go with John Brown to Harpers Ferry serves as a pattern even until this day to those leaders of the minority group, who are fighting to keep, "Race militancy below the danger point of violent reaction." The decision that Lincoln made to sign the Emancipation Proclamation is an admonition to leaders of the majority group to battle the angry storm of race and religious hate, before the crushing waves of intolerance engulf us, and thus poison the blood stream flowing from the warm heart of American life, with the polluted blood oozing from the wounds of Fascism.

It was a hard decision that the black man, Douglass, was called upon to make. Leonard Ehrlich gives a graphic description of the meeting of Douglass and John Brown in an old abandoned shack, well back in the hills.

"I knew you would come, Douglass; I knew you would not fail me," John Brown said. Now, for the first time, he spoke aloud his plans. What were those plans? "A silent night-march into Virginia, the arsenal at Harper's Ferry captured, liberty spreading southward like a trail of fire, do you see it, Douglass?"

"Brown," Douglass gasped. "The Nation roused, chains dropping," consternation flooded Douglass. "In the name of God, what madness was this, Brown; it's mad, it's mad, I tell you," the black man exclaimed. The words were like a sudden blow to the fevered old man. "I say it's mad, and you cannot do it," Douglass continued. Brown stood frozen. A sickness rose in his eyes, "You, too, Douglass, are going to fail me." "God, Brown," Douglass exclaimed, "can't you realize what you'd be doing? You'd be attacking the United States Government, it would be treason. The whole country would turn against us, the whole movement would be set back 50 years; you want to help the slaves, why then do you think of doing the very thing that would harm them most?" So Douglass' decision was against John Brown, because he thought in his heart

that Brown's plan would bring down the Nation's anger upon the whole slave question.

When Douglass turned away from Brown and went home, he put love of country above love of race. I believe he knew in his heart that America with so many races could never achieve her destiny if one race placed its welfare above the welfare of the country.

The decision that Lincoln made was no less difficult. He had resolved on his course. He told his ministers he had not called them together to ask their advice, but to lay the subject matter of his proclamation before them. Thus, he read aloud the original draft of the Emancipation Proclamation.

The Declaration of Independence declared the liberty of a free people. The Proclamation of Emancipation was the completion plan of the Declaration. It was the culmination of what Jefferson had begun.

Jefferson wrote something that the world had tried to write for many centuries. Lincoln accomplished what the world had tried to accomplish for many centuries. Destiny stood behind him and pushed him on to a distant goal, to the towering and unattainable peak of a mighty idea. Step by step, he fought his way up against the opposition of men both North and South, until he had led the Nation from the shades and shadows to the glorious dawn, where men both North and South realized at last that a house divided against itself could not stand, and that our nationalism accept no North, no South, no East, no West, but one country, one flag, with the Eternal God as our refuge, and over all His everlasting arms.

There are five elements that made Lincoln great. Destiny, the invisible hand that pushed him on through the great forest to the highest pinnacle of earthly grandeur and renown; his wife, of Southern extraction, discovered in him his true worth and lashed him into action; the Negro whose shackles gave him the spring board for action.

Gen. Robert E. Lee, who refused Lincoln's invitation to command the Northern Army, and whose intrepid leadership inflicted such heavy losses upon the North, that Northern opinion was forced to yield to Lincoln's idea of emancipation as a desperate measure to stave off defeat. General Lee had furnished the great drama of the war. Even though he was fighting against the Negroes' liberation, he wrote with his own hands the passes that enabled his slaves to cross the southern line and enter territory held by the Union forces.

Lincoln's fulfillment of the great command, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto Me," caused H. G. Wells to name him one of the six great men of all times. But a few years later, General Lee was to almost match this splendid Lincolnian tolerance. Simmons draws a lively picture of the scene.

A lonely, downtrodden ex-slave moved down the center aisle of the most fashionable church in Richmond, Va., and went to the altar and knelt and began to weep. Consternation swept over the white congregation. The priest looked on with amazement and cried, "Take him away."

The most illustrious figure Virginia ever produced raised himself from his seat in a majestic manner, moved down the aisle and knelt by the side of this black man on the Altar of God. He was Gen. Robert E. Lee.

No man of American life carried a greater burden than Lincoln. No President had as many attempts of assassination made on his life. He heard the rumble of the storm of civil strife. He dreaded the terrible consequence in the making. He would have given his life to prevent the disaster, and as his heart became sad and lonely, he cried out, "This is the hardest trial of my life. Why is it? Why is it?" He must have been thinking of another who hung upon the rugged cross, long after the sun of Golgotha had gone down. Lincoln was no more anxious to stop the extension of slavery, than he was to preserve the Union. He was no more anxious to free the blacks, than he was to make the whites humane. It meant as much to him that no freeman could be a slaveholder, as it did that no slave could any longer be a slave.

In this fateful period of world history if Douglass could speak, I believe he would say, I have no doubt that you don't have grievances, and just ones at that, but complaining will not settle any grievances, however just, it will only embitter the relations between the races, and only give more ammunition to those who are against you in these tragic times.

You must not become so deeply absorbed in thought of persecution against you that you forget your guilt of being biased, in your own interests. You cannot grow indifferent to your country's needs. You cannot give up the struggle for a better and brighter day, for a bigger and better America, it is your job to help make democracy work.

For in spite of slow-lifting shadows, of bruising words, of unkind speech, all of hopes, all of triumph, that the American Negro may tell are found in the annals of his native land. The road is hard and the day is long, you should work hard and take every chance that comes your way to prove your worth. You should not be disappointed if progress is not rapid. For people's minds must be changed before you can change their actions. Buying War bonds and sharing in the communities' burdens shou'd make for tolerance and good will, should convince the majority group that you are entitled to a fair deal. You should lay away a dependable nest egg for tomorrow in Government bonds and not commit racial suicide by reckless spending.

The day of plenty is at hand, but the day will end and night will come to those who have spent their pocketbooks empty, and the day will again dawn upon millions of unemployed standing in the breadline with millions of cook stoves cold and meal barrels empty, with millions of mothers clutching infants with hungry arms, who cry for the bare necessities of life.

If Lincoln could speak to the world today, I believe he would say that "70 years ago I preached about a free nation."

As long as we can keep the ideals of democracy befors us, we are advancing toward its fulfillment. We can do this if we keep emphasis on the side of goodness, kindness, self-sacrifice, justice to all. These simple democratic acts would soften humiliation and stand as a bulwark against agitators who come not to build, but to destroy the American way of life. It is not too much to assure the Negro that he will be included in the blueprints of a free world. It is not too much to assure him that the best in his race will be free from attacks by the worst in the white race and that he will have the full protection of the law and the opportunity to work and achieve his destiny.

If one-third of the Negro population could be persuaded to purchase one $25 Government bond each month, in 24 months, the race would have added $3,000,000,000 worth of wealth to its total, or more than it has saved in 79 years of freedom.

Seventy-nine years ago, I said to you, "Liberty is your birth right. God gave it to you as he gave it to us, but you must try to deserve this priceless boon. Let the world see that you merit it, and are able to maintain it by your good works."

Seventy-nine years ago, when Lincoln left us trembling on the verge of a new life, and Douglass lay down to pleasant dreams, we couldn't read nor write. Today, we have dipped our pen in the ink of immortality, and have written into the copybook of time, Native Son, the great American novel, and God's Trombone, the great American poem.

Seventy-nine years ago, we had never seen inside of a school room. Today, we have dipped our pen in the blood and sweat of slaves and have written into the curriculum of time * * * a new system of industrial education.

Seventy-nine years ago, we didn't have a song * * * today, haunting folk music comes in quick tears and laughter straight from our unhappy hearts as an enduring gift to the world, and yet we have only begun the long climb from the awful depth where Lincoln found us, and Douglass inspired us.

Our pace may have been slow, but we were conscious of a double mission of advancing ourselves and fulfilling an obligation to Lincoln and other Americans who first lighted the torch of liberty about our heads.

Soil Conservation in Iowa

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1945

Mr. CUNNINGHAM. Mr. Speaker, in the Fifth Congressional District of Iowa, we have a very strong advocate of soil conservation in the person of Mr. George Ver Steeg, editor of the Pella Chronicle. Personally and in his paper he is doing his utmost to bring to the attention of the people the need for soil conservation. Marion County, Iowa, the county of his residence, has more than 400 farmers cooperating in a county soil conservation program. On December 14, 1944, Mr. Ver Steeg gave an address at the annual meeting of the Marion County Soil Conservation District, Knoxville, Iowa, and under unanimous consent, I include his remarks in the Appendix of the RECORD.

Friends, first, I want to thank Clay Barnett and the men of the service who work with him for the invitation to speak to you. One year ago I had prepared an informal talk, but the hour grew late and I had to forego that pleasure. However, all of the past year I have carried the ideas I had wanted to express and now I shall get them off my chest.

Pleasing it is to know that along with the soils district commissioners and the Farm Bureau the Knoxville Community Club is sponsoring this meeting and businessmen are here. Businessmen in general have been apathetic to the soils-conservation movement. They have been interested in crop abundance or failure, drought, and flood, all things that touch them very intimately in the purse, but they have not been concerned over a very real danger—permanent loss of business and prosperity because of eroded and abandoned lands. I will enlarge on this a bit later.

My topic is the Soil Conservation District and Movement from the Editor's Viewpoint. I want to say that I speak not as an outsider. I am not viewing this movement in a detached manner—I am enlisted just as you are. For nearly 7 years, or as long as I have been editor of the Chronicle, it has been my hobby and especial pleasure to put in licks to help conservation along. Nothing has given me greater pleasure than seeing here and there small evidence of my work and receiving commendation from my farmer friends and business associates. It has all been very worth while.

Let's have a look at the history of agriculture in Marion County. It was nearly 100 years ago that the the plow was first put to

land in this county. There was abundance everywhere, there was no need to conserve, there were always new frontiers and the soil seemed inexhaustible. At the turn of the century we began to hear that men from the agricultural college at Ames were concerned about erosion and wasteful land use. They made trips to farms here and there giving advise on erosion control and recommending retirement of eroded and worn-out farm lands to grass. For 30 years there was only half-hearted interest among farmers and public interest was almost nil.

It was less than 10 years ago that we in Marion County began to show interest. That was when the civilian conservation camp was established and the young men were put to work rehabilitating some of our worst land. Those farms are today demonstration areas that teach us the value of conservation—the treatment worked; the farms are back into high production and erosion has been controlled. Then came the establishment of the English Creek Watershed where thousands of acres came under the supervision of the men of the Soils Conservation Service. And finally came the soils district which has enjoyed such substantial growth and in which nearly 400 farmers and landowners are enrolled as cooperators. We now have our feet on solid ground—we are ready to go forward on a broad front.

We know that we still have thousands of acres of eroded land in this county. We know that some of these lands have been abandoned, that thousands of acres are unfit for the plow, they are worn out, mortgaged, buildings on them are tumbledown. But their future is not hopeless. They can be rehabilitated and will be through the cooperation of all in the soils district.

Now whose concern is this problem of ending wasteful land use in Marion County? Is there a single businessman who cannot see how his future is bound up in continued fertility and productivity of our land? Agriculture is almost the sole source of our wealth and every businessman should be conscious of the fact that up to the time of the establishment of the soils district he was facing an ever-diminishing return, a narrowing horizon, and that there would be even less for his children. Contrast this outlook with the one we have now—an ever-widening horizon as more and more land comes under agreement with the district, fertility is restored, erosion ended, and prosperity returning to the men who till the soil. Isn't it worth while being interested in? Should not the vision of the ever-widening horizon, increased trade for the town and the individual, security for both farmer and businessmen stir the imagination and bring every businessman into the soils-conservation movement? Indeed conservation is the business of every businessman. What can he do? He can wholeheartedly endorse the movement, speak an encouraging word to his farmer friends, join with his colleagues in the community club to push the movement along and at every opportunity speak out in favor of good land use. Best way to do that intelligently is to go with the conservation workers and farmers on demonstration tours and see what has been done. Last summer Congressman PAUL CUNNINGHAM went on such a tour and he was so impressed that he returned to Washington with a very much better understanding of the soils-district movement and with enthusiasm that will make him an even better friend of conservation than he has proven himself to be in the past. PAUL CUNNINGHAM has an interest in prosperity in Marion County—so does every businessman and every citizen.

Now I want to point my remarks at the farmers here. What about the farmer? What obligation has he to farm 'round the hill? There is not a farmer here who owns 1 foot of the land he tills. He is only holding it in trust for his short lifetime and he will be responsible to those who come after for his stewardship. He can be blessed or he may be cursed, according to the way he used the talent given to him in trust.

Short years ago farm folks might have felt that they were on the defensive when they endorsed conservation. Now, with a great beachhead of nearly 400 cooperators in the district there is no need to apologize to anyone. On the contrary, there is a great need to show your neighbor by example and to tell your neighbor at every opportunity about that grand feeling of security that comes with farming right—nailing down the soil and diverting it to better use so that it may be safe and grow yearly more fertile while the farm enterprise grows more profitable.

Gentlemen—cooperators, you are not on the defensive. You are the privileged men of Marion County. Never give an inch, give no ground, make no concessions, fight for what you know is right. Have a real stake in this project and take pride in it as it goes forward year by year. It is the most important movement, for you and yours and for me and mine, of this generation.

What can the newspapers do about it? Time was when soils-conservation news was a short item between the obituaries and the patent-medicine ads. That time is over. A good country newspaper exists only because it serves its community. A newspaperman who senses the importance of this movement will inform himself, keep in touch with both district workers and farmers, bring stories into print so that all his readers may know of pogress, publish pictues of men doing the job and of the projects—be the interpreter of the movement to every farmer enlisted and even more to all farmers. Yes, there are still some who are stubborn, many who are careless, many more who have just not taken time to learn what it is all about. The newspaper can help to enlist them all.

Now, we have a team here, the soils-district workers, the cooperating farmers, the business and professional men and the newspapers. A tiny waterfall will wear away the hardest stone if it keeps everlastingly at it. Don't be disccuraged; don't give it up. Do get enthusiasm—catch the vision. Together we shall wear down the apathy, shall show our people the wisdom and the profit in joining this movement,and sticking with it. Our reward? The knowledge that we helped to preserve for our children those things we were given so freely and which we used so wastefully until we saw our duty and our course laid out so plainly short years ago.

Behind us, and we hope for always, is the era in which we squandered our talents and the horizon narrowed each year. Before us is the ever-widening horizon. In closing I am reminded of a little story. A smart guy hailed the driver of an old bus with a query, "Hey, Noah, is the ark full?" And the seedy old driver replied, "Nope. Just need one more monkey, so hop in." True, some people may look upon our bus as only a monkey-wagon but we know better—it is the finest Greyhound on the road. It will carry us all to security. We must not miss this bus.

Irrigation and Nebraska's Future

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1945

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the first annual convention of the Nebraska Reclamation Association, held at Lincoln, Nebr., on January 20, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the Nebraska Reclamation Association, and honored guests, I want to express my gratitude to you for your kind invitation to speak on the program today and I hope that in these few minutes I may say something that will be of lasting benefit to each of you and to my beloved State of Nebraska.

We are in the first month of a new year, the second month of our fourth year of war. Our materials are flowing in ever-increasing streams to our fighting men in Germany, in northern Italy, and in the far-off Philippines. As I speak, right now, American blood is being spilled with the blood of our allies—Chinese, Australian, British, French, and Russian—so that in this year of the world's history, our enemies might be decisively defeated and our arms victorious.

I wish that I could bring you the promise of a quick victory, but there is no talk of quick victory in Washington today. There is a grim determination to see it through. And underneath it all, there is a sad foreboding of bloodier battles to come. Yet, in the night of despair, hope lights our hearts. As we read of the brave actions of our men on every fighting front, we know that final victory will be ours.

A new Congress has been seated—the seventy-ninth in our Nation's history. Today, Franklin D. Roosevelt will be inaugurated President of the United States for the fourth time. I would not be honest either with you or with the deepest feelings of my heart if I hinted to you that I am joyful about the prospects of our fourth term. I hope you will believe me when I say that I would feel the same if it were a Republican taking office as President of the United States for the fourth time. I have been, and am now, and forever will be convinced that more than two terms in the office of President for any one man are fraught with peril to our free institutions. A long tenure of office for one man, no matter what the office, puts a terrific strain on our democratic processes. As Ely Culbertson has so well put it, a government of angels if continued long enough in power, eventually becomes a government of devils. We have seen the effect in cities and States of political boss control and now are witnessing its blighting effects on our national life.

I refuse, however, to throw my hands in the air and say that representative government is dead. I say that it is being threatened, terribly threatened, due to the fact that a majority of our people in America have adopted the leadership principle of the old world, but I believe that when the issue has been made crystal-clear—that when freedom is an issue, the people will never falter, they will never fail.

Meantime, there is work for all of us to do. There is work in Washington and there is work in Nebraska. I hope to prove faithful in knowing what to do and in doing the right thing in the position of great trust and responsibility to which the people of Nebraska have sent me.

That brings me to a great work that is very close to my heart today. It brings me down to a very practical project on which we can all unite, whether we be Republicans, Democrats, or Independents. That great project is building up the State of Nebraska, economically and culturally, at every opportunity.

One of Nebraska's great opportunities to rebuild economically is now before us. It is that of irrigating tens of thousands of new

acres and supplementing the irrigation of other tens of thousands of acres not yet adequately irrigated. It was Shakespeare, writing in the play Julius Caesar, who said:

"There is a tide in the affairs of men, which, taken at the flood, leads on to fortune.

"Omitted, all the voyages of their lives are bound in shallows and in miseries."

Nebraskans by the tens of thousands today face such a time in their lives—a time when they can take advantage of irrigation projects that will come on an unprecedented scale, if they are willing that these come; a time when the State as a whole can get ready for servicemen who even now are being mustered out and will be coming home in increasing numbers as this year passes into history; a time when Nebraska can increase its real wealth immeasurably and thereby increase the real wealth of the United States. Irrigation of upward of a million irrigable acres in our State could mean more than the finding of gold or the striking of oil. It could mean more in the terms of spreading employment, of returning Nebraskans who migrated in the drought period, and in terms of stabilizing our agriculture and hence our business.

The recent rather confusing and long drawn-out fight by irrigation interests and navigation interests found conflicting support in Nebraska during debate on the flood-control bill. Nebraska is the only State entirely inside the Missouri River Basin. I have consistently maintained that the two interests, irrigation and navigation, could be harmonized. I believe history yet to be written will prove that I am right.

When I think of the fights that have taken place in Congress in conflicting national irrigation and navigation policy, and when I consider the incipient struggles again showing up here and there, I am reminded of the story of the Kentucky cobbler who unexpectedly inherited a small fortune.

He locked up his shop and went out on a wild spending orgy. In time, of course, all of his money was gone, so he went back to his humble cobbler's bench, apparently none the worse for his experience with money.

Not long afterward, a lawyer appeared in his shop and told the cobbler that he had inherited another fortune. The cobbler put down his tools, looked up from his bench and said with some exasperation:

"Lord A'mighty! Do I have to go through all that again?"

There is no real, basic reason why we should have to go through contest fights either here or anywhere else in regard to water, as long as the people know all the facts and are reminded constantly of those facts. That is one way this association can do a great work here in Nebraska, just keeping the people informed. Because I do not want more fights between this agency and that one, I voted for the O'Mahoney-Milliken amendment to the flood control bill, for this amendment requires that the Bureau of Reclamation and the Army Engineers shall get together and iron out administrative differences relative to control of our Nation's waters.

This amendment does not hinder navigation interests in their legitimate desires, and requirements, but it does prevent headlong action that would render null and void the work of hundreds of thousands of people over a period of many decades. It directs the Army Engineers and the Bureau of Reclamation to work together—and that is something we will all welcome.

On irrigation, there can be no shadow of a doubt about Nebraska's basic interest. Irrigation in Nebraska has been demonstrated affirmatively by the successful operation of the North Platte project, located jointly in Nebraska and Wyoming. Although parts of western and central Nebraska in some years receive enough rainfall for cereal and forage crops, the maintenance of a stabilized agricultural economy, except for the eastern portion of the State, depends upon irrigation. I could stand here all day and recite instances of farmers who have used irrigation literally to lift themselves by their economic bootstraps here in Nebraska.

Nebraska has more miles of live water, that is, flowing stream water—than any other State in the Union. Nebraska has the greatest amount of underground water of any like area in the United States, and Nebraska is among the leading States in undeveloped irrigable acreage.

To me these three facts point to only one conclusion: Nebraska is facing the greatest opportunity for the development of irrigation in its history, an opportunity that promises a great increase in real wealth, a reclaiming of much lost population, a chance for tens of thousands of our farmers to take the road to better living.

I realize that I do not have to prove these statements to members of this association. And I realize that I do not have to prove my loyalty to the ideal of irrigating every possible acre in Nebraska in the coming post-war years. As most of my friends know, I have a farm I have been irrigating for years, and I have been talking and voting for more and better living for my thousands of farm friends since I have been in political life. I shall keep up that talking and I shall continue that method of voting.

It is evident from recent population studies made by Dr. J. O. Hertzler, professor of sociology at the University of Nebraska, that Nebraska needs irrigation development, if for no other reason than to regain lost population. Professor Hertzler's study shows that 12 to 13 percent of our population left Nebraska in the 1930–40 period, and that the counties without irrigation projects were hardest hit by population losses.

Under the program brought before Congress last year by the Bureau of Reclamation, an imposing number of irrigation and multiple-purpose projects would be undertaken nationally in the post-war years.

A summary of the irrigation units planned on the Niobrara, Platte, and Republican River basins would include the Narrows Unit (which would be constructed only in the event of the completion of transmountain diversions that have been proposed), the Sargent unit, the Farwell unit, the Lower North Loup unit, the Cedar Rapids unit, the Albion unit, the Loup Valley unit, the Plum Creek unit, the Grand Island unit, the Prairie Creek unit, the Osceola unit, the Bellwood unit, and the Schuyler unit, all in the Platte River basin; the North Republican unit, the St. Francis (Kans.) unit, the Wells unit, the Frenchman unit, the Meeker unit, the Red Willow unit, the Cambridge unit, the Almena unit, the Oxford unit, the Franklin unit, the Red Cloud unit, the Superior (Courtland) unit, the Republic unit, the Scandia unit, Kirwin unit, the Webster unit, the Glen Elder unit, the Wilson unit, the Cedar Bluffs unit, and the Kanopolis unit.

New lands which would be irrigated in Nebraska and Kansas under these projects would include some 1,284,000 acres, with 21,804 acres receiving supplemental water.

Proposed reservoirs for irrigation and other purposes serving these units include the Pioneer, Bonny, Wray, Culbertson, Harvey, Norton, Harlan County, Medicine Creek, Kirwin, Webster, Glen Elder, Wilson, Cedar Bluffs, Kanopolis, Plum Creek, Boelus, Davis, Dismal, Erickson, and Loretta Reservoirs, with an aggregate capacity about equal to that of all of the present reservoirs in the Platte River watershed. This proposed program is for Nebraska and Kansas, but it is easily seen that Nebraska would reap much the greatest advantage if all these projects were constructed. By the time we add the acreage in the Niobrara Basin for which the Bureau cannot yet give us a figure, the program really assumes proportions which are not easily grasped. Let's just go over the Bureau's proposed programs for Nebraska to see how it sounds. I get a great deal of satisfaction out of just repeating these:

There is the Mirage Flats project on the Niobrara River, which was under construction before the war began, but was stopped by order of the War Production Board in December 1942. Clearance from the W. P. B. to resume construction was obtained in February 1944. The project will irrigate an additional 12,000 acres, through use of an earth dam and canals. It is costing $557,000.

There is the Frenchman-Cambridge project on the Republican River, both for irrigation and flood control, which will put 36,000 acres under irrigation by means of two earth dams and several canals. It would cost $9,678,000, and when completed will remove the frequent flooding by Medicine Creek and the lesser flooding by Frenchman Creek.

There are the five well pumping units on the Republican River, which would put 23,500 more acres under irrigation and furnish 9,000 acres with supplemental water, by means of wells, pumping, and canals. This would cost $1,147,000.

There is the Bostwick project on the Republican River, for irrigation, flood control, and electric power, which will put 25,170 acres of new land under irrigation, with the use of an earth dam and canals. This project would include a power plant, with a firm power capacity of 1,000 kilowatts. It would cost $30,188,000, including the Harlan County reservoir.

Miscellaneous projects listed by the Bureau of Reclamation for Nebraska would cost about $2,500,000.

Out of the total irrigable acreage of 1,284,000 acres yet to be developed, the Bureau of Reclamation proposes to fully prepare in 1946 for starting construction on projects totaling 170,000 acres, to which water would be carried for the first time and to 20,000 acres for which supplementary water is sought. These latter projects, not including the Harlan County reservoir, are estimated to cost $33,380,000, which is less than we have been spending on one day of waging war in the past 3 years; in fact, it is about what we are spending for 3 hours of war! No estimate has been released to date on the total cost involved of all projects proposed. But I do know that the development of flood control and irrigation facilities in the Republican River Basin alone will cost from $100,000,000 to $125,000,000, depending upon the post-war costs of labor and material. It would not surprise me if all projects awaiting the attention of your organization would exceed one-third of a billion dollars.

The flood control bill recently passed by Congress approved the Bureau and Army plans in the Republican Basin and specifically authorized construction of the North Republican, Frenchman, Cambridge, Bostwick and Well Pumping projects. The United States Engineer Corps had previously testified before congressional committees that they had authority under former flood control bills to construct up to five reservoirs upstream on that river, in addition to the Harlan County dam, which would be the key structure in the flood-control plans for that dangerous stream. But this bill made their authorization statutory. The United States engineers are now engaged in a review of their former studies of the Kansas and Republican Rivers, a report of which is to be released April 1, 1945. It should be emphasized, however, that the folks along the Republican have been working diligently for 4 years, and it is only natural that more of their program has been ready for congressional authorization. The Bureau of Reclamation in the last month has established a general office at Lincoln and a branch office at Grand Island to speed up Nebraska work and particularly the work in the Platte River and Loup River Basins.

One of the important bills which failed of enactment due to a legislative snarl in the Seventy-eighth Congress, just ended, was the important rivers and harbors bill, which included authorizations for work on the Missouri River. This omnibus bill, containing projects scattered throughout the country, died through failure to secure agreement on the size of irrigation tracts to be included in the Central Valley project in California. I hope the bill will be revived early in this session. I do urge you people to study carefully the 160-acre limitations, for I am confident that it might prove a hardship in many instances in Nebraska.

I have no hesitancy in saying now that I am in favor not only of all of these projects, but of any others that are proven feasible, and are shown to be for the welfare of the people of Nebraska, or the people of other States whose interests in particular cases do not conflict with our interests too greatly. This program, nationally, means much to America. This program in Nebraska in the post-war years means millions of dollars in new pay rolls; it means humming factories in this and adjoining States; it means more money for our farmers; it means that this whole, vibrant, grand America of ours is going forward; it means we are building a better America for a better world.

Since the beginning of irrigation in this country, some 21,000,000 acres have been irrigated both by public agencies and private individuals. The Bureau of Reclamation has completed more than 50 irrigation systems serving more than 4,000,000 acres of these productive farming lands in 15 Western States. The Bureau right now is working on projects in Oklahoma and Kansas—the sixteenth and seventeenth States, respectively, in which it has carried on its activities.

As we all know, reclamation projects many times are multiple-purpose—for irrigation, for flood control, for silt control and for generating electric power. More than 2,000,000 kilowatts of power are generated from plants on 14 projects of the Bureau of Reclamation, which this year will produce more than 13,000,000,000 kilowatt-hours of energy. The greater part of this power is now used in war industries. But in the post-war years, this power will be an important factor in the development of our whole West. In addition to its industrial uses, I hope much of such power as might be generated on Nebraska streams might find an outlet in the lighting and equipping of our farm homes. There is no question but that the expansion of the rural electrification program wherever population density makes it practical, will do much toward making our farm homes safe, sanitary, and more productive, as well as more pleasant. Through the extension of rural electrification, and through development and use of our water resources, Nebraska's population can show a tremendous growth. Scottsbluff County was number 21 when our present method of designation of county auto license numbers was established some years ago. Today if we were amending the numbers to correspond with current populations, Scottsbluff County's number would be 3 instead of 21. This great growth and development is due entirely to irrigation. It is common knowledge that for each additional farm resident, there is an increase of two town or city residents. The development of our irrigable acres would mean perhaps an additional 100,000 farm residents and an increase of about 300,000 for the State of Nebraska.

We are indeed fortunate at this meeting to have with us representatives both of the Bureau of Reclamation and of the Army engineers. I hope that my friends with the Bureau of Reclamation will not think I am trying to unduly compliment their military friends when I point out that for 150 years now, the Army engineers have been working on rivers and harbors. They have been going upstream all the time, taking in more and more territory as our country became more and more developed, and as there were expanding uses of the rivers and canals for navigation by huge basic industries.

In 1902, at the insistence of the President, Theodore Roosevelt, the first act providing for irrigation of our millions of arid acres was passed. Since that time, 43 years ago, the Bureau of Reclamation has been working in the upstream areas. As time has passed and as the need has increased, this great Government organization has been going downstream. Now, the two have met. There we have the crux of the reasons for the so-called battle between the navigationists and the irrigationists. There you have the reasons why the O'Mahoney-Milliken amendment was necessary. There you have the basis of the supposed conflict between the two agencies.

But I do not think that that conflict is going on and on. I do not believe that it is necessary that that conflict continue. I believe that both the Army engineers and the Bureau of Reclamation can work together for the good of the whole country, from both an administrative and an engineering standpoint.

I might add that I do not think that another superagency, put above both of these long-time agencies, would resolve any conflicts, however much you might think so by reading certain newspaper columnists and hearing certain radio commentators. In this connection I want to pay tribute to the work of that great American, the great Nebraskan, George W. Norris, whose recent death saddened all of us. It was his great fight for the Tennessee Valley Authority—and resultant wartime success of that agency—that makes the Missouri Valley Authority a political talking point today. Yet the two ideas are not at all the same. The factors that brought them up are not at all the same. The situations are not the same. The net result would not be the same.

T. V. A. was conceived for an admittedly backward region, a region exploited by many private power companies; a region filled with poverty and economic distress; a region containing already a great Government project, Muscle Shoals, which was lying idle. None of these conditions fit the Missouri Valley today. The Missouri River Basin is not poverty-stricken. Its people do not live in log cabins. Its electric rates, by and large, are not exorbitant, and its capital is not being drained to giant corporations with watered stock in New York. Nebraska power development and distribution systems are rapidly nearing complete public ownership. The Missouri River Basin did not just learn the other day that rivers cause floods and that floods can be prevented. We of this basin have been cognizant of these facts for many years and, with the aid of the Bureau and the Army engineers, are defeating the ravages of nature by harnessing the power of our water to make it work for our purposes.

We have watched the Army engineers work efficiently and we have watched the Bureau of Reclamation work efficiently. Those two groups, working with and coordinating their programs with the United States Department of Agriculture, can and will make of the Missouri, or any other western watershed, a safe, productive, and stable farm and business area. These agencies, together with the Department of Agriculture and our State University, can solve our agricultural and land-use problems. We know that these agencies, through a combined experience of more than 200 years in being, have attained a know-how that no other super-agency could attain in a few months under three lame-duck Congressmen who might be appointed to head it. We have seen how political management can be put in control of the disposal of over 100 billion dollars of surplus property, how political management can seep into any Government agency that is created these days, and we have no hankering for any political managemen in the Missouri Basin.

This is not to say that I am opposed to a Missouri Valley Authority for all time. There may be a time in the future, far or near, when the need for such an agency will become apparent. If so, I assure you, and I assure everyone who has the slightest interest, that I will fight for it. I have an open mind on the subject, but at this time I simply cannot see the need for such a superagency. The work is being done and is being done well by existing agencies. I see no reason for Nebraska farmers to start growing cotton just because it is grown successfully in Tennesse, and I see no reason for Nebraskans to get excited about a valley authority just because one down South happens to be enjoying popular favor at the moment. Let us wait and see. Meantime, let us build with what we have, let us carry out and enlarge the program at hand, and retain a better measure of independence. Character does not thrive on paternalism.

I want to pay tribute to your president, Edwin Van Horne, and to your other officers, who are generously giving of their time and efforts to get this program started. I want to congratulate Harry Strunk who has been the sparkplug in the Republican Valley Conservation Association, and now joins you to help in this even larger assignment. I am sure that you can count on Governor Griswold, Wardner Scott, Dan Jones, and other State officials, to assist you at every turn. I can promise you that the entire Nebraska delegation in Congress will stand ever ready to do their share when your programs reach the point that they are ready for congressional consideration. Problems involving water conservation and irrigation will always have a high priority on the time and attention of all of us in Washington. Nebraska is the only one of the 17 western States not now a member of the National Reclamation Association and I assume you will want to associate yourselves with this very effective group whose interests and objectives are wholly like your own.

You're going to enjoy your work in this association. You'll have a great satisfaction in worth-while achievement. But it won't be easy. And it isn't a job for a thin-skinned man. Ahead of you lies the task of arbitrating some of the knottiest problems which will face Nebraska in the next decade. Our State water code is far from complete. It will have to be rounded out, and finished off. Frankly, if you don't do your job, we in Congress will be almost helpless. It will be quickly apparent to you that if advocates of two different programs on the same stream, or in the same basin, appear before us, we will be helpless to judge the merits of the two cases. You men in this association will have to compose the sectional differences, the little conflicts which will arise, precisely as the Army and the Bureau had to compose their differences. Then when your spokesmen appear before us, we will know that they speak for the majority, and are advocating a single program which has been deliberated upon. And we can go down the line with them on everything they seek.

Sometimes when I get a glimpse of the Missouri River, among the largest in the United States, and its tributaries, I think of all the potentialities there are in the water that rolls on and on. I think of the cities and towns that it passes; of the goods that are carried over it; of the homes that are nourished by its irrigation, and lighted by its flowing power. At such times, my heart leaps up to the great potentialities of our

great America. America is not finished. It need never be finished. We in this association, we in Nebraska, we in America, must lift up our eyes to the hills from whence cometh our water and our strength. We must catch a new vision of a growing, expanding, building America. We can have that America. We can build on this continent the mightiest civilization ever known to man. And in so doing, we can help to build a better world.

National Service Legislation

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1945

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Do We Fight With One Hand Tied, or With Everything We Have?" written by the distinguished, able, and competent Under Secretary of War, Robert P. Patterson. The article was published in the Scripps-Howard newspapers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DO WE FIGHT WITH ONE HAND TIED, OR WITH EVERYTHING WE HAVE?

(By Robert P. Patterson, Under Secretary of War)

I believe it is time for the people of America to come to a decision about themselves and about their country.

It is a decision which is not easy to make, nor can it be made casually, because it involves the lives of every one of us, the rights of every one of us, and the fundamental decency of every one of us.

I believe it is time to decide whether we are going to fight the war with one hand tied behind our backs, or whether, by adopting a national service law, we are going to fight the war with everything we have.

TWO IN TWENTY-FOUR

Suppose, for example, that 24 Americans gathered in your home tonight. And that these 24 people represented the entire Nation. Only 2 would be in uniform. Those two would be the only ones required by the Government, under present laws to take part in the war effort. So long as that situation exists, we as a Nation are fighting the war with one hand tied behind our back.

In great national issues such as this, the simple realities sometimes become distorted, and everyone is bewildered by complicated statistics, involved arguments and clever catch-phrases.

Let's make it simple. Think of our Nation as a family of four or five hard-working, average people, living on a farm in Ohio. It's a summer afternoon, and everyone is busy at his own job. Cousin Ben is out in the front yard, trimming rosebushes. Suddenly, the barn catches fire, and dad calls for help to put it out. Everyone rushes to his aid—everyone, that is, except Cousin Ben. He keeps right on trimming rosebushes.

HE NEEDS COMPULSION

Now it won't do any good for Cousin Ben to help put out the fire a week from now. What we need is for him to quit trimming rosebushes and start fighting the fire, right now. And since he won't do it voluntarily, there has to be a way, for the good of the whole family, to compel him to do it.

There are millions of people who are voluntarily devoting themselves to the war effort, just as millions would volunteer for military service even if we had no selective service law.

But in modern war, volunteers are not enough, either on the battle front or on the home front. Other Nations know this. Our enemies know it. America, however, is the only one of the great powers which does not have a National Service law, or its equivalent.

MANPOWER IS WASTED

There have been charges that manpower is wasted. Every conceivable effort is made to prevent such waste, but of course it occurs. War, by its very nature, is the most colossal waste known to man. No employer, be he the head of a great corporation, or the manager of the corner grocery store, or the Government, or a farmer with two hired men, can keep every employee fully occupied every moment of every day. We just haven't become that efficient.

In this Nation's great, urgent need for manpower every case of wastage is, of course, to be deplored and corrected. But even if we eliminated all waste—and some is inevitable—we still need more war workers than we now have. The isolated cases of wastage make headlines—but headlines do not make tanks and artillery shells which are the things our fighting men need.

When the news from the fighting fronts looks good, many of us are inclined to lean back and relax, and to figure the war is just about over, and all this speed and urgency really isn't necessary. We should remember always that we are fighting powerful and resourceful Nations who, as they have demonstrated, ars fully capable of inflicting serious counterblows.

To talk about today's gains and victories is easy. To predict tomorrow's is extremely dangerous. The pipe line of supply to our forces in Europe and in the Pacific is a long one. It takes many weeks to transport all of the materials from the factory to the front. We cannot afford to gamble the lives of our men and the future of our Nation on when somebody thinks the war will be over. We have got to keep the supplies going forward, day and night, week in and week out, whether good news or bad comes over the wires. To do less would be criminal folly.

There is one great national characteristic of all Americans, whether they live in Pennsylvania, or Indiana, or Texas, or California. That characteristic is a deep-seated sense of fair play.

WAR INVOLVES ALL

Is it fair play for us to say to 12,000,000 of our sons and brothers and fathers in the armed services that "you happen to be between the age of 18 and 45, and able-bodied, and so we are sending you into combat to defend us with your lives," and at the same time to provide no legal obligations or responsibilities, so far as the war is concerned, for the 16,000,000 other American men between 18 and 45, who remain at home?

This war was declared, not in the name of those 12,000,000 who fight, and not by those 12,000,000. It was declared by and in the name of all the American people.

Is it fair to send Jim to work, and suffer, and perhaps to die in battle, and not even require Jack, who remains at home, to make the things Jim needs with which to fight, or clothe himself, or bind his wounds?

It has been argued that Government officials cannot be trusted to administer a national service law fairly and effectively. We are trusting General Marshall and Admiral King with the lives of our soldiers and sailors and marines, and certainly no one would contend that the lives of those men are any less valuable, or any less sacred, than the material comforts of those of us who remain at home.

MILLIONS ARE WORKING

It is difficult to express our urgent and pressing need for more manpower without seeming to overlook the millions of loyal, sincere men and women in civil life who are working wholeheartedly in the war effort. I have seen them in the ammunition plants, the aircraft plants—many of them working on the midnight shift—many elderly men and women—working to arm and equip their loved ones who are fighting overseas. In all kinds of weather they travel many miles from their homes to work for the winning of the war. No one can see them without being deeply touched by their devotion.

They are a great and a proud army, doing a job which is just as necessary and just as vital as are the men in uniform. Without them and their magnificent record of production there would never have been a D-day. But there aren't enough of them. There are too many who are not fighting the war at all—either on the home front or on the battle front.

TAKE A LOOK

Tomorrow morning on your way to work look around you. You will see people who are not contributing to the war in any way—who are busily engaged in activities which are well and good in peacetime but totally unnecessary in war. Wouldn't you rather have those men making guns and tanks and airplanes and battle jackets and blankets and jeeps and bomber tires—things your sons and brothers need, and need badly?

We need thousands of men in munitions factories, in aircraft, rubber, and textile factories, and we need them now. When we landed in France we committed ourselves. Our men at the front can't stop and wait for ammunition and food and gasoline. They have got to have it now, and they have got to have it a week from now, and a month from now, and 6 months from now, and every hour of every day so long as the war lasts.

A great many statistics have been cited on both sides of this great issue. The opponents of national service, in listing our manpower resources, generally neglect to include the fact that between now and June 30 the armed forces will take 900,000 more men out of civilian life and jobs. Or that we will have to fill 700,000 additional war jobs during the same period.

WE NEED MORE

But statistics, after all, don't help very much. You can't stop a Tiger tank with statistics. You can't very well go over to France and tell Jim, who's trying to blow up a German pillbox, that "here are some statistics proving that we've got all the war workers and all the war production we need." Because we haven't.

We need more.

Jim needs more.

Now.

Lend-Lease Not Responsible for Cigarette Shortage

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following communication sent me by the Honorable Leo T. Crowley, Administrator, Foreign Economic Administration, refuting the statements that the lend-lease program is responsible for the current cigarette shortage:

FOREIGN ECONOMIC ADMINISTRATION,
Washington, D. C., December 22, 1944.

Hon. SOL BLOOM,
Chairman, Foreign Affairs Committee,
House of Representatives,
Washington, D. C.

DEAR MR. CHAIRMAN: In the Appendix to the CONGRESSIONAL RECORD, volume 90, part 11, page A4755, Mr. DWORSHAK raised the question of the relationship of the lend-lease program to the cigarette shortage and his comments implied that there was such a relationship.

Enclosed are some figures and comments which disprove any such contention and which I thought you might like to include in the Appendix to the RECORD for this session.

Sincerely yours,

LEO T. CROWLEY,
Administrator.

The question has been raised by a Member of the House concerning the relationship of the current cigarette shortage to the lend-lease program. The latest figures show that not only is the shortage not attributable to the lend-lease program but that the total amount of cigarettes and unmanufactured tobacco exported, both commercially and under lend-lease, is less than the amounts which were exported in the 4 years preceding the lend-lease program.

In those 4 years, total cigarette production ranged from 169,969,000,000 to 189,371,000,000 a year. Annual exports varied between 3.3 percent to 3.7 percent of total production. Since the inception of lend-lease, total cigarette production increased from 217,935,000,000, in 1941, to 247,000,000,000 in the first 9 months of this year. Of this increased annual production, total exports, commercially and under lend-lease, ranged only from 1.1 percent to 3.5 percent and, despite the increased production, a smaller total number of cigarettes were exported than in the preceding 4 years. No cigarettes at all were lend-leased in 1941, and but a minute fraction of a tenth of 1 percent, 0.2 percent, and 1.5 percent of the cigarettes produced in 1942, 1943, and 1944, respectively, have been lend-leased.

It has been our concern, and rightly so, to see to it that American soldiers overseas should have cigarettes. To that end, for the first 9 months of this year, apart from the exports referred to above, 63,000,000,000 cigarettes, or 25.5 percent of our total production, have been shipped overseas. Similarly, the cigarettes which have been lend-leased, a total of 4,302,000,000 in 4 years, have all gone to the fighting forces of our allies. No cigarettes have been lend-leased for distribution to civilians.

The picture on exports of unmanufactured tobacco is substantially similar. Total exports, commercially and under lend-lease, are generally less than in pre-war years. Since April 1943, all of the tobacco which has been lend-leased has been lend-leased for the use of Allied armed forces.

For the information of the Members of Congress, I include two tables which give the figures on production and exports, commercially and under lend-lease, of cigarettes and unmanufactured tobacco, from and including 1936 to the end of September of this year:

Cigarette exports and production

[Millions of cigarettes]

	Exports [1]			Production	Exports in percentage of production		
	Lend-lease	Commercial	Total		Lend-lease	Commercial	Total
					Percent	*Percent*	*Percent*
1936		4,629	4,629	158,893		2.9	2.9
1937		5,667	5,667	169,969		3.3	3.3
1938		6,368	6,368	171,686		3.7	3.7
1939		6,761	6,761	180,667		3.7	3.7
1940		6,577	6,577	189,371		3.5	3.5
1941	0	7,569	7,569	217,935	0	3.5	3.5
1942	5	2,905	2,910	257,521	.002	1.1	1.1
1943	686	3,523	4,209	308,800	.2	1.2	1.4
1944 [2]	3,611	2,798	6,409	247,000	1.5	1.1	2.6

[1] Export figures do not include shipments to United States forces overseas. Such shipments in the first 9 months of 1944 amounted to approximately 63,000,000,000.
[2] January to September.

No cigarettes have been lend-leased for distribution to civilians.

Tobacco exports and production
(Unmanufactured tobacco)

[Millions of pounds]

	Exports			Production [1]	Exports in percentage of production		
	Lend-lease	Commercial	Total		Lend-lease	Commercial	Total
					Percent	*Percent*	*Percent*
1936		425	425	1,155		37	37
1937		435	435	1,563		28	28
1938		489	489	1,376		36	36
1939		358	358	1,874		19	19
1940		236	236	1,462		16	16
1941	90	180	270	1,262	7	14	21
1942	183	56	239	1,409	13	4	17
1943	233	162	395	1,400	16	12	28
1944 [2]	51	134	185	1,356	4	10	14

[1] Production figures are on a farm-sales-weight basis, whereas export figures are on a declared-weight basis.
[2] January to September. Production is three-fourths of the total 1944 production.

No tobacco is currently being lend-leased for civilian use.

Opposition to St. Lawrence Waterway

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I am inserting a resolution adopted by the New York State Retail Solid Fuel Merchants Association with offices at Albany, N. Y. The subject of the resolution is in opposition to the construction of the St. Lawrence waterway and power project.

NEW YORK STATE RETAIL SOLID FUEL MERCHANTS ASSOCIATION, INC.,
Albany, N. Y., January 27, 1945.

Hon. DANIEL A. REED,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN REED: The officers and directors of the New York State Retail Solid Fuel Merchants Association, Inc., at a meeting held at the Hotel Syracuse, Syracuse, N. Y., on Wednesday, January 24, 1945, representing 1,012 retail coal merchants selling over 85 percent of New York State's solid fuel tonnage, hereby record their earnest opposition to the construction of the said St. Lawrence waterway and power project.

Whereas agitation for congressional ratification of the United States-Canadian agreement for the construction of the St. Lawrence waterway and prower project has again been revived; and

Whereas legislation intended to accomplish such ratification is now pending before the United States Congress; and

Whereas the construction of a deep water canal in the International Rapids of the St. Lawrence River and the deepening of connecting channels of the Great Lakes system in the United States would open the ports of the Great Lakes to invasion by foreign shipping; and

Whereas the proposed depths of the waterway are insufficient to permit profitable operation of the American Merchant Marine on such waterway as a result of which international commerce, which would otherwise be transported by American flag vessels, will be diverted to foreign tramp ships; and

Whereas such diversion of traffic to foreign flag tramp vessels with their relatively low-paid crews and substandard working conditions will exclude American flag vessels from such service; and

Whereas the diversion of such international commerce from existing Atlantic and Gulf ports will greatly injure such ports; and

Whereas such diversion to said foreign-flag tramp steamers will deprive American railroads of tonnage now moving between the Great Lakes area and the Atlantic and Gulf ports, greatly to the loss and detriment of said railroads; and

Whereas the St. Lawrence River will be closed during approximately 5 months of the year due to freezing, thus requiring the railroads to maintain equipment and facilities for the movement of transportation during said approximate 5 months' period which would not otherwise be required, thus imposing an unnecessary and undue burden on said railroads; and

Whereas the construction of said project will facilitate the importation of cheaply manufactured foreign products to be sold in competition with American-manufactured products; and

Whereas the construction of such waterway will undoubtedly result in the importation of foreign anthracite and bituminous coals mined by low-paid foreign labor and transported to the United States at rates prevailing for ballast, all of which will injuriously affect the coal industry and its employees; and

Whereas the enormous cost of said project is not warranted in the light of the minor benefits, if any, which may accrue to limited sections of the country as against the damage and injury to American industry and commerce and American labor: Be it

Resolved, That a copy of this resolution be spread upon the minutes of the meeting of the directors of this association and that copies thereof be sent to the Governor of the State of New York, the Lieutenant Governor, and all members of the New York State Senate, to the speaker and members of the New York State Assembly, and to United States Senators and Members of Congress from New York.

Yours very truly,

C. B. NELLIS,
Executive Secretary.

Farm Machinery and Lend-Lease

EXTENSION OF REMARKS
OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following communication and release which I have received from the Honorable Leo T. Crowley, Administrator, Foreign Economic Administration, which clears up several misunderstandings about the lend-lease program which I feel should be brought to the attention of the Members of the House.

FOREIGN ECONOMIC ADMINISTRATION,
Washington D. C., December 30, 1944.

Hon. SOL BLOOM,
House of Representatives,
Washington, D. C.

DEAR MR. BLOOM: Speaking on the floor of the House on Friday, December 1, Representative A. L. MILLER submitted a report on his trip to England in the course of which he discussed phases of lend-lease operations. Several statements which were made should, I believe, be replied to, in order to keep the lend-lease record clear.

For example, Mr. MILLER said that he had visited a place about 60 miles north of London where there were "at least a square mile of American-made farm machinery, new tractors, plows, harrows, and disks packed close together." This material he indicated, had been sent from the United States under lend-lease, and he quoted a colonel who accompanied him as saying that: "This type of lend-lease should have stopped long ago." He added that he presumed that equipment "was on order and someone felt it necessary to complete the order."

Actually, the place visited by Mr. MILLER was a depot where a type of American tractor with ancillary equipment was stored preparatory to shipment to France to build military roads or assignment on war projects in England such as the clearance of ground for air bases. Normally there are about 200 crawlers at this depot awaiting shipment and at certain times before and after the invasion of France there had been as many as 500 or 600. They are continually moving either to the battle lines or to war tasks behind the lines, assigned them by the Combined Munitions Assignment Board acting for the Combined Chiefs of Staff. There may possibly be a dozen pieces of agricultural equipment among these. But, the overwhelming bulk of the equipment which Mr. MILLER saw and which can so readily be mistaken as machinery for agricultural use was equipment required for military operations.

I would like to emphasize that shipment of equipment to England as lend-lease is recommended by the accredited representatives of the United States Government, including some of the highest ranking American officers, stationed in England who are constantly in touch with the war situation and who recommend only when they are convinced this equipment will serve best in the winning of the war. The lend-lease equipment present at the depot at the time of Mr. MILLER's visit, had been sent there pursuant to such recommendations.

Mr. MILLER, following his discussion of this equipment, which he mistakenly believed to be agricultural machinery, says that England has increased her domestic production of food from 35 percent to 75 percent of her need. He adds that this has been accomplished through lend-lease of farm machinery and that, "It is very evident now, however, that this type of lend-lease should be stopped."

England produced about 40 percent of her domestic consumption before the war and now produces about 70 percent. The United States supplies about 10 percent of Britain's food needs, and we have sent her some equipment and fertilizer and seed which, of course, have helped make possible the increase in her domestic production. However, we have sent to all of our allies no more than 2 percent of the total farm machinery manufactured in the United States. Certainly, the crisis in food in England has not passed. The British are still living on an extremely strict diet. Of the total of lend-lease exports to the United Kingdom from the inception of the lend-lease program in March 1941 through October 1944, 26.8 percent consisted of foodstuffs and agricultural products. In the first year of lend-lease, food was the largest single item of lend-lease aid sent by this country to the United Kingdom. At one time the British had been reduced to a 7-day supply of food. That the situation remains critical, however, is indicated by the fact that in the first 10 months of the current year, 1944, 18.4 percent of our lend-lease exports to the United Kingdom was still foodstuffs and other agricultural products.

It would seem obvious, therefore, in view of the fact that our lend-lease exports to Britain are determined after the closest possible study of conditions within that country by our representatives on the scene, and after conference with Government agencies in this country such as the War Production Board which are responsible for the maintenance of our domestic economy, that lend-lease supplies are sent abroad to our allies in accordance with the intent of the Lend-Lease Act to strengthen the defense of the United States by strengthening the defense of our allies without crippling our domestic economy.

Discussing the recent report of the President to the Congress on the operation of reverse lend-lease, Mr. MILLER, after citing that phase of the report dealing with transportation of American troops to England in British ships, said that the President "did not state how much money the War Department or some agency was paying in addition for the transportation of these troops." He indicated a desire to ask someone "representing the administration" the following question: "What, if anything, is it costing this country when troops are transported to England on English ships? Is this a part of lend-lease; if not, why not?"

In the seventeenth report to Congress on lend-lease operations it is pointed out that approximately one-third of all the supplies and equipment currently required by our armed forces in the European theater of operations between June 1, 1942, and June 30, 1944, was supplied by the British as reverse lend-lease aid, without payment by us. The British supplied us with everything we needed that they were able to produce in sufficient quantities. This includes transportation on British ships for which the United States does not pay anything. Our men have been and are being carried in British ships as a phase of reverse lend-lease.

In his remarks Mr. Miller used a quotation which he attributed to a statement issued by Secretary of State Stettinius, Secretary Morgenthau, and myself, as a special committee of the Government on lend-lease and reverse lend-lease discussions with the British. The quotation was as follows:

"Lend-lease aid to the United Kingdom will be liberalized following the defeat of Germany to include materials for improving British living conditions."

This sentence did not appear in our statement, as an examination of a copy of the statement, which I am enclosing, and which was issued to the press on November 30, 1944, will disclose. In the statement we reaffirm the frequently repeated statement of lend-lease policy to the effect that—

"From the beginning of the lend-lease program in March 1941 lend-lease aid has been extended for one purpose, and for one purpose only, the defense of the United States and to enable our allies to bring the full weight of their men and resources to bear against our common enemies."

We add—

"That policy will be continued without change."

The only paragraphs in our statement which would seem to have any kinship with that of Mr. Miller were the following:

"After the defeat of Germany the United Kingdom and the United States will both use all the fighting power that is required for the earliest possible defeat of Japan. It is likely, however, that both the United Kingdom and the United States will be able to reconvert part of their resources on an equitable basis to meet essential civilian needs in the period between the defeat of Germany and the defeat of Japan. As a result of such a partial and equitable reconversion there will be some improvement in the conditions of life of the British people. For 6 years, first standing alone against the enemy and later fighting alongside our own forces on battlefields, on seas and in the sky all over the world, they have endured privation in diet, had their houses destroyed about them and have been sent to distant parts of the country to work wherever the needs of war called them. After the defeat of Germany, it is necessary that their inadequate diet be improved, temporary emergency housing be provided, and such other measures adopted as may relieve in some degree their present extremely difficult circumstances.

"This committee believes that a program which will help in achieving this objective is a matter of necessity for the most effective prosecution of the war against Japan, and that it expresses in some measure the common bond which has carried our countries through the hard days of the war to approaching victory."

However, these paragraphs only state once more that we intend to maintain lend-lease in its traditional role, as an arm of our allies' and our own defense in the fighting of this war.

I have gone to some length in setting the record straight on the lend-lease picture because I am anxious that we shall not appear to be breaking faith with the men who are giving more than matériel to this struggle. I believe in justice to them, and to their parents and friends also, that we should not permit mistaken impressions which would indicate that we on the home front are not doing everything possible to protect their interests to be freely circulated.

Sincerely yours,

LEO T. CROWLEY,
Administrator.

Leo T. Crowley, Foreign Economic Administrator; Henry Morgenthau, Jr., Secretary of the Treasury; and Edward R. Stettinius, Jr., Acting Secretary of State, acting as a special committee of the Government on lend-lease and reverse lend-lease discussions with the British following up the Quebec Conference, today made the following statement:

"Throughout the war the lend-lease and reverse lend-lease requirements of the United Nations have been reviewed from time to time in the light of the military strategy for the war against Germany and Japan.

"Such a review has been carried out in discussions now concluded between the appropriate military, naval, air, and civilian representatives of the United States and United Kingdom Governments. These discussions concerned the lend-lease and reverse lend-lease aid required to enable the carrying out of the strategic decisions made at Quebec for winning victory over both Germany and Japan at the earliest possible moment.

"The programs of lend-lease and reverse lend-lease aid should be continued in accordance with the fundamental principle laid down by the President that: 'Until the unconditional surrender of both Japan and Germany, we should continue the lend-lease program on whatever scale is necessary to make the combined striking power of all the United Nations against our enemies as overwhelming and as effective as we can make it.'

"The amounts and types of supplies required continue to be subject, as always, to adjustment from time to time in accordance with the changinig conditions of the war. When finished munitions are produced and available for delivery, they are assigned by the Munitions Assignments Board under directives of the combined Chiefs of Staff in the light of the strategic considerations prevailing at the time of the assignment. Similar procedures are and will continue to be in effect for other war supplies that each country may make available to the other.

"From the beginning of the lend-lease program in March 1941, lend-lease aid has been extended for one purpose—and for one purpose only—the defense of the United States and to enable our allies to bring the full weight of their men and resources to bear against our common enemies. That policy will be continued without change.

"Since lend-lease aid is made available to our allies only when it contributes directly to the winning of the war, lend-lease articles have from the beginning not been available for reexport commercially. That policy will also be continued without change. There will be no change in the principle as laid down by the Government of the United Kingdom and in its white paper of September 1941 that no articles received under lend-lease from the United States shall be exported commercially.

"After the defeat of Germany, there will be no impediment to the United Kingdom's exporting articles, so far as war conditions permit, which are no longer supplied under lend-lease and are obtained out of their own production or purchased from this country for cash.

"To some degree lend-lease aid for the United Kingdom will be reduced even before the defeat of Germany. It is now expected that some raw and semifabricated materials—such as iron and steel—will no longer be provided by the United States to the United Kingdom under lend-lease after January 1, 1945. This will have the effect, under the terms of the white paper itself, of removing products made from such materials from limitations that will continue to apply to articles received under lend-lease. Such materials no longer obtained under lend-lease will, of course, be available to the United Kingdom in commercial exports only after the overriding considerations of war supply and war shipping are met.

"The committee understands that, as in the past, the United States and the United Kingdom will both endeavor to insure, to the extent practicable, that neither United States nor United Kingdom exporters receive undue competitive advantage over the other as a result of the war situation.

"It appeared in the discussions that in the period immediately following the defeat of Germany, the British need for lend-lease assistance would be not much more than one-half of that currently furnished in 1944.

"After the defeat of Germany the United Kingdom and the United States will both use all the fighting power that is required for the earliest possible defeat of Japan. It is likely, however, that both the United Kingdom and the United States will be able to reconvert part of their resources on an equitable basis to meet essential civilian needs in the period between the defeat of Germany and the defeat of Japan. As a result of such a partial and equitable reconversion there will be some improvement in the conditions of life of the British people. For 6 years, first standing alone against the enemy and later fighting alongside our own forces on battlefields, on seas, and in the sky all over the world, they have endured privation in diet, had their houses destroyed about them, and have been sent to distant parts of the country to work wherever the needs of war called them. After the defeat of Germany, it is necessary that their inadequate diet be improved, temporary emergency housing be provided, and such other measures adopted as may relieve in some degree their present extremely difficult circumstances.

"This committee believes that a program which will help in achieving this objective is a matter of necessity for the most effective prosecution of the war against Japan, and that it expresses in some measure the common bond which has carried our countries through the hard days of the war to approaching victory.

"Since lend-lease and reverse lend-lease are concerned solely with war supply, problems of post-war foreign trade throughout the world did not enter into the review of these programs. Economic and financial cooperation by all the United Nations in many different forms will be required to meet these separate post-war problems. Effective measures in this field will require both international and national action by the respective governments, including in many cases, legislative action."

Nonessential Travel

REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. GAVIN. Mr. Speaker, I want to call to the attention of the membership of the House a directive issued by Director of War Mobilization and Reconversion James F. Byrnes, appealing for curtailment of nonessential travel; particularly for a cessation of group meetings, such as conventions and trade shows not necessary to the war effort.

I want to commend the civic, patriotic, fraternal, and trade associations of the Nation. They respected his request. However, I was amazed when I read an article in the San Antonio Express, which was forwarded to me, which states, and I quote:

A program of continental interest and importance will bring 1,500 farm representatives from the rural electric cooperatives of 45 States to San Antonio for the third annual meeting of the National Rural Electric Cooperative Association at the municipal auditorium on January 16 and 17.

This convention was a direct contradiction and utter disregard for the Byrnes directive. How can we expect the American people to respect War Mobilizer Byrnes' directives if those associated with the Government show an utter disregard for his request and proceed to hold a meeting of 1,500 representatives from 45 States? He states in the directive that a committee composed of representatives of the War and Navy Departments, the War Production Board, and the War Manpower Commission would pass on applications for the holding of group meetings which are attended by more than 50 persons to determine if the need for these meetings is sufficiently in the war interests to warrant the tax on transportation and service. I wonder if Government permission was secured for this meeting?

It seems as though Government employees pay little attention and care less as far as directives are concerned. The civilian Government agencies are the worst violators of this directive. How can we expect the American people to cooperate when the Government itself pays no attention to these matters that they say are necessary to the war effort?

It is about time the employees of Government agencies cut out unnecessary conventions and travel during the war period, and this goes for individuals as well as groups.

Mr. Byrnes' directive follows:

Director of War Mobilization and Reconversion James F. Byrnes appealed today for a curtailment of nonessential travel and particularly for a cessation of group meetings, such as conventions and trade shows not necessary in the war effort.

This action was taken with approval of the President who has told Mr. Byrnes that even the invitations to the inaugural ceremonies on January 20 are being restricted as never before because of demands the war has brought about, particularly on transportation and housing. The great majority of the invitations to be issued, it was said, therefore, will go to Members of Congress, officials of our Government, and others who already are in Washington—who need no transportation and have their housing accommodations.

Justice Byrnes pointed out that in 1942 after Pearl Harbor, American associations voluntarily canceled many conventions and trade shows. However, during the past year, the optimism which led so many of us to believe that victory was at hand, also led to a substantial increase in the holding of conventions and post-war trade shows.

"This has added a substantial load to our already overtaxed transportation and hotel facilities, with an increasing demand for additional manpower," he said.

"I am advised that our railroads have 38,872 coaches and other passenger units now as compared with 53,941 in 1918. Our organized military movements alone in 18 months of this war have required the transportation of 16,000,000 persons as compared with 6,500,000 in a corresponding period during World War No. 1.

"We have about the same number of coaches and only a limited number more Pullmans now than we had in 1939. The military are using 10 to 15 percent of the coaches and almost half of the Pullmans. In the face of this, revenue passenger-miles have increased from 22,600,000 in 1939, 29,000,000 in 1941, and 53,600,000 in 1942, to an estimated 96,000,000 in 1944.

"Similarly, our hotels are crowded to the extent that persons traveling on important war assignments, and our servicemen find it difficult and sometimes impossible to obtain accommodations."

Mr. Byrnes added that he recognized that some meetings were desirable in the best interests of the war. However, it was his belief that these could be much fewer in number and much smaller in attendance than at present.

Justice Byrnes announced that, with the approval of the President, Director J. M. Johnson, of the Office of Defense Transportation, had been asked to head a committee to be composed of representatives of the War and Navy Departments, the War Production Board, and the War Manpower Commission to receive and pass upon applications for the holding of group meetings which are to be attended by more than 50 persons to determine if the need for these meetings is sufficiently in the war interest to warrant the tax on transportation and services.

He stated that it is expected that this committee will act not only on requests from the public, but also on requests from the civilian government agencies.

Justice Byrnes requests that all conventions to be attended by more than 50 persons and scheduled to be held after February 1, 1945, be canceled unless approved by this committee as necessary in the war effort. He expressed the hope that group meetings of less than 50 be held to a minimum. He requested that all post-war trade shows be canceled. He particularly appealed to hotel management to decline reservations for unapproved group meetings and trade shows.

Justice Byrnes said that he was so certain that his appeal would receive immediate public support and general cooperation that he has taken no measures to determine Government enforcement procedures which might be instituted.

He also stated that he was writing the heads of all Government agencies to ask them to institute procedures to examine all travel of Government employees with a view to reducing such travel to the minimum consistent with their responsibilities.

He urges the general public to defer nonessential trips.

Four Slices of Bread for the People of Italy

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include herein a letter which I have addressed to the Secretary of War, the Honorable Henry L. Stimson. This letter is written in an effort to obtain for the people of liberated Italy 300 grams of bread a day which represent four slices of bread:

JANUARY 26, 1945.

Hon. HENRY L. STIMSON,
Secretary, Department of War,
Washington, D. C.

MY DEAR MR. SECRETARY: During the month of October 1944 the President, by letter, directed that the bread rations for the people of liberated Italy be raised to 300 grams per day.

1. Is the food available?
2. Are shipping facilities available?
3. If food and shipping are available why hasn't the President's directive been carried out?
4. Who blocked the President's order?

In the light of the suffering of the people of liberated Italy an early reply will be deeply appreciated.

Sincerely yours,

VITO MARCANTONIO.

Law Question Raised in Naming of Wallace

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence in the Washington Star:

LAW QUESTION RAISED IN NAMING OF WALLACE—OBSERVER CITES ACT OF CONGRESS BANNING POLITICAL JOB REWARDS

(By David Lawrence)

Did President Roosevelt disregard a law of Congress forbidding political rewards when he sent to the Senate the nomination of Henry Wallace to be Secretary of Commerce and Federal loan administrator?

The statute referred to became law on August 2, 1939, when it was signed by President Roosevelt. Section 3 reads as follows:

"It shall be unlawful for any person, directly or indirectly, to promise any employment, position, work, compensation, or other benefit, provided for or made possible in whole or in part by any act of Congress, to any person as consideration, favor, or reward for any political activity or for the support of or opposition to any candidate or any political party in any election."

This is what President Roosevelt wrote in his letter of January 20, 1945, to Jesse Jones:

"Henry Wallace deserves almost any service which he believes he can satisfactorily perform. I told him this at the end of the campaign, in which he displayed the utmost devotion to our cause, traveling almost incessantly and working for the success of the ticket in a great many parts of the country. Though not on the ticket himself, he gave of his utmost toward the victory which ensued.

"He has told me that he thought he could do the greatest amount of good in the Department of Commerce, for which he is fully suited, and I feel, therefore, that the Vice President should have this post in the new administration."

REWARD FOR ACTIVITY

The foregoing reveals that the office of Secretary of Commerce, which was created by act of Congress, was bestowed on Henry Wallace as a reward for political activity. Neither the President nor the Vice President are exempted from the provisions of the section in question.

If it is unlawful for a President or any other Federal official to give a public office as a political reward, is it lawful for the United States Senate to confirm a man who receives the reward? This is a question which bears on the spirit, if not the letter, of those statutes which have long been looked upon as a means of keeping Government free from pernicious influences. Offenses under not only the Federal Corrupt Practices Act but the Hatch Act are subject to fine and imprisonment if convictions are obtained.

There is nothing in the law which limits the making of the promise to any action taken or promise made during a campaign. The bestowal of a reward after the campaign is apparently as much banned as a promise. For the statute speaks of "reward for any political activity" and this logically could not materialize until after the service is rendered and a campaign concluded and the victor is in a position to award his plums to those who have helped him win.

INTIMATION IN WIRE

There has been some intimation that, even during the campaign—in fact, shortly after the convention was held which nominated Mr. Roosevelt for a fourth term but rejected the renomination of Mr. Wallace for Vice President—a telegram was allegedly sent by Mr. Roosevelt to Mr. Wallace bearing on the subject of a promise of future office.

William K. Hutchinson, head of the International News Service in Washington, in a dispatch on Monday of this week, said that, after the unsuccessful fight made at the convention, Mr. Wallace received a telegram from Mr. Roosevelt purporting to read as follows: "Tell Mrs. Wallace not to make any move to leave Washington. There will always be a place in my household for you."

Mr. Wallace didn't bolt the ticket but went ahead to give it his active support. For several weeks there was public speculation last summer and autumn as to what post Mr. Roosevelt might have in mind for the retiring Vice President. This telegram, however, would not be persuasive except in relation to the January 20 letter. The words of the statute which bar any reward for political activity alone need to be considered in view of the fact that the President now publicly admits that he is giving a public office as a political reward to Mr. Wallace.

Food Trade Drive Against Inflation

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the following statement by Mr. R. B. Caywood, president of the National-American Wholesale Grocers Association, on the perils of inflation, which appeared in the Journal of Commerce, January 19, 1945:

FOOD TRADE DRIVE AGAINST INFLATION

While continuance of the war food program must be the No. 1 "must" on the schedule of all in the food industry, continued vigilance against the perils of inflation on the home front must be exercised by the food distributing trades as an outstanding contribution to this program.

The fight against inflation has just started. Those of us of World War No. 1 well remember that, while the war continued, it was relatively easy for us, individually and collectively, to support the limited price control that was operative in those days.

However, with the armistice, wholesale grocers, in common with influential businessmen in all lines of production and distribution, were successful in inducing Washington to revoke the few controls existing.

INFLATION RECALLED

We sought "freedom" and "normalcy." What we got was inflation—wild inflation. Wholesale grocers soon were signing wholly unilateral contracts to which irrevocable letters of credit were attached. The retribution was quick and terrible.

To some extent our suppliers had protected themselves. Our customers in too many cases refused deliveries on contract prices or were not able to absorb the ensuing losses. The wholesale grocery industry passed through a disastrous squeeze period, and many were forced into bankruptcy—either immediately or later on as an aftermath of this condition.

Is the wholesale grocery industry going to repeat this performance or will we not be the first to demand continuation of price and ration controls until it is clearly evident that supply and demand are in a safely balanced position? We had better.

Political Parade

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1945

Mr. SHORT. Mr. Speaker, under leave heretofore granted to extend my remarks, I include the following newspaper article by George Rothwell Brown which appeared in the Washington Times-Herald of January 17, 1945:

POLITICAL PARADE

(By George Rothwell Brown)

The tragedy of today's admitted shortages in manpower and production lies largely in the fact that President Roosevelt did not warn the country in time.

Instead, the President, in his fourth-term campaign addresses, painted such a rosy picture of American armed might that the people were lulled into a sense of false security.

This led inevitably to a let-down. Unfortunate, but true.

Thus it is not to be wondered at that the revelations now being made have come as a shock to Congress, which was lulled along with the rest of us.

For reasons obviously political Democratic spellbinders in the Presidential and congressional campaigns put such emphasis upon the terms of peace that were to be inflicted upon Germany and Japan as to lead the layman to conclude that the end of the war was "just around the corner."

Now we know better. Now we are being told better, by those who should have informed us in October and November of what they are revealing to us in the New Year 1945.

It was not until about the 1st of December, a month after the election, that President Roosevelt admonished his executives to put on the soft pedal. Meanwhile the mischief had been done.

It was the President's speech at Philadelphia, on October 27, 1944, which more than anything else gave to the Nation that feeling of false security, from which it has now been rudely awakened.

At that time Field Marshal Von Rundstedt's counteroffensive had not taken place, nor had it been contemplated, and this is true also of the first week in December, when the President sounded his first warning.

Thus it is clear that it is not this counteroffensive which has caused such an alarming increase in manpower and production estimates. The warning came before that.

Said the President at Philadelphia, in one of his most optimistic orations of the fourth-term race:

"The war in Europe has reached the final, decisive phase—the attack on Germany itself."

That was a good campaign argument. And the changes were rung upon it everywhere. The main argument came down to this, that Mr. Roosevelt must be given a fourth term in order that he might preside over the peace table, very effective indeed, for the people longed for a victorious peace.

We are now being told, in January, by spokesmen of the administration, that the battles still ahead will be long and tough. The suddenly revealed recuperative powers of the German Army also have told us that.

Yet at the end of last October we were led to believe that in manpower and production everything was 100 percent perfect. Said the President:

"Never before in history have the soldiers and sailors of any nation gone into battle so thoroughly trained, so thoroughly equipped, so well fed, and so thoroughly supported as the American soldiers and sailors fighting today in Europe, Asia, and the Pacific."

The accent was on thoroughness. No hint of shortages! A little later in the same political address the President said:

"All these operations had to be planned far in advance—and that does not mean merely drawing arrows on maps. It has meant planning in terms of precisely how many men will be needed and how many ships—warships, cargo ships, landing craft—how many bombers and how many fighter planes—and how much equipment and what types of equipment down to the last cartridge."

That was Candidate Roosevelt speaking. Today we are being told by Chairman Krug and Secretary Stimson how many more cartridges we shall need, and how many more men.

The planning the President spoke of so glowingly on the stump of October does not now appear to have been "precisely" as perfect as he made out to be the case.

The Wallace Appointment

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. KEEFE. Mr. Speaker, the recent nomination of Henry A. Wallace to be Secretary of Commerce has provoked widespread editorial comment. It is refreshing to note that many editors, who have consistently and ardently supported the President in the past, view with alarm the implications to be found in the President's letter to Mr. Jesse Jones.

Mr. Charles E. Broughton, editor of the Sheboygan Press, of Sheboygan, Wis., former Democratic National Committeeman from the State of Wisconsin, who has consistently and vigorously supported the administration in all of its actions, writes an editorial under date of January 25, 1945, entitled "A Sad Spectacle." It is worthy of note that even such a vigorous and consistent supporter of the New Deal cannot stomach such a plain political appointment.

Mr. William J. McHale, fearless and independent editor of the Chilton Times-Journal, describes the appointment as the political pay-off.

Mr. David Lawrence in his syndicated column appearing in many newspapers throughout the country asks the pertinent question: "Did President Roosevelt break law in giving reward?"

I am including these three editorials as part of these remarks as indicative of the thinking of the people of America on this very important question:

[From the Sheboygan Press of January 25, 1945]

A SAD SPECTACLE

When we are trying to weld together a coalition of men of all political parties with the aim of winning the war and the peace that is to follow it ill behooves the President to make an appointment that in his own words is "political," and to replace a man whom Mr. Roosevelt declares has rendered an excellent service to his Government.

We refer to the letter written by President Roosevelt to Jesse Jones, Secretary of Commerce, retiring him from office and recommending for confirmation in his place Henry Wallace, former Vice President.

The weakness of Mr. Roosevelt's letter is found in these words:

"DEAR JESSE: This is a very difficult letter to write—first, because of our long friendship and splendid relations during all these years and also because of your splendid services to the Government and the excellent way in which you have carried out the many difficult tasks during these years.

"Henry Wallace deserves almost any service which he believes he can satisfactorily perform. I told him this at the end of the campaign, in which he displayed the utmost devotion to our cause, traveling almost incessantly and working for the success of the ticket in a great many parts of the country. Though not on the ticket himself, he gave of his utmost toward the victory which ensued.

"He has told me that he thought he could do the greatest amount of good in the Department of Commerce, for which he is fully suited, and I feel, therefore, that the Vice President should have this post in the new administration.

"It is for this reason only that I am asking you to relinquish this present post for Henry, and I want to tell you that it is in no way a lack of appreciation for all that you have done, and that I hope you will continue to be a part of the Government.

"During the next few days I hope you will think about a new post—there are several ambassadorships which are vacant—or about to be vacated. I make this suggestion among many other posts, and I hope you will have a chance, if you think well of it, to speak to Ed Stettinius.

"Finally, let me tell you that you have my full confidence and that I am very proud of all that you have done during these past years."

Jesse Jones has the confidence of the business world, he is in close touch with the war situation, and to replace him with a man who has had little experience is bound to divide the United States Senate at a time when unity is so greatly needed. The letter of the President stunned the American people, for fitness was not the requisite, but

politics. The President made this clear in his own language, for he said of Mr. Jones "your splendid services to the Government and the excellent way in which you have carried out the many difficult tasks during these years."

There was no such a recommendation for Mr. Wallace, simply the statement that Mr. Wallace had asked for the post and in return for political favors, he was going to give him recognition in the new administration.

Mr. Wallace, it is true, lent his efforts to the Democrats, but there were thousands of others who acted as keymen, and it would be a rank injustice, a miscarriage of justice, to say that tried and true servants should be replaced to pay a political debt. Mr. Wallace and Mr. Jones have clashed, and the appointment will only tend to widen the breach, and it will work injury to the administration. We predict that this wound to a man, who is kicked out, will never heal, in face of the statement that he had the full confidence of Mr. Roosevelt.

Seldom have we been forced to take issue with President Roosevelt, but when a post of this importance is to be bartered off on the grounds of politics, rather than efficiency, it bodes no good for the future. Mr. Roosevelt was elected for a fourth term, based on his familiarity with the war situation and because the people felt he could best serve in rounding out a just and lasting peace. According to his own letter to Mr. Jones, there had never been anything other than "splendid relations" and "splendid services."

In private industry nothing like this would be warranted and our public servants should have the same in mind.

But to go further, Mr. Roosevelt asks Mr. Jones to make the same approach that Mr. Wallace did, and ask for an ambassadorship or some other desirable post. This is the height of unstatesmanship. We can quote the Bible, and yet would these words help: "But whosoever shall smite thee on thy right cheek, turn to him the other also."

[From the Chilton (Wis.) Times-Journal]

THE POLITICAL PAY-OFF

We all know that a lot of unsavory things are done in the name of politics. Public jobs and honors are the currency in which political favors are paid. Usually, however, those who deal in this kind of currency try to camouflage their actions under a cloak of decency. They bide their time until the friend can get his recompense without outraging public opinion.

Not so with President Roosevelt in the payment of his political debt to former Vice President Wallace. He asks Jesse H. Jones, with whom he had a "long friendship and splendid relations," and who has "rendered splendid services to the Government," to vacate the job of Secretary of Commerce that he might reward Mr. Wallace for having displayed "the utmost devotion to our cause" in the election campaign last fall.

Thereby he set forth for the record what observant people knew for many years—that Government jobs, all the way up to a cabinet post, are on the auction block for political devotion to him.

Mr. Wallace had an ardent desire to be Mr. Roosevelt's running mate last fall. He was dumped in the ashcan, plainly and ungraciously, by his revered chief before the nominating convention got under way. Most people thought at the time that Mr. Wallace, his sense of pride wounded by the rebuff, would retire to the sidelines and let the campaign take its course. But Mr. Wallace's pride, if he had any, didn't suffer a dent. He went right out and whooped it up for the New Deal just as if he had not been kicked in the pants.

The President's wish now to make him Secretary of Commerce, and place in his hands the multibillion dollar R. F. C. lending agency, suggests that this little barter transaction may have been arranged before the campaign got under way rather than after it was over. That's the kind of grease that would soothe Mr. Wallace's wounded pride, and Mr. Roosevelt is a shrewd enough politician to have sensed it.

Anyway, Mr. Wallace's campaign meanderings are to be appropriately compensated out of the public treasury—if the Senate doesn't prove so ungracious as to upset the apple cart by divorcing the juicy R. F. C. from the Commerce Department.

If Mr. Wallace has business and financial ability, he has managed rather successfully to keep it a dark secret. To most people he is a dreamy, visionary politician whose basic wish is to keep out in front of the gang if he can manage in time to guess which way the gang is bound. The direction doesn't matter, but to be out in front does.

Mr. Wallace has Presidential ambitions and he has the powerful "pink-tinted" C. I. O. political committee behind him. What better break could he want for that ambition than to be at the head of the multibillion money-lending agency.

That great repository of the science of government, W. P. A., and lend-lease, Mr. Harry Hopkins, could give Henry some authoritative tips on that point. And it may be that Mr. Hopkins of "spend and spend and elect and elect" fame did have something to do with inducing Mr. Wallace to crawl out of the political ashcan into which he had been rather unceremoniously dropped, to give "of his utmost toward the victory which ensued."

DID PRESIDENT BREAK LAW IN GIVING REWARD?

(By David Lawrence)

WASHINGTON.—Did President Roosevelt disregard a law of Congress forbidding political rewards when he sent to the Senate the nomination of Henry Wallace to be Secretary of Commerce and Federal Loan Administrator?

The statute referred to became law on August 2, 1939, when it was signed by President Roosevelt. Section 3 reads as follows:

"It shall be unlawful for any person, directly or indirectly, to promise any employment, position, work, compensation, or other benefit, provided for, or made possible in whole or in part by any act of Congress, to any person as consideration, favor, or reward for any political activity or for the support of or opposition to any candidate or any political party in any election."

This is what President Roosevelt wrote in his letter of January 20, 1945, to Jesse Jones:

"Henry Wallace deserves almost any service which he believes he can satisfactorily perform. I told him this at the end of the campaign, in which he displayed the utmost devotion to our cause, traveling almost incessantly and working for the success of the ticket in a great many parts of the country. Though not on the ticket himself, he gave of his utmost toward the victory which ensued. He has told me that he thought he could do the greatest amount of good in the Department of Commerce, for which he is fully suited, and I feel, therefore, that the Vice President should have this post in the new administration."

The foregoing reveals that the office of Secretary of Commerce, which was created by act of Congress, was bestowed on Henry Wallace as a reward for political activity.

Neither the President nor the Vice President is exempted from the provisions of the section in question.

If it is "unlawful" for a President or any other Federal official to give a public office as a political reward, is it lawful for the United States Senate to confirm a man, who receives the reward?

This is a question which bears on the spirit, if not the letter, of those statutes which have long been looked upon as a means of keeping government free from pernicious influences.

Offenses under not only the Federal Corrupt Practices Act but the Hatch Act are subject to fine and imprisonment if convictions are obtained.

There is nothing in the law which limits the making of the promise to any action taken or promise made during a campaign. The bestowal of a reward after the campaign is apparently as much banned as a promise. For the statute speaks of reward for any political activity and this logically could not materialize until after the service is rendered and a campaign concluded and the victor is in a position to award his plums to those who have helped him win.

There has been some intimation that, even during the campaign—in fact, shortly after the convention was held which nominated Mr. Roosevelt for a fourth term but rejected the renomination of Mr. Wallace for Vice President—a telegram was allegedly sent by Mr. Roosevelt to Mr. Wallace bearing on the subject of a promise of future office.

William K. Hutchinson, head of the International News Service in Washington, in a dispatch on Monday of this week said that, after the unsuccessful fight made at the convention, Mr. Wallace received a telegram from Mr. Roosevelt purporting to read as follows:

"Tell Mrs. Wallace not to make any move to leave Washington. There will always be a place in my household for you."

Mr. Wallace didn't bolt the ticket but went ahead to give it his active support. For several weeks there was public speculation last summer and autumn as to what post Mr. Roosevelt might have in mind for the retiring Vice President. This telegram, however, would not be persuasive except in relation to the January 20 letter.

The words of the statute which bar any reward for political activity alone need to be considered in view of the fact that the President now publicly admits that he is giving a public office as a political reward to Mr. Wallace.

Clear Everything With Sidney

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Times-Herald of January 24, 1945:

CLEAR EVERYTHING WITH SIDNEY

The Republicans used "clear everything with Sidney (Hillman)" as a slogan in the 1944 Presidential campaign and, while it aroused much interest and excitement, it wasn't enough to elect Dewey President.

"Clear everything with Sidney" was what President Roosevelt was reported to have told his henchmen at the Chicago convention which renominated him for a fourth term. Hillman, a capable and energetic operator, headed (and heads) the C. I. O.-Communist Political Action Committee, or P. A. C., which wanted Henry A. Wallace renominated for Vice President.

The P. A. C. was unable to cram Wallace down the craws of the conservative southern Democrats, but it was able to block nomination of those Democrats' favorite, Jimmy Byrnes. A compromise was reached in the person of Harry S. Truman, now Vice President.

Should Mr. Roosevelt move on to a better world some time in his fourth term, as could happen to any man of his age who works as hard as he does, we think Mr. Truman would make a pretty good President. He has never exhibited an ambition to have all the power in sight, and his long experience in Congress must have accustomed him to working with Congress, whereas Roosevelt likes to dominate completely. At least we can all be thankful that Wallace cannot succeed to the Presidency in the next 4 years.

However, Hillman's favorite has now bobbed up with Roosevelt's nomination to the post of Secretary of Commerce, plus controller of the numerous governmental lending agencies heading up in the R. F. C. This work has long been handled by Jesse H. Jones, a banker and businessman who does not make loans without reasonable likelihood of repayment.

The R. F. C. and its subsidiary corporations have about forty billions in resources. They can make loans from this money, or manipulate strategic materials, or build factories, or buy and sell real estate—and they do. Under Jones, these operations have been conducted in businesslike fashion. In the period of reconversion after the war these agencies will be fully as important as they are now. What it adds up to is that this job which Roosevelt and Hillman want to give to Wallace is the second biggest job in the Government.

Wallace is the man who said the war was being fought to give everybody in the world access to a quart of milk a day; also, that after the war we should knock down our $700,000,000 synthetic-rubber industry to pilot-plant size and go back to importing rubber halfway around the world. If once again some foreign power should cut us off from those rubber sources, Wallace would have us once again caught perilously short on rubber.

This is the man to whom the President, spurred by Hillman, wants to give all of Jones' Government jobs.

The furor over the Wallace nomination has pretty much obscured Mr. Roosevelt's nomination of Aubrey Williams to be Rural Electrification Administrator. Williams is an old-time leftist social-service worker, once head of the National Youth Administration, and quite a favorite of Mrs. Roosevelt's.

One important and frequent job of Rural Electrification bureaucrats is to make a shrewd estimate on whether some farmer who wants a public power line run into his place is likely to pay for the power.

Dear Aubrey has had no training in this kind of work. His ingrained love for the less fortunate part of the common people would incline him to give Government power to all who asked for it, and let the taxpayers foot the bills of those who couldn't or wouldn't pay their own bills.

Looking over these Roosevelt nominations, we feel that Mr. Roosevelt made an understatement when he said recently that he was still "a little left of center."

He is still evidently clearing important matters with Sidney—meaning he is a long way left of left of center.

His administration's ultimate objective seems to be some kind of totalitarianism for the United States—maybe fascism, maybe communism, maybe some combination of these two European systems. The technique evidently is to slide totalitarians into positions of power in the Government, detouring Congress when possible, and bulldozing it when it has to be consulted.

If we all find ourselves presently living in a totalitarian state, with our traditional American liberties destroyed, the majority of the voters in the 1944 Presidential election can look at themselves in their mirrors and say, "Well, you asked for it."

Nomination of Henry A. Wallace To Be Secretary of Commerce

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1945

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Kansas City Star of January 23, 1945, commenting on the nomination of Henry A. Wallace for Secretary of Commerce. The editorial is entitled "Brazen Political Pay-Off." I believe it reflects the opinion of a large majority of the people of the Middle West.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRAZEN POLITICAL PAY-OFF

The action of the President in pushing aside Jesse Jones to make a place for Henry Wallace is one of the rawest political deals in the Nation's entire political history.

It is a brazen political pay-off openly made as such—a pay-off not only to Wallace for his work "for the success of the ticket in a great many parts of the country," as the President frankly states, but a pay-off to Sidney Hillman and the C. I. O. Political Action Committee for their same work for "the success of the ticket."

And this Cabinet-post pay-off goes to a man who literally has never had a day of experience to qualify him for the responsible office to which he is named—Secretary of Commerce and administrator of more than $32,000,000,000 in authorized loans to business and for economic purposes of various kinds in this country and abroad.

The President does not even cite any Wallace qualifications for the office. He does say that the retiring Vice President is fully suited for it; but that evidently is based upon Wallace's own statement, that he thought he could do the greatest amount of good in the Department of Commerce. The whole import of the President's letter demanding that Mr. Jones step out is that Henry Wallace deserves almost any service which he believes he can satisfactorily perform. And Henry Wallace deservies it, in the President's view, because he worked so hard "for the success of the ticket."

That's the upshot of the whole business. An experienced, capable man is kicked out so that Henry Wallace can get what he wants—as a man who not only is totally without business experience but as a man of demonstrated incompetence through his management of the Board of Economic Warfare.

The President's action not only is an affront to American industry, business, and finance which the Department of Commerce is expected to serve, but it is an affront to the American people.

The President calls for and expects national unity and support, especially in wartime. He has made such appeals on the basis of patriotism. As President he is expected to serve all the people, the Nation's interest—first—and politics second if at all in wartime.

Yet right in the midst of wartime, with urgent calls upon the Nation's manpower and all its people to do their utmost and to make all necessary sacrifices in support of the Government—the official head of the Government himself flouts every consideration of unselfishness and openly, without finesse or apology, serves purely political interests as a pay-off for work "for the success of the ticket."

It is deeply discouraging to the millions of earnest and patriotic Americans who have tried to forget politics and put the Nation and the cause of victory ahead of everything else while they sacrifice to support their Government.

This is bad enough in wartime. It will be worse in peacetime so far as the Wallace appointment is concerned. As Secretary of Commerce and authorized administrator of billions in loans, Wallace will be in a key position in the whole set-up of reconverting industry and providing millions of jobs for retired war workers and returning veterans.

In this post Jesse Jones was the only link between the administration and American industry. He had the confidence of practical men who are directing the war production job and who must direct the peacetime job. It is needless to ask how Wallace will perform in the office, with his head full of grandiose dreams and schemes for making America over. His appointment is like placing a high official of the National Association of Manufacturers at the head of the Department of Labor.

Wallace does not have and he will not be able to get the confidence of American industry which must be depended upon to plan, expand, produce, and thus provide those millions of jobs.

This appointment in the first hours of the President's fourth term leaves millions of Americans in humiliation and dismay.

Nomination of Henry A. Wallace To Be Secretary of Commerce

EXTENSION OF REMARKS

OF

HON. JOSEPH H. BALL

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1945

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter signed by Benny Austin, addressed to the editor of the Washington News, and printed in the January 24, 1945, issue of that newspaper. The letter refers to the Wallace-Jones brannigan.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BENNY WRITES HIMSELF A PIECE ABOUT WALLACE, JONES, AND US

You know, I like your paper. But sometimes I can't make out whether your editorials are written by some little boy who can't remember more than a couple of years back, or by some old gaffer who lives, mentally, in the McKinley era as portrayed by the late Horatio Alger.

Take this Wallace-Jones thing. You say we mustn't have Hank in there because he's an idealist and while every town needs one, it doesn't want an idealist as the town banker, because a banker should have at least one glass eye so he won't go all emotional on you and give the depositors' Christmas savings away to the first sad case he meets. I haven't your paper before me, but I think that was the gist of your editorial.

As I say—it must have been a very little boy or a very old man who wrote it, because he either never heard of, or has forgotten that little '29 crash thing.

Lots of bankers were caught with your dough and my dough. And then out town

banks tumbled, one knocking the next one down like a lot of duck pins, smashing our little nest eggs and suddenly we were stony.

That was not the doing of idealists like Hank the Happy. In charge of operations were those cold, efficient lumps of ponderosity like Jesse the Jowl. Money men. Men of substance. Men with the know-how. Far-seeing business men and Great Engineers, even. Nuts!

Actually, of course, bankers are incurable romantics—about themselves. But we are not called upon to match with equal naivete their own childish faith in their own judgment, which the record shows is completely unwarranted.

In particular, if half of what TRUMAN's committee said about Jonesey is true, he should have had the "can tied to him" long since by an irate and patriotic citizenry.

Now take the other side. Is Wallace this weird combination of political slicker and do-good? Let's see.

He ploughed under the dear little pigs and slaughtered the tall corn. Was that an act of a politico or a do-good? Hardly the latter. He did it to keep up prices. He was trying to control production, not on the basis of need, but on the basis of profit. So he suddenly seems to more nearly resemble those cartel fellers you rant against, like the tin magnates and aspirin kings, some of whose best friends, I am told, are bankers. Why, as I think of it, Henry is changing in my mind's eye, growing bigger and sloppier, and talking with a Texas drawl.

So why not a big-city editorial on the real kernel of this W-J brannigan? One that would show that this is an interesting but strictly political fight over a rather game bloke with a possibly slightly phony homespun facade, politically ambitious, definitely wedded to capitalismus, but whose liberal leanings have won him a certain support which makes him, as the result of a political pay-off, the focus of an interesting fight between two factions of the Democratic Party, one side abetted by the Republicans.

As to Hank being a political slicker, I think he is kind of slick that way. But since when should that horrify Congress and the peepul? Franklin D. is kind of slick, and so is your boy, Dewey, although he got away out of his weight and class in the recent tournament.

At any rate, please don't give us that stuff about Hank, who would have been President if Roosevelt had died, who ran the Department of Agriculture, not being able to run even a country bank; it's too corny. Try Wallace's Hy Bred, or maybe he'll mix you up something special.

BENNY AUSTIN.

National Service

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1945

Mr. WILLIS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a timely editorial entitled "Forging New Chains," which appeared in the Fort Wayne (Ind.) News-Sentinel of January 22.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FORGING NEW CHAINS

With the emergencies of war as the handiest excuse, Mr. Roosevelt once more is attempting to put over a national service, or labor slavery, bill.

His desire for such a law, which would place in his ambitious hands the destiny of every working man and woman in the Nation, has become with him a fixation.

He sees such a law, not primarily as a solution of any manpower problems which exist, but as a means whereby he may forge new instruments of power over the electorate.

That some manpower problems do exist cannot be wholly denied, but they are problems of maldistribution, chiefly, and these could be solved, if the President so desired, by efficient use of the manpower which is available.

Furthermore, there is absolutely nothing in the record of the New Deal administration which indicates that it could, even with a national service law, solve any of the manpower problems which have not been solved to date.

As a matter of plain fact, there is plenty of reason to believe that such legislation, administered by the hordes of bureaucrats which now infest the country, would be a means only of creating complete chaos and an actual shortage of manpower.

It is on the record that the administration has done virtually nothing to stop the continued outbreak of unauthorized strikes. It has done nothing to stop the slow-downs which are fostered by scores of unions.

It has done nothing to stop the hoarding of labor by industries which are growing financially fat under the "cost-plus" system of paying for goods. It has done nothing to see to it that factories make the most efficient use of the labor which they have.

One of the reasons the administration has failed to act in these instances is because it fears reprisal at the hands of the powerful unions.

Moreover, we are entitled to a strong suspicion that the administration has not been eager to make the most efficient use of available manpower, because if it had, it would not now have any "logical" excuse for assuming an iron dictatorship over American labor.

We are entitled to the suspicion that the reactionaries in Washington, from Mr. Roosevelt on down, may have "planned it that way."

As always, Mr. Roosevelt wants the slave labor legislation jammed through Congress in a hurry. Speed is always his watchword, when he reaches out for new powers. He wants it hurried through so quickly that Congress will not have time to examine the need for such legislation, and so will give him the power he seeks, without question.

This technique has always been used by Mr. Roosevelt, who has been able each time either to find, or to create, an emergency which whips up fear on the part of the people and the Congress, and thus puts a ready weapon into his grasp.

As always, he promises to use such power fairly, and sparingly.

And who can believe that? Mr. Roosevelt has never used any of the powers granted him "sparingly," and he has not always used them fairly.

Indeed, it has been but a few days since the Senate Judiciary Committee, one of the most important of all legislative committees, sent a report to the Senate in which it charged that the President had issued orders which had no statutory or constitutional basis; that he was attempting to rule by executive decree; and that the express intent of some laws had been misinterpreted by Mr. Roosevelt.

It goes without saying that the "misinterpretations" were not accidental.

Mr. Roosevelt has long since lost faith in the traditional American system of a representative republic.

He believes that he, and he alone, has the brains and ability to rule, and that all fundamental powers should be turned over to him, and that Congress should relegate itself to a position comparable to that of the German Reichstag, which merely puts its stamp of approval on any decree the dictator issues.

There is no need in this country for national service laws, by which American labor would be enslaved, and by which it could be shuffled about at the whims of some pay-roll stooge, and be forced to work where the stooge directed, and at whatever pay he decreed.

All that has been said, or can be said, about a national service bill can also be said of the un-American' "work-where-we-tell-you" bill which has just been approved by the House Military Affairs Committee.

This proposed piece of Fascist legislation would provide a maximum fine of $10,000 or 5 years in prison, or both, for any man between 18 and 45 who refused to leave the job he is on, and take one which some Government stooge directed.

Think, if only for a minute, what such a law could mean to America.

Any critic of the administration, any political enemy, any man who didn't bow to the will of Mr. Roosevelt and his clique of power-mad bureaucrats, could be harassed throughout the rest of the war. His home could be broken up, his mind and health ruined. If he owned a business, he could be removed from its management and forced into bankruptcy.

The emergency which came into Mr. Roosevelt's hands at this propitious moment was the Allied set-back on the western front. The administration is straining to make Congress and the electorate believe that this emergency is enough to justify relinquishing one of the last of our freedoms.

It was a serious set-back. But not that serious. Nothing has happened in this war yet so serious as to justify scrapping our Constitution, and placing American labor in the chains of slavery, which would be but little better, if any, than that endured by the Negroes of pre-Civil War days.

America's last fortress, between the people of this Nation and the overriding ambitions of its Chief Executive is the Congress.

If it fails the Nation in this instance, and gives in to the will of the Nation's power-greedy leader, it may as well order itself disbanded, and go home.

American liberties will, at long last, have been dealt a mortal blow.

A Banker Who Serves as a Private

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1945

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Banker, 48, Serves as Private in Line," published in the New York Times. The banker happens to be a distinguished South Carolinian.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BANKER, 48, SERVES AS PRIVATE IN LINE—EDWARD J. ARTHUR, OF UNION, S. C., WITH UNITED STATES SEVENTH ARMY—THREE BROTHERS ARE COLONELS

(By Richard J. H. Johnston)

With One Hundredth Division, United States Seventh Army, January 25.—A former

bank vice president and mayor of Union, S. C., Pvt. (1st cl.) Edward J. Arthur, serving with a quartermaster company in this division, is probably the oldest enlisted man on the Seventh Army front. This soft-spoken, graying veteran of the First World War, enlisted 2 years ago at the age of 48.

"I just wanted to get in the service and help out," he told me today. "My family are well taken care of, so I enlisted."

Private Arthur, who has three brothers who are full colonels on active duty, was for a number of years after the last war a commissioned officer in the National Guard.

"Bars and stripes carry too much responsibility," he said, explaining why he had consistently refused promotion.

CHANGES HIS OPINION

A prosperous automobile dealer in Union, he told how he changed his opinion of war after an experience on the western front in the last war as a machine-gunner with the Fifth Regiment, Second Marine Division, which fought at Champagne in the Argonne Forest and at St. Mihiel. When he returned to Union in 1919 he vowed he would permit none of his sons to get into any service.

"At that time I said," he declared, "that I would shoot him in the foot first, but later I changed my mind."

Several years later he enlisted in the National Guard and served for 12 years.

"When the war came I signed up," he explained, "to help out, and I am not leaving until the Germans are cleaned up, but," he added hastily, "I am not staying in the service any longer than I have to—I could be enjoying life at home right now."

Private Arthur, who was described by his officers as an excellent soldier, was formerly a commander of the Union American Legion Post, vice president of a bank of which he and his three brothers are part owners, and head of an automobile business.

TRAINING A LITTLE TOUGH

He said he found training at Fort Screven, Ga., and Camp Sutton, N. C., a little tough, but he underwent all the rigors of training beside the youths without too much trouble.

He has four children—Miss Arthur, a teacher in Barstow, Calif., High School; Miss Lucy, 20, who works in the offices of the Southern Railroad in Atlanta; Edward J. Arthur, Jr., a student in Union High School; and Miss Kathleen Arthur, 22, a secretary at Barstow High School.

Private Arthur's brothers in the service are Col. Joseph D. Arthur, a West Point graduate, now serving in the Engineering Office in Washington; Col. Harry M. Arthur, formerly commander of the One Hundredth Division special troops, who is now in China serving with the infantry training school; Col. John M. Arthur, chief of staff at a United States Marine Corps base in the Central Pacific.

Analysis of H. R. 1752

EXTENSION OF REMARKS

OF

HON. J. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

UTILIZATION OF SELECTIVE SERVICE REGISTRANTS, 18 TO 45, UNFIT FOR MILITARY SERVICE, AS WORKERS IN WAR INDUSTRIES

Mr. JOHNSON of California. Mr. Speaker, I have made an analysis of H. R. 1752, now under consideration. I hope this may prove of help to those members who have not had the time to attend the hearings on the bill or to read the rather voluminous record.

Having listened to all of the hearings on the above-named bill, I submit herewith an analysis of the bill and answers to some of the questions that will arise as to the need for and purpose of the bill. This is prepared to clarify my own thinking on the matter and also to give what little help I can to Members who are not members of the Military Affairs Committee and who, consequently, had no opportunity to hear the testimony on which the bill is based.

My purpose is to help avoid misunderstandings, already numerous, as to what the bill proposes to do and the means used to obtain the objective sought.

GENERAL PURPOSE OF THE BILL

The purpose of the bill is to mobilize the civilian workers of the Nation so as to keep production at the peak, in every requirement of the military forces. Our total war requires an uninterrupted flow of every kind of equipment and munitions to the fighting forces, now occupying nine theaters. A slow-up of one single item may slow up a drive and cause it to lose momentum, acquired at great cost of life. If the momentum had been retained, it would have hastened victory and a consequent saving of lives. Every facility—labor, management, Government, and agriculture—will be used to get the men necessary into the special type of work which is critical. The selective service, which registered the men and which deferred them, is the agency that will get the men and locate them in the right places and permit them to be changed from former essential occupations to critical occupations. This is the general procedure:

The Director of War Mobilization shall designate and certify plants and facilities, activities, and farms, and so forth, which are essential to the war effort. He may make classifications on the basis of areas, types of activity, occupations, facilities, and farms. Any registrant in work of the type certified as essential shall retain his job until his selective service board permits him to leave it.

Also, the Director of War Mobilization shall certify, after consultation with management, labor, agriculture, and Government, to the Selective Service Director the extent to which areas, plants, facilities, and farms are unable, by voluntary recruiting, to meet manpower requirements. Then the Director of Selective Service designates the categories of registrants not in essential war production and not deferred under the Tydings amendment—which is not changed—or by reason of being engaged in essential war production. That group is the one liable to perform essential war work. The men in this group who, in the judgment of the Director, can transfer to the essential work with the least disruption to the civilian economy and themselves, must respond first. Then the local selective service boards are directed by the Director to request such registrants to voluntarily become employed in essential war work, within the time set by the Director.

The local selective service boards may order those who have not responded to this request to make application for employment, in occupations certified by the Director of War Mobilization, and to accept such employment when accepted therefor. The registrant directed to obtain employment shall have a reasonable choice of employers.

To help the local selective service boards, the Director of War Mobilization may assign to such boards, in an advisory capacity, representatives of other agencies of Government.

Conscientious objectors are directed to find employment in some activity or employment in the national interest.

The time the registrant is employed in essential work—including not over 15 days' time for transfer from one to the other—is excluded from the 90-day period a veteran has to claim his former job.

The registrant entering the work provided by this act shall be accorded the rights; first, to reenter his former occupation within 90 days after leaving essential war work; second, his seniority rights in his former employment; third, a determination by the United States district court—free of legal costs or fees—that he is entitled to his former job; and fourth, help of the selective service organization in personnel problems and reinstatement in his former job.

The persons taking employment under this act in essential war work, as designated by the Director of War Mobilization, shall receive travel pay and subsistence the same as if inducted in the military service to and from the place they enter essential war work under this act.

A violation of this act shall constitute a violation of the selective service law, which the millions inducted in the military service were required to obey. An alleged violator has the defenses that the selective service board acted arbitrarily or that he had a justifiable reason for not complying with the board's order.

This act terminates with hostilities or earlier by concurrent resolution of Congress.

Persons employed under this act voluntarily or by order shall be accorded the benefits of the Soldiers' and Sailors' Civil Relief Act, freedom from suits, protection against lapse of life insurance, extension of mortgages, and so forth.

Please read the attached questions and answers, which further explain the bill and questions that will arise as to its provisions.

WHAT ARE THE MANPOWER NEEDS TO BE SATISFIED BY THIS ACT?

The testimony is that by July 1, 1945, the military forces will need 900,000 men and the production forces 700,000. Of the 900,000 for the military, it was estimated that 330,000 will have to come out of industry and the ranks of those who have been deferred.

WILL MANAGEMENT, LABOR, AND AGRICULTURE GOVERNMENT BE USED IN ADMINISTERING THIS LAW?

Yes. Page 3 of the bill provides that these agencies will be used to voluntarily recruit manpower requirements. Only after these voluntary methods fail may

the board compel a man to seek and take employment in a war industry.

WILL THIS ACT DECREASE TO A MINIMUM THE TURN-OVER OF WORKERS?

Under Secretary of the Navy Bard estimated before a Senate committee that procedures similar to those in this act would recruit workers and conserve workers to such an extent that scarcely no compulsion should be required. If turn-over in war industries such as the Mare Island Navy Yard and others could be reduced to the peacetime level, or even approach it, that saving alone would almost solve the manpower problem in critical items. The consequence would be that it would minimize the necessity of seeking new and untrained workers.

DOES THIS BILL REPEAL OR LIMIT THE TYDINGS AMENDMENT?

It does not. The Tydings amendment is specially referred to and recognized. As a practical matter, this act extends the Tydings amendment by adding to it farmers who are classified IV-F's. It might add cannery workers and other workers who are connected with or incidental to farming, should the Director of War Mobilization place them in such a category. Some crops might be placed on the critical list and the workers for those crops would benefit by this legislation. The farm-implement problem might be helped by this legislation. The Director of War Mobilization might decide that the food situation was critical because of a lack of essential farm implements to get the crops in and harvested. He could then certify that workers were needed for the farm-implement industry.

DOES THIS BILL STIGMATIZE IV-F'S?

Decidedly not. Most IV-F's would break a right arm to get in the service. They cannot because of handicaps. Most of them would like to work at something that contributes directly to the success of the soldiers and sailors. This bill provides a way, on a selective basis, to give them a chance to take jobs contributing directly to the war effort. Also by selectivity it gives those most able to respond the first chance. Those who cannot respond, because not placed in a category to respond, have official sanction then to work in the ordinary civilian economy, without feeling that they are shirking. This would definitely raise civilian morale.

IS THERE ANYTHING NEW OR NOVEL ABOUT THIS BILL?

There is not. It merely provides a method of obtaining badly needed men for production, when all voluntary methods fail. The principle is in the Tydings amendment. This act extends the principle of the Tydings amendment to IV-F farm workers and others. Also, there is nothing new in the furnishing of labor for war production in an emergency, by the services. Stevedores have been furnished by the Navy when there was a shortage but an acute need for them in San Francisco, and labor and management could not furnish them. Soldiers and sailors have been furloughed to help harvest crops. The Seabees are really a group who do special construction jobs, and what a grand job they have done. Soldiers and sailors have been called upon in almost every theater of war to do special kinds of work, that should have been done by civilians.

IS THIS A SLAVE BILL?

Decidedly not. All workers will have an opportunity to respond to the request for entry into an essential or critical war employment, if they are not so engaged. Present recruiting agencies will help give workers this chance. War and Navy authorities believe this will fill the need and not make necessary the ordering of the recalcitrants to accept a war job.

If they are required and ordered to take such a job they will be in the same category as their millions of fellow registrants who have been inducted and as their hundreds of thousands of fellow registrants who have been killed or wounded. If these few recalcitrants and stubborn workers will not accept a necessary war job without being ordered to do so, they will not be slave workers any more than the millions of men and women in the armed services, most of whom were inducted. Many of these workers were deferred and that means that the one who took the place which was theirs, but for the deferment, may have lost his life that his country might be free and the man deferred might be secure. This is only a mild step, which the chiefs of the military services think necessary in order that victory may come sooner and lives saved.

WERE THERE ANY SHORTAGES IN 1944?

Yes; there were. This is from testimony of Col. Lewis Sanders of the Office of the Chief Staff—record of hearings, page 411:

Shortages in 1944

	Percent
Medium heavy artillery ammunition	6.2
Mortar ammunition	11.5
105-howitzer ammunition	7.8
Bombs, grenades	9.2
Heavy trucks	6.0
Air-borne radar	22.4
Dry cells for batteries	23.8
Cotton duck	13.7
Tires, heavy truck	9.7

And that is not a complete list of the shortages. It is all I have got the survey on up to this point.

Tribute to the Late Senator Francis Maloney

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1945

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very beautiful acrostic poem written by Horace C. Carlisle in tribute to our late colleague Senator Francis Maloney, of Connecticut.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

SENATOR FRANCIS MALONEY

S-enator Francis Maloney was known,
E-verywhere, as an American who
N-ever forsook, in a crisis, his own—
A-lways at all times his big heart beat true
T-o the appeals of truth, justice, and right—
O-n all occasions, it was his delight.
R-eadily, for these, to speak and to fight.
F-riend to his country and friend to his State,
R-ecognized for the kind deeds that he's done,
A-nd for an influence, lasting and great—
N-ever disparaged, though he lost or won—
C-autiously chose he the words that he spake
I-n the great Chamber where he sought to make
S-ure he was right, ere he drove down his stake.

M-en come and go, but their influence still,
A-fter them, keeps keeping on keeping on
L-iving, in silent activity, till
O-ften all that ever knew them are gone.
N-ever neglectful was he of a friend,
E-ven on down to his untimely end—
Y-ea, he was one on whom God could depend.

—*Horace C. Carlisle.*

Address of Hon. Harry W. Bashore

EXTENSION OF REMARKS

OF

HON. HAL HOLMES

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. HOLMES of Washington. Mr. Speaker, under leave to extend my remarks, I include an address of Commissioner Harry W. Bashore, of the Bureau of Reclamation, which was presented to the annual meeting of the American Railway Development Association in Chicago recently by Goodrich W. Lineweaver, Assistant to the Commissioner. The address deals with the Importance of Reclamation and Methods Recommended for Settling, Clearing and Leveling Project Lands. I am sure I do not have to call the attention of the House to the important place Federal Reclamation has in the economy of the West—not only from an agricultural standpoint but for what great reclamation projects like Grand Coulee Dam are contributing to the prosecution of the war through hydroelectric power production.

The other phase of Mr. Bashore's address deals with settling, clearing, and leveling reclamation project lands to aid settlers and to assure the return of the Federal investment. I am glad that the Bureau of Reclamation is giving attention to this phase of reclamation operations. In my own district the Roza Division of the Yakima Project is under construction as a war-food project and the land which is now being watered for the first time will provide opportunities for settlement of returning servicemen. The veterans will find the Roza Division lands as productive, I am sure, as are other divisions of the Yakima Project, which is a prize development in reclamation annals.

The outstanding post-war development, in my opinion, that the Bureau of Reclamation has scheduled is the Columbia Basin irrigation project which will be watered from Grand Coulee Dam. Practically all of the million acres of

land in this project are in my district. I am exceedingly anxious that the Bureau of Reclamation will work out and put into effect a comprehensive, effective settlement program under the Columbia Basin Project Act of 1943 which will give returning servicemen who are qualified for irrigated agriculture every opportunity to settle where they can be self-sustaining and make every possible contribution to the development of the Pacific Northwest.

In order to achieve this result it will be necessary for the Bureau of Reclamation to have its plans ready, so that construction work on the irrigation system can begin as soon as war conditions permit. A comprehensive program for settlement and effective land use is also essential.

Our first job is to win the war, but we will have an equally big job in giving returning servicemen every possible chance for successful careers in the walks of life for which they are best fitted. There are thousands of young men from the Pacific Northwest and other sections of the West who will be qualified to settle on the irrigated lands of the Columbia Basin Project and they must have that opportunity.

The text of Mr. Bashore's address is as follows:

Members of the American Railway Development Association, the subject I have been asked to discuss today is The Importance of Reclamation and Methods Recommended for Settling, Clearing, and Leveling Project Lands. I am sure you recognize the importance of reclamation. Railway men know what Federal reclamation has contributed to the irrigation of some 21,000,000 acres of arid land in the West and what irrigation has meant to the railroads that serve the West—or for that matter to the transportation lines that carry goods, materials, and machinery from and to the Midwest and East.

There is sufficient water available in the West to double the acreage now irrigated. We believe that using all the available water for beneficial purposes would increase the population of the 11 most Western States from around 15,000,000 to about 30,000,000.

What is more, building of dams for irrigation has an extremely important byproduct result. An enormous quantity of electrical energy is produced at low cost. From this low-cost power hundreds of industries are springing up throughout the western territory, which otherwise would not have been economically possible. This has opened up a new vista for individual enterprise and initiative, which many thought had been closed. Bringing under irrigation 22,000,000 additional acres of arid land would make possible some 400,000 new farms, and this, too, would stimulate individual initiative on a grand scale.

The two-way traffic created by the agricultural and industrial developments of the West to date indicates what further expansion would produce. The railroads of the West and the Nation have a direct interest in the future of water conservation for irrigation and its partner—hydroelectric power.

If you want further evidence of the importance of irrigation to the railroads, I can cite a few figures.

Take the Columbia Basin project just south of Grand Coulee Dam in Washington, where more than 1,000,000 acres of now dry land will come under cultivation when water is applied. It is estimated that this development will mean an increase of $36,000,000 in railroad revenues annually for the four lines which reach the project—the Great Northern, the Northern Pacific, the Milwaukee, and the Spokane, Portland & Seattle branch of the Union Pacific.

On the basis of actual figures on the Yakima and Okanogan projects in Washington, to which 69,000 carloads of industrial and agricultural freight were shipped in 1929 when the peak was reached, the Columbia Basin project should create a market for several hundred thousand carloads a year from the East and Southeast. This tremendous traffic would create a demand for labor in the industrialized regions of the country and step up the movement of farm products from the East, for the West never has grown enough food to feed itself.

I could multiply examples of this sort indefinitely. The building of great engineering works in the West necessarily results in tens of thousands of carloads of freight from the Midwest and East, where farm machinery, electrical equipment, and household supplies are manufactured. But you know that story as well as I do.

There are other angles on the importance of reclamation in the post-war world, however, that are worth mentioning. In the period of economic adjustment from war to peace it is mighty important that there be projects ready which can absorb a large number of workers, men who have been employed in munitions industries and demobilized servicemen.

The nucleus of a post-war program of the Bureau of Reclamation is represented by authorized projects. First is a group of about 30 authorized projects, work on which has been halted or retarded by the war. The cost of this work is estimated at more than $800,000,000 at pre-war costs. This group has been augmented by authorization of a limited number of small projects under the war food program.

Great impetus was given Reclamation's post-war activities this week when the Congress completed and sent to the President the flood-control bill through which were authorized for construction by the Bureau of Reclamation more than 30 projects in the Missouri River Basin. These projects represent the initial stages of the Bureau's Missouri Basin plan, and when constructed will transform more than 2,600,000 acres of dry land where agriculture has had an uncertain existence into irrigated land where crop production every year can be assured. The total cost of the particular Missouri Basin projects is estimated at nearly $400,000,000, and the flood-control bill authorizes an appropriation of $200,000,000 for the partial accomplishment of their construction.

Totaling up the authorizations, the Bureau of Reclamation can proceed with work on nearly 70 projects in 17 Western States as soon as construction funds, manpower, and materials are available. Our plans call for the advancement of field investigations and other preconstruction activities without interference with the prosecution of the war so that the actual dirt can begin to fly when the need is most urgent.

The authorized projects would provide irrigation for approximately 5,000,000 acres in addition to serving multiple purposes including power development, flood control, and related uses. Supplemental water also would be provided for an additional 5,000,000 acres now inadequately irrigated.

With these authorized projects in its program, the Bureau of Reclamation is well on the way to providing immediate employment and settlement opportunities on irrigated land for returning servicemen.

Anticipating even larger needs and opportunities last summer, the Bureau presented an over-all inventory of potential Reclamation developments for the West totaling some 200 irrigation and multiple-purpose projects. This number includes practically all of the presently authorized projects.

At the peak the over-all program could give work to some 200,000 men building dams, reservoirs, power plants, and distribution systems for both water and electric current. At least as many more would be employed in the workshops in other parts of the country making equipment and materials. These would be immediate direct results of the Bureau of Reclamation's post-war program. The indirect results fan out and multiply all through the West and the country.

Another thing must be mentioned. At one time it seemed to our students of population growth that we were reaching a saturation point in this country. That was a time when we were not making full use of the great advances of science. At least we were not distributing their economic benefits as broadly and equitably as possible. I think the post-war period will be one in which the tendency to spread the economic advantages of scientific development will be accelerated greatly, and that the result will be a new impetus to population growth.

This would mean that we would have to find much more land upon which to raise food, if we were not to become like the countries of western Europe dependent upon other parts of the world for a very large part of our food supply. Even as it is, agricultural economists figure that we shall need to bring in between three and four million additional acres of land each year for agricultural production, just to keep up with present population growth. The Bureau of Reclamation's over-all plans contemplate the early development of only about 8,000,000 newly irrigated acres, and supplemental water for nearly 10,000,000 acres now inadequately irrigated. In view of the recognized need for expanding acreage under cultivation, our program appears by no means excessive.

But you want to hear something also about the settlement program the Bureau of Reclamation is developing.

Let me start in by saying that the Department of the Interior was set up in 1849 as the agency designed largely to administer the homesteading program of the Government. The Bureau of Reclamation, established in 1902, continued the homesteading policy by extending settlement to public lands that could be brought under irrigation. That is how the area of a quarter section, or 160 acres, came to be the limitation applied to reclamation projects.

From the beginning of the Bureau its policy has been to encourage land settlement through the building of family-size farms. This was the pathway toward agricultural and industrial prosperity it was felt. Experience has proved this concept to be sound, and development of the family-type farm remains the fundamental land settlement policy of the Bureau of Reclamation.

* * * * *

In the early days there were no qualifications, except citizenship, required of homestead entrymen on a reclamation project. Anyone who was a citizen and hadn't exhausted his homestead right could go in. But in the early twenties it was felt that a thorough investigation of reclamation projects should be made, and acting upon a mandate of Congress, the Secretary of the Interior appointed a fact finders' board composed of persons not in Government employ, who studied the situation and recommended legislation. The Fact Finders' Act of December 5, 1924, which resulted from the report of this committee, provided that the Secretary of the Interior establish standards for the selection of settlers based on character, experience, and financial competence. As a result of these standards local boards composed of responsible citizens pass on each applicant who wishes to make entry on Government land on a reclamation project.

Although there is no obligation on the part of private owners of land on reclamation

projects to apply the same standards, a number of privately owned and managed irrigation districts cooperate with the Government in applying similar standards to prospective settlers.

There have been a number of checks made as to how well this method of selection has worked, and on the whole it has been found to be fairly good.

We realize, nevertheless, that the standards found useful in 1924 may not be equally applicable in 1944, and that those desirable today may be outmoded by new and more scientific methods of selection 10 years hence.

For instance, one of the minimum requirements for acquiring public land on reclamation projects from the Government today, when such is available, is cash or its equivalent of about $2,000. Actually, it requires considerably more than this to develop a reclamation farm most efficiently and rapidly—but that is a basic minimum.

Just the same, it may not be reasonable to ask men who have come home from fighting Nazis and Japanese to lay this amount of money on the line out of their own pockets. While the people at home working in war factories may have had the opportunity to accumulate $2,000—some of them much more—it is very hard to get that much together on the fighting front, and probably we should help these men with their financing if they desire to establish permanent farm homes. Most of us will agree they are entitled to it, even if there is a greater than normal failure to make good.

At the same time we shall also be faced by the fact that the demand on the part of servicemen after the war for irrigated farms certainly will exceed the supply of available farms. Even though we may be able to provide 135,000 additional irrigated farms in the 8 or 10 years following the end of hostilities, that will not satisfy all of the servicemen who wish such farms.

It is clear that the problem of giving servicemen opportunities to make a place for themselves at home is going to be a far greater problem after the present war than after the previous war, if for no other reason, because there will be many more of them to care for. In World War No. 1 there were 3,000,000 in the armed services. Already in this war there have been more than 11,000,000 men and women in military services, and if the war with Japan lasts for several years, or Germany continues to resist for much longer, there may be many more.

The Department of the Interior and the Bureau of Reclamation foresaw the need for providing new farms for returning servicemen in World War No. 1, but the legislative restrictions and lack of appropriations deprived us of the opportunity to offer adequate settlement opportunities when the time came to do so. The Department of the Interior after World War No. 1 received some 200,000 inquiries from servicemen who wished to establish themselves on the land, but because of the severely limited reclamation program of the 20's, less than 2,500 public land farms on our projects were opened to entry from 1920 to 1940. About a third of these were settled by veterans under the meager preference law and their record compares favorably with those of other settlers.

Under the projects now authorized, including the Columbia Basin in Washington, the Bureau could provide about 30,000 farms on public lands or other lands the Secretary of the Interior is authorized to purchase and dispose of to veterans or others. The greater part of the acreage which would be served by the projects in the Bureau's postwar plan would be privately owned, and the extent of our participation in the settlement of the privately-owned land will be governed by future legislation.

This time it is extremely important that we place very much greater emphasis upon creating conditions that will pave the way for veterans to make a success of irrigation farming, and I don't mean that we must regiment their lives or lead them around.

Obviously the first step would be to devise a system of selection that would connect those best qualified with the opportunity they need. The Bureau has been giving considerable thought to that problem.

More thought is being given to ways of making sure that veterans who settle on irrigated farms may be provided with enough capital to aid them in getting a start. Consideration is being given by the Bureau of Reclamation to leveling the land in advance of settlement.

In this connection the findings and recommendations of a special committee named to study the problem as it will apply to settlement of the Columbia River Basin is illuminating. The committee recommended that on all Government-owned land heavy leveling be performed by the Government at times convenient to the settler and safe from the standpoint of wind erosion. The cost of such work would be added to the appraised value of the land. In order to reduce the equity of the owner as little as possible, however, it was recommended that he be given full opportunity for utilizing his own labor by leaving him to final preparation of the land surface and construction of the farm irrigation system. It was also recommended that publicly-owned equipment be made available by the Bureau of Reclamation on a contract or lease basis to owners of private land, the leveling performed with such equipment to be controlled by contract. Roads within the farmstead were to be the responsibility of the farmer.

The settler, however, will need technical assistance and advice if he is to perform his part of these operations most economically and quickly. It was recommended that adequate engineering assistance and agricultural advice be made available to him.

It is more and more the viewpoint of those responsible for the development of Reclamation projects that assistance to the settler shall extend beyond engineering aid, and that it be continued throughout the life of the project by providing a service that will bring right down to the grass roots all of the advantages that modern science and engineering can provide. Ordinarily the scientist does not publish his findings in terms that the farmer and the rest of us can understand sufficiently well to use fully the benefits that modern science can provide. If the Bureau can help him toward such an understanding and point the way through which he can get the full advantages of the age in which he lives, the prosperity and well-being of the individual and the irrigated communities will be advanced.

The hope of all of us who are interested in the reclamation program is that funds and manpower will be provided quickly enough without interference with the prosecution of the war to allow us to proceed vigorously toward the completion of field investigations and blueprints. In that way, reclamation developments will assure settlement opportunities on irrigated land for returning servicemen and civilian workers in war industries as demobilization begins.

The Case Against Slavery

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Wayne News-Sentinel:

THE CASE AGAINST SLAVERY

The essential fraud, as well as the fallacies, behind the New Dealers' plea for a national labor slavery law, can only be brought out by a somewhat detailed study of the case against it.

It is significant that not only the Nation's true liberals are bitterly opposed to such legislation but that both industry and labor are fighting side by side against this, the reactionary administration's latest attempt to fasten new shackles on America.

Organized labor well knows that such a law could easily sweep away its gains of the last half century. It knows that unions could be made impotent, as they have been made under every totalitarian government in the world.

Industry's case against labor slavery, recently projected by the National Association of Manufacturers, sums up the evidence and puts the plea to the people's "jury" in this way:

"If national manpower legislation could provide the answer (to the alleged manpower shortage), industry itself would be the first to call for enactment of a national service law. But the very nature of the manpower problem today is proof positive that national legislation—a blanket law—would not and could not solve the crisis."

Government estimates show that at the present time about 150,000 additional men and women are needed in industry throughout the country. Figures taking into account the number of present industrial workers who will be drafted show that by June 1 as many as 700,000 to 900,000 may be needed.

Now, as the N. A. M. points out, the 150,000 workers needed at the present time constitutes only about one-fourth of 1 percent of the present labor force of the Nation.

Why, then, is it deemed necessary to subject more than 99 percent of the American labor force to involuntary servitude, regulations, and compulsion in order to obtain the one-fourth of 1 percent now needed for industrial work?

The answer, of course, is that it is not necessary.

The N. A. M. directs attention to one of the dog-eared arguments of the neo-Fascists, who say that, if it is all right to draft men for the Army, it is all right to draft them for work.

One might as logically say that, since wood alcohol is a good thing to put in your car in cold weather, it ought to be good for a man to drink.

The soldier has to be drafted (not very many of them love war enough to volunteer), and he has to be regimented and strictly disciplined, because upon these things his life depends; and he makes a better soldier because of it.

The very opposite is true of the laborer, who will never work as well, nor produce as much, in slavery, as he does now as a free man.

As the N. A. M. clearly states its case:

"Conscription of men for services on the assembly line * * * is the essence of the Nazi-Fascist philosophy we are fighting against. Placing a drafted worker alongside a voluntary worker in a factory will damage all worker morale. * * * Industrialists have estimated that the delay, confusion, and red tape that a national service act would inject into a factory would cut war production from 10 to 15 percent, instead of boosting it.

"Workers can be drafted physically, but their will to work cannot be regimented, nor can their devotion to duty be disciplined. * * * Compulsory labor is a denial of the very thing Americans are fighting around the world to preserve."

The N. A. M. report also recalls that 2 years ago the President in a message to Congress asked enactment of labor draft laws,

and although the manpower situation was more serious then than it is today, the problem was solved without such a law.

The manufacturers' association said then, and it repeats now, that "Production would suffer, not benefit, from labor compulsion, because there is no substitute for the initiative and willing effort of free men. Free labor and free industry is the combination that has made and can preserve our American economy."

The case boils down in two questions regarding the conscription of labor under any sort of a national service act:

Is it necessary?

Will it work?

The answer to both questions is an unqualified "No!"

A Dissenting Opinion on Congressional Junkets

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Richard L. Neuberger in the Progressive of October 2, 1944:

A DISSENTING OPINION ON CONGRESSIONAL JUNKETS

(By Richard L. Neuberger)

With Members of Congress being panned in so many places, I would like to submit a dissenting opinion from a different viewpoint.

In the 21 months that I served in Alaska with the American Army our outfit was visited by five Senators and two Representatives. The visits occurred at widely scattered times. The men who came to see us included Democrats and Republicans, liberals and conservatives, veteran Congressmen and newcomers.

Congressmen may not be popular in some quarters, but I can testify that their visits did a lot to boost morale and esprit de corps among the American soldiers who saw them. I remember Senator WILLIAM LANGER spying a couple of North Dakota soldiers at Fort Nelson on the Alaska Highway. He strode over to see them in mighty strides. For the next month Army units along the wilderness road talked about "that visitin' Senator fellow" who recognized a couple of soldiers as his constituents from back home.

The five Senators who came to our particular base in Alaska were C. DOUGLASS BUCK, Delaware; HOMER FERGUSON, Michigan; HARLEY M. KILGORE, West Virginia; JAMES G. SCRUGHAM, Nevada; and WILLIAM LANGER, of North Dakota. The two Members of the House were Representative HOMER D. ANGELL, of Oregon, and ANTHONY J. DIMOND, the veteran Delegate from Alaska itself.

SHARE AND SHARE ALIKE

All the officers and men whom I know had a favorable opinion of these visitors. They proved regular fellows. No expedition was too much for them to undertake. They made plane trips in hazardous Alaskan weather, and you must experience Alaskan weather to know what aerial hazards really are. They visited lonely, out-of-the-way installations. They shared pot-luck and slept in sleeping bags and wore G. I. parkas. They were not affected or stilted or high-hat, and they showed a genuine interest in the problems of the average American soldier in that bleak theater of war.

Many of these Members of Congress are men more than 60 years old. Yet they never spared themselves in seeing what was really going on in Alaska. Representative ANGELL flew north of the Arctic Circle to Fort Yukon. Delegate Dimond flew far out in the Aleutians and traveled by Coast Guard cutter along the coast of the Alaskan Panhandle. Senators KILGORE and FERGUSON visited the airports on the vital air route to Soviet Russia. Senators SCRUGHAM, BUCK, and LANGER rode for many miles on the Alaska Highway.

THOSE PENTHOUSE CRITICS

I have seen considerable criticism of so-called official "junkets" to visit our fighting men. Westbrook Pegler never tires of ridiculing Mrs. Roosevelt's trip to the Southwest Pacific. The President has been attacked for his cruiser journey to Hawaii and the Aleutians. Members of Congress have been assailed for their trips to the various fighting fronts all over the world.

I am sure that those who criticize official trips to the theaters of war—whether the trips are by the President or his congressional opponents—have never served in those theaters. It is easy for a newspaper columnist, sitting in an air-conditioned penthouse or a steam-heated apartment, to be cynical about a Senator or Cabinet member flying to Alaska or Italy. But the soldiers in Alaska or Italy think quite a different way.

I am a Democrat. I served in the Oregon State Legislature as a Democrat. Representative HOMER ANGELL is a Republican. But when I saw him in the heart of the Yukon River watershed, I said, "Here is the Congressman from my home town. Here is someone who can take back a message to my mother and dad. Here is someone who has enough interest in the war to travel thousands of miles to see for himself what we are doing and how we are getting along." And Democrat or Republican, liberal or conservative, that meant something to me.

Soldiers like to be recognized. This is particularly true of men stationed in far-flung outposts. A United States Senator getting off a plane or boat indicates to those men that they are not forgotten, that someone is deeply concerned with their welfare. When Representative ANGELL visited Watson Lake, an airport high on the divide between the Yukon and Mackenzie watersheds, an air corps corporal said to me, "Golly, captain, is that guy really a Congressman? Who'd think we'd ever meet a Congressman way up here?"

Cynicism is an attitude confined to those fighting the war from night clubs and saloons. When the President's wife visits a lonely island in the Pacific, it is easy to laugh it off as a political gesture. When a Senator flies to an airport on the Bering Sea, it is equally easy to say he is trying to build himself up back home. I have never heard a soldier say this, though. I have seen Senators and Representatives writing down messeges to take back home with G. I.'s crowded around them like a football huddle.

One of the inspiring features of this war has been the way leading people of the Nation have taken their time and risked their lives to visit the theaters of war. Mrs. Roosevelt, Vice President Wallace, many Senators and Representatives, countless members of the entertainment industry, innumerable newspaper correspondents, these people have showed up everywhere, all the way from Alaska's icy shores to the coral beaches of the southwest Pacific. Conspicuous by their absence, of course, have been some of the more bloodthirsty inhabitants of cafe society who are quick to ridicule and scoff at such trips.

The greatest encouragement which can come to a soldier in a lonely place is assurance that he is not forgotten. A comedian from Hollywood, a slim-legged chorus girl from New York, a Senator from Washington, D. C., a newspaper correspondent from Chicago—all of them are indications to the fighting man that the solid people of his country appreciate what he has done. Journeys to the battlefronts and outposts may be "junkets" to the cynics, but they are tonics to the men who carry the flag.

The O. P. A.

EXTENSION OF REMARKS

OF

HON. NOBLE J. JOHNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. JOHNSON of Indiana. Mr. Speaker, several citizens of my district have requested that I insert in the RECORD the following in regard to the O. P. A., which was written by Mr. Lon Pawell and published in the Zionsville Times of January 25:

THE O. P. A.

On the seventh of November,
When folks had their say,
The majority voted
To keep the O. P. A.

To get rid of the bunch,
I did my best;
But they've taken my points,
So I'll starve with the rest.

A certain amount of rationing
May be all right,
But the Board's word
Should be good at least overnight.

We need very much now
Some things we haven't got;
To mention a few,
The pigs that were shot.

Maybe to obtain butter
And other essential grub
We should have become members
Of the Thousand-Dollar Club.

Looking the situation over,
I have a hunch
We are serving under
An incompetent bunch.

If rationing was stopped
And folks allowed to buy,
No one would hoard—
There'd be no reason why.

If the Board can prove these
To be untruthful digs,
Then they can do to me
What they did to my pigs.

Of course, if they call me on the carpet
And walk out with a gun,
I'll swear I wrote this article
Only in fun.

—*Lon Pawell.*

The above is an expression of the feelings of many people about the O. P. A. and its record of mismanagement and inefficiency and its misuse of rationing powers for political purposes, as was so well demonstrated in rationing orders during the few months previous to the last election and the orders made subsequent to the election. It is little wonder that the people have become thoroughly disgusted and have lost all faith and confidence in the O. P. A.

The Wallace Appointment

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks, I am asking that the following article written by Mr. Frank Kent be printed in the RECORD:

THE GREAT GAME OF POLITICS—C. I. O.-P. A. C. SOUGHT WALLACE APPOINTMENT TO TEST POLITICAL STRENGTH, SAYS KENT

(By Frank R. Kent)

Under any ordinary circumstances the departure of Mr. Jesse Jones from his post as Secretary of Commerce, which carries with it control of the gigantic R. F. C. and various allied financial agencies, would be a cause for regret by those who admire competency and character in high public office.

But, after 12 years of outstandingly fine performance, to have Mr. Jones thrown out to make room for Mr. Henry Wallace because of pressure from the C. I. O. bosses and in order to appease the screeching New York radicals ought to cause regret to be mixed with widespread indignation.

That such has been the general reaction is attested in various ways. The truth is that this incident reveals Mr. Roosevelt in a particularly unpleasant light. He has made no appointment more wholly political; none in which there has been so little consideration of merit; none in which the qualifications of the man have been so wholly ignored.

It is significant that in his letter asking Mr. Jones to resign for Henry, the President, with almost no pretense, admits that he made the request in order to reward Mr. Wallace for his support in the recent campaign and because he had asked for it.

He does not mention the C. I. O. and its radical allies, but he did not need to, as, except for those two groups, Mr. Wallace has no personal following and no political strength and there exists no excuse for his recognition.

CLAMOR FOR RECOGNITION

These groups, along with Mr. Wallace himself, have been clamoring for this recognition for many weeks. They have made the Wallace appointment the test. Their journalistic and political spokesmen made it clear that unless Mr. Wallace was taken care of his left-wing friends would regard it as a betrayal of the liberal cause by Mr. Roosevelt, whom they had so ardently—and noisily—supported.

This, of course, is nonsense, but it was, nevertheless, trumpeted almost daily.

And Mr. Roosevelt yielded to the clamor and the threats. He said in his letter to Mr. Jones that "this is a difficult letter to write." It is easy to understand that. He had to explain to a faithful official and a loyal friend that he was displacing him for a man immeasurably less well qualified and for political reasons only.

Neither Mr. Jones nor a very large number of the American people regard his explanation as adequate. The fact is no one save the President's and Mr. Wallace's political friends will so regard it. To offer Mr. Jones a diplomatic post was trivial and Mr. Jones properly rejected it. It is refreshing, too, that Mr. Jones did not take the President's action with the unbecoming meekness with which various others whom Mr. Roosevelt has "ditched" for political reasons, while professing personal friendship, have taken it.

So far as the business interests of the country are concerned the appointment is certainly a shock. Mr. Wallace, of course, is an honest man, but he is entirely devoid of any sort of business experience and any talent for administration.

In addition, his C. I. O. and radical friends are bitterly hostile to industry and tend, as he does, toward greater, not less, governmental control over business. When one considers that the R. F. C. alone has commitments of more than $50,000,000,000 and that it is a revolving fund over which Congress has no control, the tremendous power which the President proposes to place in Mr. Wallace's utterly inexperienced hands can be grasped.

ALMOST NO EXPERIENCE

In his whole career Mr. Wallace has had almost no experience in private business except that involved in his brief editorship of the farm journal inherited from his father and which lost its identity before Mr. Roosevelt became President.

Yet, it is now planned to oust one of the most capable businessmen in the country and put Mr. Wallace at the head of the department which deals exclusively with business and controls an almost incredible number of billions.

Opposition to his confirmation in the Senate is based, partly, on his total unfitness for such huge financial responsibilities; partly, on the undisguised use of this important post as a political reward; partly, on Mr. Wallace's own radical views as expressed in his writings and speeches.

But, mainly, the appointment is opposed because of the belief that with him as Secretary of Commerce the C. I. O. will be definitely in the governmental saddle with its professional lobbyists as the closest advisers to the man controlling the multibillions of the R. F. C. and allied agencies.

There is a feeling that the Wallace appointment will present an opportunity for the C. I. O. to dominate and operate the business of the country in a way heretofore undreamed, and that, despite his friendly words about "private enterprise," Mr. Wallace's whole heart would be set in this direction.

Some Senators believe that his appointment threatens the whole economic security of the country and regard the effort to give him this gigantic power fully as dangerous as the effort to pack the Supreme Court.

Not the least distressing feature of this whole business is the disclosure that in his fourth term Mr. Roosevelt still thinks it necessary to play politics and placate politicians at the expense of the national interest.

It is particularly amazing that he should do so right after his Friday speech in which he spoke of the "gravity of the hour" and indicated his desire to put aside partisan politics so that a united people might "get on with the war."

Eligibility of Filipinos for United States Citizenship

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. HAVENNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to invite the attention of the Members of the House of Representatives to the following letter which is addressed to the House of Representatives and has been referred to me as the Representative of the Fourth California District:

THE FILIPINO FIGHTERS FOR FREEDOM,
San Francisco, Calif., January 23, 1945.
HOUSE OF REPRESENTATIVES,
Washington, D. C.

DEAR SIR: It is with the profoundest sense of humility that we address this letter whereby we beseech you to vote for the bill that proposes to make Filipinos eligible for United States citizenship, which bill was not acted upon by the Seventy-eighth Congress despite the approval of its Committee on Immigration and Naturalization, but was therefore submitted subsequently to the Seventy-ninth Congress for consideration.

With your unflinching support and favorable vote, we look forward to the day when we can say unequivocally that there is theoretical as well as practical democracy in the United States.

Very respectfully,
THE FILIPINO FIGHTERS FOR FREEDOM,
JULIO S. ESPIRITU, *President.*

An American Speaks

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Union:

AN AMERICAN SPEAKS

(By Ruth Taylor)

I've been accused of using my friends for copy material, and told that no conversation is safe from my pencil. I admit the justice of the accusation—but, after all, the democracy of which I try to write is not the democracy of the lecture hall but just the plain, everyday life of each and every one of us. It is the "practical freedom of man" and the actual "sanctity of the individual," not the ideological basis that is of primary importance.

Therefore, I don't apologize for retailing another conversation. The other evening I was listening to a group of men talking about various things, when, across their theories came the words of the oldest of the group, who up to then had been silent.

"You talk about the problems of Europe being reflected here," he said. "I want to tell you this. I've read some of the vicious, scurrilous, smutty, un-American material that is going the rounds today. It's disgusting. I've read it only because I had to in my work. But I tell you this, no American who is worthy of the name (and I hold that most Americans care as much for democracy as I do), no decent American would give houseroom to it, let alone read the stuff some of which is anti-Semitic, some of which is anti-Catholic, and all of which is plain anti-Christian. Decent people don't read or believe that kind of thing. You can't live in America without knowing that it is all lies. Nobody is fooled by it—and only the vicious will lend an ear to it."

He went on to say, "I have lived in this town my entire lifetime. Many of those I knew as boys are dead. I've outlived my years—but those I used to know, those I've always known, have come from all sorts of

homes—their parents spoke English with different accents, we went to different churches—but rich or poor, first or sixth generations here, Protestant, Catholic or Jew—we were all Americans—and we were friends. We knew each other. We understood each other—and it's hard to dislike a man when you really know him.

"This country has given me many opportunities. Some I've used wisely; others not so well. I've had a chance to work at the work I enjoyed. I've prospered and been honored by my fellow citizens. But others with different backgrounds than mine have done the same or better. They are still my friends, my fellow Americans. And it is as Americans that I think of them! I do not narrow them down to any group either of class or creed. And I hold that what I do, any real American will do if he gives any real thought to the matter—as I have. Don't talk to me of any European problems being reflected over here! Such issues are plain un-American, and I, together with all Americans, will have no part in them."

The Monetary Problem

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. OUTLAND. Mr. Speaker, it is always a pleasure to receive a letter from a constituent which has words of well-merited praise for one of our colleagues in this House. I should like to include as part of my extension of remarks the following letter from Mr. John Morrill, of Gonzales, Calif., which makes some very pertinent and praiseworthy remarks about my fellow Californian, the Honorable JERRY VOORHIS. I might state that Congressman VOORHIS was kind enough to distribute copies of the book which Mr. Morrill mentions among his colleagues and I, for one, believe that he has done a real service to us by making available such a careful study of the monetary problems of this country.

Hon. GEORGE E. OUTLAND,
House Office Building,
Washington, D. C.

MY DEAR GEORGE: * * * I appreciate being on the mailing list, thanks to you, of the CONGRESSIONAL RECORD, which keeps me in close touch with what is going on in the national legislative halls. I cannot begin to read it all, but there are certain Members of the House whose speeches I watch for and always read. We have some brilliant men representing us in Washington, elected from both parties. Some of those speeches appearing in the RECORD are real classics. While I do not always agree, I respect their views and sincerity.

I have noticed in recent months, however, and that is what has prompted me to write you, expressions of pessimism concerning the future. The same sentiment is often expressed by people I contact here on the home front, among them, prominent businessmen. The pessimism is built about the fear of an inevitable period of depression following the change from a wartime to a peacetime economy. Some even anticipate that it will be worse than the disaster which struck during the Hoover administration and continued into the early thirties.

If the Congress does its full duty to cope with this menacing situation, can it not be avoided? Plans have been discussed on the floor of both Houses. All seem to be in full accord that full employment must be found for returning veterans of this war and for those thrown out of employment by the closing of war industries, as well as adequate subsidies for unemployables and disabled veterans. All very good, but where is the money coming from to pay for all of this, plus retiring outstanding bonds as they mature and interest on the colossal national debt? I have yet to read of any proposed plan by any Member of the House or the Senate, with one exception, to cope adequately with this situation. That one exception—and in him and his plan I see the one bright ray of hope for the future—is Congressman JERRY VOORHIS of California. If I remember correctly, Jerry was picked by the Washington press correspondents as being the outstanding Member of the House from the standpoint of intelligence, sincerity of purpose, and devotion, as well as hard work for the cause of the people. A fitting tribute, in my opinion.

I do not need to elaborate here upon the plan for monetary reform and for the setting up of a scientific and constitutional money system, to replace the present banker-dominated unconstitutional debt money system, which has been proposed by Congressman JERRY VOORHIS of California. It must be familiar to every Member of the present Congress, as he has discussed it fully at different times from the floor of the House.

However, I would like to refer specifically to his recent letter to the people of his district, which appeared in the CONGRESSIONAL RECORD of September 21 last. In this letter he makes the statement that, had the principles contained in his monetary reform bill (H. R. 4931), introduced in 1939, been adopted, our national debt at the present time would be $80,000,000,000 less. Has any one in the House challenged that statement?

In my opinion JERRY is absolutely right when he says that what we need is "Not more debt, but more horse sense." We need to divorce the private banking system from the business of creating money. Let them confine themselves to the legitimate field of private banking, and on the other hand, put our Government into the business of creating money, as the Constitution provides, through a Government-owned Federal Reserve System. Then when new money is created to meet our expanding needs, let it be created debt and interest free, appearing on the books of the Treasury Department as a national credit (as JERRY proposes), not on the books of the private banks as a national debt.

It is squarely up to Congress to act in the impending crisis. Congress alone has the power. They are responsible to the people.

I challenge any Member of the House of Representatives to state one valid reason why the proposals contained in JERRY VOORHIS' bill (H. R. 4931) should not be adopted and made into law, or in lieu of that plan, to offer any substitute measure which will achieve the same ends.

As a member of the House Committee on Banking and Currency, I urge that you do all possible to bring about the reforms mentioned above—reforms which have been urged by some of the Nation's outstanding economists as the only plan that will prevent those cycles of deflation such as we have experienced in the past and that will avoid the disaster which otherwise looms ahead. Also, in one of your news letters released to the press of your district, will you let us have your views on the Bretton Woods monetary agreements?

And now in closing may I compliment you on your splendid record of service to your district and to the Nation during your first term of office and express my full confidence in your handling of the difficult problems which will confront the new Congress starting in 1945.

With warm personal regards,
Cordially and sincerely yours,
JOHN A. MORRILL.

Delaware Assembly Ratified Bill of Rights 155 Years Ago Today

EXTENSION OF REMARKS

OF

HON. PHILIP A. TRAYNOR

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilmington (Del.) Sunday Morning Star of January 28, 1945:

DELAWARE ASSEMBLY RATIFIED BILL OF RIGHTS 155 YEARS AGO TODAY—STATE COPY, NOW IN NATIONAL ARCHIVES, HELD MOST VALUABLE OF TEN KNOWN EXISTING COPIES

(By Maj. Elizur Yale Smith)

Delaware was the first State to ratify the Federal Constitution, on December 7, 1787, by unanimous consent of the popular convention held for that purpose, and Delaware was the sixth of the original 13 States to ratify the first 10 amendments to the Constitution, which amendments are known collectively as the Federal Bill of Rights. The necessary action in ratifying the Bill of Rights, by the general assembly of Delaware, took place in both the house and asembly and in the council on January 28, 1790, just 4 months and 3 days after the amendments had been passed by resolution of the First Congress of the United States under the Constitution. The ratification was signed by George Mitchell, speaker of the council, and by Jehu Davis, speaker of the house, and on February 19, President (Governor) Joshua Clayton forwarded the official notice of ratification to President Washington, who in turn transmitted the communication to Congress on March 8, 1790.

New Jersey was the first State to ratify the bill of rights, on November 20, 1789, and it was nearly 23 months after Delaware's ratification before the necessary three fourths of the States ratified our famous document of personal liberty, so that the bill of rights officially became part of the Constitution, [illegible] as much so as if it had been written into the original Constitution in 1787. The last necessary State to ratify was Virginia, on December 15, 1791.

NEW YORK THEN THE CAPITAL

When this memorable action took place in Delaware, the seat of Government of the United States was in Federal Hall, on the corner of Wall and Nassau Streets, in the City of New York. There the first Congress of the United States began its deliberations on March 4, 1789, and there, on April 30, following, Gen. George Washington was inaugurated the first President of the United States. In his first inaugural address, President Washington spoke of "a reverence for the characteristic rights of free men," and pointed to the advisability of framing a Bill of Rights. At that time Richard Bassett and George Reed were the Delaware Senators and John Vining was the sole Representative of the State in the House of Representatives.

The Declaration of Independence says: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain in-

alienable rights, that among these are life, liberty, and the pursuit of happiness—that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed * * *." But not the Declaration of Independence, nor the Constitution of the United States, nor the Federal Bill of Rights, nor the early charters granted to the American Colonies, nor the early constitutions adopted by many of the States at the time of independence, nor any of the early declarations of rights, gave us our natural rights and freedoms. "We the people of the United States" have been entitled to our rights and liberties from a time whereof the memory of man runneth not to the contrary—we were born with them—but it became necessary to guarantee us, "We the People," our inalienable right of all mankind. Various attempts have been made, here in America, to usurp our rights and freedoms, but on every occasion the people have risen in protest. Today, as never before, there are sinister forces at work to curb many of our rights and freedoms, and to overthrow our constitutional form of a republican democracy.

DOCUMENT WORTHY OF CELEBRATION

There is probably no one state document that could be more fittingly celebrated in this time of war than our Federal Bill of Rights. The personal liberties enumerated in this great document are unquestionably the basic principles at stake as the United Nations press forward to victory. The personal freedoms of "We the People of the United States," stand out in striking contrast to the regimented slavery of millions of people in foreign lands. Thomas Jefferson once remarked: "How little do my countrymen know what precious blessings they are in possession of and which no other people on earth enjoy."

Fortunately the immortal document known as the Bill of Rights listing the first ten amendments to the Constitution, was enrolled on parchment and has been preserved so that this generation, and generations to come, may look upon the writing of the words on many of our founding fathers who fought for freedom that our personal liberties might be perpetuated. Yet, for many years past this priceless heritage has been forgotten, or taken for granted. People spoke the words of the Bill of Rights glibly, but recent researches by national organizations have proved that the average American citizen knows little about this famous state paper—the Bill of Rights—its wording, or its history.

Many of the States objected to the ratification of the Federal Constitution, as written, at Philadelphia, in 1787, because it contained no Bill of Rights. Many of the States were slow in their ratification of the Constitution for this reason, and many of them recommended that amendments in the form of a bill of rights should be brought "to the consideration of the Congress which shall first assemble under the said Constitution to be acted upon according to the mode prescribed in the fifth article thereof," which are the words adopted by the Virginia Convention. Had not many exponents of the Constitution agreed to propose such amendments it is doubtful if the great charter of our republican democracy would ever have been ratified by a sufficient number of States to put it into effect.

DELAWARE EAGER FOR NEW GOVERNMENT

Delaware, the first State to ratify the Constitution, was a small compact community, and its public men were intelligent and patriotic. In the Constitutional Convention, at Philadelphia, it had contended with great spirit for the interests of the smaller States, and its people now had the sagacity and good sense to perceive that they had gained every reasonable security for their peculiar rights. When the session of the convention for ratification commenced in Massachusetts, in January 1788, the people of the five States of Delaware, Pennsylvania, New Jersey, Georgia, and Connecticut had successfully ratified the Constitution without proposing any amendments, yet, it is certain, that the subject of a Bill of Rights, and other amendments, was the ground of considerable anxiety on the part of the people of these five States. The people of Delaware were especially anxious for the new form of constitutional government, even though it had defects, to be put into effect in place of the decrepit Confederacy.

It fell to James Madison, a Representative in Congress, from Virginia, to bring up the subject of amendments in the First Congress. Five days after President Washington's inauguration, Madison, who had copies of the resolutions of several States calling for a total of 78 amendments, including a Bill of Rights, tucked away in his pocket, announced in Congress that he intended to bring up the subject of amendments on the fourth Monday of the month. The various resolutions of the States were debated in Congress throughout the summer, until finally, on August 25, 1789, when the number of amendments recommended had been boiled down to 17 articles, they were received in the Senate, from the House. After further debate in both branches of Congress, the 17 articles, by combination and elimination, were reduced to 12 articles. To these 12 the Senate concurred on September 25, so that this is the correct date of the passing of the resolution of Congress recommending the ratification of the Bill of Rights to the 11 States that had ratified the Constitution, and to North Carolina and Rhode Island, where ratification was pending.

COPIES SENT FOR RATIFICATION

The articles of amendment, as passed by Congress, were ordered to be enrolled on parchment and copies sent forth to the Governors of the several States for ratification, or rejection, by their Legislatures. Fourteen enrolled copies were accordingly inscribed on parchment between September 25 and 28, 1789, and from a careful examination of the 10 known extant copies 3 scribes did the engrossing. All copies were signed at Federal Hall, on September 28, by John Adams, Vice President of the United States and President of the Senate; Samuel A. Otis, Secretary of the Senate; Frederick Augustus Muhlenberg, Speaker of the House of Representatives; and John Beckley, Clerk of the House. Joint resolutions proposing amendments to the Constitution do not require the signature of the President and are not, as a rule, submitted to him. In this case, however, a resolution of Congress desired the President to send the original enrolled copies of the proposed amendments forth to the Governors of the Original Thirteen States. The President's letter of transmittal is dated October 2, 1789. One of the fourteen enrolled copies was retained by the Department of State, and this copy is now in the National Archives, Washington, but there is no endorsement on it to show that it is the master copy. All the extant copies, including the Delaware copy, are similar, except for slight variations in lineation, punctuation, and inscribing. The existing copies are approximately 28 inches by 30 inches in size.

DELAWARE COPY MOST VALUABLE

The original copy sent by President Washington to President Joshua Clayton, of Delaware, is the most interesting, and undoubtedly the most valuable of the 10 known existing copies. Delaware is the only State that took the original document and on the bottom of it inscribed the resolution of its general assembly and then returned the document, bearing the Delaware ratification and the State seal, to President Washington, with the request that he notify the Congress. This Delaware copy, which is now in an excellent state of preservation, was therefore returned to Federal Hall, New York City, from whence it came, and the site of Federal Hall is now the headquarters of the Bill of Rights Commemorative Society. This Delaware copy of the Bill of Rights is now in the National Archives, Washington. Perhaps, someday, some Delaware statesman will introduce a bill in Congress to have it returned to Delaware and placed on exhibition in the statehouse. There are two other copies in Washington, one in the National Archives and one in the Library of Congress.

Some of the States have lost their copies, including Maryland, North Carolina, Georgia, and Pennsylvania. Through investigations started by the Bill of Rights Commemorative Society the States of New Jersey, South Carolina, and Rhode Island have recently found their original copies, which were thought to be lost. It is hoped that the other lost copies may eventually be found.

FIRST ARTICLE NOT O. K.'D BY DELAWARE

Delaware ratified all but the first article of amendment, as originally passed by Congress, but as a sufficient number of States did not ratify the first two articles, the Bill of Rights, as we know it today, consists of the original articles 3 to 12, inclusive. The two rejected articles referred to proportional representation in Congress, and prohibiting varying the compensation of Members of Congress until an election of Representatives should intervene. Both of these matters are very much in the thoughts of the Members of the present Congress.

Secretary of State Jefferson sent out the announcement of the ratification of the Bill of Rights, as part of the Constitution, on March 1, 1792, but the Supreme Court of the United States has decided that December 15, 1791, the day Virginia ratified them, as the eleventh necessary State, is the effective date. It took 11 States for ratification as Vermont was admitted to the Union on March 4, 1791.

Strange as it may seem, the States of Massachusetts, Connecticut, and Georgia did not formally ratify the Bill of Rights until 6 years ago, the year of the sequicentennial of the writing of our great charter of rights and freedoms.

Letter From Mr. Paul Schoff, of St. Anthony, N. Dak.

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from a letter from Paul Schoff, St. Anthony, N. Dak.:

I hope the Congressmen and Senators of the United States would use their influence to stop and have come to an end this terrific war by working for a negotiated peace with the Axis Powers, one fair and reasonable to all nations, one that would compare with the laws of God, rather than to maintain the slogan that we will fight until unconditional surrender, regardless of the numbers of thousands or millions of young men that are going to be slaughtered on both sides, and which would be the surest way to spread the seeds for hatching up the next world war even a

little bit sooner than No. 2. The people in this section of the State are unalterably opposed to compulsory military training after the war other than in some form that could be given in the schools.

The Post-war Defense Problem

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1945

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "How to Solve Our Post-war Defense Problem," written by Brig. Gen. John McAuley Palmer, United States Army, and published in the Saturday Evening Post of January 27, 1945. I should like to have the article printed in full, including the remarks of the editors.

I have obtained from the Public Printer an estimate of the probable cost of printing this article. The estimated cost is $114.40.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW TO SOLVE OUR POST-WAR DEFENSE PROBLEM

(By John McAuley Palmer, brigadier general, U. S. Army)

What kind of military establishment shall we have in this country after the war? Do we want a professional army or a citizen army rooted in universal military training? Should the Army and Navy be administered under a single Government department? Should we have a separate air force on equal footing with the Army and Navy? These and similar questions are all components of the post-war defense problem—a problem which will be hotly debated during the coming months.

In our issue of December 23, Brig. Gen. John McAuley Palmer presented one important phase of the question in an article titled "General Marshall Wants a Citizen Army." In an endorsement published with that article, Gen. George C. Marshall, Chief of Staff, United States Army, identified General Palmer as "the Army's leading authority on the subject of American military policy."

General Palmer now turns to some other urgent phases of post-war defense and, in the article beginning on this page, makes a simple and logical suggestion as to how Congress and the American people might get at the real facts behind all the argument. His suggestion has such originality and such merit that we believe it will be interesting to every American.

THE EDITORS.

When Washington became President, there were two principal planks in the platform of his administration. He sought to establish a sound financial system and a sound military system. With the aid of Alexander Hamilton, his Secretary of the Treasury, he attained the first of these objectives before the end of his first administration. But it was not until after Hitler conquered France, 150 years later, that Congress adopted the first principle of Washington's military policy—compulsory military training in time of peace.

It is a high tribute to Hamilton's financial genius that his successors have, so far, been able to devise enough taxes and borrow enough money to pay for the vast wastes of public wealth that have flowed through that wide gap in our national structure. For unreadiness for war has been the principal cause of all our great national debts. If our fathers had accepted all of Washington's political system, instead of but half of it, our burden of taxation would be much lighter than it is today.

Since we have neglected the solution of this paramount national problem for more than a century and a half, it is obviously time to begin taking effective action. Our enormous national debt and our determination to join with other nations in the establishment of a peaceful world order both demand a scientific solution of the problem of post-war military organization. Fortunately, General Marshall, Chief of Staff of the Army, has taken a long first step toward such a solution. He has simply directed his planners in the War Department to return to George Washington's guidance. The historical background of his directive is given in my article, General Marshall Wants a Citizen Army, which appeared in the December 23 issue of the Saturday Evening Post.

It is also fortunate that the House of Representatives has recently taken another essential step toward a scientific solution of the problem. Its Select Committee on Post-War Military Policy is the first competent agency ever created by the Congress to weigh and decide between conflicting ex parte views as to the relative missions, dimensions, and economies of the several elements of our national-defense system.

In the old days, the Congress appropriated for the Navy and the Army separately, without any prior scientific settlement as to the proper joint relations and missions of the land forces and sea forces. One committee in each House prepared legislation based more or less upon the Navy's view as to what these relations and missions should be. Another committee in each House prepared legislation based more or less upon the Army's view as to what these relations and missions should be. Congress then passed laws embodying incomplete fragments of both ex parte proposals, frequently splitting the same mission between the two services and sometimes giving to one service a mission that could be performed better and more economically by the other. These things happened because the members of the committees had access to only one-sided views. There was no means of bringing conflicting points of view together in an open court with the view of arriving at the truth.

This situation was bad enough when only the land forces and the sea forces were concerned. With the tremendous new importance of the air forces, all our accepted conceptions of world strategy must be reappraised. From the days of Themistocles to the days of Admiral Mahan, a nation could protect its overseas communications solely by means of ships. That long chapter in world history is now closed. It therefore becomes imperative to solve the problem of equilibrium between the ground forces, the air forces, and the sea forces. Before proposing a peace establishment for either, their mutual relations and relative economies should be determined in a scientific manner. The mission and role of one cannot be defined intelligently without also defining the missions and roles of the two others. This problem of equilibrium between the three military services cannot be solved by either the sea-force expert, the air-force expert, or the ground-force expert. Each of them will be a competent and highly eloquent witness as to what his branch of the service wants. But each of them will be a strictly ex parte witness as to what his branch of the service should get—which happens to be the real question at issue.

The truth will be arrived at only through a judicial determination of the issues joined between these three expert witnesses. Some such process of adjudication will be indispensable after the present war. With our enormous public debt, economy will demand that all unnecessary overlappings of military missions must be eliminated. Each of the three ex parte programs must therefore be rigorously whittled down and refitted into one coordinated national program. There must be one single plan for the whole structure of national defense. It will not do to have one architect for the foundation, another for the walls and another for the roof.

Now, how can these ex parte views be reconciled and the truth determined? The answer is very simple. It is only necessary to bring the three experts together in an open court, receive their pleadings and join their issues. A competent judicial mind, after a reasonable time for enlightenment and investigation, can weigh these issues and make a sound decision. The essential thing is to require each expert to present his case in the presence of the two others—subject to open rebuttal by either or both of them. This is the recognized method of reconciling conflicting expert views in our courts. And, by this method, issues just as complicated and technical as the issues between land, sea, and air experts are decided daily. It will not be necessary for the judge to master all the intricacies and technicalities of land, sea, and air warfare. The three experts will always be available to enlighten him sufficiently for him to intervene with common sense and practical wisdom whenever his expert advisers fail to agree. In fact, this process, through mutual education, will frequently have a salutary effect in narrowing the issues themselves. It can safely be predicted that the judgment of such a tribunal will be accepted by the American people as the real foundation of a sound military policy and an economical military budget.

Under the Constitution of the United States, the House of Representatives' Select Committe on Post-war Military Policy has full power to exercise this judicial function in all matters affecting the organization of the armed forces of the United States. But it will not be humanly possible for it to exercise it effectively unless it employs the aid of other judicial machinery of a kind well known to our courts.

All the members of the committee have other great obligations to the Nation. Most of them are members of other congressional committees, which frequently make great demands upon their time. They must also be prepared to be present on the floor of the House when important issues are under consideration. And they all have extensive correspondence with members of the constituencies which they represent in the Congress. Few, if any, of them can be present at all the meetings. How, in these circumstances, can they make a sound adjudication of all the issues between the many ex parte witnesses who must appear before them if our national defense problem—with its many political and economic as well as military complications—is to be solved?

A possible solution is suggested in the practice of our courts of equity. Such a court might frequently have a case that would absorb the judge's whole time for weeks, if he should attempt to act upon every phase of it in person. It might thus fill his docket for an indeterminable period, to the exclusion of other and, perhaps, more important cases.

The judge meets this situation by appointing a master in chancery. It is the duty of this officer of the court to inquire into and report upon all matters of fact referred to him and to perform such other acts as may be directed by the court. In this capacity, he is empowered to examine conflicting witnesses in the presence of counsel for all parties at

interest. After this process, he reports the essence of the case to the court, with his recommendations. His report is not binding upon the judge. But, as it gives the reaction of one intelligent mind on the whole case, his honor generally accepts it as the basis of his further action in full court.

In this way the judge is enabled in a short time to dispose of a case which might otherwise close the Temple of Themis to all other petitioners for weeks or even months.

There is a remarkable incident in the history of the Supreme Court of the United States in which the harmonizing influence of a master was revealed. In this case, under the custom of the Supreme Court, the official was known as a special master. But his function was in essence the same as that of the master in chancery in equity cases.

Suits had been brought against the Chicago Sanitary District, a creature of the State of Illinois, by all the States bordering on the Great Lakes, on account of alleged injuries threatened their harbors and navigable waters by the diversion of water at the lower end of Lake Michigan. As the flow of water from Lake Michigan tended to maintain a better low-water level in the Mississippi River, all the States of the lower Mississippi Valley found it to their interest to join the State of Illinois as codefendants in these cases.

In all these cases, under the Constitution of the United States, the Supreme Court of the United States was the court of original jurisdiction. It would obviously be impossible for the Court to exercise its normal functions if it undertook, at the same time, to take the evidence directly in these highly important cases—which, by the way, were quite as complicated and technical as the three-way controversies between the sea forces, the air forces, and the ground forces now pending before the House of Representative Select Committee on Post-war Military Policy.

The Supreme Court therefore decided to refer all these cases to a special master. And, as it realized that his success would depend largely upon his Nation-wide reputation for wisdom and integrity, the Court selected the Honorable Charles Evans Hughes, a great lawyer, one-time Governor of the State of New York, one-time Justice of the Supreme Court, one who had missed election as President of the United States by a close vote in but one of the States, one who had recently served as Secretary of State, and one who was soon to become the Chief Justice of the United States.

After many months of patient labor, Special Master Hughes submitted his report to the Supreme Court, with the result that this enormously complicated and highly important litigation was finally argued and presented to the Court for decision in less than 2 days.

It is obvious that an able and disinterested mind, free to explore the problem as a whole, can do for the Select Committee on Post-war Military Policy what Special Master Hughes did for the Supreme Court. It is not even essential that the committee's special master should be a lawyer. Some distinguished layman recognized both as a scientist and a man of affairs, such as the president of Harvard or the president of Masachusetts Institute of Technology, would be eminently qualified for this task. Such a man would not be overawed by the intricacies of any application of science within the armed forces. Also, with his pedagogic experience, he would be able to appraise his witnesses by the quality of their thinking, without regard to any purely irrelevant criteria such as the number of stars on their shoulders or the amount of gold braid on their sleeves.

While high military rank has an indispensable place in the conduct of military operations, it has no such privileged position in scientific processes as the solution of a problem in geometry or the determination of a national policy. In fact, the history of our Army shows that high military rank may exert a baleful influence in the field of military policy. It was Winfield Scott, hero of a brilliant campaign from Vera Cruz to the city of Mexico, who later, as commanding general of the Army, influenced President Lincoln to adopt an unsound military policy which almost defeated his efforts to save the Union. It was William Tecumseh Sherman, hero of the decisive march through Georgia and the Carolinas, who later, as commanding general of the Army, submitted that same unwise policy to a joint congressional committee, thus thwarting the efforts of Congress to establish a sound military organization after the Civil War. If any Army officer, while either of these distinguished soldiers commanded the Army, had ventured to propose a modern adaptation of the Washingtonian military policy such as General Marshall has recently endorsed, he would have been dangerously close to military insubordination.

In fact, the mental processes of a successful leader in battle are essentially different from those of a scientific investigator. In the stress of combat, there is no time for a meticulous quest for the ideal plan. The successful commander is one who can adopt any one of several practicable plans quickly and then press it to swift and resolute execution. It is obvious that the problems submitted by the select committee to its special master will require essentially different treatment.

We may now dispose of one possible objection to the appointment of a special master. It may be urged that we alleged military experts have mysteries in our craniums that no intelligent layman can understand. This, of course, is unadulterated and not entirely disinterested bunkum. It will not be necessary for me to prove this statement because, under a well-known rule of evidence, it will be sufficient for me to admit it.

The select committee's special master would not be concerned with details of organization. He would simply investigate and report upon broad questions of policy referred to him by the select committee. Among these are the following:

Should we have a single Department of War in our post-war organization? What, in a general way, should be its relation to the three armed forces?

Whether we have a single Department of War or not, should the Joint Chiefs of Staff, created by the Commander in Chief for the effective prosecution of the present war, be perpetuated in permanent legislation? If so, how should this agency be related to the civilian head or heads of the armed forces?

Should we have a separate air force, coequal with the sea forces and the ground forces? If so, what proportion of the total number of airplanes should be set apart permanently as integral auxiliaries to the sea forces and the ground forces?

What are the relative missions and economies of carrier-based and land-based airplanes?

What is the true mission of the Marine Corps? What is the true line of demarcation between its amphibious missions and the amphibious missions of properly trained ground forces?

None of these, nor any other questions before the select committee, will be any more technical or complicated than the questions in engineering and sanitary science which came before Special Master Hughes in the Chicago Sanitary District cases. The select committee's special master would reach his conclusions by having all conflicting experts sit at the same table with him, where he would enlighten himself by questioning each of them in the presence of the others. After each special case, he would submit his recommendations to the select committee for its action in the premises.

The Select Committee on Post-war Military Policy has already held extensive hearings on the single Department of National Defense without reaching a final conclusion. The testimony shows that all the Army witnesses from the Secretary of War down favored such a single department. Most of the civilian witnesses before the committee, including the Director of the Bureau of the Budget and a former Secretary of the Navy, strongly endorsed it. One distinguished Navy officer favored it, but most of the Navy witnesses opposed it, and some who did not positively oppose it expressed the view that no action should be taken until Admiral Nimitz, Admiral Halsey, and other commanders in the Pacific theater of war should be free to appear before the select committee. There was merit in this position, although its effect would be to postpone action on an important public question for a long period of time.

This suggests a special advantage to the select committee in appointing a special master. After digesting the testimony of other witnesses, he would be able to take a swift plane to the Pacific. There within 3 or 4 weeks, he would be able to get the views of all the higher military and naval commanders without distracting them from their duties in connection with the prosecution of the war. His final report, after his return to Washington, would greatly expedite the select committee's solution of a fundamentally important post-war problem.

The labors of the special master would be greatly expedited by a consideration of the Washingtonian military policy recently endorsed by General Marshall. In his logical mind, the master probably would soon reduce this policy to the following essential principles:

1. Every able-bodied American should be trained to defend his country.

2. During the training period, all natural leaders should be carefully screened out and encouraged to become reserve officers—eligible for eventual promotion to any rank for which they can qualify, under sound and equitable standards.

3. No professional officer or man should be maintained on the permanent establishments of the ground, sea, or air forces to perform a duty which can be performed effectively and in time by trained nonprofessional officers and men.

Further analysis of these principles would, I believe, convince the special master that they constitute an infallible formula for maximum economy in peacetime and maximum effectiveness in wartime.

A sound solution of our postwar military problem will demand the scientific determination of that effective combination of air forces, sea forces, and ground forces which will be most consistent with economy, military efficiency, and our purpose to join with other nations in the establishment of a peaceful world order. It is obvious that an uncoordinated summation of the separate estimates of the three armed forces will result in a much larger total peace establishment than will be consistent with the foregoing considerations. A quite natural esprit de corps in each of the three services will impel it to seek the greatest possible share in the defense of its country. But each will be influenced by a less disinterested motive. The larger its slice in the postwar military melon, the more promotion by act of Congress will there be for its professional officers. This suggests that Robert Burns was the supreme authority on national military organization when he wrote:

"If self the wavering balance shake
It's rarely right adjusted."

This interservice competition will greatly complicate the problem before the select committee. Under its influence, many witnesses will come before it as members of pressure groups rather than as scientific experts. With the testimony beclouded by

self-interest in this way, it may be questioned whether even the wisest special master will be able to straighten out the mess.

This leads to the conclusion that it will be impossible for the Congress to make a scientific solution of our post-war organizational problem unless it first removes the promotion perturbation from the minds of all officers in the three armed services.

Fortunately, a congressional precedent indicates that this will not be so difficult as it may seem at first glance. The Sixty-sixth Congress had to solve precisely this same problem as a first step toward establishing a sound organization of the Regular Army after World War No. 1.

The story of this great reform goes back many years. From the close of the Civil War until November 1919, interarm competition within the Army defeated every effort to determine a well-balanced Army organization. During those years, no Congressman was able to learn what the Army really needed because his correspondence with friends and constituents within the service indicated that those in the infantry, the cavalry, the artillery, and other branches of the service each wanted an increase of his own arm of the service and was little concerned with anything else. This difficulty reached a climax in 1919, when the Military Affairs Committee of both Houses of Congress took up the pressing question of post-war Army organization.

Both committees soon discovered that the wide differences of opinion between witnesses from the several branches of the Army were almost all due to the promotion perturbation. Therefore, during the month of November 1919 they eliminated the cause of this perturbation definitely and permanently by adopting a system through which the normal promotion of all officers below the grade of brigadier general should be placed on an equitable basis entirely independent of any immediate or future changes in organization. Thereafter, the normal promotion of any officer would not be overstimulated by a legislative increase of his arm of the service, nor would he suffer if the public interest should demand legislation for its decrease. From the day that the Military Affairs Committees wrote this provision into the proposed law, the allotment of commissioned personnel to the several branches of the Army, presented no further difficulty. Also from that day, the military correspondence of all Congressmen was enormously reduced. Thereafter, letters on Army organization came only from the small percentage of their correspondents who knew something about that subject. I will venture to say that since that momentous day in November 1919 no Army officer has ever written to any Congressman on the subject of Cavalry, Infantry, or Artillery increase.

The promotion-perturbation eliminator adopted by the Sixty-sixth Congress may not exactly meet the conditions existing after World War No. 2. But an able special master, after a reasonable time for investigation, should have no difficulty in rectifying the formula. In fact, if the members of the select committee should make this the first item on the special master's agenda, their subsequent labors would be enormously simplified.

A strictly scientific solution of our national-defense problem demands that the normal promotion rate for all officers should be the same, whether they serve on the ground, in the air, or on the sea. There should be no departure from this general rule except where the law authorizes accelerated promotion as a recognition of exceptional ability os as a reward for exceptional merit. But though such a rule is obviously fair to all, it will not be universally popular. As in 1919, there will be protests throughout the services. But, as the Sixty-sixth Congress decided then, this is a case where individual tastes, predilections, and pretensions must yield to a paramount public interest.

Do We Want National Health Insurance?

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1945

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able article entitled, "Do We Want National Health Insurance?" from Collier's magazine of January 27, 1945. As the title indicates, it discusses the problem of national health insurance. The article is by Amy Porter, and is a very valuable contribution to the discussion of this subject.

I am informed by the Public Printer that it will cost $173.40 to print the article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DO WE WANT NATIONAL HEALTH INSURANCE?

(By Amy Porter)

HOW WOULD YOU RECEIVE MEDICAL CARE UNDER THE PROPOSED LAW?

Senator MURRAY illustrates as follows:

Question. Will the medical care I receive depend upon how much I have paid into the insurance fund?

Answer. No; if you have paid the minimum amount so that you are insured, you are entitled to all the medical care you need.

Question. Will I be allowed to choose my own doctor?

Answer. Yes; you can choose from among all the doctors in the community who participate in the insurance system, or you may choose a group practice center. You may change doctors if you are not satisfied.

Question. Can I continue to go to my present doctor?

Answer. Yes; if he is participating in the insurance system. He will be paid for his services to you. A great majority of the medical profession presumably will participate, since practically our entire population will be insured. If you go to a nonparticipating doctor, you will have to pay him yourself.

Question. Will the doctor come to my home if I am too ill to go to his office?

Answer. Yes. The doctor will be available to you in his office, in your home, or at the hospital, according to your need.

Question. Will my dependents be taken care of without additional fees?

Answer. Yes.

Question. What if I should need an operation?

Answer. You will be entitled to the surgical, hospital, and laboratory services that you need.

Question. What if I already have a chronic or incurable disease?

Answer. You will be entitled to medical or surgical care and to hospital care up to 30 days, with possible extension to 120 days.

Question. Will it be possible for me to see specialists?

Answer. Yes.

Question. What kind of medical care would I receive?

Answer. It should be better than what you receive today, since your doctor could use all needed laboratory, specialist, and hospital services.

Question. How will my doctor be paid?

Answer. According to the method the local doctors choose—by salary (part time or whole time), fees, or so much per insured person who chooses him.

The state of health in the United States is nothing to brag about. Ours is not the healthiest country in the world, although we like to think it is. In the matter of life expectancy, often taken as an index of health, the United States does not make a very good showing. Prewar statistics, compiled by the National Resources Planning Board, reveal that we are outranked in life expectancy at various ages by Norway, Sweden, Denmark, the Netherlands, Australia, New Zealand, Germany, Italy, and other countries. At age 60, we rank below 11 other countries.

We lose at least half a billion working days each year to illness, one-third of it considered preventable. Out of 13,000,000 men drafted, almost 4,000,000 were rejected as unfit. Of the unfit, at least one-sixth suffered from "easily remedied defects," and a larger proportion from defects that were preventable. Methods and treatment are steadily improving, yet it is estimated that from 30 to 50 percent more mothers die than would die if they all had good medical care. With proper treatment, probably 30,000 cancer victims could be saved each year. Syphilis could be wiped out with the knowledge we now have and do not fully apply, and tuberculosis, which claimed more than 56,000 lives in 1943, could be practically eliminated.

These statistics and estimates come from the United States Census Bureau, the United States Public Health Service, the Children's Bureau, and other governmental agencies, and from studies made by private agencies such as the Rockefeller Foundation. A survey by the Committee on the Costs of Medical Care showed that at the peak of prosperity in 1929, one-half the population was poorly provided with medical care. This result is borne out by the findings of the National Health Survey, made during the depression.

When people do not get adequate care, it generally is because they cannot afford it. Medicine is more effective and more widely applied today than it used to be, but full application is often more costly because it makes frequent use of expensive equipment, expensive laboratory procedures, and expensive consultations with specialists.

Dr. Ernst Boas, of Columbia University's College of Physicians and Surgeons, says: "Medical knowledge has increased so much, it costs more to apply it. This is not the doctor's fault and it is not the people's fault. But we must find a remedy. Fifty years ago a man with a bellyache was content when his doctor gave him a few pills out of his little black bag. That was all there was to do for him, and it didn't cost too much.

"Now, the man who takes his bellyache to the doctor may get involved in X-rays and specialists and one thing or another until the first thing he knows he has run up a bill for $50 or $100 or $1,000. Or else, realizing he may run up such a bill, he stays away from the doctor, taking his chances on a ruptured appendix or stomach ulcers. And when you consider the cost of caring for long-drawn-out illness, such as rheumatism or heart trouble or cancer—well, we all know cases where such costs have brought a family to ruin."

Lack of money is the reason, again, for the scarcity of doctors in farm communities and in the poorer sections of the country, especially the South. This scarcity is not merely a wartime condition, but a settled trend which can be expected to continue after the war. Doctors in private practice must live by fees, so naturally most of them gravitate to cities and prosperous communities where more people have more money. In peacetime, New York—a center for specialists—had one doctor for every 487 inhabitants. But Alabama had 1 doctor for every 1,500 inhabitants (since the war, 1 for every 2,800).

The regions that are short of doctors usually have too few hospitals and inadequate supplies and facilities such as X-ray services and laboratories. This, in turn, keeps doc-

tors away, for a modern doctor prefers to practice with the aid of the equipment he learned to depend upon at medical school.

In general, the distribution of medical care in this country is spotty, with the well-to-do and sometimes the city poor getting good care, and the middle and lower income groups, especially in rural areas, often getting inadequate care, or no care at all. This spotty distribution is reflected in various statistics. Last year 200,000 women gave birth to babies without any medical help. Out of every 1,000 babies born in the United States, 40 die during their first year of life, but that is the rate for the country as a whole. In 10 States, only about 30 babies out of every 1,000 fail to live out their first year. At the same time, in 10 other States, the infant death rate was nearly double the average for the best States.

In the 10 States where the fewest babies died, over four-fifths of the births occurred in hospitals. Physicians attended nearly every birth. But in the 10 States where almost twice as many babies died, less than a third of the births were in hospitals, and only about three-fourths were attended by doctors. In the same way, the poorer areas of any city will fall behind the city as a whole in health.

We all know these things in a vague sort of way. We shudder when some especially pathetic case is brought to our attention through a newspaper story or through personal knowledge. We shudder and perhaps we send in a contribution to a health fund.

We Americans, who can boast of the finest doctors and hospitals in the world, do not like to think that our neighbors actually suffer and die because they do not have access to good medical care. Doctor Alan Gregg, medical director of the Rockefeller Foundation, says, "Because the doctor's services are purchaseable and yet almost beyond price, they are coming to be regarded like life, liberty, and the pursuit of happiness—a civic right, a public necessity."

It is generally agreed that something must be done—and nearly everyone concerned with the problem agrees that that something will have to be insurance of one kind or another, public or private. Individually, most people cannot budget the unpredictable costs of illness. Collectively, they can do it in the same way they budget fire or car insurance.

The most far-reaching insurance proposal so far is the Wagner-Murray-Dingell social security bill, a revised version of which is to be considered by the present Congress. In its medical provisions, the bill goes beyond all earlier ones and proposes to pay the cost of complete medical and hospital care for some 110,000,000 United States citizens, from birth to death, from measles to eyeglasses.

The measure proposes to pay for this and other health measures with the expenditure of approximately the same amount of money, or perhaps a little more, than we pay out now for private medical services—between two and three billion dollars. The money would come from insurance taxes instead of through fees paid privately to doctors and hospitals. All of us, sick and well, rich and poor, would pay according to our earnings to make up a great insurance fund out of which all of our medical needs would be met.

The medical provisions are the most controversial part of the bill, which is sponsored by Senators ROBERT F. WAGNER and JAMES E. MURRAY and Representative JOHN D. DINGELL, and is designed to extend social security all along the line. It provides for a single payroll deduction of 6 percent on incomes up to $3,000, with employers paying a like amount. Self-employed persons such as grocers, farmers, doctors, would pay 7 percent. One quarter of the total funds would be applied to medical care costs, the balance going to insurance against old age, unemployment, maternity, temporary illness, permanent disability.

Thus, if you are employed, complete medical care for yourself and your dependents would cost you 1½ percent of your income up to $3,000 or not more than $3.75 a month. An average, middle-income family now pays out 4 percent of income on medical bills alone, or about $120 annually on $3,000. Of course, most of us would not pay the maximum $3.75 monthly, or $45 annually, for medical and hospital care, because three-fourths of us make less than $3,000 a year.

The bill has passionate friends and violent foes. They have argued themselves hoarse since 1939 when the first compulsory health insurance proposals were put before Congress. The foes charge that the bill is communistic, un-American, a stab at free enterprise, and a scheme to provide an inferior kind of political medicine to the people.

Led by the American Medical Association, they include several large national drug chains, some private insurance companies, a group of patent-medicine and drug manufacturers, the American Bar Association, and the American Hospital Association. Prominent doctors opposed to the bill include Dr. Morris Fishbein, editor of the A. M. A. Journal; Dr. James C. McCann, president of the Massachusetts Medical Service; Dr. W. P. Morrill, research director, American Hospital Association; and many others.

The bill's friends argue that tax-supported medicine is no more un-American than tax-supported education.[1] They are led by the social-minded legislators who wrote it, and by a minority group of doctors within the American Medical Association. Friends include organized labor, both A. F. of L. and C. I. O., some farm groups, the National Lawyers' Guild, the Association of Interns and Medical Students, and the American Public Health Association. Prominent doctors and specialists who favor the bill include Dr. Hugh Cabot, of Boston, formerly of the Mayo Clinic; Dr. Ernest Boas, of Columbia University's college of physicians and surgeons; Dr. Miles Atkinson, eye, ear, nose, and throat specialist, of New York University; and many others.

The arguments of the opposition are (1) the bill would rob the patient of his right to choose his own doctor; (2) it would lower standards of medical care; (3) it would make doctors slaves to bureaucrats; (4) it would cut the doctor's income by ending the fee-for-service system; (5) the bill is unnecessary because anyone can get the medical care he needs right now, privately, or through voluntary insurance or through charity.

Those in favor of the bill reply that: (1) The bill does not limit free choice of physician, rather it extends the privilege to those who have not had much choice before. (2) Standards of care would be raised because a physician would be able to make free use of costly equipment specialists' service, and laboratory tests which now are often beyond the ability of his patient to pay for. (3) Doctors would be as independent as they are at present, practicing as they do now, except that they would be sure of getting paid. (4) Most doctors' incomes would be raised, and more who wished to keep on with private practice could do so. (5) Many persons do not now get adequate care, either because they can't afford it and don't like to ask for charity or because first-rate medical services aren't available in the communities where they live.

Public opinion on the issue is reflected by various polls. Dr. George Gallup reports that 59 percent of the people want an extension of social security laws to cover medical care. Seventy-five to eighty-five percent want an easier method of paying doctor bills.

A survey by the National Opinion Research Center (paid for by a group in favor of the bill) found that 68 percent favored a broadened social security law covering payments for doctor and hospital care, and 82 percent wanted an easier way of paying medical bills. Another survey by the Opinion Research Corporation (paid for by a group opposed to the bill) showed only 37 percent favoring a Federal Government plan for health security, although 63 percent wanted some easier way of paying medical costs. The National Opinion Research Center blames the apparent discrepancy in the two surveys on the way the Opinion Research Corporation worded its questions.

THE WISHES OF THE PEOPLE

Still another poll, made by Foote, Cone & Belding for the California Medical Association to determine how doctors could meet the threat of Federal medicine, found that 50 percent of California's citizens definitely favor Federal medicine, 34 percent are against it, and 16 percent are undecided.

The report commented: "Among upper-income groups, Federal medicine is desired because of the poor. Among the poor it is desired because they want proper care themselves. * * * If it were to come up on the ballot today * * * it seems abundantly clear that you (the California Medical Association) would lose the issue—perhaps by a landslide.

"And," the report continues, "if doctors ask 'Why is medicine singled out? Hasn't the doctor as much right to the advantages of free enterprise as anyone else?' the answer is simple, 'The public doesn't think so.' The public is applying to the profession a principle as old as this Nation: When something is desperately needed by all of the people, but only part of the people can obtain it because of the cost, then it must be socialized so that all may have it. The people quite evidently think that medicine should be a public utility under Government control and operation like the postal system."

To wean the public away from its desire for Federal medicine, this firm advised its doctor clients to concentrate on enlarging and improving the California Physicians' Service, a medical insurance plan for families with incomes under $3,000. The California Physicians' Service is one of the best-known medical society-sponsored plans in the country, headed by the distinguished Dr. Ray Lyman Wilbur, chancellor of Stanford University, who had the boldness to suggest 12 years ago, when he was chairman of the Committee on the Costs of Medical Care, that it was time the American Medical Association did something to extend better care to low-income families.

The American Medical Association is conducting its campaign against the bill in cooperation with the National Physicians' Committee, which has distributed more than 15,000,000 copies of a pamphlet denouncing compulsory health insurance.[2] This pam-

[1] Dr. Fishbein, of the American Medical Association, says: "Take a look at tax-supported education.

"We have in the United States 108,000 one-room schools—in Illinois 67 percent of educational facilities—where 1 teacher teaches all the subjects to pupils of all ages and acts at the same time as school nurse, physical educator, and supervisor of recreation. Among the medical profession there is a feeling that national compulsory sickness insurance would provide an equally low quality of medical care for most of the people served."

Advocates of the Wagner bill reply that because the bill is national in scope, it would tend to eliminate State inequalities in health facilities, pulling up low-standard areas to higher standards.

[2] Dr. Fishbein says the American Medical Association's house of delegates "has endorsed the work of this and other agencies," but that the American Medical Association does not support the National Physicians' Committee with funds. However, medical societies and individual doctors do support the N. P. C. with funds.

phlet, the committee states, "is the source and fountainhead of most of the propaganda against the Wagner bill, flooding the Nation today. It supplies the chief arguments drummed into the medical profession through editorials in hundreds of official medical journals, and pounded into the public ear from the lecture platform, the press, and the radio." Maybe you receive one of these pamphlets enclosed in your doctor's bill, or wrapped up with a package of pills at the drugstore.

The National Physicians' Committee also asks the personal physicians of Congressmen to present its arguments to legislators. The National Physicians' Committee likens the threat of the Wagner bill to a raging forest fire, and in one of its pamphlets says: "Human rights as opposed to state slavery is the issue. * * * The provisions (of the bill) are so sweeping that, if enacted into law, the entire system of American medical care would be destroyed."

The 1943 financial report of the committee noted that 6,227 individual physicians had sent in contributions "to preserve for the medical profession the independence and freedoms essential to its continued progress." The committee's funds for the fiscal year 1943-44 totaled $294,720.88.

Senator WAGNER says of the National Physicians' Committee's pamphlets: "Misrepresentations and half truths abound in this propaganda. It has roused unwarranted fears as to the purposes of our bill."

WAGNER recalls the opposition he encountered when the social security bill was introduced in 1935. "Yet today," he says, "no one questions the value of this act."

Leaders of the American Medical Association, Dr. Morris Fishbein and others, say they speak for a majority of the country's doctors. Members include 125,000 out of a total of 185,000 licensed physicians.

But a dissenting group within the American Medical Association—the Physicians' Forum, headed by Dr. Boas, of New York—is actively working for the Wagner bill. Another group of American Medical Association members—the Physicians' Committee for the Improvement of Medical Care, headed by Dr. John P. Peters, of Yale University's medical school—endorses the principles of the Wagner bill. The combined membership of these two groups is around a thousand.

Dr. Boas argues: "You cannot tell from American Medical Association utterances how the rank and file of physicians feel. Many of them are afraid to speak up, for the American Medical Association is powerful. It can cause a doctor to lose his hospital privileges and otherwise damage him in his practice.

"We cannot win this fight through the organized doctors," Dr. Boas continues. "They'll trail along after their patients—the public—demand action. They have always trailed along behind every progressive move in medicine. They opposed public-health vaccinations against diphtheria. They almost kicked me out of my county society because I ran a baby health station."

An opinion poll of doctors in the armed services shows, according to a report in the American Medical Association Journal, that 54 percent want to go into group practice after the war, 4 percent want to go into full-time salaried practice, and 5 percent want to go into Government service. Thus a total of 63 percent prefer some form of practice other than the American Medical Association's traditional solo practice on a fee-for-service basis.

FIGHTING FIRE WITH FIRE

As one method of opposing the Wagner bill, leaders of the American Medical Association now are working to develop more and more voluntary insurance plans, such as the California Physicians' Service and other medical society plans, the Blue Cross Hospitalization plans, and industrial plans run by private insurance companies, in the hope that the public will prefer those to a Government-sponsored Nation-wide plan.

Voluntary plans now promoted by organized medicine in the beginning were stoutly opposed by the American Medical Association. This century-old organization, which during its early history did so much to raise medical standards, promote research and stamp out quackery, thereby earning the gratitude and respect of the country, has always opposed any medical care plant that involved any change in the traditional way of practicing medicine. The traditional way is: The individual patient consults an individual doctor and pays a fee for each service rendered.

The American Medical Association disapproved of the first hospitalization plans, starting with the one that began in Dallas, Tex., in 1929, but later, after such plans were securely established in many places, it gave its approval. It opposed the country's three most famous voluntary medical insurance plans—Ross-Loos of Los Angeles (whose founders were expelled from their local American Medical Association); Group Health of Washington, D. C. (which won a conviction in the Supreme Court against the American Medical Association under antitrust laws), and Farmers Union Cooperative of Elk City, Okla. (whose founder almost lost his license to practice).

In the past it has opposed the formation of group practice centers where (as at the Mayo Clinic) a collection of doctors skilled in various branches of medicine work together to give appropriate care to each patient. It has usually protested when the Government extended free treatment to special groups—such as venereal-disease cases, veterans, or low-income mothers and children—on the ground that such treatment amounted to unfair competition with the private practitioners.

However, after national health proposals were introduced in Congress in 1939, the American Medical Association came to accept both group practice centers and voluntary insurance plans—although never a combination of the two. It also sanctions increased Federal grants-in-aid to States, to provide public health services and care for indigents—always under local control.

There are at present over 300 voluntary insurance plans in operation—hospital, medical society, industrial, and other types. Together they insure approximately 20,000,000 people against one or more items of medical expense. The most important numerically are the Blue Cross hospital plans with an enrollment of 15,000,000. These cover hospital bills only. About 7,000,000 people have some protection in addition to, or other than, hospitalization insurance. This protection, in about half the cases, is limited to surgical and obstetrical insurance, and, in many, there are other limitations.

So far, then, about 15 percent of the population has signed up under voluntary plans of one kind or another. American Medical Association representatives believe this percentage can be tremendously increased. Advocates of the Wagner bill argue that experience shows such plans usually stop growing after a few years of operation because the bulk of the people can't afford them.

The voluntary plans favored by medical societies and hospitals find most of their customers among people making over $2,000 a year, and even in the prosperous year 1942, 43 percent of the Nation's families earned less than $2,000. Then there is a ceiling on most plans, limiting membership to those with incomes of less than a specified amount. The ceiling is generally from $2,000 to $3,000. Most plans limit enrollments to group, many exclude dependents, almost all exclude persons over 60. For these and other self-limiting reasons, advocates of the Wagner bill believe voluntary schemes can never reach more than one-fourth of the population. Also, as Wagner bill proponents observe, insurance against surgical and obstetrical expenses does not help a person who has pneumonia, heart trouble, or cancer.

Those who administer voluntary plans are in general opposed to compulsory insurance. The Blue Cross administrators, closely affiliated with the American Hospital Association, which in turn is closely affiliated with the American Medical Association, are opposed. Mayor LaGuardia, of New York, is an exception. He says that the new voluntary plan about to start operating in New York is "only a stopgap until something like the Wagner bill passes, and when that happens I'll be very happy about it."

The Wagner bill designates the Surgeon General as the administrator of its health insurance features. Would this mean, as opponents fear, that the Surgeon General would be an autocrat over American medicine, with every doctor, every hospital, dependent on his whims?

Advocates say such fears are without foundation, since the bill provides suitable checks on the Surgeon General's power.

He could not hire doctors. Any doctor licensed to practice in any State would automatically have the right to participate in the national insurance plan if he wished to. And doctors would themselves decide which of several methods of payment they preferred.

On all matters of policy, the Surgeon General would be required to consult with a council on which the medical profession and other interested groups would be represented. He could not spend a penny without the consent of the Social Security Board, which, the bill's advocates argue, has made an excellent record for just, unbiased dealing during the 10 years of its existence.

Under the bill, payment to doctors and hospitals would be arranged on a national basis, but administration of medical practice would remain, as now, a local affair.

To the argument that "Government in medicine" would necessarily give us inefficient, low-quality care, Wagner bill advocates reply by citing the record of the many Government health activities which have been in operation for years. The Government now gives care to some 750,000 farmers through the Farm Security Administration. It gives whole or partial support in many States to public health departments, hospitals for veterans, and for tubercular and mental cases, to venereal clinics, maternity and child health clinics.

Maternity clinics, for instance, have had the use of social security funds for the past 7 years. From 1936 to 1942, the infant mortality rate was cut almost one-third; the maternal death rate more than half. This marked decline coincides with the extension of medical services by the States, made possible in part by social security funds. Katharine B. Lenroot, Chief of the Children's Bureau, says, "This Federal aid was undoubtedly a factor in saving the lives of many babies and their mothers."

If the Wagner bill goes into effect, the voluntary plans will not necessarily be junked. Many probably will take over administration of the Federal plan within their areas. At least one American Medical Association leader in New Jersey is figuring on that.

Speaking at a medical society meeting, he said, "We don't feel these plans are going to answer the problem of medical care distribution. If we took in 50 percent of all the people in New Jersey, that wouldn't answer it. * * * But we can develop an agency * * * and its administrative methods can be extended to take over any Federal plan which comes into our State."

The health program conference of 29 prominent physicians and economists issued a report in December, proposing that voluntary plans of good standard should be allowed to continue under a health insurance law. The Wagner plan has greater scope than any other. It offers more than insurance against the cost of illness.

"Ultimately and by evolution," Senator MURRAY says, "it probably would bring about a vast reorganization of medical care. It would subsidize the building of hospitals, health centers, and laboratories in the places that need them most. By offering doctors financial security (it is estimated that on the average the general practitioner would make at least $5,000; complete specialists twice as much) it would tempt an adequate number of able men to settle in areas now desperately in need of them.

NEW ERA FOR RURAL DOCTORS

"It would encourage establishment of group practice centers, on the theory that group practice offers the most efficient as well as the least expensive kind of medical care. Rural diagnostic centers would radiate out from these centers into small towns and rural areas. Thus the country doctor who never could afford to pay out $10,000 for three standard items—X-ray, cardiograph, and metabolism devices—would have access to this equipment."

The Wagner plan emphasizes preventive medicine. Dr. Atkinson, of New York, praising this part of the program, said, "Any system of medical care which comes to life only in the face of illness is outmoded. If we are to give good care to all the people, we must prevent sickness, rather than simply treat sickness after it happens. This bill would encourage people to go to doctors for check-ups even when they feel well, thus making it possible for us, the doctors, to prevent illness and to detect serious disease while it is still in its early, curable stages."

The bill also would provide funds for medical education and for medical research, both essential to continued progress.

Contrary to the fears of some doctors, private practice would not be wiped out. No doctor would be required to join the plan. The Park Avenue specialist and the super de luxe hospital could continue as now, giving luxury service to those who wish to pay for it. Just as we have many fine private schools in a country where tax-supported schools are open to everybody, so we would continue to have private doctors and private hospitals, along with assured medical care for everyone.

Senator WAGNER says, "This is an American plan, geared to our own experience, form of government, and standard of living. Our people need protection against the costs of illness. They need ways to narrow the gap between the best that medical science has to offer and what many people receive. The medical provisions of our bill provide this program."

Whether or not this particular bill is passed, the trend is in the direction of medical security for all the people. No country which has tried compulsory insurance has ever abandoned it. The organized doctors of Great Britain strongly favor more, rather than less, compulsory insurance. Perhaps, like some European countries, we will go through a period of further experimentation with voluntary plans before we come to a final decision on national health insurance.

The Wallace Appointment

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. ALLEN of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Alexandria (La.) Daily Town Talk:

THE WALLACE APPOINTMENT

The spoils system took one of its most corrupt turns this week with the firing of Jesse Jones and the hiring of Henry Wallace. It was enough of a shock to the American people that a good man was being ousted so that a party worker could be rewarded. But it was more of a shock to learn that the party worker was Wallace.

To the South this move is one of distaste and distemper. Jones has represented the principles of the South—of its democracy and of its free enterprise. He has represented the Reconstruction Finance Corporation and subsidiary lending organizations which have provided many an impetus to American enterprise. He has done a good job.

What are the American people getting in this New Deal? They are getting Henry Wallace, whose party dropped him at the Democratic convention last June. They are getting a man whose reward is a position of high importance and significance at all times for which he is not fitted. They are getting a man who has called American businessmen and industrialists a group of Fascists.

Political personnel swaps can be swallowed, though not condoned, when they represent a change for the better or, at least, not for the worse. But it is a blow to the American people when the President in whom they have put their trust for a record-breaking number of history-making years, removes a qualified man in such an important post in order to reward a party worker.

The fundamental principle behind this move is as important as any political or economic significance. It has undermined the faith of a lot of people in their President at a time when faith is a mighty important thing.

Connecticut War Workers' Production Leading Nation

EXTENSION OF REMARKS

OF

HON. JOSEPH F. RYTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. RYTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Hartford Courant entitled "Connecticut War Workers' Production Leading Nation":

CONNECTICUT WAR WORKERS' PRODUCTION LEADING NATION

(By A. E. Magnell, financial editor)

Nowhere in the United States has the value of production of war materials and supplies equaled the total that stands to the credit of every man, woman, and child in Connecticut. First in the Nation in the per capita production value of material, Connecticut also ranks high in its ratio of manpower serving in the winning of the war. Connecticut individuals, institutions, and corporations have helped bear the cost of war, too, as is evidenced by purchases of a total of $3,300,000,000 in War bonds and stamps, which was 45 percent of the war contract awards placed here. Hartford's War bond purchases were almost 50 percent of the State totals and were also about 44 percent of the contracts placed in the city.

One of the smallest States of the Union in territorial area, and thirty-first when measured on a basis of population, the war effort and accomplishment of Connecticut's citizenry in World War No. 2 stands as an inspiration.

Connecticut has already given the sweat of its brow; its blood has stained the soil of foreign lands; and tears have been shed for those torn from its protecting arms.

More and more is being demanded of sons of the Nutmeg State on the war fronts and the home fronts. In meeting these demands Connecticut must not falter and must not fail.

SEVEN BILLION FOUR HUNDRED MILLION DOLLARS IN WAR CONTRACTS

The cumulative total of war supply and facility contracts for the period from June 1940 through November 1944, compiled by the War Production Board, ran to $207,000,000,000 nationally, of which Connecticut's total was $7,442,096,000, or 3.59 percent. The civilian population of Connecticut was 1.32 percent of the Nation. In other words, residents of the State produced almost three times as much in value of materials as their ratio to the population of the country.

The total value of the war contracts placed in Connecticut was tenth highest in the Nation, but, on the basis of population, the production requirement was $4,360 per capita.

The State of Michigan obtained war contracts aggregating approximately $22,000,000,000, but, reduced to a basis of inhabitants, the average was $4,175.

In meeting demands made upon Connecticut industry $279,000,000 of Government funds were supplied in Connecticut; in Michigan the Federal funds aggregated $1,269,000,000.

At the same time men from Connecticut industries went into the armed forces. The ratio of these was 31.2 percent of the male labor force, while in Michigan this ratio was 27.1 percent. Only in Massachusetts, West Virginia, Arizona, and the District of Columbia was Connecticut's ratio exceeded, and in none of these was the demand for production of war material as high.

Connecticut's production of war material has been approximately 50 percent of the total of the whole New England area. Hartford's share of the total war contracts has been $3,419,625,000 placing it thirteenth in the list of cities on a basis of volume while the city ranks fifty-first on the basis of population. Further reduced to the per capita basis, Hartford was found sixth with an average of $6,800 followed by Detroit with a per capita of $6,525. South Bend, Ind.; Wichita, Kan.; Flint, Mich.; San Diego, Calif.; and Bridgeport were leaders in that order.

AIRCRAFT PRODUCTION

Citizens of Connecticut have the distinction of having met aircraft production requirements of the highest per capita value in the country with an average of $2,175. The aggregate of aircraft contracts in the State was $3,718,820,000 to November 1944. This placed Connecticut sixth in total value of contracts of this classification, then aggregating $58,125,000,000. The per capita production of aircraft in this State of $2,175 compared with $1,432 in California, $1,391 in Kansas and $1,389 in Michigan. Aircraft production contracts placed in Hartford amounted to $2,671,800,000 and those in the Bridgeport area exceeded $804,000,000.

ORDNANCE CONTRACT

Ordnance requirements, including guns, ammunition, armor, and mechanized units is another important field in which Connecticut occupies a prominent place. The volume of these contracts is $2,044,187,000, or almost 5 percent of the total national needs. In this standing of States Connecticut is seventh. On the per capita basis the average, putting Connecticut second in the list, is $1,195.

The value of ordnance contracts in Connecticut cities are: New Haven and Waterbury combined, $849,000,000; Bridgeport,

$649,000,000; Hartford, $418,000,000. Bridgeport leads in per capita production.

SHIPBUILDING

Connecticut's importance in shipbuilding production rests almost 100 percent on submarines. The volume of these contracts is $289,000,000, while the national expenditures total nearly $27,000,000,000. In volume Connecticut stands eighteenth. Groton stood twenty-fourth in the listing of cities.

Other contract awards for the winning of the war are classified as "all other" contracts. The major requirement in this group is production machinery, without which airplanes, artillery, ammunition, tanks, and other mechanized units, ships, and other essentials cannot be built. As a machine-building area Connecticut figures prominently in the $1,110,851,000 of such awards.

Cream for the Few But Little Butter for the Many

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, the following letter and answer indicates a trend that is not in keeping with a desirable wartime food program:

JANUARY 2, 1945.

Mr. BENJAMIN H. BENNETT,
Bureau of Agricultural Economics,
Department of Agriculture,
Washington 25, D. C.

DEAR MR. BENNETT: I note in your letter of December 19 that in 1943, 1,475,000,000 pounds of cream were sold in the United States, and in 1944, 1,672,000,000 pounds.

Was this cream sold for consumption as cream or was it diverted to manufactured products such as ice cream?

How much was sold and used as cream?

Sincerely yours,

REID F. MURRAY,
Member of Congress.

UNITED STATES DEPARTMENT
OF AGRICULTURE,
BUREAU OF AGRICULTURAL ECONOMICS,
Washington, D. C. January 6, 1945.

Hon. REID F. MURRAY,
House of Representatives,
Washington, D. C.

DEAR MR. MURRAY: The 1,475,000,000 pounds of cream sold in 1943 and the 1,672,000,000 pounds sold in 1944, as mentioned in our letter of December 19 referred to cream sold for fluid consumption only. Cream for use in the production of frozen dairy foods, such as ice cream, sherbets, etc., was excluded.

Very truly yours,

B. H. BENNETT,
In Charge, Dairy Section,
Division of Agricultural Statistics.

Mr. Speaker, cream is not even rationed and you will note that the consumption of cream increased from 1,475,000 pounds in 1943 to 1,672,000 pounds in 1944.

Can you find anyone that can give a valid reason for not rationing cream? Why not, when the products made from milk and even at times the product made from the skim milk have been rationed?

Do you know anyone that can give a reason for rationing evaporated milk with 7.9 percent butterfat content when cream containing 19 percent butterfat is not rationed?

Do you realize the millions of pounds of butter, for the average citizen, that could be made from the cream diverted to the few with the price?

The people should be willing to at least accept equal consideration in the consumption of dairy products that is accorded the men in service. We should not continue to see the cream for the few.

In a Washington grocery store a few days ago, a lady asked for some butter. The grocer said. "I haven't any butter, but I can sell you all the cream you want" "Won't you have some cream?"

I thought, how much longer are we to have a food program for the few at the expense of the many? How much longer are we to have a food program based on sectional favoritism, and political expediency, instead of a food program that gives all the people equal consideration?

WHY SO LITTLE BUTTER

Everyone realizes that butter is a necessity and not a luxury. Of course, there should be sacrifices—but they should be equal and apply to all and not for the few. As long as butterfat is frozen at some 52 cents per pound for one purpose such as when used in butter and allowed to sell for twice as much in other forms of dairy products there is not much fairness or economic sense involved. When a cheese spread with 28 percent fat and 45 percent moisture is allowed to sell for 70 cents per pound, when the producer has his normal cheese frozen at 23¼ cents per pound and where the normal cheese has 32 percent fat and 39 percent moisture, it would appear that the Price Control Act did not do much toward protecting the consumer.

If butter and powdered skim milk are produced all the nutritive value of milk is obtained. The butter and powdered skim have all the food value of the milk and there has not been any valid reason why an acceptable amount has not been made.

The reasons that butter—a protective food—has not been provided the armed forces is no doubt due to transportation problems in some sections. The reasons that butter the protective food has not been provided in acceptable amounts for domestic consumption are:

First. There has been no attempt to produce butter in acceptable amounts.

Second. The subsidy for butter production at 8 cents per pound fat in 100 pounds of 3½ percent milk is 28 cents per pound and the subsidy is 60 cents to 90 cents per hundredweight of milk when the milk is used for bottling or when converted into the other manufactured dairy products. However, there is nothing in 10 pounds of cheese made from 100 pounds of milk or in 50 pounds of evaporated milk that is not in the 5 pounds of butter and 13 pounds of powdered skim milk made from 100 pounds of milk.

Third. The low ceiling on powdered skim has retarded butter making. The price of powdered skim has been kept ridiculously low when its food value is taken into consideration. Powdered skim with 35 percent digestible animal protein has had a 14- to 15-cent per pound ceiling which is way out of line with the price of any other animal protein food or any food product.

Fourth. Some people have read into the dairy program evidence of a desire of the vegetable oil interests, which are so influential in the present administration, to promote vegetable oils at the expense of the animal fats. The fact that animal fats are being allocated for soap making, and vegetable oils are being subsidized is also apparent.

Fifth. One animal fat such as lard with a 13-cent-a-pound ceiling, has been allocated by the millions of pounds to these soap makers while the vegetable oil production has been subsidized up to 8 cents or 9 cents per pound, or a subsidy of nearly three-fourths the O. P. A. ceiling for oils and fats, which is 13 cents per pound.

Sixth. The war food program has been keyed to cotton and wheat, both of which have been surplus crops although of great importance in war as well as peace. Manpower, fertilizer, and effort have been expended in producing cotton and wheat. Ten cents to fifteen cents per bushel has been spent to subsidize wheat production and $10 to $15 per bale has been spent to subsidize cotton production, and then 33 cents per bushel is spent to get rid of the wheat and $20 per bale is spent to get rid of cotton even during wartime.

Seventh. The New Deal has always appeared allergic to butterfat when in the form of butter. The Department of Agriculture has used radio facilities of the Nation to promote vegetable oils at the expense of animal fats. These groups are more interested in profits than in human nutrition. Many people are being misled. Not only the producer but labor, business, and the people themselves will suffer if unwise food programs prevail.

Eighth. When the vegetable oil interests can enjoy a 13-cents-per-pound O. P. A. ceiling, add 15 percent water, inject one-half cent worth of a vitamin, and sell the product for 29 cents per pound and, in addition, obtain the cooperation of the administration, it is not surprising that the butter industry is faced with many difficulties.

Ninth. Under normal times over 40 percent of the Nation's milk was diverted to butter making, and when the butter business is injured the whole dairy business is injured.

Tenth. The W. F. A. and O. P. A. do not appear to read the law very carefully or they would not put so many obstacles into the butter-production business. If the powdered skim were allowed to sell somewhere near in accordance to its value this butter situation would not be difficult to meet. If the 1,672,000,000 pounds of 19 percent cream obtained in 1944 were converted into butter, the national butter production would be increased by some three hundred fifty to four hundred million pounds and all the people would be furnished an acceptable amount of this great food. The few get the cream—the many do not get the butter their children should be eating.

A Citizen Army

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1945

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "General Marshall Wants a Citizen Army", written by Brigadier General John McAuley Palmer, United States Army, and published in the Saturday Evening Post of December 23, 1944. I should like to have the article printed in full, including the endorsement of General Marshall, Chief of Staff.

I have obtained from the Public Printer an estimate of the probable cost of printing this article. The estimated cost is $110.50.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GENERAL MARSHALL WANTS A CITIZEN ARMY—THE WAR DEPARTMENT STATES ITS POSITION ON OUR ARMY AFTER THE WAR

(By John McAuley Palmer, brigadier general, United States Army)

ENDORSEMENT BY THE CHIEF OF STAFF

The author of this article, Brig. Gen. John McAuley Palmer, is the Army's leading authority on the subject of American military policy. The conclusions at which he arrives are solidly founded on research and study extending over the past half century, and are worthy of the consideration of every thinking American.

GEN. GEORGE C. MARSHALL,
Chief of Staff, United States Army.

Since the War of 1812, most of our military unpreparedness and most of our enormous military expenditures have been chargeable to two conflicting views as to the merits of two mutually antagonistic types of military organization. One of these may be characterized as the citizen-army type, the other as the standing-army type. In the War Department's plans for a post-war military structure, which of these two styles of architecture should the planners follow? This is a highly important question, for, in the absence of a decision on this fundamental point, the planners are almost certain to give us an incongruous hodgepodge of both systems, as they have invariably done in the past.

Fortunately, this fundamental question has been answered by Gen. George C. Marshall, Chief of Staff of the Army. In War Department Circular No. 347 dated August 25, 1944, he has directed the General Staff and all other planning agencies under his jurisdiction to adapt their plans to the citizen-army formula. It will help us to grasp the full significance of this important decision if we will consider the origins and places of these two military types in our past history.

General Marshall is not proposing anything new. He is simply directing his planners to make a modern adaptation of the plan which President Washington submitted to the First Congress in January 1790, as one of the essential foundations of the new American Republic. This 1790 plan was prepared by Maj. Gen. Henry Knox, our first Secretary of War, and was revised to meet the President's views before he transmitted it to the Congress. It was based upon the fundamental democratic principle that every citizen in a free state should be trained to defend his country. It contained simple and economical machinery for the orderly mobilization of all or any necessary part of the Nation's manpower in ample time to meet any military emergency.

Few of his countrymen realize that from the close of the Reveloution to end of his life, Washington gave continuous scientific study to the problem of military institutions suited to the needs of a self-governing free people. In 1783, shortly after the formal conclusion of peace with Great Britain, he transmitted his Sentiments on a Peace Establishment to the Continental Congress. This was a treatise on national military policy prepared after consultation with all the generals at his headquarters. Unfortunately, this important state paper remained in manuscript form for 147 years and was not printed until I found it among the Washington papers in the Library of Congress and published it in a book of mine in 1930.

In this 1783 treatise Washington had written: "It may be laid down as a primary position and the basis of our system that every citizen who enjoys the protection of a free Government owes not only a portion of his property but even of his personal services to the defense of it."

After 7 years of further study and mature reflection, he made this "primary position" the "basis" of the plans which he transmitted, as President, to the first Congress in January, 1790.

In delivering his first inaugural address, 9 months earlier, Washington revealed that he was deeply conscious of the world significance of the new American republic. He was a lover of peace, but as the founder of the modern democratic state, he sought to make it always strong enough to maintain its just rights in its cruise toward an unknown future. Unfortunately, a great majority of his fellow countrymen preferred to make it impotent. Therein lies the fundamental cause of the present world cyclone: A high barometer of overmilitarization in the regions of lawless aggression; a low barometer of undermilitarization in the regions of lawabiding democracy. Hence the inevitable storm. In their calculation of world conquest, the general staffs of the Axis powers counted primarily upon the continued military impotence of world democracy. They are now finding that this was a most disastrous miscalculation.

The Washington-Knox plan was very simple and may be outlined briefly as follows:

For a few weeks in their nineteenth summer, again in their twentieth summer, and finally in their twenty-first summer, all young Americans were to be trained as citizen soldiers in what Knox called camps of discipline. During these 3 years all these citizen soldiers in each community were to be enrolled in local units of what Knox called the advance corps of the national citizen army and held in readiness for a call to arms, if necessary.

In addition to his citizen soldiers, Washington insisted that there must also be enough regular officers and soldiers to do those things that obviously cannot be done by citizen soldiers. In Washington's day this meant the national military overhead, teachers in his military schools, guards for the national arsenals, and troops to garrison the posts on the Indian frontier.

In the event of an Indian war or other emergency requiring a temporary reinforcement of the normal Regular Army, each community was to furnish its equitable quota of citizen-officers and soldiers. If any community should fail to fill its quota with volunteers, the shortage would be filled by what we would call a selective draft within that community.

In the event of a great national emergency all citizen soldiers under the age of 22 would be mobilized immediately in their local units of the advanced corps.

Washington attached great importance to trained leadership. In an address to the Congress, less than 4 months after his inauguration, he urged that war-experienced veterans of the Continental Army should form the original officer corps of his new citizen army. These war veterans were to be gradually replaced by the graduates of a system of military schools. In his treatise of 1783, he proposed the establishment of "one or more" military academies. A year later he endorsed General Steuben's proposal that there should be three such academies, one in New England, one in the middle States, and one south of the Potomac—and this when our total population was less than 4,000,000. Later, Knox incorporated this proposal of Steuben's in his own plan. It is obvious that these three military academies would train many more officers than would be needed for the little Regular Army of about 2,500 men with which Washington proposed to guard the Indian frontier. A great majority of their graduates would therefore return to their homes to become the trained leaders of his citizen army.

A MISHANDLED LEGACY

Washington believed as a fundamental political principle that, in a free state, military promotion should be open to able citizen soldiers as well as to professionals—but subject to the imperative condition that no officer—professional or nonprofessional—should be intrusted with the command of any body of American soldiers, small or great, until he had demonstrated definite and positive qualification for that great responsibility.

If the First Congress had adopted the Washingtonian plan, and if subsequent Congresses had gradually adapted its detailed organization, armament, and training requirements to meet gradual changes in population, modes of transportation, and scientific progress, we would have been prepared for all our subsequent wars. To use Washington's language, it would have made us so "respectable in the eyes of our friends" and so "formidable to those who would otherwise become our enemies" that most of these wars—including the present global holocaust—probably could not have occurred.

But this was not to be. After 2 years of debate and agitation, the Congress finally adopted Washington's scheme for a Nationwide citizen army, but not until after it had carefully eliminated every provision for training its soldiers and for providing it with qualified officers. Washington had proposed a national citizen army in terms of gilt-edged bonds. Congress issued it in terms of watered stock. This is the origin of the notorious Militia Act of 1792, which got its inglorious try-out 20 years later in the War of 1812.

So Washington failed to secure the adoption of his most cherished plan for the future peace and welfare of the new American Nation. His plan was rejected, not because it was bad from a military standpoint, but because it was obviously too good. The majority in Congress was influenced by a curious antimilitary complex which most American politicians had inherited from their English forebears. Back in the seventeenth century, Parliament had given Oliver Cromwell an effective army. Since then, anything savoring of military efficiency was regarded by most Englishmen with suspicion. And so, at the beginning of our Revoluntionary War, their descendants in the Continental Congress were careful not to authorize an intelligent manpower policy for the Continental Army. If too easily victorious over King George, Washington might be tempted to follow Cromwell's example. This was the principal cause of an unduly prolonged war, with all its attendant economic and social distresses. On the whole, the Commander in Chief of the Continental Army encountered much more serious opposition from obstructionists

in the Continental Congress than he did from King George's army.

After the adoption of the Constitution, the traditional antipathy to military efficiency took on a new form. Suspicion was now directed not against Washington, but against the Government that he headed. Obviously, if the new Federal Union should be given effective military power in any form, it would be strong enough to nullify the divine right of secession. After the Constitutional Convention, a strong isolationist party had sprung up in each of the 13 States. The isolationists of that day regarded the proposed American Union much as their political descendants of the twentieth century regarded the League of Nations. They therefore did all they could to keep their respective States out of it. Failing in that, they entered the new Government with their fingers crossed. They feared that the interests of a majority of the States might become fatal to the interests of a minority. They believed that, in that event, the minority could and should secede from the Union.

While large numbers of men, North as well as South, believed in the divine right of secession, they were not disposed to give the new Federal Government any effective military power. It might be used to preserve the Union as well as for national defense. It thus appears that the establishment of an effective military system, in any form, was not politically feasible in the United States until after interstate isolationism was finally wiped out in the Civil War. But by that time, Washington's legacy of military wisdom had long been forgotten by his countrymen.

It was the untrained militia of the act of 1792 that failed in the War of 1812. It may therefore be interesting to consider what the issue might have been if Congress had accepted Washington's plan for a citizen army composed of trained citizen soldiers under trained leaders. By 1812, his organized advanced corps would have numbered about 117,000. All able-bodied American citizens under the age of 40—about 600,000 in all—would have been graduates of Washington's camps of discipline. Practically all the veterans of the Revolution would have passed the military age, but they would have been replaced by younger officers who had been tested for each step in the ladder of promotion. Every company and higher unit would have had a commander accustomed to lead it in field maneuvers. Every divisional commander would have been familiar with the team play of infantry supported by artillery and cavalry. Could a little British raiding force have burned the capital of a Nation organized like this? If Washington had had his way, Britannia might have hesitated before entering a second war against her wayward American daughter.

But if the untrained 1,792 milita failed completely in the War of 1812, our little Regular Army came out of it with the highest credit and prestige. Before the war, it had been little more than widely scattered constabulary on the Indian frontier. As war threatened, it was increased in 1808 and again in 1812. Under capable leaders like Brown and Ripley and Winfield Scott, the Regulars became highly disciplined soldiers. At Chippewa and Lundy's Lane, they proved themselves a match for the best British troops. It was the gallantry of this new Regular Army and the brilliant exploits of our Navy that redeemed some of the general disgrace of the war. The history of our modern Regular Army really begins with the War of 1812. Since then, it has never failed to give a good account of itself.

After the War of 1812, the War Department became the headquarters of this new Regular Army. Its leaders became the sole military advisers of the Secretary of War. They were neither military philosophers nor critical historians. They were hard-boiled, practical soldiers. To them, the lesson of the recent war was simple. The militia was utterly worthless. They had no knowledge of Washington's scientific plan to make it the source of an effective citizen army. In their minds there could be no effective military organization except with hired soldiers under professional officers.

When Monroe became President, in 1817, he made John C. Calhoun his Secretary of War. The new Secretary was fully indoctrinated by his generals. He therefore agreed with them that the existing militia was worthless. But instead of seeking to reform it, he proposed to replace it by what he called an expansible standing army. Here was a plan that Washington and his generals never heard of, and one that was the very antithesis of everything they ever advocated.

An expansible-standing-army bill was transmitted to the Congress by Secretary Calhoun in December 1820. It was based upon a radical conception entirely new in American history and foreign to American tradition. In time of emergency, instead of reinforcing the Regular Army by the mobilization of organized military units composed of citizen officers and soldiers trained in peacetime to defend their country, we should expand the Regular Army, as such, by drawing the national manpower into its lower ranks, there to serve under a permanent class or caste of professional officers.

Looking at the Calhoun plan after the lapse of 120 years, we are amazed that any group of intelligent men could have proposed an arrangement so utterly futile from a political standpoint. There was never a chance that it would be acceptable to the American people or their Congress. The trouble was that Calhoun's military planners—like many other distinguished practical soldiers since their time—were totally ignorant of the fact there is a political as well as a dynamic aspect of military institutions. They were proposing a type of military organization which later attained a high degree of efficiency in autocratic Germany and Japan. But they were unable to see that it was totally inapplicable to a democratic state such as the United States of America. Wise military statesmen like Washington are always inclined to improve or perfect existing institutions rather than to propose new or alien types. They appreciate that a national institution is a living organism, like a growing tree deeply rooted in the soil of national history and tradition. It can be pruned or guided or stimulated as it grows, but it cannot be replaced by a lifeless, artificial substitute such as a post driven in the ground. The trouble with the post is that, instead of taking root, it will rot where it enters the soil.

Notwithstanding its utter futility, the Scott-Brown-Calhoun conception of an expansible standing army became orthodox in the Regular Army for many years. It completely displaced the Washingtonian military policy. As late as 1876, General Sherman worked out a modern improvement of Calhoun's scheme. But he suggested a much greater coefficient of dilution. He proposed to expand a peacetime Regular Army of about 27,000 men into a wartime Regular Army of about 213,000. General Upton's coefficient of dilution was not quite so big. He proposed to stretch a peace establishment of about 23,000 into a war establishment of about 140,000. Under such a system, expansion for a great war would be impossible under the volunteer system, and none of the advocates of the expansible standing army ever dared to propose that its ranks should be filled by conscription.

While we officers of the old Army were never able to say just how we proposed to expand our expansible standing Army, we were all agreed that there was one infallible practical formula for national preparedness: Increase the Regular Army whenever you can. If Congress won't give you enough Regulars, get as many as you can. We submitted this panacea to our friends in Congress and made it the theme of learned books and magazine articles whenever we could find a publisher. As General Pershing once said of his early days in the Army: "Every Army officer carried an Army-organization bill in his vest pocket." I wrote one myself when I was a second lieutenant. I gave cogent reasons for a sufficient legislative increase to make me a captain of infantry. But while that highly commendable objective would have added $40,000,000 a year to the National Budget, I can see now that my scheme would not have added a pennyworth to the solution of our national-defense problem.

It will be seen that there was one marked difference between the old Army's military policy and Washington's. He wanted as many professional officers and soldiers as were needed for certain specific purposes, but no more. We disciples of Calhoun and Scott and Sherman wanted just as many as we could persuade Congress to give us. And we were perfectly sincere about it. We had been bred in the doctrine that citizen soldiers are worthless and that only professional soldiers are worth their salt.

This, of course, was due to a defect in our military education. There was a serious deficiency in the curriculum at West Point. We had more mathematics than we needed, and no instruction at all in the history of our national military institutions. How different our subsequent military history might have been if some old superintendent of the Military Academy about a century ago—when General Sherman was a cadet—had ordered one of his bright young instructors to prepare and deliver a course of lectures on that theme.

This increase-the-Regular-Army complex in the minds of many Regular Army officers tended to vitiate their thought on national military policy for many years. According to General Grant, the superiority of the Confederate armies at the beginning of the Civil War was due to the fact that the North did have and the South did not have a standing army. The true problem for each side was to develop its traditional citizen army as soon as possible. The Confederacy concentrated upon this policy from the start. Almost all the southern graduates of West Point and other trained officers who resigned from the old Army when their States seceded were absorbed as leaders and staff officers in the great citizen army of the Confederacy. As Grant said, "They leavened the whole loaf." There was little such yeast for the Federal citizen army, because the northern military authorities wasted valuable time in securing their orthodox increase of the Regular Army. Many trained and educated officers who should have gone to the northern citizen army as leaders and staff officers were, therefore, retained in new regular regiments, too few and too small in total strength to exert any material influence upon the progress of the war. It is well known that Calhoun's political disciples in the South were powerful advocates of secession, but it is not so well known that his military disciples in the North almost made it impossible for Lincoln to save the Union.

Thirteen years after the Civil War, for the first time in our history, the Congress made a constructive effort to establish a sound military system. Now that the secession heresy was finally extinguished, this had finally become feasible from a political standpoint. A joint congressional committee, popularly known as the Burnside Commission, comprising three Senators and four Representatives, was, therefore, appointed. All seven of its members had commanded citizen soldiers in the recent war, two in the

Confederate Army and five in the Union Army. Here was a jury of seven soldier statesmen, highly competent to take up the light that had failed in Washington's administration.

And but for an unfortunate accident, Washington's message might have come to their hands. In preparing his military policy of the United States, General Upton had just finished a study of Sparks' Writings of Washington. Unfortunately, he overlooked the highly significant footnote in volume 8, which should have directed him to Washington's correspondence with his generals and his Sentiments on a Peace Establishment, then among the voluminous unpublished Washington papers in the State Department. Lacking this essential key to Washington's constructive labors, he quoted most of Washington's denunciations of the untrained militia of the Revolutionary War, but failed to find any record of the scientific reforms that Washington, with the aid of his generals, had worked out after the war. In short, he found Washington's diagnosis of the national military disease without finding his sovereign cure.

Lacking Washington's own remedy, he then substituted his own, which was no less than a new version of Calhoun's expansible standing army. In this way, Washington was made the principal expert witness for a military policy which he never heard of and one which was the antithesis of everything he ever proposed. Strongly endorsed by General Sherman, then commanding general of the Army, this was the gist of the military policy that the War Department submitted to the Burnside commission.

But even with the support of Upton's pseudo-Washington, the War Department was unable to sell its expansible standing army to the soldier-statesmen of the Burnside commission. They had all seen American citizen soldiers doing pretty well in a great war. As to the Regulars being the whole show, the two Confederate veterans—Generals Butler and Dibrell—probably recalled that Lee and Stonewall Jackson had managed to do fairly well without any Regulars at all. And so another great opportunity passed with nothing done.

After the Spanish-American War, the War Department again had an opportunity to present a solution of our national military problem to a receptive Congress. The result was a material increase of the Regular Army, but no effective step toward the development of our traditional citizen army. In 1903, upon the recommendation of Secretary Root, Congress authorized a new planning agency known as the General Staff and a new educational system for the training of prospective General Staff officers. But unfortunately, just as he was launching his new planning agency, Mr. Root gave it a bad start by publishing Upton's Military Policy of the United States, in an official War Department document, as a critical and exhaustive study of our national military system since Washington's administration.

In a message to the Congress shortly after the outbreak of World War No. 1, President Wilson proclaimed that the traditional foundation of our military system was a "citizenry trained and accustomed to arms." This pregnant hint from its commander in chief made no perceptible impression upon the General Staff, for it immediately proceeded to make plans for an expansible standing Army on a large scale. As a result, when a great war Army of citizen soldiers was required a little later, it had to be extemporized, as in the past. Again, as at the beginning of the Civil War, many trained professional officers who should have become leaders and staff officers in the wartime citizen Army were tied up in new Regular Army regiments.

After World War No. 1, there was a widespread popular opinion that the citizen Army, developed at such enormous cost during the recent war, should be perpetuated as a permanent national institution through a system of universal military training. This policy was advocated by the citizen-Army veterans who were then establishing the American Legion, and was endorsed by many Regular Army officers, including General Pershing. Unfortunately, the War Department recommended another policy based upon a large standing Army, with no provision for the development of our traditional citizen Army. But for these divided counsels, the National Defense Act of 1920 might well have contained a complete legislative solution of our national military problem based upon universal military training.

Failure to establish a sound system after the last war found us in dire straits at the beginning of World War No. 2. Again it became necessary to extemporize the national citizen army with which we have fought all our great wars. In accomplishing this tremendous constructive task, General Marshall and his assistants are demonstrating on battlefields throughout the world that the American Army of the people is superior in sheer military might to the much-vaunted armies of the Axis Powers. In his recent War Department circular, he therefore directs all planning agencies under his jurisdiction to make that Army the basis of their plans for a future peace establishment. As Washington did before him, he bases his military policy upon the democratic principles that in a free state every able-bodied citizen should be trained to defend his country and that every citizen sholdier should be eligible for promotion to any rank for which he is able to qualify under sound and equitable standards.

The Army of the future envisaged in the War Department circular would comprise a relatively small Regular Army, subject to prompt reinforcement when necessary from a great citizen army reserve composed of trained citizen officers and soldiers. The officer corps of this national army, as a whole would comprise relatively few professional officers and a relatively great number of citizen officers. But the efficiency of the whole would depend primarily upon the efficiency and the disinterested devotion of these professionals. There can be no effective citizen army without them. It would be their indispensable task, as General Grant expressed it, to leaven the whole loaf. Within the limits of his true mission, as defined by Washington and Grant in the past and more recently by General Marshall, the highly trained professional officer would thus become one of the most invaluable servants of the modern democratic state. The plans now in preparation in the War Department contemplate that the National Guard shall continue to be an essential component of the Army of the United States. Under the provisions of section 5 of the National Defense Act, representative officers of the National Guard are now participating with Regular Army officers in the preparation of these plans.

The citizen army advocated by General Marshall would meet our military requirements, whatever the future world organization may be. It would not be provocative of war, as great standing armies are. It would be organized for the prompt reinforcement of a relatively small Regular Army in the formation of such expeditionary forces, great or small, as would enable us to do our part in suppressing lawless aggression. It would thus assure our friends and warn our potential foes that hereafter America will be not only willing but able and ready to do her part in maintaining a peaceful world order. On the other hand, if the organization of world peace should, unfortunately, break down, it would put us in a position to mobilize all, or any necessary part, of our total manpower in a minimum of time and with maximum effectiveness for war.

It would also form the basis for a military system of maximum economy. Under a system of universal military training, the money required to maintain one officer or man on the permanent establishments of our armed forces would maintain several trained Reserve officers or reservists. With such a Reserve system, our peace establishment would be capable of rapid expansion and, therefore, a relatively small and inexpensive permanent establishment would meet our needs. Without such trained Reserves, there would be no such power of rapid expansion, and a much larger and more expensive Regular Establishment would be necessary in order to give us a reasonable degree of security. It may therefore be laid down as a fundamental principle that whenever we maintain one officer or man on the permanent establishments of our ground, sea, or air forces to perform a duty that can be performed effectively and in time by trained Reserve officers or reservists, we increase the per capita cost of our national-defense system unduly and reduce its ultimate capacity to meet the Nation's requirements in war.

Mr. Biddle, the Elk Hills Naval Petroleum Reserve Contract and His Apparent Dereliction of Duty

---

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to revise and extend my remarks, I am incorporating herein a final excerpt from the memorandum submitted by Mr. Norman Littell, former Assistant Attorney General of the United States, on January 8, 1945. This excerpt will supplement three other parts of the memorandum submitted in the CONGRESSIONAL RECORD on January 22, 1945, pages 427–430 and again on January 24, 1945, pages A268–A270, and again on January 25, 1945, pages A295–A297.

Mr. Speaker, the Elk Hills Naval Petroleum Reserve contract matter has already been before this House, but no action was taken upon a resolution by the gentleman from California [Mr. JERRY VOORHIS]. In view of the record as now submitted herein, the time has come for this House to take action. This is a matter of vital interest to each Member of this body. Excerpt in question is submitted herewith:

FORENOTE; PERSONAL AND PUBLIC ISSUES DISTINGUISHED

Personal issues: Mr. Biddle's official release and his public testimony before the Senate Immigration Committee on December 9, 1944, answering my memorandum of November 27, to this committee, presents issues of two kinds: Personal and public. Only the latter should be of real concern because they involve a vital question as to whether a public official should de disciplined or discharged (as in my case) for testifying frankly before congressional committees, and also matters of integrity in the transaction of Government business. I have heretofore ignored

the personal issues, but I find that Mr. Biddle has widely disseminated critical personal comments. This was done through his paid public relations staff and through leaks to a columnist (as he now admits in his testimony before the Immigration Committee).

Grave problems of government and not of personalities are at issue.

I do not wish to lend even passing importance to such statements by replying to them. However, in case any member of the committee wishes an answer to Mr. Biddle's personal comments I have attached a brief reply as an appendix to this memorandum.

Public issues: In replying to the committee's present request for all available information which I may have in this matter, I am compelled to consider in its entirety Mr. Biddle's statement before the Immigration Committee and his public release of December 9, not only because these statements constitute his official reply to my charges of November 27, but because the public interest imperatively demands it. The basic question as to whether an official of the executive branch of the Government has been disciplined for destifying too frankly before congressional committees and whether or not there is also involved a fundamental question of integrity in the transaction of Government business vitally affects not only the war effort but the well-being and effectiveness of democratic Government.

These matters fall squarely within this committee's jurisdiction as follows:

I. MR. BIDDLE'S ATTITUDE TOWARD TESTIMONY GIVEN BEFORE CONGRESSIONAL COMMITTEES

A. The Elk Hills naval petroleum reserve contract

1. Hearings before Public Lands Committee in Congress regarding Navy Department contract, November 20, 1942, with Standard Oil Co. of California for development of the Elk Hills Naval Petroleum Reserve: The Attorney General's principal objection seems to be that I said "this was another Teapot Dome case" (p. 40)[1] and that I "read my entire memorandum (to the Public Lands Committee) which was to be the basis of" Mr. Biddle's "opinion to the President" (p. 42). The former statement is untrue and the latter completely misrepresents the order of events.

I said in my opinion that "in degree this agreement goes beyond the contracts involved in the Pan-American and Mammouth (Teapot Dome) cases and in principle there is no controlling distinction." I reaffirm that now. The instant case went beyond the Teapot Dome cases in that an actual interest in the oil content of the Government land, together with an interest in the Government improvements and equipment on that land, were vested in the Standard Oil Co. of California.

Any able lawyer will agree with that statement in my report. Contrary to Mr. Biddle's apocryphal account (p. 41), I have never in the slightest degree retracted, or apologized for, that statement, and I do not do so now.

Respecting the charge that I read my report to the Public Lands Committee before Mr. Biddle had time to write an opinion to the President based upon it, Mr. Biddle elliptically evades the fact that he had the report for an ample period of time and elected to go on vacation to Hot Springs when this matter was already a subject of public controversy. Note the following dates:

June 9, 1943: Completion of report discussed with Mr. Biddle.

June 11, 1943: Completed report handed to Mr. Biddle.

June 12, 1943: Copy of my report sent to Justice Byrnes at the White House pursuant to Justice Byrnes' request.

June 14, 1943: After having studied the report, Mr. Biddle reviewed it page by page with the writer and representatives of the Interior and Navy Departments in Mr. Biddle's office. The language above quoted that this contract went beyond the Teapot Dome leases in degree, was then in the report, and it still is. Mr. Biddle could have changed the language then if he so desired.

Mr. Biddle left that night for a vacation at Hot Springs, Va., with the contract in force and Standard Oil Co. pumping oil from the Elk Hills reserve.

June 17, 1943: The writer was requested to appear before the Public Lands Committee of the House, but was instructed not to submit a report. I stated merely my personal conclusion that the Standard Oil contract was "illegal and invalid."

June 19, 1943: Unknown to me, Mr. Biddle authorized delivery of my report to Standard Oil Co. attorneys.

June 21, 1943: Mr. Biddle telephoned me to direct that my testimony should not "go into any details regarding the contract" when I appeared again before the Public Lands Committee on June 22.

June 22, 1943: I again requested the Public Lands Committee to postpone the matter pursuant to Mr. Biddle's instructions, but postponement was refused. The committee consented, however, to consider only the bare legal aspects of the matter and not go into the practical aspects of the contract as analyzed, where the greatest embarrassment to the Navy and Standard lay. I testified accordingly. I withheld copies of my report as Biddle instructed, but I did not know that he had already authorized giving it to Standard Oil Co. lawyers.

Same day, June 22, 1943: Held conference with Biddle regarding problem of testifying under restrictions. He was highly irritated over my stated opinion that the contract was "illegal," and said, "I doubt whether the contract is illegal." Later, on my questioning, it was apparent he had not read the two controlling Supreme Court decisions—the Teapot Dome cases. On those only could any opinion be based.

June 24, 1943: After it had been pointed out to Mr. Biddle that it was highly improper to give Standard Oil Co. copies of the report when denying it to a committee of Congress, as a face-saving gesture he personally delivered copies the next morning to the chairman of the Public Lands Committee.

Same day: Instructions received over the telephone from Mr. Biddle to limit my testimony before the committee the next day. "There is no need * * * to do anything but submit a copy of your report."

Due to the complex character of the subject matter, voluminous technical exhibits, and language unfamiliar to the committee, involving statistics of production, encroaching water levels, fluctuating market values, production costs, etc., reading the report without explanations would have been largely meaningless—and how could one be so evasive before natural and inevitable questions of committee members? And why?

In an effort to have Biddle's instructions clarified before going back before the committee on June 25, I finally reached him on the telephone at 6:45 p. m. on June 24th, only to be again reproached for having testified that the case went beyond the Teapot Dome leases, even though I again stated that I had only read from my report in saying so. His instructions were again wholly confusing, for he concluded petulantly, "You will have to use your own discretion, but you know what I want you to do!" I, therefore, sent to Mr. Biddle a memorandum which I had drafted when unable to reach him on the telephone that day, which can be found in the Department files.

June 25, 1943: Testified fully and frankly in accordance with my memorandum of the preceding evening to Mr. Biddle.

From these facts it is readily apparent, (a) that Mr. Biddle had ample time in which to draft an opinion to the President if he desired to do so, but he chose to go on vacation instead; Congress could scarcely be asked to postpone hearings until after the return of Mr. Biddle when Standard Oil Company was drilling wells in the Naval Petroleum Reserve and pumping oil daily; (b) that when I read my report to the committee, it was only after two postponements at Biddle's request, and on Mr. Biddle's instructions to do so; (c) that Mr. Biddle had plenty of time to change the language of my report if he did not approve of it, and his disapproval came entirely as a result of press reports which hurt the feelings of Secretary Knox, who had signed the contract, and not as a result of any improper statement in my report; (d) that throughout, repeated efforts were made to restrict my testimony, which is in flat contradiction of Biddle's statement (p. 41, last line): "Nobody objected to his going down and testifying. He went down and testified. He wasn't asked not to at all. He testified at once when he was told to."

2. The Abe Fortas memorandum: In passing, let me note Mr. Biddle's attempt to detract from my exhaustive study of the Standard Oil-Navy contract of November 20, 1942, by saying that Under Secretary of the Interior Fortas "as a result of his study of the contract * * * wrote a careful memorandum" on the contract before I did. I am sure Mr. Biddle never saw the Fortas memorandum or he would not have been so expansive. It was all on one page. It contained three points, one of which was wholly wrong, and one of which questioned the general public policy which was, of course, what everyone was questioning at that moment. How any lawyer could have passed so superficially so challenging a contract, bristling with potentialities of future dispute and loaded with booby traps where certain and provable damages and injuries to the public's interest in this oil reserve were lurking, is difficult to understand. Mr. Fortas himself apologized for what Mr. Biddle describes as a "careful memorandum" when he testified before the Public Lands Committee, but later information that an assistant had prepared it and Mr. Fortas had merely signed it, permits Lawyer Fortas to escape from responsibility. Only Messrs. Biddle and Ickes are lavish in their praise of this "careful memorandum."

3. Exclusion from conferences and negotiations re new Elk Hills contract: Mr. Biddle's statement that I was included in all conferences and negotiations (p. 45) in the Department of Justice in respect to the writing of a new contract for the development of the Elk Hills Naval Petroleum Reserve, following the announced rescission of the illegal contract after my appearance before the Public Lands Committee on June 17, is untrue. The records and files of the Department of Justice will show conclusively that this matter was turned over to Mr. Charles Fahy, Solicitor General, and a lawyer from the Solicitor's office, by Mr. Biddle, and that I was excluded from all conferences on this matter from June 17, to the end of July. During all of that time the Navy and Standard attorneys, attending conferences at the Department of Justice, were trying hard to get the approval of the Department not of a temporary agreement, as Mr. Biddle testified (p. 44), but of a new permanent agreement.

The results of these conferences were submitted to me from time to time and I submitted written memoranda which appear in the files of the Department, renewing objections to some of the same factors which had appeared in the original contract and were restated in new form. It was only when I

[1] All references are to pages in the Attorney General's statement of November 9, 1944, before the Senate Immigration Committee.

finally refused, as far as I was personally concerned, to approve of a permanent agreement because the Government's interests could not be adequately protected in such hasty legal and technical work, that a temporary interim agreement was approved as a compromise. It was at the end of July that Mr. Fahy finally stated, after finding himself unfamiliar with certain factual matters, that henceforth he was not going to have any conference without me present. Very proper, but very late.

Mr. Biddle complacently states that (p. 45) "The Navy was not affectionately inclined toward Mr. Littell." By "Navy" whom does he mean? Certainly not the many officers who congratulated me privately on saving the Navy's oil reserve from Standard, nor the former Secretary of the Navy, Josephus Daniels, who, with President Roosevelt as Under Secretary of the Navy in the last war, had fought to preserve the Elk Hills Reserve from oil company exploitation, and who publicly commended me for the stand which I had taken. Rather, did he not mean Admiral Stuart, in charge of the Naval Petroleum Reserve, who had been taken in completely when he approved such a contract and who has since been removed, and honest but easy-going Secretary Knox, who admitted that he had "muffed it."

And what difference did any personal attitude make? Since when have we worked in the Department of Justice for love and affection?

4. Publicity regarding the Elk Hills expose: By innuendo in his testimony, before the Immigration Committee, and by direct statements made to press men from Biddle's rumor factory in his publicity office, Mr. Biddle has charged that I sought publicity in this matter. As usual, Mr. Biddle failed to recognize on the merits a vital public issue until too late; a major public controversy had to break over him before he saw it. No man could have prevented publicity in respect to Elk Hills, and the man who had mastered the problems imbedded in the contract was inevitably drawn into the discussion.

Had I been so minded, there were plenty of opportunities to let this story leak to the press any time after I went to Mr. Justice Byrnes on April 14, 1943, when Justice Byrnes had Secretary Knox withdraw the contract from the Appropriations Committee where $2,000,000 had been requested in support of certain obligations of the contract. The press was silent on the subject.

Many people knew of this contract, in spite of the secrecy which surrounded it, and there was much adverse discussion on the Hill when the contract was known to the Appropriations and Naval Affairs Committees. The first public attack was launched upon it by Senator LANGER in the Senate on June 12, 1943, 2 months after Mr. Justice Byrnes acted. I did not know Senator LANGER. I had not at any time communicated with him and have no idea where he got his information.

Upon being notified of Senator LANGER'S speech by long distance from my office on June 12, 1943, when I was in Asheville, N. C., attending a United States attorneys' conference, I telephoned to Mr. Biddle, in order to suggest a means of protecting the President from further attack and being unable to locate Biddle, reached Mr. Byrnes at the White House. I suggested that there be issued a public statement that the contract had already been withdrawn from the Appropriations Committee by orders from the White House. Mr. Byrnes concurred, and this action was taken later that day, after Mr. Byrnes had conferred with Mr. Biddle, and Mr. Biddle, himself, said in a public statement that he "had persuaded Secretary Knox" to withdraw the contract from the Appropriations Committee. (Justice Byrnes had done that on April 14.)

Attention from the press was not only inevitable—it was invaluable. While Mr. Ickes had made every effort to prevent my testifying before the Lands Committee in the first place, and Mr. Biddle had endeavored to limit my testimony after he could not postpone the hearings against the insistent demands of the Public Lands Committee, the congressional hearings proceeded step by step to turn the light of day down into the shadowy nooks and crannies of that predatory contract. Only because of publicity did the Government attain anything like an equality of bargaining power when Navy personnel were pitted against the skilled lawyers and technicians of the Standard Oil Co. of California. Sheer embarrassment made Standard reasonable in negotiations.

It is inevitable that memories of the "little black bag" in the Teapot Dome cases should have been revived in the press. One of the identical oil reserves was involved in another bad contract. The press rendered an invaluable service to the American people in fully illuminating the facts.

Mr. Biddle now says that he "supported me" in this Elk Hills fight. I was unaware of it. His confusion of mind was further confounded by pressures to which he was constantly subjected by a Secretary of the Navy who had committed the Government to the contract and was anxious to stop his public embarrassment over the matter, and the Secretary of the Interior, who, as Petroleum Coordinator for War, was closely associated with a former director and other representatives of the Standard Oil Co. of California in the Petroleum Administration for War.

The real trouble was that Mr. Biddle was simply in a twit trying to run with the hare and hunt with the hounds.

Daughters of the American Revolution Endorse Committee on Un-American Activities

EXTFNSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a resolution of the Mississippi Delta Chapter, Daughters of The American Revolution, commending the creation of the permanent Committee on Un-American Activities.

The resolution follows:

As a patriotic society, interested in the welfare of our beloved country and the preservation of its ideals and traditions and its way of life, we hereby offer our sincere thanks to Hon. JOHN E. RANKIN, of Mississippi, for his stand in Congress to preserve the Dies Committee on Un-American Activities, and give praise to him for what we consider a great achievement.

We commend Mr. RANKIN for his speech on this subject over the Columbia Broadcasting System on January 16. It was a forthright, courageous statement, and clearly defined the object and purposes of the committee.

We appreciate the acknowledgment in this address of the support of the Daughters of the American Revolution, for the purpose of our society is to preserve the ideals and traditions, the principles of government upon which this great country was founded.

The National Society D. A. R., in session April 1943, commended the Dies committee for "its diligent research and persistent uncovering of un-American activities." We join with the national society in such commendation for work well done, and we urge the Members of Congress from Mississippi to lend their support to Mr. RANKIN and the committee in continuing investigation of un-American activities which threaten free government.

We request that this resolution be spread upon the minutes and a copy be sent to Mr. RANKIN and one to each of the Representatives of Mississippi.

MISSISSIPPI DELTA CHAPTER, D. A. R.,
Mrs. WALTER SILLERS, Sr., *Regent*.
Mrs. L. W. NUGENT, *Secretary*.

Maj. Thomas B. McGuire, Jr., Nation's Leading Active Air Hero, Killed in Action in Pacific

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1945

Mr. CANFIELD. Mr. Speaker, the people of my congressional district, particularly those living in Paterson, were shocked recently to learn of the death of Maj. Thomas B. McGuire, Jr., the Nation's leading active air hero, who was killed in action in the Pacific.

Tom spent his early days in Paterson, and he was a member of one of that city's oldest families. His great-grandfather settled there in 1817. Ever since McGuires have played a prominent part in the business and civil history of this area.

The ace's father, Thomas B. McGuire, Sr., well-known automobile dealer, is a personal friend of mine, and with him I have held out the hope that Tom, who had destroyed 38 Jap planes, would be returned to the United States and learn of his countrymen's appreciation of his services.

The Paterson Morning Call, in a leading editorial, says, in part:

The news that Maj. Thomas B. McGuire, Jr., of Ridgewood and formerly of Paterson—who since joining the Army Air Force in July of 1941 had downed 38 Japanese planes in action, making him the leading American air hero still on the fighting front—had been killed in action while fighting enemy planes over the Philippines on January 7 will come as a tremendous shock not only to the members of his family but also to his many thousands of friends in this city, Ridgewood, and all over the country who appreciated the wonderful part he was playing in helping put the Japanese Air Force out of business, thus aiding in speeding up victory in the Pacific war area.

The report of his death came to his beloved widow, who has been living at San Antonio, Tex., yesterday in a letter from Lt. Gen. George C. Kenney, commanding the Allied Air Forces in the Pacific. He told Mrs. McGuire that the news of the death of her husband brought him the worst moment of the many he has had to face since the war began as he realized his importance to the Nation's war effort. He wrote: "Your husband was

one of the men the Air Forces can never forget, and we will find it more difficult to carry on without him."

Major McGuire's greatest desire was to help win the war as speedily as possible, and for this reason he had on two occasions refused furloughs that would give him an opportunity to rest and visit his family, a privilege which his 720 combat hours and more than 240 combat missions richly deserved. It was his determination to be a help to General MacArthur in his invasion of the Philippines that undoubtedly kept him on the fighting front and brought him into the final battle that resulted in his death after his plane had been crippled while he was engaged with a number of Jap planes.

The Paterson Evening News presents the following tribute:

Only 23 years old, Major McGuire, whose father and paternal grandparents have long been part of the Paterson scene, had packed more thrills and action into his brief life's span than the average 1,000 people experience in a long normal lifetime. For 2 years come March, he was in all the major battles in the Pacific, and intrepid flier that he was, had destroyed 38 Jap planes before the pruning knife of war cut him down. He was second only to Maj. Richard I. Bong, American ace who had knocked down 40 Japs. Before going to the Pacific, he was 6 months in the Aleutians in the grueling days when we didn't know where next the yellow terrors would be hitting us.

Death of a young hero like McGuire brings the fight right close to our doors. After all, he was just a plain American kid who loved life and the ordinary things we all like. When home, he was just a quiet youngster who loved to tinker with mechanical things, yet never went into the shop of the auto agency his father conducted in Ridgewood. There was never any indication that here in this young fellow were the makings of a fabulous hero whose exploits would thrill the world, galvanize the entire Air Corps with a new esprit de corps and bring panic to the hated Nips.

Yet when he swung into action, young McGuire was the epitome of fearlessness and daredeviltry. Maybe it wasn't daredeviltry at that, because his commanding officers and fellow fliers attested to the fact that he was a team player who worked with his squadron instead of trying to play a single-o, limelight-seeking game.

Allen W. Smith, writing for the Passaic Herald-News, says:

Tom was not a resident of Passaic. News dispatches of his heroics and daring in the South Pacific said he was from Paterson, or from Ridgewood, or from San Antonio, Tex. But he was as much a part of Passaic as he was of Painted Post, N. Y., or Rapid City, S. Dak. He was an American fighter who performed his job far beyond the call of duty.

It was the pleasure of this writer to have had dinner with Tom and his father, the Ridgewood automobile dealer, just before he left on his ill-fated trip to the Pacific. He had just returned from a 6 months' tour of battle duty in the Aleutian Islands, where his flying and daring made him outstanding. He was anxious to get in the big show in the South Pacific. But his was not talk of war or planes. He talked of music in which he had such a deep interest; he talked of home and his plans for after the war.

He knew he had a big task ahead, and he was ready for it.

Tom left for San Antonio for some advanced flying instruction, and there, too, he was married.

Then the South Pacific—

There were big names in that theatre, Boyington, Bong, and others. Soon his name appeared on the horizon.

Two for McGuire! Eight for McGuire! The D. F. C., the Air Medal, Presidential Citation, then a plunge into the ocean off New Guinea and wounds. The Purple Heart and the Distinguished Service Cross, a grateful Nation's second highest award to its brave. Tom could have come home, but he preferred to stay with his command and fight.

Col. Charles Lindbergh went to the New Guinea area on a secret mission, and for a month he lived in a hut with Major McGuire and daily they flew in combat formation * * * into enemy territory. Their studies of high altitude flying will result in the saving of many of our fliers.

In the meantime, young Tom's record grew. In the Christmas Eve period he downed 7 Jap planes, for a total of 38—two behind Major Bong, the leader. He wrote a thrilling saga across the blue Pacific skies.

Major Bong retired from combat, and returned to this country to be married.

"No finer fellow than McGuire could break my record if he has not already done it," said Bong.

Few days went by that Tom's father did not call this newspaper.

"Any news of Tom today?" he'd anxiously inquire.

The tragic news came at 2:56 yesterday afternoon.

Tom was dead, killed in action, the way he would have preferred it.

The American Air Forces will never forget Tom McGuire.

We Must Modernize Congress

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. OUTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by me, published in the Reader's Digest for February 1945:

WE MUST MODERNIZE CONGRESS

(By GEORGE E. OUTLAND, Member of the House of Representatives from California)

Criticism of Congress by the people is not new, but of late Congress has begun to criticize itself. Our National Legislature has become sharply aware of the need of bringing its machinery up to date. More than 50 resolutions calling for reform were introduced in the Seventy-eighth Congress, which ended in December, and reorganization along modern lines will be one of the chief concerns of the new Congress. The public thinks of Congress largely in terms of what happens on the floors of the Senate and the House. The real work, however, is done in committees, and it is with the committee system that changes must start.

Frank Knox, late Secretary of the Navy, was an extremely busy man. Yet when Congress decided to investigate a Navy contract, Secretary Knox was haled up to Capitol Hill not once but four different times to tell exactly the same story to four different congressional committees. Jesse Jones is reported to have appeared 18 different times before 18 different congressional committees—to deliver the same 2-hour speech.

Today there are 47 standing committees in the House and 33 in the Senate; moreover, there are many temporary committees. No wonder the New York Times refers to "our hydra-headed Congress." Senator LA FOLLETTE told the Senate last year that "hardly a day has gone by during the present long and arduous session of the Congress when I have not had to decide which one of several very important committees I would attend."

The Maloney-Monroney resolution, adopted at the close of the latest session of Congress, creates a bipartisan committee composed of six Members from the Senate and six from the House to study the problems of reorganization and make definite recommendations at the end of 90 days.

There are several possible solutions to the committee problem. One that will appeal to the common sense of the American people calls for 10 or a dozen joint or parallel committees of both Houses. Much time now wasted could be saved and such an arrangement would enable the two chambers to work together with greater understanding

However, reform will make little progress until the American people as a whole demand greater efficiency of their Congress. Reducing the number of committees would mean reducing the number of committee chairmanships. The prestige of a committee chairmanship is the climax in the career of a Congressman; there are few who will vote to reduce their own chances for such a position—and few chairmen who will vote to abolish the position already theirs. Moreover, each committee chairman is allowed extra clerical help; short-handed as each Congressman is, to become a committee chairman is to obtain a more adequate staff.

This problem of staff is becoming increasingly serious. One of the keenest students of Congress, Dr. George B. Galloway, chairman of the Committee on Congress of the American Political Science Association, contends that of the 80 standing committees not more than 6 have staffs sufficiently expert to cope with and to evaluate the testimony of either administrative officials or lobbyists. My own Committee on Banking and Currency must pass on all legislation concerning the Office of Price Administration, the Federal Deposit Insurance Corporation, the Federal Housing Administration, the Federal Reserve System, the Commodity Credit Corporation, the Home Owners Loan Corporation, and the many aspects of the Reconstruction Finance Corporation. Yet our committee has no attorneys, no special consultants, no expert to whom we can turn for evaluation of testimony, preparation of material, or legal interpretation.

Congressman MONRONEY, of Oklahoma, points out that each of 145 Federal departments and bureaus employs more people than there are on the entire congressional staff. For example, the Office of Indian Affairs spends more than twice as much to supervise the Nation's Indians as it costs to operate Congress.

To meet requirements it would not be necessary for committees to create permanent staff additions. There is now provided by the Library of Congress a little-known Legislative Reference Service. This is composed of experts who are able to render research assistance on questions of importance that arise before various committees. Such a service could be greatly enlarged. Thus committees which from time to time needed greater staff help might turn to the Service, drawing from a pool of competent students of Government problems maintained under impartial auspices.

Likewise a Constituents Inquiry Service under the Library of Congress would immediately remove from individual Representatives and Senators the burden of handling endless trifling requests, and demands which overwhelm them in a mass of detail and prevent them from adequately performing the major duties.

One Representative hurried back to his office to find 96 letters awaiting him, among which were the following requests:

A chamber of commerce wanted him to get busy "right now to lift gasoline and tire rationing."

A determined young woman demanded that he instruct the Army to transfer her boy friend from Africa to a service post she named back home.

A clubwoman wanted "some information on world production."

A politician wanted a portrait of the President personally autographed "from Frank to Willie."

The principal speaker at a political meeting wanted to know how long the war would last and how much it would cost.

"Taxpayer" wanted him to put an end to "lend-lease gifts to foreigners and other immoral people."

"American mother" urged him not to vote for post-war cooperation "unless they do what we say." [1]

If you think this list is an exaggeration, I hasten to assure you that it is not. My own collection of strange requests already fills several folders, and is growing daily. Legitimate requests any Congressman is happy to attempt to meet. Those asking him to "please send me a rock from Chesapeake Bay to add to my rock garden" or demanding that he "see that sliced bread is restored to the American people or I shall vote for your opponent next time" are time consuming, to put it mildly. All requests for information or accommodations, including many that are reasonable, could well be referred to a Constituents Inquiry Service.

Other steps are needed, however, to reduce the demands now made upon a Congressman's time. Placing all post offices under Civil Service would save the worry and energy now spent on nominating postmasters. Further time could be saved by the transfer of all Annapolis and West Point appointments to Civil Service or to the academies themselves. The granting of self-government to the District of Columbia would remove a thorn from the side of many a harassed Congressman—and from the side of the city of Washington, too.

Under existing procedure the first and third Tuesdays of each month are reserved by the Claims Committees in both House and Senate to hear private claims against the Government. Persons who have been injured by an Army truck or have some other personal injury claim against the Government present their cases. In the opinion of many Congressmen, the Claims Committees might well be abolished and an administrative agency to do its work set up. This would take away, as Senator LA FOLLETTE points out, the burdensome task of investigating petty claims and invoking the cumbersome procedure of passing private bills through the House and Senate."

Among the criticisms of Congress heard most often is that there is too little cooperation between our National Legislature and the administration. Sometimes the blame is placed on the bureaucrats, sometimes on the New Deal; less often on a willful Congress itself. Here again Congress is aware of a problem to be solved within its own ranks, and the stirrings of solution are already noticeable.

Representative KEFAUVER of Tennessee suggests amending the rules of the House to provide for a question period at which heads of executive departments and independent agencies would be requested to appear and answer questions—somewhat like the question hour in the House of Commons.

One practical example of cooperation between the legislative and executive branches has already demonstrated its merit. The House Committee on Public Buildings and Grounds supervises the vast public housing and Federal works program in war-congested areas. The first Tuesday of each month there appear before it John Blandford, Jr., N. H. A. Administrator; General Fleming, F. W. A. Administrator, and the key assistants on their respective staffs. A mutual give-and-take follows. Chairman LANHAM asks questions about particular complaints or problems that have arisen, and he gets frank answers. Such meetings have resulted in better understanding on the part of both Congressmen and Administrators; potential friction has been averted, and governmental efficiency has been increased. The example set by FRITZ LANHAM and his committee might well be followed by other committees in both Houses.

There are even plans afoot also by which Congress could improve its public appearance. Dr. Galloway suggests that more frank recognition be given of the fact that the important work of Congress is done in committees. Therefore, let the bulk of the calendar be given over to committee meetings, open to the public, and let Congress meet to vote only one night a week. Business could be cleared with dignity and decorum. Similarly congressional debate, in Dr. Galloway's opinion, could be telescoped into one or two evenings a week, with congressional leaders discussing legislative issues before their own visible audience and the radio audience as well.

Neither the problems facing Congress nor the solutions are limited to Congress; both are for the American people as a whole to face. We shall never see our national legislative body modernized until the demand has reached the point where Representatives and Senators can no longer afford to ignore it. To this end there is much that we as individual citizens can do.

We can familiarize ourselves with the problems and proposed solutions. There is more fresh material available in books and publications. Once you have posted yourself, do not hesitate to let your Representative know that you are aware of needed changes, and that you are concerned with his awareness to them. It is easy to sit back and damn "bureaucracy"; the essential thing is to help bring about changes which will prevent bureaucratic domination in the first place.

Our Congress is not composed of supermen, armed with extraordinary powers of vision Nor is it composed of "political panhandlers and trimmers." It is made up of ordinary men who are sincerely interested in doing the job which you sent them there to do. They work hard at that job. Your encouragement and your suggestions will help them to remodel Congress and enable it to function more efficiently.

Totalitarianism starts with the decline and neglect of the legislative body. The sensitiveness of the people to their Congress is one of the surest guaranties against the failure of democracy.

[1] Associated Press article by Frank I. Weller in the Washington Post, March 19, 1944.

Democratic Steering Committee Commends Hon. Robert Crosser, of Ohio, for Outstanding Service

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. JACKSON. Mr. Speaker, under permission granted me, I include the following resolution of the Democratic steering committee, commending the outstanding service rendered by the gentleman from Ohio, the Honorable ROBERT CROSSER, as chairman of that committee:

Whereas Hon. ROBERT CROSSER, a Representative from the State of Ohio, is automatically retiring as chairman of the Democratic Steering Committee of the House of Representatives, at the beginning of the Seventy-ninth session of the Congress of the United States; and

Whereas said committee desires to express its deep and abiding appreciation of the service, fellowship, and wisdom of our retiring chairman: Be it

Resolved, That the Democratic Steering Committee of the House of Representatives of the Seventy-ninth Congress of the United States of America extend to our beloved colleague and fellow Democrat profound appreciation of the services which he has rendered this committee, the leadership of the House of Representatives, and the Democratic Party; and be it further

Resolved, That this committee and his fellow Democrats of the House of Representatives, where he has faithfully served for more than 30 years, experience immeasurable pride in the career of "BOB" CROSSER, as he is affectionately known. Few men have ever been so honored by their constituents as he has; he has the love and confidence of all those who know him, and his personal life and political record will adorn forever the history of this Nation; and be it further

Resolved, That a copy of this resolution be recorded in the records of this committee, and a copy sent to our retiring chairman, Hon. ROBERT CROSSER.

JOHN H. KERR.
JED JOHNSON.
EDWARD J. HART.

Seaway for the Whole Nation

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial with reference to the St. Lawrence seaway which appeared in the Milwaukee Journal on January 21, 1945:

SEAWAY FOR THE WHOLE NATION

Again bills are before Congress to authorize construction of the long-delayed St. Lawrence seaway.

This great project long has been ureged and advocated by the lakes States and some others; it has been opposed by some Mississippi Valley States, especially Illinois, and by Atlantic seaboard communities that feared competition with their shipping and harbor operations.

It is time the American people realized that the St. Lawrence seaway would not be a regional facility. Its service would be to the whole Nation. The war alone should, by now, have made that crystal clear.

Seacoasts everywhere in the war areas have been attacked and many of their water-front facilities have been wrecked. In England, both the Dover coast and London itself have experienced the damange and horror of robot bombs.

The Nation, therefore, that provides lines of communication from its best protected or least vulnerable inner reaches to its coasts, best insures its security in wartimes.

These communication lines, to be most effective in war periods, must be used and thereby adequately tested in peacetimes. And, obviously, the peaceful flow of commercial traffic, not only to the seacoasts but also to a Nation's interior, will help to create industrial and other constructive endeavors at the core of such a Nation, with immeasurable benefits thereby conferred upon the whole of that Nation.

So the St. Lawrence seaway is not a regional project. It is national in concept and effect. It is intended to, or in any event inevitably will, make the whole Nation stronger.

It seems needless to repeat that bulk cargoes from or to far-away places can most economically be carried by ships. That America's shipping should and will continue to ply into and out of seaboard harbors is obvious. But that they also should ply into and out of the world's greatest and safest inland seas—in peacetime or wartime—is so evident that every American should be urging great works that would make it possible.

News of Casualties

EXTENSION OF REMARKS

OF

HON. CLARENCE E. HANCOCK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. HANCOCK. Mr. Speaker, Members of Congress are receiving letters in increasing numbers from worried parents asking for news of their boys fighting on foreign fronts, particularly those engaged in the action around Bastogne and the Belgian bulge.

In the hope that I could obtain information which might be of some comfort and reassurance to the anxious relatives and loved ones of these boys, I called at the Casualty Branch of the Adjutant General's Office a few days ago and spent 2 or 3 hours with the highly efficient, kindly, and sympathetic Chief of the Division, Col. George F. Herbert, and several of his officers.

I suppose more heartbreaking messages go out from that office than anywhere else in America. Secretary Stimson, Chief of Staff Marshall, Adjutant General Ulio, Colonel Herbert, and, I believe, his entire division, realize that grim fact, and I was greatly impressed with the care that is taken to see to it that the sad news passing through their hands is delivered promptly, accurately, and sympathetically.

The Casualty Branch is a large and well-trained organization consisting of 82 officers and 2,400 civilian employees who work 24 hours a day, 7 days a week, in three shifts. Practically all of the civilian employees are women, about 45 percent of whom are colored. Incidentally, I saw no loafing in my tour of the office. Four thousand telegrams and 10,000 letters are dispatched every day, and all are carefully checked to avoid errors.

The files contain the record of every man and woman in the Army serving overseas as well as records of civilians serving with the Army. Before embarking, everyone is required to designate the name, address, and relationship of the person to be notified in case he or she becomes a casualty.

Many people feel that a direct message from the War Department is too cruel a shock and that the sad news should be broken gently by clergymen, or the Red Cross, or some fraternal or veterans' organization. A well-known news commentator advocated such a course a few months ago, and as a result of it a great many parents and wives of boys in the service wrote the Casualty Branch on the subject. Over 65 percent of them preferred the direct message from the War Department. And so would I.

Normally, reports of casualties go from company or unit commander through military channels to the theater headquarters where the different types of casualties are classified, individual card records of each case are made by those marvelous business machines, showing name, serial number, grade, arm or branch of the service, place, date and nature of casualty. Officer couriers bring them directly to the Casualty Division in Washington. They travel by air under the highest priority. This method has been found the most expeditious and accurate means of delivering the records and the card system enables the Casualty Branch to tabulate the totals in the different classifications quickly. There are so many similar names, so many difficult to spell and pronounce in our all-American Army, and the serial numbers have so many digits that errors often creep into cable and radio reports, although in some places the Army must rely on cable or radio because the equipment for the more modern method is not available.

Each individual report is carefully checked with the records of the Casualty Division to make sure of the identification of the casualty and to determine whether any previous and contradictory reports have been received.

A telegram to the designated relative reading typically as follows is sent:

The Secretary of War regrets to inform you that your son, Pvt. John Doe, was wounded in action on November 5 in France. Letter follows.

ULIO,
The Adjutant General.

Very promptly thereafter a personal letter will be written by one of the many skilled writers in the Division giving all the information available and permissible regarding the circumstances and the nature of the injury. At the same time the addressee is invited to send a cheerful five-word message to the wounded boy by cable through the Casualty Branch and a form is enclosed for this purpose.

I was shown a number of the messages going overseas. All of them were tender and affectionate but some were cleverly and subtly so.

One girl cabled her soldier, "Wish I were this cablegram."

A young wife cabled this message to her wounded husband lying in some far-off hospital: "Baby busting diapers. Raising ——."

I imagine that second one got a friendly chuckle and perhaps a sentimental tear from every nurse, orderly, and wounded man in the ward.

When a soldier is hospitalized overseas, the commanding officer of the hospital is ordered to write, or designate some one on his staff to write, a letter to the person whose name is supplied by the patient, giving brief diagnosis, physical condition, and prognosis in simple language, expressing sympathy and describing the treatment being received. Similar letters will be written monthly as long as patients remain on the seriously ill list and progress reports will be sent at 15-day intervals. Copies of these letters and reports are sent to the Casualty Branch in Washington to be attached to the soldier's records so that they are always kept up to date.

In all cases, casualties and any news concerning them are reported to the persons designated by the soldiers themselves before any release is made to the press, the Red Cross, Members of Congress or anyone else. This is as it should be.

As a Member of Congress I can quickly obtain the latest reports that have reached the Casualty Branch but only after the emergency addressee has been notified. It is important that the serial numbers be given to expedite replies.

Parents and wives and sweethearts are often deeply worried because of long delays in receiving letters from their loved ones in the Army. This may be accounted for in various ways. Under battle conditions the opportunity and the facilities for letter writing are not available for weeks at a time. Sometimes there is a shortage of trucks, ships, or planes to carry the large shipments of mail that accumulate. Mail sometimes goes astray, and sometimes mail goes down with the ship or plane carrying it, and sometimes the boys are a little careless about writing, taking it for granted we will know they are all right so long as we do not hear to the contrary.

Please be assured that in nearly every case no news is good news. If you have not heard from your boy for several weeks or months, I suggest you write to his immediate commanding officer or his chaplain stating that you are worried about him because you have not heard from him in so long a time and asking for information regarding him. If his failure to write is due to neglect or the natural aversion so many young boys have toward letter writing, I predict you will get a prompt response from him. After all, there is so little they are allowed to tell about the things they are doing.

Probably more deep and prolonged anxiety and anguish is caused by the "missing in action" messages than any other. Right now thousands of Ameri-

can families are receiving telegrams like this:

Mrs. JOHN JONES:

The Secretary of War desires to express his deep regret that your husband, Corp. John. Jones, has been reported missing in action in Luxembourg since December 15. If further details or other information are received, you will be promptly notified.

ULIO,
The Adjutant General.

The first thing the stricken family notes is that more than a month has elapsed since young John has been reported missing. Why the delay? They want to know. In battles of such severity as are occurring today it frequently happens that a company or a regiment is broken up, scattered, their rosters lost. The division would then be the smallest unit having personnel records. While the battle rages at its full fury it is impossible to determine the losses with any accuracy. It is bound to take time to ascertain the names of the men killed, wounded, captured, or missing.

Let me say at once that there is a better than a 50–50 chance that the boy reported missing in action is alive. In the case of the men so reported in the recent fighting on the western front, Colonel Herbert thinks the chances are considerably better than that; that a very large proportion will eventually be reported as prisoners of war in Germany or will return to their outfits. There will be another agonizing delay before we can know definitely who are the prisoners. It takes from 6 weeks to 3 months to learn about that, and then we will receive our first and only news through the International Red Cross until the boys themselves are permitted to write highly censored letters.

When a soldier is taken prisoner he is moved from one place of detention to another, and it may be several weeks before he reaches his final concentration camp. There committees of the International Red Cross obtain his name, serial number, and other pertinent information and report it to International Red Cross headquarters in Geneva, Switzerland, whence it is sent by cable to the Casualty Branch of the Adjutant General's Office and families are notified. They are also informed of the laws Congress has passed regarding allotments, family allowances, and other provisions for the welfare of wives, children, and parents.

The Red Cross is the finest humanitarian organization the world has ever seen. It renders services of incalculable value to prisoners of war and to their families. Let us remember that when the next campaign for funds is launched.

In this brief statement I have covered my subject very sketchily. I have not told you about the fine work of the Casualty Division of the Navy, and I have not told the full story about the Army.

It should be a comfort to all of us with boys in the service to know how painstakingly and how sympathetically our Army and Navy chiefs are trying to keep us informed about them.

Drafting Workers Into Unions

EXTENSION OF REMARKS
OF
HON. ROBERT K. HENRY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 29, 1945

Mr. HENRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Dairyland News, of Lake Mills, Wis., December 11, 1944, and an editorial, Drafting Workers Into Unions, which appeared in the Milwaukee Journal on January 25, 1945:

[From the Dairyland News, Lake Mills, Wis., of December 11, 1944]

THE POLITICAL PASTURE

(By Art Tiller)

Herewith are offered a few words in defense of farmers living in the vicinity of the Badger Ordnance Works in Sauk County, against whom certain radio broadcasts and newspaper articles appear to be directed because they do not rush in to fill 1,200 construction jobs.

It was not until November 1 that the War Manpower Commission changed its regulations to permit farmers to seek employment at the huge powder plant without invoking what could be considered a penalty, in that their draft status would be altered. Even now the farmers are permitted only 4 months of such employment.

In order to get to the work site and home again each day, most of the farmers would spend from 3 to 4 hours riding the busses, since farmer help is recruited within a radius of 65 miles from the plant. Thus, any 8-hour day at the plant would be stretched into 12 hours devoted to the job, and with chores on the farm still to be done.

The long hours, hardships, and inconveniences do not constitute a deterrent, however, to the enlistment of farmer labor. The real "bottleneck" is the exorbitant demands made by organized labor agents.

To qualify for a $1.25-an-hour job as a carpenter—which means anyone who can drive nails or saw lumber on rough construction—the farmers are compelled to pay $50 to a labor union agent in the form of initiation fees, plus $2 a month for a "permit" to work. As a result, any farmer willing to serve on the job for 2 months would earn $400 in eight 40-hour weeks but would have to pay 14 percent of it, or $54, to a union for the privilege of patriotically helping in the war effort. The situation prevails at a time when the Commander in Chief, General Eisenhower, and numerous other War and Navy Department officials are appealing for more ammunition—and when work on the new addition at Bow is 2 months behind schedule for lack of help.

Obviously, no blame can attach to the farmers who have done such a grand job in producing food, and who stand ready to aid in getting out more powder. But as long as the labor unions insist upon getting such heavy cuts of the farmers' wages there isn't anything that the purchase of an extra war bond will do to produce more ammunition.

[From the Milwaukee Journal, January 25, 1945]

DRAFTING WORKERS INTO UNIONS!

The House Military Affairs Committee, showing about as much courage as an angle worm, has cringingly reversed itself. It has struck from the work-or-fight bill a provision that men taking essential war jobs—at the direction of their draft boards—would not be required to join labor unions against their will.

This is just like drafting men into the Army and then forcing them to join a soldiers' union. It sounds ridiculous. The weak attitude of the House committee is ridiculous.

We are not here concerned with any normal right of labor unions. We are not concerned with the closed shop or maintenance of membership. We are concerned with the forcing of men into joining organizations whether they want to or not.

We are confronted with a war emergency, a manpower shortage which requires some legislation to facilitate the shifting of workers from nonessential to essential work. The May-Bailey bill is not as comprehensive as it might be, but it is at least part of the answer. It provides a method whereby draft boards may keep men between 18 and 45 in essential jobs and shift men from nonessential to essential jobs.

The seniority and other rights of men who are shifted would be protected under the bill. As another protection, it was proposed that such men would not be forced to join a labor union against their will. Obviously this is right. When a man is drafted into a war job he is in no normal relationship to the job or a union.

This protective clause brought loud complaints from Philip Murray and William Green and other union leaders. Hastily the House Military Affairs Committee beat a cowardly retreat.

This is unthinkable. There are fewer than 15,000,000 Americans in labor unions; there are 130,000,000 Americans. The overwhelming majority of Americans, whether they can get their ideas across to Congress or not, will be disgusted if the law is passed drafting workers into labor unions. This overreaching by union leadership to apply political pressure will in the end prove damaging to unionism.

Unemployment

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 29, 1945

Mr. SCRIVNER. Mr. Speaker, as factual information which may be pertinent to the debates of this week, I wish to insert in the RECORD the Social Security Board table appearing below, showing the average weekly unemployment claims being paid during the month of December 1944, in this country, a total of 74,969.

For unemployment compensation purposes it is considered that 4⅓ weeks constitutes a month, so on this basis it is evident that for the month of December there were approximately 325,000 man-weeks—13,000,000 man-hours—lost by persons who were unemployed due to no fault of their own, who could not find suitable employment and, hence, were eligible for benefits in their respective States.

The lowest month of record for the payment of unemployment benefits was November of 1943. The December figures show an increase of over 40 percent

in the year in benefit payments and a total payment in December of nearly five and one-half million dollars.

The table follows:

Average weekly number of beneficiaries, Social Security Board

Region I:	
Connecticut	1,648
Maine	865
Massachusetts	3,198
New Hampshire	267
Rhode Island	1,425
Vermont	115
Region II–III:	
Delaware	167
New Jersey	4,911
New York	10,980
Pennsylvania	2,925
Region IV:	
District of Columbia	364
Maryland	819
North Carolina	466
Virginia	333
West Virginia	486
Region V:	
Kentucky	1,311
Michigan	9,706
Ohio	1,076
Region VI:	
Illinois	7,274
Indiana	1,584
Wisconsin	941
Region VII:	
Alabama	1,192
Florida	804
Georgia	571
Mississippi	271
South Carolina	391
Tennessee	2,739
Region VIII:	
Iowa	316

Total	74,969

James F. O'Connor, Late Congressman From Montana

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. HAGEN. Mr. Speaker, JIM O'CONNOR is gone. I desire to add my humble tribute to my good friend from Montana who died January 15.

My former boss and predecessor, the Honorable R. T. Buckler, served on the Committee on Indian Affairs with Representative O'CONNOR. Because of this, I had quite a number of personal contacts with Mr. O'CONNOR, who, shortly after beginning service on the committee, became its chairman. He was ever ready to help me whenever I called on him for information or advice.

His office staff has lost a considerate and appreciative boss.

Members of the Committee on Indian Affairs have lost a fair-minded and helpful chairman.

The Indians of America have lost a sympathetic and understanding Congressman.

The people of Montana have lost a good neighbor, a conscientious public servant, and a Congressman of great integrity and character.

Congress and its membership have lost a good true friend.

The American people have lost a loyal and unselfish American and statesman.

May God bless and keep his soul.

The Tydings Amendment

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. REED of New York. Mr. Speaker, the milk and butter situation in the dairy sections of New York State, particularly western New York, is most serious. Prior to the second directive issued by General Hershey explaining that the II–C men still have their rights under the Tydings amendment, and that these rights should be granted, there have been taken from the farms large numbers of young men who are indispensable to the preservation of the dairy farms. There is no group of farmers who face a more serious problem than the dairymen, because inexperienced replacements are of no help in this highly specialized type of farming. Under leave to extend, I wish to insert resolutions passed at the seventh annual meeting of the Niagara Frontier Cooperative Milk Producers' Bargaining Agency, Inc., under date of January 16, 1945:

Whereas the Niagara Frontier Cooperative Milk Producers' Bargaining Agency, Inc., views with alarm the steady decrease in skilled dairy farm labor; the agency feels that migratory and transient labor are of great value in harvesting fruit, vegetable, and cash crops, but that this class of labor cannot be relied upon by the dairyman. His is a 365-day job requiring experienced skilled workers: Therefore be it

Resolved, That the agency recommends to those in authority that every effort be made, consistent with the prosecution of the war, to leave on, and return to the dairy farm as many of its skilled workers as is possible; be it further

Resolved, That we place ourselves on record as favoring the Tydings amendment which provides for the deferment of farm workers whose induction would take a large portion of land out of production.

Whereas the Niagara Frontier Cooperative Milk Producers' Bargaining Agency, Inc., reiterates its stand as opposed in principle to the use of subsidy payments, believing that fair and comparable pricing is the better method. However, those in authority have definitely authorized and adopted the subsidy program, and have made it applicable to production of milk and milk products: Therefore be it

Resolved, That the agency believes that, pending withdrawal of the program and readjustment of market prices to cover the cost and true value of milk, the agency and the producers of milk should know, well in advance, of any change in the amounts of such subsidy payments. That producers and their organizations should be consulted as to what changes, if any, would be fair and equitable; that rates of payment should be continued at not less than their present levels and that adjustments made should be commensurate with current changes in production costs.

That this agency reaffirms its position taken in recent petitions to the Commissioner, that official order No. 127 should be so amended as to protect producer returns, and the public interest in the adequacy of supply, in the event of the total or partial withdrawal of subsidies.

Whereas butter has long been recognized and proven to be a healthful, nutritious food; it stands as one of the best of all milk products and cannot be honestly imitated. The agency feels that the price of butter is too low at this time in comparison with other milk products and discourages the production of milk for this product: Therefore be it

Resolved, That the agency is strongly opposed to any attempt by anyone to imitate this natural food by processing, packaging, flavoring, deceptive advertising, coloring, or any other deceptive methods; and be it further

Resolved, That the price of butter be raised to a point where its manufacture will be encouraged to the end that consumers be no longer deprived of this valuable food.

"I Took Refuge in American History"

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hal W. Kennedy, assistant deputy, Los Angeles County counsel:

In this tragic hour in which we live, as we listen to the roar of history, our souls cry "sanctuary" and our minds grope for encouragement upon which to hang our faith and belief that the American way of life will continue. In common with millions of other average Americans, I want to continue to believe in democracy.

If possible I want to believe in democracy in the same trusting manner in which I believed in it as a boy. I want to capture back

that definiteness and certainty of belief that came with my own boyhood but which may be passing out in the manhood of my generation.

I want my little boy to live in a country where he can enjoy watching a Fourth of July parade and experience the same spiritual and emotional reactions that I did. I hope he will be able to go to a patriotic gathering and hear the orator of the day extol the virtues of our representative democracy and have the same deep-seated, ingrained trust that the America his dad knew is here to stay.

Perhaps this is wishful thinking, naive, entirely unrealistic, and not in keeping with the sweep of today's events, but I found the mental refuge I was seeking by rereading American history and by visiting the shrines and places which symbolize America's greatness. I am now ready to face the challenge of our responsibility.

REBIRTH OF PATRIOTISM

Hope, courage, and determination returned to me as I stood on the banks of the James River, at Jamestown, Va., and looked upon the site of the first American colony. As I thought about the suffering and the starvation of those early colonists and viewed with awe and reverence what now remains of the old brick church that housed the first Legislative Assembly in our country, I experienced a rebirth of patriotism and I wondered whether, along with the great need for physical things, national defense does not also demand some things which are spiritual.

Standing on the bleak New England coast, looking at the Plymouth Rock, feeling the icy blast that swept in from the Atlantic, I was confident that the American people today are ready to show the same devotion that motivated the Puritans in their search for freedom. The American people are not ready to entirely capitulate to the doubts and fear and hysteria sweeping the world today.

Visiting Boston Common, Bunker Hill, and Breed's Hill, and reading the scores of historical markers and commemorative plaques gave me confidence that today there must be new John Hancocks and Samuel Adams with ability to crystallize the courage and determination of a great people.

Retracing the routes taken by Paul Revere and the lesser known William Dawes, I felt sure that there must be modern riders "ready to rise up and spread the alarm" to warn us of new dangers that now beset our shores. Lexington Green and the Concord Bridge reminded me that every period in history has found its leaders. Fundamentally we are no different from our ancestors, only softened and lulled into security by too much ease.

In the midst of the low Pennsylvania hills, I stood at Valley Forge and thought studiously of the innate greatness of Washington. It marked the spot where he had been called upon to show the eminence of his character. While Washington was there, there centered the common hopes and the common interests of all the American people. A visit to that place imbued me with the greatness of Washington's sacrifice and the littleness of what I, as an average citizen, was really doing to preserve the product of his arduous labors. I knew then that his influence was the property of the world, the legacy of all those who love liberty.

I journeyed to Gettysburg and sensed the power of that place as a symbol of the present Union of the States, the tragedy of Civil War, and the emptiness of the future if the patriotic citizens of this country do not now reappraise the value of that struggle, in terms of its influence upon our country today.

ETERNAL VIGILANCE THE PRICE

We are a great people but the age-old law of compensation demands that we must be eternally vigilant to keep us great. In the history of the law there is an old maxim which has come down to us since the days of Justinian, which declares that "he who takes the benefit must also bear the burden." If America is to remain free, we must pay the price to keep it so.

A rereading of the history of the United States and an intimate visit to historical American shrines gave me a greater appreciation of the debt we owe our ancestors and a stronger resolve to hold on to the pattern of representative government, for the world of tomorrow will need it to build upon.

I found peace, comfort, and courage through my historical tour and returned home to read again and again of America's greatness. As history repeats itself, the present generation will produce new leaders, statesmen, heroes (if need be) who will save us in our crisis. We must have faith; we cannot let go. The pattern of American Democracy must be preserved. With boyish faith, I am ready to believe that God shall not let America be the last of its kind in the world.

Exportation of Tobacco Seeds and Plants

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, one of the many examples of the hypocrisy in high places in this administration is shown in legislation passed in 1940—the eighth year of the present administration:

[Public, No. 543, 76th Cong., ch. 232, 3d sess.]

S. 3530

An act to prohibit the exportation of tobacco seed and plants, except for experimental purposes

Be it enacted, etc., That it shall be unlawful to export any tobacco seed and/or live tobacco plants from the United States or any Territory subject to the jurisdiction thereof, to any foreign country, port, or place, unless such exportation and/or transportation is in pursuance of a written permit granted by the Secretary of Agriculture. Such permit shall be granted by the Secretary only upon application therefor and after proof satisfactory to him that such seed or plants are to be used for experimental purposes only.

SEC. 2. Any persons violating any of the provisions of this act shall be guilty of a misdemeanor and shall be punished by a fine of not more than $5,000 or by imprisonment for not more than 1 year, or both such fine and imprisonment.

Who was Secretary of Agriculture at this time? Who together with his assistants went from one end of the country to the other lauding the wonders of reciprocity? Who appeared on program after program of the free-traders? It was none other than the then Secretary of Agriculture, Henry Wallace.

Listen to this letter of explanation coming from the office of the present Secretary of Agriculture:

JANUARY 22, 1945.

Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: This is in reply to your letter of January 2, inquiring about the act of Congress prohibiting the exportation of tobacco seed and live plants. This law was enacted to protect the foreign market for American tobacco growers. It was felt that the large quantities of tobacco seed being exported annually to China and other countries which normally imported large quantities of tobacco from our flue-cured districts were contributing to the decrease in these tobacco exports.

The act forbids the exportation of tobacco seed except for experimental purposes, and the officials of the Department concerned with plant breeding stated that one-half ounce of seed is more than ample for planting a regulation-size experimental plot. This, therefore, was adopted as the maximum quantity of seed that could be exported for any one variety. However, under an approved application, a permit may be issued to cover several varieties. Permits are issued only for seed to be used in the course of scientific experiments as conducted by governmental agencies. During the past 4 years the total quantity of seed authorized to be exported has been slightly under 11 pounds. A copy of the regulations governing the administration of this act is enclosed.

Congressman KERR, of North Carolina, was instrumental in securing the enactment of this law, and you may wish to discuss it further with him.

Sincerely yours,

CHARLES F. BRANNAN,
Assistant Secretary.

Is this what the New Deal champions call good-neighbor policy? Do you think the American people can be deceived forever by a policy of talking one way and acting another. The first requisite for understanding between countries is to have the spoken word and the legislative acts religiously coincide. We have a near embargo on wheat imports, and we have a near embargo on tobacco exports set up by the present administration. Who, I ask, wishes to explain this situation and what is your answer?

Giant Foreign Cartels Controlling Industrial Diamonds Are the Target of the Department of Justice

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. RABAUT. Mr. Speaker, I am informed that the Department of Justice has today filed another anti-trust case against the giant foreign cartels which operate in world markets and attempt to deprive this country of materials needed for war- and peace-time production. This time it is industrial diamonds. There is hardly any element more important for war production than industrial diamonds. Industrial diamonds are needed for turning out machine tools on which our whole war production depends. It is high time

that a cartel operating to restrict the supply of industrial diamonds to this country was struck down.

The complaint which has been filed by the Department in the United States District Court in New York, states that 5 British or South African companies, 3 Belgian companies, and 1 Portuguese company produce and sell 95 percent of the world's diamonds, and that the result of the conspiracy is to keep all the diamond producers of the world from selling directly to American consumers. Thus the Belgian producers have been kept from selling directly to the American market. They were forced instead to sell to the British combine. The complaint shows that it has been difficult to build up an adequate stockpile of industrial diamonds in this country because the cartel was afraid that might reduce the price.

The Appropriations Committee has long been familiar with the cartel problems facing the antitrust division. The diamond case is a good example of how these cartels interfere with war production. I call the attention of the Members of Congress to the operations of this cartel because if it should turn out that existing law is insufficient to break it down, and that something more is needed, consideration will have to be given, in my judgment, to measures which will put teeth into the antitrust laws and prevent their continued abuse.

Kiwanis

EXTENSION OF REMARKS

OF

HON. STEPHEN PACE

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. PACE. Mr. Speaker, last Thursday it was my privilege to attend the meeting of the Kiwanis Club of Washington in celebration of the thirtieth anniversary of the establishment of Kiwanis. At this meeting I listened to an address by the Honorable Ben Dean, of Grand Rapids, Mich., president of Kiwanis International. I think it was a splendid address and believe it will be of interest to every Member of Congress. Under the unanimous consent granted me I am incorporating his address as a part of my remarks.

Kiwanis has become a great moral force in the United States and Canada. In the active prosecution of its motto, "We Build," it has contributed and is contributing to the building of greater men and a better world. It has helped immeasurably in cementing the cordial feeling of friendship which now exists between Americans and Canadians. It is in the forefront of every effort to bring this great world war to an early and victorious conclusion, and is taking an active part in the planning for the establishment of an international agreement among nations to bring an end to war and to secure the blessings of a lasting peace.

It has been my privilege to be a member of the Kiwanis Club of my home city, Americus, Ga., for about 20 years. This fellowship and the ideals and programs of Kiwanis have proven of great benefit to me and are the source of constant inspiration in my present work.

Mr. Dean's address is as follows:

Kiwanis this week is 30 years old. On January 21, 1915, the State of Michigan issued a charter to the first Kiwanis Club, located in Detroit. Today there are 2,250 Kiwanis Clubs in cities and towns throughout the United States and Canada, and the membership includes 138,000 leading business and professional men.

The name Kiwanis is a coined name of Indian derivation. Originally it had no meaning. Today, after 30 years of attention to community needs, Kiwanis is universally accepted as a symbol for service, and is held in public respect and esteem throughout the two nations.

In these three decades Kiwanians have spent millions of dollars on tens of thousands of underprivileged children. They have maintained hundreds of fresh-air camps and supported thousands of clinics. They have turned ugly city dumps into spacious parks and playgrounds. With their dynamic leadership they have revitalized communities which had gone to seed.

During these 30 years Kiwanis Clubs have trained more than 50,000 men for leadership in community affairs, and in the State and Nation. Each year Kiwanians spend seven and one-half million hours in fellowship around luncheon tables, in adult education, and in learning to understand and cooperate with fellow citizens of diverse racial backgrounds, political opinions, and religious beliefs.

Much of the manpower and the leadership for the war effort on the home front has been supplied by Kiwanis and other service clubs. For instance, last year Kiwanis Clubs bought and sold more than a billion dollars worth of War bonds. Kiwanians contributed more than 10,000 pints of blood, and induced more than 250,000 other men and women to donate to the blood banks. Kiwanians sent 10,000,000 packs of cigarettes overseas, and made more than 2,000,000 contacts through gifts and letters to men in the armed forces.

Kiwanis International has dedicated its manpower and its influence to two major objectives in 1945—the year of decision. They are embodied in the Kiwanis theme—six words—six words that hold the destiny of mankind—six words that sum up the hopes and prayers of every liberty-loving soul on the globe.

The six words are "Win the war—build for peace." Win the war—build for peace.

That is the Kiwanis theme. Listen now to the first great Kiwanis objective. Hasten total victory—accelerate club war services. Kiwanians will intensify their efforts to sell war bonds, to supply blood banks, to collect scrap, to fill war chests, to finance the Red Cross. They will do this as a practical means to speed the war effort. They will also do it to build morale.

Do you know what the war is costing the United States? Two hundred and fifty million dollars a day. Every 4 days, a billion dollars. Every 12 days, as much as we spend in a whole year on our public schools, our colleges and universities.

The second world war will cost the nations a trillion dollars. A trillion dollar bills laid end to end would stretch 3,800 times around the earth. For a trillion dollars, a modern 5-room house could be built for every family in the world. Or a million dollar hospital for every community of 2,000. A trillion dollars would give 500,000,000 young men and women a 4-year college education. Or build 25,000,000 miles of 4-lane highways.

The money cost, however, is unimportant compared with the blood that stains the snows of Europe and the sands of the South Pacific. Already more than 150,000 American boys have been killed. More than 600,000 casualties. Every day the losses mount. There is a desperate urgency to end this bloody business quickly.

Thus Kiwanians must throw the weight of their influence in their 2,250 communities against a let-down of the war effort—against the inevitable war-weariness which will follow victory in Europe—against those vicious subversive influences on the home front which seek to divide and sow doubt and distrust.

The second objective of Kiwanis is—use our influence to establish and maintain world peace.

It was just 25 years ago next March 19, in the United States Senate that the votes of 35 Senators—7 more than necessary—barred this Nation from joining the League of Nations, and changed the course of history. These 35 Senators believed they had public opinion behind them. People were disillusioned, embittered. They wanted to isolate themselves from European quarrels. They welcomed President Harding's normalcy.

But does any thinking American today believe there is security in isolationism? No spot on the globe, no matter how remote, is more than 60 hours from the local airport. The world has shrunk to the size of an oyster. Everybody is everybody's neighbor. What goes on anywhere on earth is a matter of concern to America.

A third world war might well be the annihilation of civilization. The V-3 bomb gives promise of the horrors to come. Given time, Germany may yet devise bombs that can travel far enough to destroy our coastal cities. Soon there will be monsters of destruction—jet-propulsion bombs capable of traveling 3,500 miles an hour, vaulting 70 miles above the earth, carrying tons of explosive to wipe out entire cities. As long as there is a single unpoliced spot on earth where men of evil design may marshal scientists without souls to devise colossal engines of human destruction, there can be no security or peace for America, or for the world.

This time, America dare not evade the responsibility of leadership. We have the largest navy on earth. The largest air force. The second largest army. The largest industrial plant. We have the most power—the most at stake. We must accept the obligations inherent in such superiority, and take the lead for peace. There can be no effective international force for peace unless America plays a leading role.

It is high time America used her power and her influence to insist on the proper terms and conditions for a lasting peace. It is time America served notice on her allies and the world that she is spending her manhood and her resources not to perpetuate old world empires, not to maintain buffer states and balances of power—but to fashion out of blood and agony for all time, a peace that will be just and durable. The voice of Senator VANDENBERG was a welcome voice of clarity and purpose in a fog of doubt and indecision. The instant favorable response to his brilliant speech shows the temper of the people.

I am amazed to find how many people—educated men and women—are pessimistic about peace. How many think another war in 20 years is inevitable. This is rank defeatism. This is not the faith that built America. There are 2,169,000,000 persons in the world. Never in history did so many want one single thing so passionately—a just and lasting peace. How the gods must look

down and laugh in derision at boastful, arrogant man, who can find no better purpose for the machines that he has built than to use them to destroy himself. How absurd, how utterly preposterous to say that man, who has conquered disease and mastered the forces of nature, who has tamed the tides and probed the secrets of the stars and released the energy of the atoms, how absurd to say that he cannot join hands with his fellow man and work out their common destinies in peace unvexed by violence.

This, then, is the task of all Kiwanians and like service groups, to build a strong and vocal public opinion that demands a lasting peace. We must use our Kiwanis Clubs as forums and platforms to mold in each community a public opinion that will be powerful and insistent. In a democracy it is the people on whom the peace depends. Let the people speak with a common voice from the towns and the country, from the hills and the plains, and Congress will hear. Across this broad land must be built a public opinion that cannot be ignored in Washington, that will be clear and unmistakable to our allies, that will be a sharp and insistent directive at the peace table. To this task Kiwanians and all like-minded Americans must dedicate their energies in this fateful year.

The tenth great objective of Kiwanis—I wish I had time to discuss the other seven—the tenth objective is, Stress spiritual values as vital to human progress." The Kiwanis ideals of fellowship and service are based on the primary of human and spiritual values. Democracy is a spiritual concept. It exalts the individual. It gives primacy to human personality. Man is the master, the state is the servant. America has strayed far down the pathway of materialism. She forgot the faith of her fathers. Now she does penance in an agony of blood and wasted treasure. Out of this fiery furnace America must emerge humble and chastened if she is to lead the world to liberty. She must turn back to the eternal values of the spirit.

I close with this story. In a little town in Scotland, a distinguished professor of speech of a great university spent the week end with a friend. On the Sabbath they attended the village kirk. In the midst of the service the host of the professor rose and said, "We have as our guest today a professor of speech of one of our universities. May we have him read the Twenty-third Psalm?" The pastor gladly invited the professor to the pulpit. With cultivated voice and practiced diction, the professor read the beautiful Psalm of the Shepherd, and when he had finished the audience was visibly moved. Then someone in the congregation rose and said, "And now, Pastor, will you also read the psalm." And the venerable pastor, who had spent his life among this people, who had shared their joys and sorrows, in his frail, hesitating voice, read also that matchless passage of the Psalmist. And when he had finished there was hardly a dry eye in the congregation. On the way home from church the host said to his guest, the professor, "Did you notice what a strange thing happened? When you recited the psalm the congregation was visibly moved, but when the pastor read it there was scarcely a dry eye. Why was that?" And the professor, who must have been a modest man and a very discerning one, replied, "That is easily explained. You see, I know the psalm, but the pastor knows the Shepherd."

That, my friends, is the difference between lip patriotism and a loyalty and love of country that wells from the heart. May we as Kiwanians, in this year for greatness, dedicate our manpower and our leadership to the safeguarding of our historic liberties and to bringing about a world of lasting peace and good will.

India's Freedom

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement made by me at the India Independence Day meeting, National Press Building, Washington, D. C., January 29, 1945:

I want to begin with a warning. Let us not fall into the error of viewing India as an eternal problem which will defy solution into the ages; rather, it must be the purpose to focus our energies on the realization that it is a living problem requesting solution and possible of solution.

The talk about India revolves and revolves. It is a study in contrasts and disparities. It would almost appear that wherever you strike at the tumultuous canvas that is India you can reach forth and pull out an extreme of one kind or another. The truth is there exists in India such conflicting conditions, side by side, as to give each opposing study of India a semblance of truth. And because of this profusion of talk this everlasting marshalling of facts some semitrue, some true in what seems to be in everlasting parade before the world, we begin, out of inertia, to view India, not as eternal India, but as India, the eternal problem. I think it is extremely important that we in America, before all else clarify our approach to an awareness that the problem of freedom for India is immediate, is alive, and is soluble.

I have spoken to any number of our servicemen who have recently returned from India where they had been stationed. They tell me their first reaction is one of profound shock. They have seen on one hand the fabulous resources of the continent and on the other the specter of starvation and famine stalk the land. They are puzzled and distressed. They come away with a sense of the enduring moral dignity of the Indian people in the face of their rulers. They have asked themselves and asked me: Don't the principles of the Atlantic Charter apply to India? Aren't we fighting for the freedom of men and nations everywhere? And for a durable peace? It isn't right and it doesn't make sense. Can a peace endure when 400,000,000 inhabitants of a continent are held in thrall for the benefit of another country?

But the direct approach is undermined by the adroit and seemingly unanswerable propaganda of the British who smoothly point out:

1. There is a war going on and the question of India independence must wait until some day after the war.

2. The diversity of religious and political groups preclude unity in India and hence preclude independence until such unity is achieved.

3. The Cripps offer for India independence was made in good faith, offering independence. Why was the offer not accepted?

4. British rule in India prevents civil wars, protects minority peoples and defends the continent.

5. The illiteracy rate is so high and the training in self-government so underdeveloped that it would be injurious to India if independence were granted.

The British, however, take great pains not to point out:

1. That the war against Japan could be won more quickly if the Indians were given a specific date of independence. Then and only then would they enter into the battle in sufficient numbers to be of more than token aid. It is no secret that the Indians join the armies in order to eat. Mr. Phillips' report to President Roosevelt made on May 14, 1943, is very much to the point. He stated: "Assuming that India is known to be an important base for our future operations against Burma and Japan, it would seem to be of highest importance that we should have around us a sympathetic India rather than an indifferent and possibly a hostile India. Indians feel they have no voice in the Government and therefore no responsibility in the conduct of the war."

2. As to unity, the British are well aware, and so are we, that in every country which has sought its independence, unity was achieved after freedom. The history of our own country in its struggle for freedom is an exact case in point. England asks that all parties reconcile their differences first, a most difficult feat, you will admit, when the very visible efforts of the British are directed toward keeping the factions apart. To ask for complete unanimity of viewpoint among all the factions of a country actually is asking for the development of a totalitarian form of government. No unbridgeable chasm exists in India to keep the people divided and render them unfit for self-government. There are more minorities, more unrelated languages spoken in the United States, more variance in custom and belief in the United States than there is in India. Yet here out of the amalgam, a mighty nation has been forged.

Much has been made of the Hindu-Moslem intractability. Look, the British say, they won't get together and so how can we grant independence to the contesting parties. I think a very apt analysis has been made by Kumar Goshal in an article in the Voice of India. He states: "It is curious how the name of the Moslems crops up wherever it is profitable for a third party to utilize it. Britain says she has to remain in India because of the Hindu-Moslem antagonism. In Palestine, British power has to be maintained, we are told, because the Jews and Moslems cannot get along when left to themselves. General Giraud abrogated the Cremieux decree in French North Africa because, he said, voting rights for the Jews annoyed the Moslems. Since the Moslems are the common denominators in all these places, one might suspect that they can never live peaceably with the members of any other religion. Yet 50,000,000 Moslems in China get along quite well with Buddhists, Taoists, Confucians, and Christians; Moslems in the Philippines had no conflict with Christians; and in the Soviet Union Moslems live harmoniously with members of many other religious faiths. Can it be that the fault lies with imperialism, which is the other common denominator in the countries where religious antagonism takes an acute form?"

3. Now, how about the wonderful Cripps offer? Can there be any doubt that the Cripps offer was framed in such a manner as to insure rejection? It continued the supreme power of veto in the Viceroy. It offered independence in an indeterminate future. It continued complete sovereignty to 562 Indian princes in as many different states covering 90,000,000 people with power to lay and collect taxes and administer justice outside the national government. Individual provinces or Indian states (some of the latter are smaller than a small township in the United States) could elect to stay out of the Indian Federation. The results are easily forseeable; there would be states within a state, a sort of

Balkanized India, a paralyzed India economically and politically. It is little wonder then that all parties of India rejected the Cripps offer.

Can it be said that the Cripps offer was made in good faith? Certainly it is more in keeping with Churchill's pugnacious declaration: "I have not become the King's First Minister in order to preside over the liquidation of the British Empire" than an actual offer of independence.

4. So Britain remains in India for India's good, does it? England may point to the illiteracy, the disease and squalor, the vast number of untouchables to justify her withholding freedom from India. She may say it would be dangerous to give freedom to those yearning to be free. But Britain's tight hold on India resulted in no program to wipe out the disease and squalor. Indeed, she encouraged an economy in India that permitted great wealth to exist alongside of the abject poverty. Her defense of her position in not granting India independence because she is not prepared for self-government is like the story of the man who killed his parents and then pleaded for clemency on the ground that he was an orphan. If England really were sincere in talking of eventual self-government for India, why has she superimposed upon India from outside a a civil service system and her own system of India's defense. Having withheld the apparati of self-government, she now reasons that India is unfit to govern itself. Let's be frank. Is it not true that a certain class of British aristocrats and industrialists fear loss of social position and economic power if India should be free? And was this not the same fear that England had when the American Colonies first demanded independence? And is it not likewise true that countries developing internally to a recognizable strength promote the economic welfare of the whole world? An outspoken member of Parliament recently said, "It is hypocritical to say that we hold India for the benefit of the Indians. We hold it as the finest outlet for British goods in general and for Lancashire goods in particular." That's it in a nutshell.

The real sabotage of the war effort in India is British encirclement of India. To attribute it to the leaders and thousands of members of the Indian National Congress now imprisoned by the British for over 2 years without a trial is a criminal denial of the truth. The imprisonment aside from its violation of judicial rights solves no problem. It intensifies the bitterness; it keeps the Hindus and Moslems from reaching any form of agreement. It casts a sorry reflection of Britain's integrity in colonial rule. When Sir Maurice Gwyer, the eminent English judge, ruled that the Indian nationalists had been arrested illegally under a statute that had no validity, the Viceroy of India autocratically issued a new ordinance in April 1943 validating the arrests made in August 1942. We cannot sit by and unprotesting, accept such denial of human rights and liberties.

I cannot leave off here without making reference to the article that appeared in the Reader's Digest of February 1945. In its book section appears a digest of Beverley Nichols' book, Verdict on India. It is so obviously the British point of view, so smug in its expression of British superiority, so superficial in its examination of the real India, so patently slanted that the mischief it can breed in the minds of the vast number of readers of the Digest is incalculable. I sincerely believe that the Reader's Digest should be prevailed upon to present the other side of the shield. Once again, the Reader's Digest finds itself on the side of power and once again it betrays a public trust inherent in a publication that purports to present a cross-section of opinion. In fairness not only to the people of India, but in fairness to its readers, I sincerely trust the Reader's Digest will publish in the near future a more honest survey of the problem of India.

I have so demanded of the Reader's Digest in a letter I sent its editor today.

I am glad I'm here tonight and to walk in step with Mrs. Pandit and those who have not given up the fundamental struggle for liberty and who have proved their devotion over and over again to those very things for which the embattled world fights today.

I cannot let the occasion go by without paying tribute to the guest of the evening, Mrs. Pandit, particularly on the day we celebrate India Independence Day, alas, an "independence day" without independence, but it will not be an unrealized dream. Mrs. Pandit symbolizes the glorious idea of freedom, the idea to which we in America must rededicate ourselves, for it is truly said that the world cannot exist half free and half slave. A bit of Mrs. Pandit's background: Her brother Nehru, a great Indian leader and servant has spent 21 years out of the 29 years of his political life in jail. Her father, her mother, her sister, and daughter have likewise been imprisoned. As Dr. Yu Tang has remarked, "Her family is strong in conviction."

Prayer at Inauguration of Gov. R. Gregg Cherry, of North Carolina

EXTENSION OF REMARKS

OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. DURHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following prayer given at the inauguration of Gov. R. Gregg Cherry, Raleigh, N. C., by Dr. C. Excelle Rozzelle, pastor of Wesley Memorial Methodist Church, High Point, N. C.:

O Lord, Thou hast been our dwelling place in all generations, before the mountains were brought forth or ever thou hadst formed the earth and the world. Even from everlasting to everlasting Thou are God. We stand today far along the processions of the centuries and in the foremost files of time. To us Thou hast given a heritage, O God, and a faith, out of the lives of heroes and martyrs, deep from the souls of saints and seers, who by their long-ago courage and idealism, speak to us this hour. Across the wide seas have come to our shores the streaming lights of a hundred, yea, a thousand, torches of struggling men out of whose tragedies and whose sacrificial renunciation we have builded here a land and country which we call liberty enlightening the world. So today we rededicate ourselves to the tears and blood, the graves, and fond memories of our fathers and our mothers.

> Faith of our fathers, living still
> In spite of dungeon, fire, and sword,
> O how our hearts beat high with joy
> Whene'er we hear that glorious word,
> Faith of our fathers, holy faith,
> We will be true to thee till death.

This day we are in the city of our sires and our feet are on holy ground. Into an ancient forest here, more than a century and a half ago, the pioneers came. On this obscure spot they cleared a pathway, built a camp fire, erected a cabin, opened a school door, and rang a chapel bell, beginning a State that we proudly now call Carolina.

> "Carolina, Carolina, heavens blessing attend her,
> While we live, we will cherish,
> Protect, and defend her."

Through the long, hard years of poverty and adversity, the birth pains, and travail of human souls, we humbly hail our commonwealth and rededicate her again to service and freedom, to untarnished ideals, and goals that lie ahead. From a handful of pathfinders on the sandy stretches of Roanoke, we have come to a multitude—oh, what a multitude—of progressive and advancing people. From the mountains to the seas, citizens, friends, and brothers have come together praying, hoping, and trusting in one supreme God who is ruler of liberated men and free governments. What a story has been ours in Carolina! What a record of perilous labors! What a history of unfailing love!

In this hour we come to make our offering of renewed service and to consecrate anew our hearts and hands to an ever challenging task without fear and without retreat. This is an hour that must try our souls—both in war and in peace. We remember those heroes of ours in camp and on the seas, high in the air, and in battle lines of death; for them we pray. For our sons and our daughters, gone from us, out of our homes and places of toil, to carry the red flag of courage, the blue flag of freedom, and the white flag of righteousness, even to the ends of the earth. For those anxious and burdened at home and busily at work on farm and mill, we pray. For all on the needed fronts of the State's daily work who do not slack at the job nor idle time away in sloth, we pray. For every particular institution of our commonwealth, we make our petition now. For those in her prisons, O Lord, teach them now the way of law. For those in all her hospitals, give Thy healing and comfort. For those on the college campus be Thou the great teacher. For the tiniest child in her school, oh, guide those little feet. For the strong ones who man those industries, be Thou the Master Workman. For the men who run her presses, write her editorials, collect, and distribute the news, be Thou the publisher of good tidings of hope. For those who make her laws and interpret them, from the plainest magistrate up to the Supreme Court, be Thou impartial judgment for all. For those who build the roadways and patrol them, and every officer of peace, be Thou the strong arm. For this assembly before us now, representatives of, and by, and for the people, be Thou the Sinai of revelation and legislation. For all the people in our land, from the President of the Republic down to the simplest workman at the job, be Thou friend and fellow worker.

In this moment we pray for him who retires from leadership in this high office but never from service to his State. O God, bless and keep him as he goes into a quiet life, to his private home and family. His rule has been fair and just and beneficent and Thou wilt reward him for his good works. And now, O God, for this friend and servant of Thine who comes to assume the duties of our new leader, we pause for a more earnest petition. We ask Thee in this solemn moment, as Israel's ancient king asked for himself long, long ago, give Thy servant an understanding heart to judge Thy people that he may discern between good and bad, for who is able to judge this Thy so great a people? We rejoice together that in this state a youth may come up from the fields of toil, through the schools of country and town, by the open process of liberal education into learning and intelligent living, reaching out into places of leadership and

giving himself to his fellow men in law and political economy of a commonwealth. We are glad that when our liberties were threatened from abroad this man left the quiet office of his profession and volunteered to serve on foreign soil for the democratic idealism he has always practiced. Now in this hour his life and work are rewarded by the gift of a free and open franchise as he is inducted into Carolina's succession of noble Governors. God bless him now and God bless him during the coming 4 years and God bless him always in his life and task. With him let the benediction of heaven abide upon her who will help to bear the burdens of state and soothe the troubled heart of this man when days are hard and difficult. Yes, Father of us all, guide, direct, and empower these two into this administration with heaven's supreme life and light and love.

Forgive us all of the wrong that has past. Enlighten us all in the ways of danger ahead. Cleanse our hearts, ennoble our purposes and guide the ship of state and every passenger aboard on the voyage we now are undertaking toward that port yonder which is now a secret in Thine heart, O God, with Thy help and the piloting of Thy gracious hand, we will not fear nor fail Thee.

All these things we ask in His name who carried our sorrows and was broken for our sins and who rose for our hope and who lives for our victoy. His name is Wonderful, Counselor, Mighty God, Everlasting Father, and Prince of Peace. Amen.

Women and Democracy in China

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. JOHNSON of Oklahoma. Mr. Speaker, under leave to extend my remarks, I take pleasure in submitting for the RECORD a very interesting and informative address delivered Monday, January 29, at the Women's National Democratic Club, by Mme. Wei, brilliant and charming wife of the Chinese Ambassador.

The address is as follows:

It is an especial privilege for me to meet with the members of this distinguished club which, by its devotion to the highest principles and ideals have come to exercise so great an influence for progressive thought and action.

I am very happy to be at such a gathering and since this is a club for democratic women, it may not be out of place for me to say a few words about women and democracy in China.

It has sometimes been presumed that in the old days the Chinese woman did not enjoy as much freedom or equality as her western sisters. As a matter of fact, in our long history, if women did not have many positive rights prescribed in so many words by law neither were there any legal restrictions specifically directed against her. She enjoyed a high position in our society and exercised great influence in the shaping of the destiny of her country. She often was active in public affairs as well as in its social and cultural life. We have had in our history many women scholars, public servants, and even women generals, who conducted victorious campaigns in the defense of their country.

But beginning with the early 19th century, when our contacts with the western world grew more intimate, we found that certain changes had to be made in order to meet the modern world trend. Among other things, the freedom and equality which the Chinese woman already enjoyed had to be expressed in more concrete terms if we are to arrive at a fuller democracy in form as well as in spirit.

Such were the purposes of the revolution which broke out in 1911. Many women took an active part in the people's uprising, sharing in its pains and dangers. I can tell you from my own experience that we had contributed our part to its success.

Since the establishment of the Republic, we have reached our goal of equal status with that of the men in every respect. The revolutionary struggle was hardly over when the Japanese invaded our country. Again we joined our men folk to put up total resistance in a total war against the enemy, not only in the defense of our homes, but for the consummation of the people's revolution.

Today, the women of China are working and fighting side by side with the men. They come from all ranks of the people—college presidents, wives and daughters of government officials, business women, farmers, laborers, and hard-working domestics.

It is with high spirit and with great determination that we work and fight. We engage in all forms of production. We have established centers for the improvement of sericulture, spinning and weaving, and are participating in cooperatives, which are helping so much in the economic life of wartime China. In the direct war effort, women are nursing the wounded soldiers and civilians, and caring for the refugees from war's destruction, the widows, and the orphans. We go into the war areas to rescue the children and put them in good hands. We are doing all those things which would help our soldiers in the front lines. Recently, among the 100,000 student volunteers for the Army, 10,000 of these are girls, anxious to join with their brothers in the fighting.

You might be interested to know that in all our armies, there is a regular women's corps in each regiment. Its members go through 3 months of intensive training which is every bit as thorough as that given the men. Although these women are taught how to use firearms and they use them whenever necessary, their main duty is liaison work between the Army and the civilian population in the war zones. When the troops approach a village, the women's corps is the first to arrive. They make known to the people the needs of the soldiers and help in preparing facilities for a brief period of rest and in setting up emergency hospitals for the seriously wounded.

But even today when all efforts had to be concentrated in our defense against the ruthless aggressors, we have not neglected for one moment to move forward in the methods of democracy where the position of Chinese women have grown daily in importance.

Let me go back for a moment to 1937, the first year of the war. In the fall of that year China was to have had a popular election of the National Congress which was to vote on the draft constitution.

The outbreak of war came in the middle of our national elections and we were unable to complete the lists of the people's representatives.

But in its place there was created the People's Political Council which is like a wartime congress.

The Council has worked remarkably well. On the one hand, the Government has received and carried out many wartime measures proposed by the Council. On the other hand, the people have found in the Council a vital channel through which their opinions and criticisms can be crystallized into constructive Government action.

The present council has 240 members. Two-thirds are elected by the provincial councils and 60 are elected by cultural and economic organizations. I might add that there are twice as many women in this body as there are in the Congress of the United States, and the body itself is just about half as large.

Among other wartime measures toward greater popular government are the provincial councils and the county councils.

These are popularly elected bodies and their powers correspond to those of the State assemblies and county councils of this country I point with pride to the fact that there is no one of them without women representation.

All these measures and many others have helped to preserve the democratic traditions of my country and have enabled us to move forward even under the most difficult conditions, in the democratic ways and methods. In his New Year's message to the people President Chiang Kai-shek called them to even greater efforts in this direction and announced that in the year 1945, as soon as there is a greater assurance of a successful counteroffensive, a national convention will be called. This is a momentous step forward in the fulfillment of our revolutionary aims.

In the post-war world a strong and democratic China with her inherent love for peace will constitute an essential bulwark in the guarding of security and freedoms. We are an old democracy, yet we are one of the youngest republics. We look to our sister Republic America for we know that our comradeship forged on the battlefields will be carried forward in terms of close cooperation in the peace to come. Together with all freedom-loving peoples, we shall work on to the end that not only will the Pacific be truly pacific, but the entire world will be brought as one family under one roof.

Amendment of the Railroad Retirement Act

EXTENSION OF REMARKS

OF

HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a letter that is very much to the point and I am sure expresses the view of many members of the Railroad Brotherhood, with respect to legislation embodied in H. R. 1362, introduced by the gentleman from Ohio [Mr. CROSSER]. I join with the writer of this letter in urging the immediate consideration and passage of this bill.

HELPER, UTAH, *January 22, 1945.*

Hon. WALTER K. GRANGER,
United States Congressman,
Washington, D. C.

DEAR WALTER: I have been instructed by the members of the Brotherhood of Locomotive Engineers to get in touch with you and our Senators, concerning provisions of the Railroad Retirement Act. We consider it very valuable legislation and we are appreciative of it; but we also believe it needs some changes.

As an example I will outline the manner in which it applies to myself as we understand the provisions of the act.

I will be 54 years old on July 9, 1945. I have been employed by D. & R. G. railroad for 36 years exclusive of 15 months as a soldier in World War No. 1. If I meet with an accident or become mentally disqualified as a locomotive engineer, I would be 11 years under the age of 65.

If the retirement board, after reviewing my case and my medical examination believed me capable of performing any sort of labor or any other kind of employment, if I wanted to take the pension they would deduct one-fifteenth for each and every year I was under 65 or allow me approximately 26 percent of my pension after 36 years continuous service, thus for 11 years I would be forced to seek new employment, physically handicapped.

1. "Our thoughts," after 30 years of service if mentally or physically disqualified, should be allowed his pension.

2. If a pensioner or an employee qualified for pension passes away his widow, a bona-fide widow, should be allowed 75 percent of her husband's annuity so long as she does not remarry and an orphan or orphans under age should be given help while attending school until they become of age; without any deduction to his own pension if living.

3. After 30 years of service and upon reaching the age of 60, he should be eligible for pension without accepting any reduction.

Social security pay-roll tax is 1 percent up to and including $250 per month. Railroad retirement's pay-roll tax is 3¼ percent up to $300 per month.

An employee earning good wages and 30 years of service under social security, his benefits will be practically the same as ours, also his widow, under present law would be awarded 75 percent of her husband's annuity in case of his death.

Thus, under the Railroad Retirement Act we are taxed better than 300 percent of the social-security program and our benefits mentioned above are not included.

We are not complaining of our tax rate, it is all right.

When Congress passed the Railroad Retirement Act, it was new and revolutionary and perhaps had strong opposition. When it later passed old-age-social security the people of our Nation were also broader minded and Congress included in it some necessary changes in order to make old age more secure.

In the year 1943, I worked 523 days, in 1944, 500 days, we are giving our Nation at war the best that is in us, but it sure is making old men out of us and causes physical or mental infirmities earlier in life. Thus every railroad man in the State of Utah, when he understands it, will appreciate any and every effort you may put forth to bring about such changes in the law.

We are proud of all our national railroad laws and we never forget the Congressmen and Senators who fight and vote to get them over.

We will appreciate from the bottom of our hearts, anything you may be able to do in our behalf.

Sincerely yours,

G. F. SPRATLING,
Legislative Representative, Division 888, Brotherhood of Locomotive Engineers.

Factual Data Relative to Federal Subsidy for Teachers' Salaries, 1945

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks, I offer for the RECORD a table of factual data relative to Federal subsidy for teachers' salaries, 1945.

This material should be of value to every Member of Congress and particularly at this time when legislation of which character is being given attention.

The table follows:

Factual data relative to Federal subsidy for teachers' salaries, 1945, indicating financial ability of States, State expenditures and financial inequalities in education, and the estimated amount each State would receive under Federal subsidy bill S. 181

States	Excess of income over expenditures 1943 [1]	Average salary of teachers [2]	Average salary [3]		Average annual cost per pupil A. D. A. [2] [3]	State expenditures for schools [2]	State expenditures for highways [4]	Per capita State collection [1]	Per capita Federal collection [4]	Amount would receive under S. 637 and/or S. 181 [5]
			Urban	Rural						
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)
Alabama	$8,661,000	$787	$1,037	$645	$40.58	$21,150,000	$23,374,000	$26.73	$87.53	$10,407,238
Arizona	3,885,000	1,653	1,635	1,479	108.72	8,659,000	5,008,000	48.33	138.27	1,444,408
Arkansas	6,346,000	678	827	509	41.09	12,556,000	9,358,000	26.70	47.36	6,855,158
California	109,085,000	2,300			174.67	107,629,000	65,905,000	66.77	488.16	9,119,409
Colorado	6,570,000	1,417	1,961	998	107.69	6,392,000	9,569,000	44.81	191.67	2,701,144
Connecticut	2,394,000	1,932	2,006	1,536	129.97	6,500,000	13,875,000	48.51	529.32	2,185,000

Manpower Muddle Laid to Army Itself

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence from the Washington Evening Star of January 29, 1945:

MANPOWER MUDDLE LAID TO ARMY ITSELF—OBSERVER PREDICTS CURE IF DRAFT-AGE CEILING IS LIFTED

(By David Lawrence)

The Congress is at last discovering the manpower muddle. Having sat idly by for 4 years and having failed to note how the armed services, as well as civilian industry, wasted manpower, the Senators and Representatives now are finding themselves confronted with requests for a coercive national service act, which, of course, is the nearest thing to totalitarianism this democracy has been asked to accept since the war began.

There is not only no need for a compulsory work law now but there never has been any need for it. There has been, however, need right along for efficiency and competence instead of inefficiency and incompetence in selecting men for the armed services and for industry, but Washington's way, especially in wartime, is to cover up blundering and then expect extreme measures to be taken to extricate the blunders from their dilemma.

Congress, in 1940, passed a selective-service law but did not insist that it be administered so that younger men would go first. Politics and pressure groups influenced the means of selection and so did the White House. Thus America did not have true selective service for a long while, but a hodgepodge of cumbersome regulations.

When the administrators of the Selective Service Act did finally emerge in 1944 from their strait jackets of pressure influence and ordered men to be taken by age groups, America took her first constructive step toward selecting a fighting army.

BUNGLED BY THE MILITARY

When some of the military men appeal now for a National Service Act, they are asking for a relief from a situation which they themselves have bungled. Why did they overestimate Air Force needs for instance and underestimate Infantry requirements?

They have wasted manpower to such an extent that behind the lines today in the noncombat areas are hundreds of thousands of men who are capable of fighting, while at home in America, also, are hundreds of thousands of men who can take those same military jobs immediately behind the lines.

The argument that because a man's eyes are bad or he has a bad ear drum, or because he once had a spot on his lung he is unable to serve in the so-called supply units repairing a truck or working a typewriter—jobs which absorb millions of men overseas—is just an alibi for the unwillingness of the armed services to face the truth about the use of manpower.

But the armed services need not take all those who have been disqualified for minor physical defects. The manpower shortage is supposed to be acute on the home front in industry. The simple way to get industrial manpower is to follow the scheme that has been already proved successful—namely, to draft for the armed services anybody who is not employed in an essential industry or business or who is not a keyman in a business establishment or in a labor union or on a farm or on a railroad or in other vital services.

It will be asked whether this isn't the present practice and whether the existing system hasn't failed nevertheless to provide the manpower. The question is answered by stating that the Army itself is responsible for a ruling which can be revoked overnight whereby men above the age of 38 are at present exempt from the draft for military service. Indeed, ever since it was announced that men as young as 30 wouldn't be called soon, the manpower shortage began to develop a crisis.

URGES CEILING REMOVAL

Strangely enough, in the last few days, under the threat of legislation, applications for jobs in war plants have been pouring in, and in many a plant the crisis has been solved. The plain answer then is to remove the ceiling on draft exemptions—it can be done without legislation—and make anybody up to the age of 45 subject to military service if he doesn't take or hold on to an essential job.

If the Army took a few here and there from that age group, or if it took enough men only to release the able-bodied young soldiers in the Supply Service behind the combat lines, the flow to the war plants of needed manpower at home would be continuous.

This isn't a plan involving the voluntary principle altogether, but as between this and coercion with jail penalties or with laws compelling men to work for somebody's private profit in so-called Army battalions, there is no comparison.

Congress could well insist that the President ask the manpower agencies and the selective service office and the armed forces to get together and remove the present ceiling on draft ages for military service and let legislation stay on the shelf for a while. The manpower shortage would be cured overnight and remain cured for months to come.

Manpower Bill

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include an address delivered by me on the program Congress Speaks over a coast-to-coast hook-up of the Columbia Broadcasting System on Tuesday, January 30, 1945, with reference to the pending manpower bill:

The manpower bill now being considered by the House of Representatives is designed to secure participation in the war effort of the men needed for the efficient and expeditious prosecution of the war. The press has referred to this bill by various titles, such as "IV–F Draft," "Work or Fight," and others. It is definitely not a IV–F draft, and there is no intention to reflect upon the patriotism of those whose physical condition, through no fault of their own, disqualifies them for active military service. Neither is it essentially a work or fight bill, as it merely defines the obligations of citizens in time of war and provides civil penalties in the courts of the land for those who violate the duties imposed. In truth, the bill is national-service legislation applying to men between the ages of 18 and 45.

The bill had its inception in the request of the President in his message on the state of the Union delivered at the beginning of the present Congress. The necessity for some such legislation is vouched for by the War Department; the Navy Department; the Chief of Staff of the Army, General Marshall; the Chief of Naval Operations, Admiral King; the War Production Board; the War Manpower Commission; Lt. Gen. William S. Knudsen, production wizard on duty with the Army; and others who bear the principal duty in equipping, maintaining, and commanding the Army and Navy.

Hearings before our Military Affairs Committee have proven that during the first 6 months of 1945 the war effort will require an additional 1,600,000 men. This expansion is made necessary because of casualties suffered by the armed forces and future military campaigns looking to a speedy termination of the war. Nine hundred thousand men are required by the armed forces during those 6 months. The military situation on all fronts has made necessary an expansion of our production effort to the extent of $6,000,000,000 over the program of $56,500,000,000 as of October 1, 1944, and requires an additional 700,000 men. This additional production will consist of airplanes, tanks, artillery, and new secret weapons.

Through registrations under the Selective Service Act of all men to the age of 65 years, an inventory of the available manpower is at hand. Applying the demands to the available supply, we can count on securing only 570,000 men for the armed forces, requiring that 330,000 must come from those now employed in necessary industry and agriculture. These must be replaced and 700,000 additional secured. Therefore, to fill present demands 1,030,000 must be taken from non-essential work and channeled into essential work. These must be secured from the seven million men between 33 and 45 years of age and those between 18 and 26, who are not physically qualified for active military service.

I have unqualified confidence in the patriotism and desire for service of a vast majority of the American people. All they want is to be told how they can help, where they are needed, and what they should do to back up our fighting men at the front. The bill under consideration is designed to give the people that information. Once told the necessities and how they can the best contribute, I have no doubt but that our needs will be met by the voluntary and patriotic response of that majority. On the other hand, this bill will furnish the power and compulsion needed in handling the recalcitrant few who fail to contribute their share while your sons are bleeding and dying on the battlefields throughout the world.

I am afraid that the provisions of the bill are not accurately understood by a large portion of our people. Unfortunately, this lack of information is due, in part at least, to misinformation and misconstruction supplied by those selfish organizations and individuals who seek to preserve their advantages at the expense of the war effort. The bill is thoroughly adequate to fill the purpose for which it is designed. Still it is reasonable and neither harsh nor oppressive in its provisions.

The bill first provides that any man between 18 and 45 years of age who is employed in necessary industry or agriculture shall not voluntarily discontinue that employment without the consent of his local draft board, subject to all of the rights of appeal available to one ordered for induction into the armed forces. Further, that should he voluntarily discontinue his position without such permission or a justified reason therefor, he shall be subject to the same penalties in the local Federal district court which a registrant who fails to report for induction must

face, and he remains liable for military service if within the age limits and physically qualified. The Selective Training and Service Act was so denominated advisedly, and particular stress must always be placed on the word "selective" in the title. It has always been the philosophy of the System that each individual shall do what he can do the best in support of the war effort. If one selected for military service is required to perform it under the penalty of fine and imprisonment, why should there be a less penalty for the one selected for war production? His service does not subject him to the dangers of battle. It allows him to work under much more comfortable conditions, generally at home with his family, and at a much higher rate of pay. This first portion of the bill freezes men in their necessary jobs and will insure a steady supply of men in airplane plants, shipyards, arsenals, and on the farm. It will terminate the turnover of employees in those plants, which has run as high as 100 percent and more a year in some plants.

The other function of the bill is to direct men not now engaged in necessary industry or agriculture into the character of work most urgently needed at the particular time. Let me here stress that the entire procedure under this bill is in the hands of civilians. The application of the bill to individuals and their assignment to work will be in the hands of the friends and neighbors of each registrant. The same patriotic Americans who are now serving, without pay, as members of local and appeal boards under the Selective Service System will administer and enforce the provisions of the bill.

The bill places in the hands of the Director of War Mobilization and Reconversion, Justice Byrnes, the duty of determining the type of plants, activities, and agricultural pursuits which are essential to the war effort. Thereafter, Justice Byrnes is required to consult with representatives of management, labor, agriculture, and government, and determine the number of men needed in various activities and the area where needed. This determination is to be followed by a voluntary recruiting campaign (to be conducted by management, labor, government, and agriculture), to secure the number and kind of men needed in the area for the industries. This voluntary recruiting campaign will give every registrant a full and free opportunity to choose between the various types of activities in which men are needed; choose the location of the plant, and choose the employer by whom he prefers to be employed. It is my firm conviction that this recruiting campaign will frequently produce all of the men needed. On the other hand, the recruiting campaign will be much more effective than the present unsystematized efforts. Under the proposed system, the types of work, the areas where needed, and the skills required will be determined by a responsible official of Government, and recruiting efforts will be coordinated. It will eliminate competition between employers and thus prevent the moving of large numbers of employees great distances from their homes, as under the present system. It will tend to prevent any hoarding of labor because the employer will know that an orderly system exists to fill any needs which may develop.

Should this first voluntary recruiting campaign fail to produce sufficient employees, the local selective service boards will request designated men registered with them, who are within the categories desired, to become employed in the necessary war work, and will designate the time within which they are requested to accept such employment. Again the registrant has a period of time within which to choose his type of work and employer within the various types required and the area in which needed. This gives the one needed in war production a second period of time within which the individual may volunteer for work where needed the most. I reiterate my absolute confidence in the patriotism of the American people, and that they need only be told where they are needed and what they should do. This second opportunity for orderly volunteering will almost inevitably produce the necessary workers. Only after these two opportunities for voluntary service does the bill make any provision for compulsion.

There may be instances in which an individual has not been able to secure such employment through his own efforts, and there will always be a small proportion who seek to shirk their duty. The bill provides for these and other contingencies by following the request of the local boards, and the period for voluntary employment, with a direction from the local board to the designated registrants to make application for employment in the endeavors needing workers, and to accept employment when tendered. This direction is also subject to appeal, as in the case of one ordered for induction. Anyone who fails to carry out such an order will be subject to the same penalties as any other violation of the Selective Training and Service Act, after trial in his local court. It is anticipated that such trials will be most rare, if they occur at all. The existence of the law and the orderly effort to secure all men required as volunteers will obviate the necessity for prosecution. No doubt the experience in this country will be comparable to that of England, where a similar law has been in effect for several years and the compulsory features rarely used.

I cannot agree with those labor leaders and others who state that labor will resent such a law and diminish its efforts in war production because of that resentment. Such statements constitute a most serious reflection upon the patriotism of American workingmen, tens of thousands of whose sons are fighting throughout the world. The most outspoken enemy of labor will find it hard to coin expressions to equal such an insult. American labor is patriotic. It will respond; it will serve the Nation.

Next we must consider the status of the workman who either volunteers for the designated work or accepts it after having been ordered to do so. In the first place, the bill provides for employment in the area of his residence, if possible, but that he shall be transported to his place of employment if it be not in that area, and transported back to his home when his services are no longer needed. If his employment be in a Government-operated plant he will have the protection of the United States employees' compensation laws for injuries or illness contracted as a result of his employment. If employed by a private employer, he will have the benefits of the workmen's compensation laws of the State in which he is employed. The bill provides that he shall have the right to his old job when the war work is terminated, with seniority and pension rights intact, just as he would have had he entered the armed forces. Should the employment which he accepts pay him less than his former employment, he will have the same right which a member of the armed forces has to suspend the payments on his home and other obligations to the extent that his ability to discharge is decreased by the change of employment. If his ability to pay his insurance payments is decreased the Government will guarantee those payments during the time he is employed and allow him 2 years thereafter in which to redeem them. In short, the bill protects him in all of his property rights until he returns to his normal pursuits and is again able to take up where he left off. This is basically just and protects every right of the persons affected.

This is emergency legislation designed to accelerate the war to a rapid and victorious conclusion. This is not the time, nor is this bill the place, to settle any social or racial questions; nor is it in the interest of the war to attempt to use this bill as a vehicle to prevent strikes or abrogate closed-shop agreements. Those questions should be settled at another time and in other legislation. I decry the efforts of all who attempt to import these highly controversial questions into war legislation denominated by the most responsible officials of Government charged with the actual prosecution of the war as necessary to the successful accomplishment of their efforts. At this very moment the Germany Army is pressed on the eastern and western fronts as never before. The Japanese face our troops at the gates of Manila, while our planes bomb his homeland. Let this consolation not come from the Halls of Congress, as surely it will, if we fail to adopt this bill, insuring the utilization of all our resources. I hope that all will sustain the position of those Members of Congress who support this bill, in the single purpose of aiding the war and hurrying the return of our loved ones from the battle fronts.

Drafting of Nurses

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. PHILBIN. Mr. Speaker, at present, the House Military Affairs Committee, of which I am a member, is holding extensive hearings on all aspects of the manpower shortage and related problems with a view to legislation. These hearings are covering a proposal for a Universal Service Act, more drastic controls of essential civilian employment, and the possible drafting of nurses.

I am most reluctant to support the latter measure but will not definitely make up my mind until the hearings are completed. Fundamentally it seems to me unjust and inequitable to single out one group for compulsory service, especially a group of women that has rendered such magnificent contributions to the war effort as our nurses.

Moreover, our civilian hospitals and institutions housing the sick, the mentally ill, expectant mothers, the aged, and other invalids must not be depleted of adequate nursing and medical personnel. If those seeking this legislation can demonstrate conclusively that we must draft nurses in order to provide adequate care for our wounded heroes then I suppose we may have to resort to compulsory measures. This alternative should never have faced us. I regret the fact that our armed services did not exhibit more vision in such a vital matter as providing nursing for our veterans, particularly at the time when they commenced the enlistment of approximately 150,000 women into various branches of the armed forces. In the first instance, if some of these women enlistees so eager to serve their country had been trained as nurses, there would not now be the present unfortunate situation which a reasonable degree of foresight, judgment, and planning on the part of policy making officials of the War and Navy Departments might well have averted.

Obviously we must and will provide at all costs every necessary and indeed the most solicitous care for the gallant band

of hundreds of thousands of young American heroes who have fallen and will fall in battle before the end of this tragic and most destructive war.

If it is shown to be necessary, therefore, I will support the nurses' draft measure, but, let me emphasize, I will do so most reluctantly and only when evidence is presented that to follow a different course would prove injurious, harmful, and detrimental to our boys. We do not propose to take chances that any of our wounded, or disabled in mind or body, should have to go without the best medical and nursing care and treatment possible.

There are other compulsory bills pending which will have far-reaching effects upon the national economy and the lives of very many of our citizens.

The whole question of universal service legislation which is polite language for a national civilian draft is bound up with additional regimentation of our whole economic system both as regards management, labor, small businessmen, farmers, and all other civilian classes. Rigid controls of this character are essentially totalitarian and alien to the spirit of American democracy for which we are fighting. Since such strait-jacket techniques involve a measure of human slavery and involuntary servitude contrary to our institutions and offensive to most of our citizens, they can be justified only by very desperate conditions. For these reasons, before I vote on any legislation which would subject our men and women to be drafted and transported far away from their homes and families to work in so-called more essential occupations, you may be sure that I will give careful consideration, not only to the validity of the urgent requirements behind such legislation but also to the undesirable effects and the probability of definite termination of such totalitarian programs when the war emergency is past.

A healthy, thriving, civilian economy, energetically and patriotically producing the weapons and materials of victory, as ours has been doing in recent years, is one of the prime requisites for our final success on the war fronts. Only the valor, heroism, and bloodshed of our own sons is paramount. Therefore, whatever other countries may do, or may be planning to do, we in America are of the conviction, based on the memorable, historic, and unparalleled experiences and accomplishments of over the past 160 years, that freemen can produce better than slaves, that untrammeled Americans are more effective than regimented minions. I have personally the greatest of doubt that compulsion could possibly bring better results than the stupendous and most exceptional achievements which our American economy, capital, labor, and every other one else included, has recorded under democratic voluntary cooperation.

BOSTON, MASS., *January 9, 1945.*

Hon. PHILIP PHILBIN,

Member of Congress:

Please advise return wire your stand on drafting women, particularly nurses.

C. EDWARD HOLLAND,
City Editor, Daily Record.

[From the Boston Record of January 15, 1945]

BLAMES BRASS HATS FOR NURSE SHORTAGE

Blame for the severe lack of nurses was placed in the lap of Army and Navy higher-ups yesterday by Congressman PHILIP J. PHILBIN, of Clinton, who contended the need for drafting nurses "should never have faced us. I regret that our armer services did not exhibit more vision in such a vital matter as providing nursing for our veterans, particularly at the time when they commenced the enlistment of approximately 150,000 women into various branches of the armed forces.

"If some of these women enlistees so eager to serve their country had been trained as nurses, we would not have the present unfortunate situation which a reasonable degree of foresight, judgment, and planning on the part of policy-making officials of the War and Navy Departments might well have averted."

The Massachusetts Congressman, a member of the important House Military Affairs Committee, said he is most reluctant to support a nurse draft bill.

FLAYS SINGLING OUT

He flailed the unjustice of singling cut "one group for compulsory service, especially a group of women that has rendered such magnificent contributions to the war effort as our nurses.

"Moreover, our civilian hospitals housing the sick, the mentally ill, expectant mothers, the aged and other invalids must not be depleted of adequate nursing and medical personnel.

"Obviously we must and will provide at all costs every necessary and indeed the most solicitous care for the gallant band of hundreds of thousands of young American heroes who have fallen and will fall in battle. If it is shown to be necessary, therefore, I will support the nurses draft measure, but, let me emphasize, I will do so most reluctantly."

CRITICIZES METHODS

At the same time, PHILBIN declared himself opposed to the strait-jacket techniques of national civilian draft legislation.

Rigid controls of this kind are "regimentation, essentially totalitarian, and alien to the spirit of American democracy for which we are fighting," PHILBIN asserted. Such laws would "involve a measure of human slavery and involuntary servitude contrary to our institutions and offensive to most of our citizenry," he said.

"Before I vote on legislation which would subject our men and women to be drafted and transported far away from their homes I will give careful consideration not only to the validity of the urgent requirements behind such legislation but also to the definite termination of such totalitarian programs when the war emergency is past."

Unity Essential for Peace

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of the speech given by Henry J. Kaiser at the testimonial dinner to Henry A. Wallace in New York City last night. Mr. Kaiser's praise of Henry Wallace is significant in that it shows the economic thought of forward-looking industrialists of today and their belief that Henry Wallace typifies the liberal philosophy of this group of our society.

The speech follows:

I like to feel that the cause of liberalism brought us together tonight. We have come to honor a man who has gained and held the confidence of a very large majority of our people. In a definite sense Henry Wallace exemplifies the liberal tradition. It is not enough to say that he believes in it. He lives it.

One does not need to be a scholar, nor a philosopher, nor a historian to know that liberalism is a way of life. It has never been the portion of kings, dictators, or conquerors. It is the spiritual heritage of the people—all the people.

The kinship between liberalism and liberty is self-evident. The true liberal is consecrated to the cause of freedom; the unconquerable will of mankind to oppose power—whenever and wherever it is concentrated in the hands of an individual or of the few.

MISUSE OF POWER

Power, and its potential misuse has increased in direct proportion to the increase in material riches. Over and over throughout the course of history it has been often employed to exploit and enslave the majority for the benfit of the few. Yet so vast and so enduring is the surge of liberalism that no individual, group, or nation has ever succeeded in subduing man's will to be free.

Whatever else may be said of the momentary crises of war or diplomacy, this is the reason why both Nazi Germany and Imperialist Japan will fail. It is the reason why every dictator must fall. It is the reason why power politics have always failed. It is the reason why every power combination whether it be in industry, finance, labor, or government is doomed.

When money power was cornered by a handful of men, it went down before economic forces which it could not control. When industrial power achieved monopoly it invited regulation and control. This is at once the evil and tragedy of bureaucracy. This is the ancient evil against which the labor movement must contend.

It will be a pity if labor repeats the tragic mistakes committed by money power and monopoly power. As one who is deeply sympathetic with the aims and hopes of organized labor, I believe the labor movement now faces the greatest crisis in its history. With compulsory membership and ample treasuries, organized labor can try to force its will upon its membership and on society by the exercise of power. If it does so, it is doomed. All of its legitimate and constructive ideals will be lost if it yields to the temptation to place power above service.

POWER OF RIGHT

There is only one power which freemen dare to recognize. It is the power of right. Before the essential rightness of the liberal position, privilege, monopoly in all its forms, and fanatical ideologies must give way. There is no truth more self-evident, more inspired in its revelation, than man's right to be free. It is in itself a power which aggression has never understood.

It was with these thoughts in mind that I turned my attention to the topic on which you asked me to speak, namely, the future of industry. In my mind industry is and must be a part of the democratic process. We are living in and witnessing the ordeal of democracy. It was never more forcefully expressed than in an editorial which appeared in the New York Times in June 1940, the author of which is, unfortunately, unknown. It bore the caption "Dunkerque," and it reads as follows:

"So long as the English tongue survives, the word 'Dunkerque' will be spoken with reverence. For in that harbor, in such a hell as never blazed on earth before, at the end of a lost battle, the rags and blemishes that

have hidden the soul of democracy fell away. There, beaten but unconquered, in shining splendor, she faced the enemy.

"They send away the wounded first. Men died so that others could escape. It was not so simple a thing as courage, which the Nazis had in plenty. It was not so simple a thing as discipline, which can be hammered into men by a drill sergeant. It was not the result of careful planning, for there could have been little. It was the common man of the free countries, rising in all his glory out of mill, office, factory, mine, farm, and ship, applying to war the lessons learned when he went down the shaft to bring out trapped comrades, when he hurled a lifeboat through the surf, when he endured poverty and hard work for his children's sake.

"The shining thing in the souls of freemen Hitler cannot command, or attain, or conquer. He has crushed it, where he could, from German hearts.

"It is the great tradition of democracy. It is the future. It is victory."

Again in a time of terrifying crisis, not so much in war as in the search for peace, democracy needs that degree of unity which will make it work. Peace could likewise have its Dunkerque. It can come as tragically near to defeat. On the other hand, it can release all the exalted forces of democracy, in which men forgot themselves in the noble impulse to minister to others.

UNITY NEED

Shall essential employment in the future, also have its Dunkerque? Is not this our chief concern? Here again there is desperate need for unity of the great forces of finance, industry, agriculture, and government.

Such immense sources of employment as housing, transportation, and medical facilities for advanced health programs need no emphasis here tonight.

There is an essential unity between government, industry, and labor. They are not independent and isolated forces. The health and well-being of the commonwealth is their common objective, the core of which is service. The unity of democracy is based on a compromise of equals and mutual self-respect.

We need now to emphasize the harmonies rather than the differences. If government, labor, and industry will each forsake the search for power and will engage in a wholehearted effort to work together, liberal democracy can be achieved. It is my firm conviction that this can be done.

Physical, mental, and spiritual health cannot be the gift of government or of industry. They cannot be seized, or legislated, or compelled. They must spring from that unified effort of which democracy alone is capable if men are to live in freedom.

UNITY FOR PEACE

I know Henry Wallace believes that only from such unity can flow the maximum use of all the resources of men, materials, and technology so vital to the prosperity and security of a world at peace. The nation united in the spirit of liberalism to do this for war. The nation must unite in the same spirit to do it for peace.

I have no fear that these are theoretical ideals beyond the power of men to realize. We are witnessing the miracle of war production, the power of unity in purpose and command on the battle fronts, the first successful attempt of government to control prices and the distribution of goods in time of war. We have seen billions of dollars earned, accumulated, and offered to the Government to support an effort in which we all have a stake. We are witnessing the nobility of sacrifice on a scale heretofore unknown. We are in the presence of a majestic demonstration that humanity and charity can triumph over selfishness.

"This shining thing in the souls of freemen * * * is the great tradition of democracy. It is the future. It is victory."

The Manpower Act

EXTENSION OF REMARKS
OF
HON. DUDLEY G. ROE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. ROE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Baltimore Sun of January 30.

I agree with this editorial completely. Certainly there is no sense in sending our men all over the world to preserve American freedom and liberty and then let them find when they return we have destroyed their liberties here at home while they were so valiantly fighting. It follows:

THE MANPOWER ACT FACES THE CLOSED-SHOP HURDLE

The first big hurdle which the May manpower bill will have to pass is certain to be the closed-shop matter. Is the Congress going to require that men assigned to war jobs must, in addition, pay initiation fees and dues to private organizations free of public supervision? That is the question in essence. It is a sign of the extent and the tempo of our drift from older civil-liberties concepts that it could ever arise.

For those older concepts were still vigorous as recently as the autumn of 1941. In November of that year, President Roosevelt himself stated, "I tell you frankly that the Government of the United States will not order, nor will Congress pass legislation ordering, a so-called closed shop. * * * The Government will never compel (a minority of workers) to join the union by Government decree. That would be too much like the Hitler methods toward labor."

In talking for the executive departments in this statement, the President, of course, was discussing agencies over which he had direct control. But he was on the firmest of ground when, in addition, he warned that Congress itself would not tolerate the compulsory closed shop. For Congress itself had formally taken that position on a number of occasions.

One of the most recent of these occasions was in 1932, in the preamble to the Federal Anti-Injunction Act. This act was sponsored in Congress by the late Senator Norris and the then Representative LaGuardia. Felix Frankfurter, as a professor in the Harvard Law School, had been one of its framers. In the Norris-LaGuardia Act Congress very forcefully stated as the "public policy of the United States" that "it is necessary that [the worker] have full freedom of association, self-organization, and designation of representatives of his own choosing"; but it insisted just as forcefully that "he should be free to decline to associate with his fellows."

To be sure, the situation faced by the President in 1941 was not quite like the one now under consideration in Congress. In 1941 the President was discussing John L. Lewis' demand that as a condition of his followers' continued production of coal for the war effort, all coal miners be driven by the Government into the miners' union. The unions do not ask in the present controversy that all workers be driven into unions; they do demand that workers assigned to closed-shop plants be driven into the union involved.

But the principle expressed by the President is clearly broad enough to cover the present situation. The principle stated by Congress in the Norris-LaGuardia Act and elsewhere covers it completely. The question before Congress is whether the principle is now to be abandoned—where a bill gravely impairing personal rights, though in the public service, is to impair personal rights still further by compelling membership in and money payments to unregulated private organizations.

Old-Age Security

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. RAMEY. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include therein a plan for old-age security forwarded by a constituent of the Ninth District of Ohio:

It should be to the interest of the Federal Government that all births, deaths, marriages, and divorces are correctedly recorded in counties and States as well as in a national bureau. With the object in view that a form of social security be adopted to which every person or citizen will contribute a just portion and receive like benefits.

The span of life should be divided into three periods: Educational, production, and retirement.

The educational period should be from birth until 21 years of age. At 1 year of age the child should receive a social-security number from a Federal security board. The county recording the birth should be interested in its education and the parents also in its future, so county and parents should each contribute an equal amount to a Federal or State security fund. This should continue until the child is 11 years of age. During the latter part of this period, the State being interested in the youth's future and education as well as the parents, should take the part heretofore taken by the county and should contribute an equal amount with the parents until the child is 21 years of age. There should be a limited insurance in case of death.

The production period should not be definite. It should begin with the youth's acquirement of sufficient education or when other conditions warrant. It should begin at about 21 years of age and should last as long as is necessary or the person is capable. During this period every earner, every person having any income from any source whatever, should pay his just proportion or percentage of income into the social-security fund. Every employer should contribute an amount equal to the amount now deducted from every employee. During this period the youth are the backbone of the Nation: its main defense in time of war, its servants and producers at all times. Therefore the Federal Government should take the part formerly taken by county and State and during the period from 21 to 46 or 51 should contribute an amount equal to that of em-

ployer and employee combined. There should be a limited insurance in case of death.

The retirement period should not be definitely limited. Some are aged at 40, others youthful at 70. Casualties in wartime are high; hazardous occupations take heavy toll and accidents happen when least expected. All disability claims whether in war or peace and all Federal and public pensions should be handled by the Federal or National Social Security Board through the State and county if necessary. With every person a willing contributor to social security there would be freedom from fear and want. Security in old age instead of poverty, decent unemployment compensation and no fear for the future as your neighbor as well as yourself are creating the national social security from the cradle to the grave.

Boards of experts should pass on the extent of any injury and the physical, mental, and financial status or condition of applicants for pension.

EDWARD J. LINDOW.

TOLEDO, OHIO.

The "Passaic Warrior"

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. MARTIN of Massachusetts. Mr. Speaker, Ted Malone, broadcasting from overseas last night, told us the story of the *Passaic Warrior*, a famous B–17 flying fortress which was christened by our colleague the gentleman from New Jersey [Mr. CANFIELD] when he was in England early last July.

Meanwhile, the Eighth Air Force has released a complete account of the big bomber's career, pointing out that it has accumulated more than 670 combat-hours of flying time, has dropped 165 tons of bombs on enemy objectives, and was the command plane of Lt. Gen. Lewis H. Brereton when he took the First Allied Airborne Army into Holland. I present the story in full:

AN EIGHTH AIR FORCE BOMBER STATION, ENGLAND.—While the news spotlight plays on the ground battle in western Europe, American bombers continue to pound enemy objectives day after day, providing the interference to clear the way for victorious Allied forward movements. Passaic County and New Jersey have a direct share in the job being done from the air.

That share is represented by the hundreds of Passaic County boys who serve in and around the bombers, and also by a famous B-17 Flying Fortress bearing the name of *Passaic Warrior*.

The *Warrior* owes its name to Representative GORDON CANFIELD, of the Eighth New Jersey Congressional District, who christened the fortress last July 10, using a bottle of Coco-cola for the ceremony. CANFIELD, with a Philadelphia colleague, had worked his way to England as an ordinary seaman on a tanker, in order to learn about merchant-marine conditions at first hand. He visited the bombardment group's station only a few days after he arrived in England.

The big bomber had completed five missions (having begun its career July 4) prior to receiving its name. Under the expert care of Staff Sgt. C. D. DuBoss, of Burke, Tex., its crew chief, it is now credited with 65 combat operations. Throughout the course of the first 47 of these, the *Warrior* was never charged with an abortive, that is, it never turned back from an enemy target without completing its job.

The 6-month list of *Passaic Warrior's* targets resembles a Cook's tour of Germany, with just enough of France thrown in to remind you that the Nazi's still held most of that country when the bomber began to fly. The July 4 Eighth Air Force attack on Tours, France, was the *Warrior's* maiden mission. Since then the targets include Lyons, Munich, the main German V-2 experimental station at Feenemunde Dessau, the ball bearing factories of Schweinfurt, the German front lines at St. Lo (in support of the American ground force's break-through there), Leipzig, Kiel, Ludwigshafen, Munster, Frankfurt, and Brux, Czechoslovakia.

The *Warrior* has been a consistently reliable and exceptionally lucky aircraft. Although each of its original four engines has since been replaced, it was the cumulative wear and tear of long and steady combat flying, not enemy action, that necessitated the changes. The few fighters the Luftwaffe manages to put up these days have given the Passaic County Fortress a miss and the sheet-metal repairmen have never had to deal with more than a spatter of flak holes in the big bomber's aluminum skin.

The *Warrior* has never had a casualty aboard throughout her 65 combat trips and it has been over almost every important German target.

In the course of its career the Passaic County Fortress has dropped 165 tons of bombs on enemy objectives and has accumulated some 670 combat hours of flying time. Only once has it been forced to turn back from any enemy target without its full job done, and on that occasion engine failure necessitated the early return.

Her day of glamor occurred last September when air-borne Allied troops were pouring into Holland from the skies to open a new ground salient in the Eindhoven sector as the liberating American and British forces drew closer the ring of steel around the Germans. The *Passaic Warrior* was chosen to fly Lt. Gen. Louis H. Brereton, commanding the First Allied Airborne Army, on an observation mission in connection with the operation. Her selection was due to the fact that she was operationally in the pink on the appointed day and to the fact that it had compiled an excellent record for dependability.

Flying low between two lead wings of C–47 Dakotas, which carried the air-borne troops, the *Warrior* boomed her way through the clouds with First Lt. Frank Scurlock, of West Middletown, Ohio, at the controls to provide General Brereton with a front-line command post from which landing operations could be directed. With General Brereton in the *Warrior* was William Courtney, of Colliers, whose magazine article on the air-borne show featured Passaic County's bomber.

America, Italy, and the Atlantic Charter

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. ROONEY. Mr. Speaker, millions of citizens of the United States of Italian birth or extraction are vitally interested in the political and economic outcome of the desolated people of Italy. Under leave to extend my remarks, I include the views of the Italian-American Labor Council adopted in resolution form at a general membership meeting of that organization held on Saturday, January 27, 1945:

On the eve of the coming historic meeting of the Big Three it is appropriate to place before the American people and the public opinion of the United Nations a grave situation which we must begin to remedy at once. This is imperative in order to hasten victory and secure an endurable and enduring peace.

The critical conditions in Italy, the possibilities of Italian political, social, and economic rehabilitation, and the entire question of the role of the new Italy in the world of tomorrow—all of these are issues which transcend in importance and scope the interests and boundaries of Italy itself. On the solution of these issues the fate of Europe and the future of mankind are, in no small measure, dependent.

In his address on the state of the Nation to the Seventy-ninth Congress, President Roosevelt declared: "It is true that the statement of principles in the Atlantic Charter does not provide rules of easy application to each and everyone of this war-torn world's tangled situations. But it is a good and useful thing—it is an essential thing—to have principles toward which we can aim."

The Italian-American Labor Council regretfully declares that in their treatment of Italy the Allied Powers have to date not been guided by the sound approach proposed by President Roosevelt.

The Atlantic Charter first of all pledges the United Nations to "seek no aggrandizement, territorial or other." In its second point, the United Nations—all of whom are signatories to the Atlantic Charter—specifically pledge themselves "that they desire no territorial changes that do not accord with the fully expressed wishes of the peoples concerned."

All the world knows that the Allied Powers and other United Nations have in their treatment of Italy, paid little attention to these first two principles of the Atlantic Charter. In their relations with Italy, the Allied Powers have, to a dangerous degree, disregarded these basic points of the Atlantic Charter as principles toward which they can aim. The extremely harsh armistice terms imposed upon the Italian people after they overthrew Mussolini, and the campaign to take by force from Italy Trieste and Fiume are flagrant violations of the letter and spirit of these principles.

We appeal to our own Government and to all the Allied Powers to lose no time in making it clear to the Yugoslavian regime of Tito that the guiding principles of the Atlantic Charter rule out the proposal of the Yugoslavian Foreign Minister Josip Smodlaka to take away Fiume and Trieste from democratic Italy and annex it to Yugoslavia.

Point three of the Atlantic Charter provides that the adhering nations are to "respect the rights of all people to choose the form of government under which they will live; and they wish to see the sovereign rights and self-government restored to those who have been forcibly deprived of them."

The Italian people were the first ones to be forcibly deprived of their sovereign rights by a Fascist dictatorial regime; the first people in Europe to overthrow a Fascist dictatorship as the Italian people. Certainly, such a nation is entitled to every consideration in its efforts to rewin its sovereign rights and the restoration of self-government. But what do we find? It was painfully revealed

in the recent Sforza case that the government of the new Italy has been allowed to exercise authority more in name than in fact. To date its power has been more fiction than reality. The dominant Allied power in Italy has not allowed the Italian people even to choose its own Cabinet members without approval by outside governments.

The fourth point of the Atlantic Charter declares "the United Nations will endeavor, with due respect for their existing obligations, to further the enjoyment by all states, great or small, victor or vanquished, of access, on equal terms, to the trade and raw materials of the world which are needed for their economic prosperity." Furthermore, the Atlantic Charter expresses in its fifth point the desire of the United Nations "to bring about the fullest collaboration between all nations in the economic field with the object of securing for all, improved labor standards, economic adjustment, and social security."

We cannot emphasize too strongly that these have not been the guiding principles of all the Allied powers in their treatment of the reviving democracy of Italy. The Italian people are paying a dreadful price in suffering and destruction. Their country is a theater of bitterest warfare; they are subjected not merely to all the havoc of military devastation but also to the vengeful wrath of Hitler and his Mussolini quislings. Their wealthiest and most industrialized provinces are being ravaged and looted. They are making a gallant effort to contribute decisively to the common victory and to speed the reconstruction of their country. So far the United Nations have rendered only pitifully inadequate assistance to and on occasions even hampered Italian democracy in its efforts to secure the raw materials and the industrial equipment with which to lay a firm foundation for the return of their economic prosperity.

It is distressing to note the thoroughly insufficient collaboration with resurgent democratic Italy by the United Nations. Anti-Fascist Italy is not being permitted to do its full part in the destruction of Axis tyranny. Hundreds of thousands of her best sons, behind the Nazi lines as well as in the freed areas, are eager to fight against the German hordes but are not being given the proper equipment and are not allowed by the Allied powers to constitute themselves as an effective national democratic Italian Army. What is more, the thoroughly unfair and unsound rate of exchange imposed upon the Italian people has served to depress cruelly labor standards and to block seriously all efforts at economic readjustment in Italy. The military authorities, particularly the British group which is dominant, have imposed wage policies which paralyze all possibility for advancing the social security of the people of liberated Italy.

We hail the declaration made by President Roosevelt to the Seventy-ninth Congress that our country "shall not hesitate to use our influence—and to use it now—to secure so far as it is humanly possible the fulfillment of the principles of the Atlantic Charter. We have not shrunk from the military responsibilities brought on by this war. We cannot and will not shrink from the political responsibilities which follow in the wake of battle."

The Italian-American Labor Council calls upon our Government and all its departments to act in the spirit and manner herewith emphasized by President Roosevelt and to pursue vigorously the above course in their relations with all the United Nations.

Our pleas for a forthright and energetic application of the principles of the Atlantic Charter to democratic Italy spring from our desire not only to assure a better life for the peace-loving industrious people of Italy, but, above all, from our devotion to America as the hope of the world in its aspirations and strivings for the triumph of democracy in war and peace and the organization of lasting world security and the enhancement of human progress.

Streamlining Congress

EXTENSION OF REMARKS
OF
HON. E. H. HEDRICK
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. HEDRICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial of the Charleston Gazette, of Charleston, W. Va., dated January 28, 1945:

STREAMLINING CONGRESS

The recommendations of the National Planning Association for making Congress an up-and-going concern are sensible in large part but have little chance of acceptance. Any attempt to shake Congress out of its ancient lethargy and antiquated way of doing and not doing things is not likely to get past the received and filed point.

But at least the report calls to the attention of the people a number of things that account for the fact that Congress, even during the greatest emergency that ever confronted this country, has frequently chosen to obstruct rather than aid. It shows that the body lives largely by precedent, and practices chiefly party politics.

The recommendation that has met with the most publicity is that the Senators and Representatives, who now get $10,000 a year, be upped to $25,000. The thought immediately occurs to one that the quality of representation would in no wise be increased two and a half times by the process. We seriously doubt if any one ever ran for Congress for the pay; a few seek an opportunity to do something for their country and most of the others seek prestige only. There are a lot of citizens who would take the job for less pay, and do it better.

The committee found a number of sources of weakness, among them incompetence and overworked. It is not clear why the two are mentioned as separate causes, for overwork is usually caused by incompetence. Lack of party responsibility is mentioned as another, yet everyone knows party politics has been the death of much worth-while legislation.

With the increase in salary, the Members would each get a "political assistant" who would look after the requests of constituents and save time for the Members to cultivate statesmanship. Imagine a constituent traveling all the way to Washington and being content to see only the political assistant. Of course the "assistants" would reply to all letters, but the secretaries do that anyway. Also they would act as buffers and have the job of helping keep up the political fences at home. About all the political assistants would have to do would be duplication of the work of the secretaries.

Everyone except the senior Congressmen and Senators is against the seniority rule because it holds back such able young Members as find their way to Washington. The excuse for the rule is that the fledglings must first learn the ropes by close observation, yet there are not a few Members who have been in Congress for years and never have learned anything. The rule is pernicious in the extreme and ought to have been thrown out long ago.

Another suggestion is the adoption by the Senate of a cloture rule which would do away with the filibuster. We know of no practice more open to criticism than that of talking a measure to death by a dissenter who is on the minority side. By use of the filibuster one Senator standing alone in his opinion can sometimes defeat a measure upon the passage of which may depend the fate of the Nation.

The committee could have gone further and done better by recommending some means whereby Senators and Congressmen could be actually selected by the people. Anyone who keeps an eye on politics knows that the candidates are selected by the party managers and in most cases the qualifications consist solely of ability to get votes or corral campaign funds. Once in a while a candidate appears who has sufficient popular strength to override the wishes of the party managers and get himself nominated, but they are few and far between. And once in a still longer while a man gets into Congress who has brains and force enough to grasp opportunities and override obstacles that stand in the way of true greatness.

In a number of particulars the National Planning Association has made some fine recommendations. What is really disheartening about the report is that it does not recommend how the reforms can be brought about.

The Wallace Appointment

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch for January 25, 1945:

WALLACE'S WILD AND VISIONARY IDEAS

We have carefully read the wild and visionary 6,500-word statement which the radical and crackpot Henry Wallace made yesterday before the Senate Commerce Committee. Then we read it again to find out who was crazy, Wallace himself, or those who say that for him to replace Jesse Jones means the doom of our Republic.

Wallace thinks private enterprise—we repeat, private enterprise—can produce 60,000,000 jobs after the war.

He reasons this way: We are now producing goods worth 200 billions a year, or twice as much as we produced before the war. He thinks if we can produce guns, ships, and planes, we can also produce houses, cars, and clothing. How crazy is that?

This man has faith in America. He thinks that, since we led the world in establishing political democracy, we have also the stuff to lead it in establishing economic democracy. Well, haven't we?

However, Wallace does not think that the job of making 60,000,000 jobs can be tackled by 20,000 big enterprises alone; but that 3,000,000 small businesses must also produce jobs. If that's radical, Thomas Jefferson is revolving in his grave.

Wallace believes the future of the American worker lies in the well-being of private

enterprise, and vice versa, and that working as a team they are unbeatable. What, no socialism, no communism?

In order to provide jobs, Wallace says we must have great business expansion and this should be financed through private investment capital. However, in cases where special risks are involved, the Government should step in and guarantee the lender against loss.

This is exactly what the Government is now doing in the case of V loans, F. H. A. loans, and so forth. Maybe it should not guarantee against risks now and maybe it should not guarantee against risks after the war. So far as we could figure out, this part about guaranteeing private lenders against risk, in the interest of an expanding post-war economy, was the most radical thing in Wallace's speech.

Of course, America was built by risk-takers, people who fondly embraced the inalienable right to lose their shirts. If we had a few men around like "Bet-a-Million" Gates, maybe Henry Wallace wouldn't have brought up the subject at all.

But to go on with a sketch of the radical Henry's ideas. He thinks private investors can gainfully lend twenty billions a year after the war.

New construction and expansion should provide 5,000,000 more jobs a year in this field than we had before the war.

In a nutshell, he thinks that if we are going to have jobs for all, we must have expanded private industry. This industry will be privately owned, privately operated, and privately financed, with Government stepping in only to share with the private investor unusual and abnormal risks which may be involved in getting started.

Along with a bigger domestic market, we should have a bigger foreign market. Our heavy equipment industries will sell a lot of their production abroad. Our farmers will ship boatloads of cotton, tobacco, and wheat. And so on.

With reciprocal trade agreements and our already existent Export-Import Bank, along with new measures for international credit and currency stabilization, Wallace thinks American can play a big—and profitable—role in developing the economies of other nations. A lot of people who haven't been accused of crack-potism think so, too.

If private enterprise cannot produce 60,000,000, what then? Wallace thinks the Government should be on watch, and when employment begins to fall below 57,000,000, a reservoir of public works should be tapped.

But public works, he thinks, should not produce Government or "relief" or leaf-raking jobs. No, says Wallace, they should produce private jobs. Construction should be done by private firms under contract to the Government, private firms to employ private labor.

Other dangerous ideas of Wallace:

Wages should be kept high after the war to provide purchasing power for expanding economy.

Profits should be kept high, too.

Taxes should be lowered.

Farmers should have good incomes, enabling them to have better homes, indoor bathrooms and electric lights.

Monopolies and cartels should not be encouraged, as they stand in the way of free enterprise.

New businesses like aviation, television, frequency modulation, fibers, plastic, should let in the little fellow, as well as the big fellow.

Small new firms become great firms.

We should build through private enterprise 2,000,000 homes a year.

We should get rid of slums.

We should be a land of home owners, and new homes should have all the fine new gadgets.

We could use more hospitals, more clinics, more doctors.

We need a broader social-security program.

We need more schools and more teachers.

So goes the radical program of the crackpot Wallace. To his detractors, after outlining the program, he says:

"There are those who say that these goals are the dreams of a 'man willing to jeopardize the country's future with untried ideas and idealistic schemes.' These people think they are realists. Actually they are the persons of limited vision and stunted imagination. * * * These people think the same as those who said the President was dreaming when he declared in 1940 that the American people would produce 50,000 planes in 1 year."

Maybe Mr. Wallace is all wrong. Maybe he is a crackpot and a visionary. Maybe our private enterprise can't produce, as he thinks it can, 60,000,000 jobs a year. Maybe we can't have more cars, more homes, more bathtubs, more clothes, more gadgets. Maybe we can't be a healthy, prosperous, independent, happy people.

But if the time has come when Americans cannot share with Henry Wallace an optimistic view of their own future; if the time has come when America cannot flex its muscles and look to the future with high hope and the old covered-wagon determination, then God help us.

Polish Lublin Government

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a vivid and timely newspaper article written by Mr. Charles Rozmarek, president of the Polish National Alliance of America, and president of the Polish-American Congress, that appeared in the Chicago Herald-American, on January 21, 1945, on the Moscow-inspired Polish Lublin government:

If the Moscow-inspired Polish Lublin government is allowed to rule Poland, it is finis Poloniae.

Yes; the end of the great and free Republic of Poland.

And perhaps never in the world's history would there be a more shameful travesty on justice.

Poland, the first nation to fight the Nazi hordes unleashed by Hitler and the nation which suffered the most in this war and which witnessed most of her children, men, and women killed and massacred by the Nazis, will be a serf after this war—if the Russian sphere of influence is allowed to rule over the democracy-loving Poles.

Poland, the cradle of Slavic Catholicity; the home of Paderewski, Kosciuszko, and Pulaski and Sienkiewicz and Curie-Sklodowska, cannot and must not be allowed to be communized by Soviet Russia.

And Poland will be communized if the Stalin-Lublin government is allowed to continue in power.

Let us consider the plight of Poland.

Poland was vigorously anticommunistic and greatly in fear of Russia before the war.

Now Poland, although allied with Russia against Germany, is in greater fear of Russia than ever before. It will be Russia, not Germany, which will occupy Poland at the end of the war and decide the permanent fate of Poland.

Russia has started in taking over Poland with the Lublin government.

LONG-TIME REDS IN CONTROL

Examine the members of the Moscow-made Lublin government, who formerly acted as members of the Comintern.

The new so-called propaganda minister of the Lublin government is Stefan Matuszewski, a Communist agent even before the Soviet revolution of 1917.

Stefan Jedrychowski, member of the Supreme Soviet in Moscow for the Vilna district, has been sent as the Lublin government's representative to Paris.

Foreign Minister Osubka-Morawski and Vice Premier Gomolka are also well-known Communist leaders. They were trained in Soviet Russia.

The people of Poland will detest these leaders and the reforms they will bring.

First, they will institute all the elements of Soviet totalitarianism. Then the N. K. V. D., Russian secret police, will start harassing the Polish patriots, and hundreds of thousands of them will be deported to Siberia and other parts of Russia. Thousands of them will be executed by the Soviet police in reprisals.

Furthermore, Poland will be forced to face a hopeless economic situation—as offered by the Lublin Soviet team.

There will be a great shortage of food, medicaments and clothing, especially in view of the fact that the help of U. N. R. R. A. is barred in Poland by the Soviets.

The viewpoint of the Polish people was evidenced when Stanislaw Mikolajczyk's influential Polish Peasant Party recently denounced the Polish Lublin government as a threat to Allied unity and a "usurper of privileges and functions" belonging to a recognized authority.

APPEALS TO UNITED STATES FOR JUSTICE

The only and real solution of the Polish situation is the recognition of the constitutionally established Polish Government in exile and to give the people of Poland an opportunity to pick its ruler at a free election without the coercion of Soviet Russia and the Lublin team.

The controversies which have arisen between the Soviet Union and the people of Poland and the other democratic countries should not be settled by force, unilateral decisions, or political coercion.

One of the principal aims of this war is to establish an international organization before which just disputes can be settled according to international moral principles.

Americans, as the torchbearers of liberty, cannot support any policy which, in the Russian interpretation, would encourage the Soviet Union to seize land and men it does not need.

Even the flimsy pretext that Russia is forced to absorb her neighboring countries in order to insure herself against future German aggression does not hold in view of the fact that all the United Nations at the end of this war will make Germany impotent militarily.

FEARS LOSS OF LIBERTIES

As Americans we plead not only for the righteous cause of our devoted ally, Poland, but also for Lithuania, Latvia, Estonia, the Balkan countries, and all the other small nations who are being deprived by a strong neighbor of the right to choose their own governments and fashion their own destinies.

The bogus governments imposed upon these nations by Russia is only a scheme to rob the people of their liberties and of their territories. If Russia refuses to grant basic liberties to her own people, how can she

be expected to carry the banner of freedom to the countries occupied by her on her march to Berlin?

We do not in any way belittle the Russian victories, but at the same time our American instinct for justice and equity cannot permit us to sanction the division of Europe into masters and slaves.

If we permit tyranny to triumph over justice in Europe we will prepare with our own hands the graves of our children. Any retreat from our war objectives outlined in the Atlantic Charter would be a death blow to the peace of the world.

For a free America here there must be a free Europe abroad.

What Henry Wallace Will Destroy

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. MICHENER. Mr. Speaker, the Detroit Free Press is an independent newspaper and has one of the largest circulations in the State of Michigan. The publisher is John S. Knight, who is president of the American Society of Newspaper Editors. Pursuant to permission granted to me, I am including in these remarks a logical editorial from the Free Press, which is as follows:

WHAT HENRY WALLACE WILL DESTROY—FAITH, HOPE, CONFIDENCE, FOUNDATIONS OF BUSINESS

Henry Wallace has been careening around this country for years denouncing American business as Fascist.

So President Roosevelt puts him in complete charge of American business.

Mr. Roosevelt in his last campaign said—again and again and again: "I believe in free enterprise, I believe in the profit system, I believe that private enterprise can give full employment to our people."

So he places in charge of American business a man who has missed no opportunity to express his hatred for American businessmen.

It would be difficult to imagine any man in all the United States who is as thoroughly distrusted and disliked by American business—big and little—as Henry Wallace.

From the very beginning of the New Deal he has never ceased to infuriate men in all classes of business activity by his highly emotional accusations.

Typical of his attitude was his charge, made in Cleveland last summer, that "American business had to be dragged into war production by the scruff of the neck."

Now, the most obvious fact in economics is that business only thrives when there is faith and confidence.

People do not put money into investments they do not believe in.

No businessman, whether he is running a corner peanut stand or a giant corporation, ever plans expansion unless he has confidence in the future.

Business can only grow on faith. Business can only thrive on confidence. Business can only exist on the hope of future profits.

Yet Mr. Roosevelt places in almost dictatorial charge of all commerce and industry a man in whom businessmen of all types have no faith and no confidence.

Far worse, they have for him a violent emotional hate which is a normal reaction from his own violent emotional antagonism toward them.

It is as simple as this: If the owner of a baseball club picked as the manager the man on the team thoroughly hated and trusted by the other players he could hardly expect a championship ball club.

Yet Mr. Roosevelt says that he will place Henry Wallace in complete charge of the planned production and employment Budget, to provide 60,000,000 jobs, now before Congress, and which is proclaimed by its sponsors as in keeping with "the free, competitive enterprise system."

American businessmen know—and it should be brought out into the light of this Senate investigation so that all Americans will understand—that Henry Wallace is a mystic who consults soothsayers, crystal gazers, and Yogis.

That is his own business in his private life. For all we know, or anybody else can tell, it may be a sound philosophy. But hard-headed American businessmen do not think so. To keep in business and to make a profit they have to stick to the simple arithmetic of earth-born knowledge.

Therefore they have no faith in Henry Wallace.

President Roosevelt could not have planned it better if he had deliberately sought to destroy the chances for American post-war recovery.

It was the free and uninhibited spirit of America which, when Pearl Harbor was attacked, made possible the miracle of production which saved the human race from the slavery of nazi-ism.

It is this free and uninhibited spirit, born of faith and confidence and hope, which alone can carry America to the heights of post-war production and bring back to this Nation a greater and cleaner prosperity.

To Henry Wallace this doctrine is anathema.

First he contends that it was not free enterprise at all which brought American management into the war. Patriotism had nothing to do with it. American business was dragged into production "by the scruff of the neck." Who did the dragging? Why, the Government! The miracle of production was brought about by coercion.

American engineers, American designers, American production wizards, had to be whipped to their tasks as slaves. It was not the majesty of their imaginations, their dreams of America, their hopes for mankind. They did not accept the challenge at all. Roosevelt did and dragged them "by the scruff of the neck" to give vent to their inventive genius.

On November 8, 1942, Henry Wallace addressed a gathering of the American-Soviet Friendship at Madison Square Garden.

He proclaimed there a new type of democracy far removed from that of Jefferson and Lincoln.

He proclaimed then that the American economic system would have to become more and more like that of the Russian Communist state, while the Russian Soviets would become politically more and more like the United States.

"These various kinds of democracy," he declared, "must be woven together into a harmonious whole. * * * We have overemphasized what might be called political or bill-of-rights democracy. * * * Russia, perceiving some of the abuses of excessive political democracy, has placed strong emphasis on economic democracy. * * * Somewhere there is a practical balance between economic and political democracy. Russia and the United States both have been working toward the practical middle ground."

Thus the mystically minded gentleman attempts to mix oil and water.

He thinks there can be a blend between totalitarianism and human freedom.

He contends that Soviet Russia has established "economic democracy."

No labor unions are allowed in Russia and any man who dares suggest such a thing is shot without further ado.

The state is absolute.

You work where you are told to work for any number of hours and for what pay the state determines.

That, Mr. Wallace declared on November 8, 1942, was "economic democracy."

Yet, for sake of argument, let us say he is right.

Let us say that he has learned truths deeper than it has been given mortal eye to see, through his Yogi contacts.

Let us say that he is preeminent and alone qualified to fit the tasks that lie ahead.

The point is that American business does not think so.

American business distrusts and hates him.

American business cannot carry to its tasks the faith and confidence and hope which alone can bring about prosperity and supply 60,000,000 jobs under a free enterprise system.

Mr. Wallace is proclaiming himself fit for the job says that he will be the champion of little business.

It is little business that distrusts him most.

Big business, the heads of giant corporations, can afford to be philosophical. They have so many millions they can weather any storms.

But little business cannot. It's the little fellow, just fighting his way up to his place in the sun, who is conservative and fearful. Big business can stand the loss of millions, the little fellow cannot stand the loss of dollars.

It is the little fellow who must have this faith and confidence and hope.

And upon him, collectively, depends the whole prosperity of the United States.

Collectively he is far bigger than any big business.

Our future depends upon his expansion.

But he will not risk expansion with the dead hand of bureaucracy upon his shoulder or the mad hand of mysticism leading him up dark alleys to see some Yogi.

The United States Senate has before it a grave and desperate responsibility.

The appointment of Henry Wallace should be rejected or his office should be shorn of its vast power to do great harm.

The Wallace Appointment

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Watertown Daily Times of Watertown, N. Y.:

DEFEAT FOR MR. WALLACE

The Senate Commerce Committee spoke out sharply yesterday on the Jones-Wallace case. In two separate votes the committee voted 14 to 5 against President Roosevelt's nomination of former Vice President Wallace as Secretary of Commerce. Shortly after the members approved by a 15 to 4 vote the George bill to separate from the Commerce Department the vast lending agencies which have been attached to it under Secretary Jesse Jones' administration.

The feeling of the committee and the feeling of Washington as a whole is strong in this matter. Senator JOSIAH BAILEY of North Carolina, chairman of the Commerce Committee, expressed it well when he said in a statement following the voting that the lending powers and the financial authority in this country today and after the war must be kept in experienced hands. His statement was far more accurate than that of Secretary of the Treasury Morgenthau who referred to Mr. Wallace as a "Yankee businessman with the horse sense to recognize that we are living in a world of change."

The people of the country have followed this debate over Secretary Jones and Mr. Wallace with deep interest. It is the old story of an informed people not being fooled. The Times has received a number of letters from readers and the rank and file praise Secretary Jones' broad experience and understanding. They have confidence in Jesse Jones. They are apprehensive about the spend-and-prosper philosophy of which Mr. Wallace is a leading exponent. They know that after the war we must return to jobs through industry and broadening business activity and not through the creation of a vast public-works program. Government spending may be necessary, but there is a broad desire on the part of our people to curb deficits and to build firmly and strongly for the future.

Washington writers are saying now that Mr. Wallace may not now receive confirmation as Secretary of Commerce when the Senate as a whole considers the matter next week. The refusal of the Commerce Committee to approve the nomination will be a powerful obstacle. It seems certain that the Senate is ready to separate the lending agencies from the Commerce Department. Mr. Wallace himself weakened his position and showed his hand plainly when he admitted to the committee in Thursday's hearings that he would accept the secretaryship without authority over the lending agencies.

In behalf of sound Government and economic stability in the post-war years, Mr. Wallace should be turned down by the Senate. Secretary Jesse Jones is too valuable an official to be cast aside at this important time to pay a political debt.

The IV-F and Nurse Draft Bills

EXTENSION OF REMARKS

OF

HON. HARVE TIBBOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. TIBBOTT. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial from the Johnstown Tribune, Johnstown, Pa.:

THE IV-F AND NURSE DRAFT BILLS

In the House hearings on the May-Bailey bill the Army and Navy had to explain why they did not already enjoy the powers bestowed by the bill. Under the measure, draft registrants classified as IV-F or deferred because of essential occupation would be reclassified as I-A if they did not take essential war jobs or if they left such jobs without the consent of their draft boards. If these registrants still refused to take or to stick to war jobs, they would be formed into a kind of labor battalion under Army control but would not receive certain advantages, such as discharge pay and the benefits of the G. I. bill of rights.

Some Members of Congress want to know of the Army: "Can't you do all this, anyhow, without new legislation? Can't you already induct any draft registrant you want, even if he isn't adapted to combatant service? Haven't soldiers already been released from military duty to take emergency civilian tasks?"

It is true that last year some 7,000 soldiers were allowed to take jobs in tire, cotton-duck, and foundry and munitions plants. Some of these were released on temporary furloughs to meet a temporary emergency. The difficulty here, the Army points out, was that such men had to get not only the standard wages in the industries into which they went but also at the same time the regular Army pay and allowances, since they were only on furlough.

No question is raised as to the constitutionality of the May-Bailey bill. There is, however, doubt as to the constitutionality of the proposed measure to draft registered nurses, even though the Justice Department has given assurances on the constitutional angle. It holds that the obligation of military service is one which all citizens owe the State.

Others hold that this ruling applies to conscription applied universally to all of one sex and within age limits, with certain individuals released who do not qualify. It may be something else again to pick out one group of women in one calling as subject to conscription while women as a whole are not so subject. For example, joining of the WAC's, WAVES, SPARS, and other women's auxiliary organizations is on a voluntary basis, and if nurses are to be put under conscription, why not the others?

The bills referred to, it appears to us, are weak substitutes for universal service. The one advantage would be that they could be passed quickly to meet a pressing emergency, while universal service legislation in all probability will be held up in Congress by lengthy debate Emphasis just now is on speed in meeting the pressing needs confronting our armed services.

Rent Control Before Columbus Discovered America

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following article entitled "Rent Control Before Columbus Discovered America—Stringent Regulation 500 Years Ago," which appeared in the November 1944 issue of the Rent Control Bulletin, Washington, D. C.:

That history repeats itself is again proven by the rent-control program. According to the October 28, 1944, issue of America, the national Catholic weekly, there seems to be nothing very new about our present rent regulations or the practices of landlords and tenants. Evictions for self-occupancy, holding accommodations vacant for higher rents, tenant complaints, refunds to the Treasury—all these have a precedent.

Following are excerpts from the article by Edward D. Kleinlerer, The Popes and Rent Control, to which several of our rent directors called attention:

"It will be of interest to recall, particularly at the present juncture of Rome's history, some of the many documents, edicts, and decrees issued by the Holy See for the protection of the citizens of Rome against rent speculation.

"An edict issued by Pope Paul II as far back as October 26, 1470, was aimed at preventing arbitrary removal of tenants by greedy landlords. 'No tenant can be removed from his lodging,' states the edict, 'unless the landlord wishes to occupy the same for himself; and then only after adequate assurance has been given that he will occupy it for 1 year at least; or in case the tenant be asked at the proper time, refuses to pay rent.'

"On October 11, 1510, Julius XII added further restrictions to the protective measures taken by his predecessor, and this, as he expressly stated, 'for the tenants' greater satisfaction and for the sake of avoiding controversies and disputes.'

"The Roman landlords and innkeepers were, however, most ingenious in finding means and devices to circumvent papal dispositions. This can be gaged from the fact that only 4 years after the edict of Pope Julius XIII, Leo X, on June 21, 1513, found it necessary to recall and confirm it. The Holy See was determined to prevent the disgraceful spectacle of Roman porticoes and church steps transformed into dormitories, crowded with homeless Romans and pilgrims.

"On April 29, 1549, Paul III issued a decree entitled 'In favorem inquillinorum et subinquillinorum Urbis' (in favor of tenants and subtenants in Rome), prohibiting increases of rent during the coming holy or jubilee year, or removal of tenants under the pretext of the necessity of putting the house to the landlords' own use. 'Now and in the future,' we read in that decree, whose title indicates the papal intention, 'landlords will not be permitted, during the anno santo (jubilee year) to increase the rent paid by a tenant or to modify the terms of its payment.' Referring to previous decrees, Paul III stipulated that, should a landlord remove a tenant using the false pretext of needing the house for his own use, he would be liable to a fine amounting to a year's rent. Half of the fine would go to the removed tenant, half to the Vatican's treasury. Gregory XIII, on February 20, 1573, added new measures against the practice of arbitrary removal of tenants. Evidently many of these measures must have fallen short of their goal, as Roman chroniclers tell us of incessant complaints of pilgrims and citizens against abuses of innkeepers and landlords. The complaints of Roman citizenry against landlords keeping apartments and lodgings vacant in the hope of getting higher rents induced Lorenzo Pizzatti, papal chamberlain to the Court of Alexander III, to present to the pontiff a series of suggestions aimed at checking this new form of speculation. He recommended, in fact, that those landlords who keep their apartments vacant over a period of 3 months should not be allowed to increase the rent.

"This constant care of the Vatican to curb speculation on housing, one of man's most elementary needs, continued till the last years of the temporal rule of the popes. It found its expression in the motu proprio of Pius VII of March 19, 1801; in the edict of Pope Leo XII, of September 20, 1824; in the orders given by Cardinal Della Somaglia, papal secretary of the state, on May 8, 1826, to extend for a period of 3 years all measures taken for the occasion of the anno santo, 1825. Moreover, Cardinal Della Somaglia made it known that whoever would, during that 3 years' period, build new houses, dwellings, stores (botteghe), or add new structures to the existing ones, would be exempted from taxes until the end of the nineteenth century. He went even further by promising that taxes already paid on materials used for new buildings would be reimbursed."

Aviation Research and Development

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. ANDERSON of California. Mr. Speaker, in order to call the attention of the Congress to the important subject of aviation research and development, I am including with my remarks the following statement which the National Advisory Committee for Aeronautics recently prepared for presentation to the House Select Committee on Post-War Military Policy.

Many of the improvements now incorporated in our military airplanes are the direct results of the very fine type of research work that is done by the N. A. C. A. I am sure that Members of the House and Senate will be interested in reading the following statement:

AERONAUTICAL RESEARCH POLICY

PREAMBLE

1. Experience since the establishment of the National Advisory Committee for Aeronautics by the Congress in 1915 has shown that the value of the airplane for national defense and for commerce has directly followed the evolution of an advancing technology based on research. Research made rapid strides as more facilities were provided for the N. A. C. A. The Army and Navy developed military applications of N. A. C. A. research results with the aid of their increased facilities for testing and evaluation. The manufacturing industry, by the exercise of great initiative and technical competence, created superior airplanes of both military and civil types to meet ever-increasing performance requirements.

2. The effects of accelerated enemy research and development in preparation for war helped to create an opportunity for aggression which was promptly exploited. This lesson is the most expensive we ever had to learn. We must make certain that we do not forget it.

3. During the war, the N. A. C. A. has greatly expanded its research facilities at Langley Field, Moffett Field, and Cleveland, while the Army and Navy have correspondingly increased their facilities for experiment and evaluation. Furthermore, the airplane industry has been able to provide extensive development facilities of its own. As a result, American airplanes are today superior in most respects.

4. This lead may or may not be continued in the post-war period, depending on whether the present facilities in the country are used to full effect to advance the science and the technology of aeronautics. Results already obtained make it apparent that there are further opportunities for substantial improvement in the performance of aircraft and equipment which can be realized only by a vigorous research program.

NECESSITY FOR RESEARCH

5. It is possible to assume that the United Nations will, by repressive measures, eliminate hostile competition in the air. Nevertheless, it is essential so to continue research as to assure American leadership in military aviation development. It is moreover certain that between the United Nations vigorous commercial competition will take place. In fact, we already are informed of extremely ambitious plans to surpass present American research equipment, obviously in a desire to excel in the air.

6. The committee believes it to be in the public interest to foster a greatly increased civil use of the airplane, for domestic and international airlines and for private operation. A vigorous civil aviation can affect favorably our domestic and international relations, both economic and cultural. At the same time it will contribute to national security by the support of a reserve of airplanes, operating and manufacturing facilities, and civilians trained in the skills which are critical in time of war.

7. The rate of growth of civil aviation will depend on the rate at which improvements in safety, performance, reliability, utility, and economy can be realized. However, to realize such improvements, research must solve some difficult problems associated with operations over extended ranges of distance and altitude, aggravated by the extension of airlines over areas of unusual weather and terrain.

8. Some of the results of war research can be applied by the manufacturing industry directly to new designs of civil airplanes. In many cases, however, practical applications have yet to be discovered and require further research directed toward the solution of specific problems. Neither the airlines nor the manufacturers can be expected to solve these problems quickly without the assistance of intensive research and development.

9. The N. A. C. A. should, therefore, endeavor to direct an increasing proportion of its research effort to the technical problems of civil aviation with a view to their practical solution.

10. Experience clearly indicates that in time of peace the application of research results to military and naval objectives is extremely important. Possible military applications must be expored by continuous experiment and testing by professional soldiers and sailors as a life work, and the products of industry must be evaluated by the military users. Such exploration and evaluation requires the full use of the facilities now available to the Army and Navy.

11. The public interest requires that effective use be made of all existing facilities for research, development, and evaluation, and that they be kept modernized. The results of research conducted at public expense should be made available to manufacturers and operators in such a manner as to stimulate the growth of healthy competition in the supply of goods and services.

POLICY

12. It is recommended that the Army Air Forces, the Bureau of Aeronautics of the Navy Department, the Civil Aeronautics Board, and the Civil Aeronautics Administration of the Department of Commerce, and the N. A. C. A. follow, insofar as may be practicable, the following general policy considerations in the post-war utilization of research, development, and testing facilities of the Government.

A. Fundamental research in the aeronautical sciences is the principal objective of the N. A. C. A. Such research is directed toward the solution of the problems of flight and results are promptly published. In exceptional cases research results of potential military importance may be withheld from publication.

B. Research of the N. A. C. A. is not considered completed until results are tested by sufficient practical application. In general, N. A. C. A. research will not include the development of specific aircraft or equipment.

C. Research programs of the N. A. C. A. are formulated in close collaboration with technical personnel from the Government agencies concerned and from industry, through membership on appropriate subcommittees. Members of all technical subcommittees of N. A. C. A. are appointed as individuals especially qualified in their particular fields.

D. The research facilities of the N. A. C. A. may be used to assist a Government agency in evaluation of specific aircraft and equipment, whenever facilities available to that agency are inadequate.

E. The research facilities of the N. A. C. A. may be used to assist private individuals and corporations whenever commercial facilities are not available; provided that, the investigation is considered by the N. A. C. A. to be in the public interest; and provided further, that the cost be met by the individual or corporation requesting assistance.

F. Application of research results to the design of improved aircraft and equipment, both civil and military, is the function of the industry, assisted as may be necessary by contracts for experimental articles, placed in a manner to stimulate competition for quality. It is recognized that the encouragement of competitive engineering organizations is essential.

G. The evaluation of military aircraft and equipment developed by the industry, and the exploration of possible military applications of research results are considered to be the function of the Army and Navy.

H. Expedition of the practical use in civil aeronautics of newly developed aircraft and equipment, insofar as Government assistance may be necessary, is considered to be the function of the Civil Aeronautics Administration.

I. The N. A. C. A. normally will use its own research facilities, but will contract with university or other private research organizations for work in special fields where outside facilities and competence are to be found. Likewise, the facilities and competence of the National Bureau of Standards, Forest Products Laboratory, and other Government research centers will be used by the N. A. C. A. whenever practicable.

J. Unnecessary duplication of facilities and effort will be avoided by adherence to the principles stated above, but for important problems whose practical solution appears to be especially difficult, parallel attack by several independent research teams is necessary. In such case, N. A. C. A. laboratories, industry designers, Army, Navy, and commerce groups and individual scientists and inventors may work on various aspects of the same basic problem. Such parallel attack must be coordinated, and it is the policy of the N. A. C. A. to achieve such coordination through the medium of subcommittees of experts representing all concerned.

Analysis of May-Bailey Bill, H. R. 1752

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. HOOK. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following analysis of H. R. 1752, the May-Bailey bill:

Section 1, paragraph 1: The Selective Service Training Act of 1940 was enacted to provide a democratic method of inducting men into the armed forces. The local Selective Service Boards are not equipped to deal with the recruitment of manpower for war production. Furthermore, the basic principle of granting to the Selective Service System the power

to draft men for work in war plants or on the farms is fundamentally opposed to the entire American tradition of freedom of contract. Whatever problems may exist with respect to war production or mobilization of manpower should be solved by the agencies created for such purpose and with experience in these fields.

No provision is made for appeal from decision by the Selective Service System to draft men for industrial or agricultural war work until the registrant is inducted. The present appeals machinery of the Selective Service System cannot possibly make a fair determination of whether or not local Selective Service boards have acted wisely in ordering an unqualified man to take a war job.

Section 1, paragraph 2: The registrant is forbidden to leave his war job unless his local selective service board has determined that "it is in the best interest of the war effort" for him to leave his job. The worker is thus frozen to a job under a private employer regardless of the wages, hours, working conditions and other terms of employment which may prevail under such employer. The local selective service board, because of reasons given above, cannot possibly determine whether or not it is in the best interest of the war effort for a worker to leave a farm or a war job. The War Manpower Commission with its local labor-management committees and farm committees now has the power to prevent workers from leaving essential war jobs. It may be necessary to strengthen the present powers of the War Manpower Commission, but there is no need to transfer this power to an agency completely unequipped for doing the job.

There is no provision whatsoever for appeal from arbitrary determination by a local selective-service board that a worker should not leave his present war job, in spite of adverse working conditions and terms of employment. Workers will not regard private employers, whom they are drafted to serve, as having any resemblance to Uncle Sam whom they have served willingly in the armed forces.

Section 1, paragraph 3: The Director of War Mobilization is given the power to certify to the Director of Selective Service plants, facilities, and farms which are in need of manpower and which have not been able to obtain sufficient manpower through voluntary recruiting. It is provided that the Director of War Mobilization shall "consult with the appropriate representatives of labor, management, agriculture, and government." Such consultation however is not mandatory and obviously would be entirely ineffective in providing a means of cooperation of labor, management, and agriculture with government.

Section 1, paragraph 4: The Director of Selective Service (which means, of course, local selective boards) is given the power to designate the categories of registrants whom he deems can transfer to war work with the least disruption to civilian economy. There has already been considerable confusion caused by the indecision of the Director of Selective Service with regard to occupational deferment. The above provision merely enlarges the present power of the Director of Selective Service to designate categories of workers whom he believes are not necessary to the functioning of the civilian economy.

Section 1, paragraph 5: The Director of War Mobilization is given discretionary power to assign to local selective-service boards in an advisory capacity representatives of other Government agencies. This provision clearly recognizes the inadequacy and lack of experience of local selective-service boards in war production and manpower problems. It is wholly ineffective, however, because it reduces the power of Government production and manpower agencies to a purely advisory role.

Section 2, paragraph (j): President Roosevelt in calling for national-service legislation stated that seniority rights and wage levels would be protected. Paragraph 2 of section 2 extends seniority right protection now accorded under the G. I. bill of rights but makes no provision whatsoever for protection of wage levels in the event of transfer to a war job. Furthermore, protection of seniority under the G. I. bill has not proven sufficiently strong.

There is no provision in the bill making it illegal for employers to refuse to accept assignments of manpower on the basis of race, creed, color, or national origin.

Although men between the ages of 18 and 45 are to be drafted to work under private employers without adequate protection of wages and working conditions, there is no provision whatsoever for the drafting of industrial facilities and capital. The bill is thus inequitable and ineffective. It is only through the proper coordination of the procurement agencies, W. P. B. and W. M. C. with their already existing labor-management-farm committees that we can get the right man in the right place at the right time.

The Task Remaining Before Us—As Maj. Gen. Lewis B. Hershey, Director of Selective Service, Proclaimed to the American People on Last December 11

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. GRANT of Indiana. Mr. Speaker, in connection with the debate on the pending limited national service bill, it is interesting to reread a speech delivered December 11, 1944, by General Hershey, Director of Selective Service.

The text of that speech, marked "cleared and issued through the facilities of the Office of War Information," follows:

It is a real pleasure to visit the city of Cleveland again and to meet with you here tonight.

Last Friday, December 8, marked the third anniversary of our entrance into this world conflict. Many of you in this audience were at that time deeply involved in selective-service operations in one capacity or another. Others of you have volunteered your services since then. All of you who have served so faithfully have earned the Nation's gratitude.

As we enter the fourth year of the war the major task of manpower procurement is well along the way with nearly 12,000,000 men in the armed forces. Today much attention is being given to the plans and preparations for caring for the returning veteran. I am familiar with your plans in Ohio, and I am happy to learn of the progress that has been made in organizing your State and this very locality for the tremendous undertaking.

Your State director of selective service, Colonel Goble, has done an excellent job of organization. He in turn tells me that the success is due to the very able local leaders, who have quickly recognized the problem, and have coordinated all efforts in organizing a program that embodies the cooperation of all agencies and groups interested in the welfare of the returning veteran.

I am deeply interested in the success of this program. I am naturally interested in seeing that Selective Service assumes its full share of the responsibility, for I have every confidence in the ability of the Selective Service System to accomplish its part of the task.

This confidence is not wishful thinking. It is based upon past performance—a record that is worthy of recounting to you at this time.

September of this year 1944 brought the fourth anniversary of the passage by the Congress of the United States of the Selective Training and Service Act. America was at peace on September 16, 1940, when alert Members of Congress, conscious of a troubled world, passed the first peacetime conscription bill in the history of the Nation. This bill called for selecting not to exceed 900,000 men yearly for training and service in the armed forces. Time has proved the wisdom of this legislation, though, at the time, it faced strong opposition.

The Selective Training and Service Act of 1940 provided great responsibilities for the Selective Service System. First was the basic responsibility of selecting the required manpower for the armed forces and making that manpower available for induction as called for by the Army and Navy. Physical, mental, and age standards were laid down by the armed forces. The law delegated to the President the power to issue regulations which would govern the granting of deferments. The task of selecting the men from the Nation's supply of manpower was placed primarily upon the shoulders of the local boards.

A second responsibility charged to the Selective Service System was that of accomplishing this selection of men for the armed forces with the least possible disruption to essential industry and agriculture.

Now, after more than 4 years of operation of the Selective Service System, of which over 3 years were while the Nation has been at war, it is well that we look at the record—that we appraise the work of the 6,443 selective service local boards and their two basic responsibilities.

The Army has reached its authorized strength, and the Navy is proceeding to its authorized strength on schedule. Manpower of the type, age, and qualifications required is available not only to complete the needs of the Navy but also to provide the replacements needed for both the Army and the Navy. Responsibility No. 1 has been accomplished with remarkable success by the local boards, aided by all other components of the Selective Service System.

For proof that responsibility No. 2 also has been accomplished one needs only to look

at production records. Essential industry and agriculture could not have accomplished their outstanding production records had selective service not understood their needs and cooperated in deferring necessary men. Labor and management in industry and the farmers in their fields are to be highly congratulated for their tireless efforts, their loyal endeavor. Millions of young men have been deferred by selective-service local boards and appeal boards in order that essential industry and agriculture might continue their operations unhampered. American war production of munitions and supplies has astounded the world. Agriculture has accomplished its fourth straight record-breaking year. Those are records that speak for themselves in certifying and substantiating the accomplishment of the second responsibility of selective service.

It would be ungrateful for me not to express at this time the appreciation we all have for the tireless efforts of the local and appeal board members and of all the other persons who are a part of the Selective Service System and who have given so generously and loyally of their time and energy. The Nation must never forget the patriotism of these persons and their magnificent contribution toward the winning of the war.

I should like to be able to promise some relaxation to the uncompensated members who have made selective service possible and have contributed so greatly toward its success. But there is yet a war to win and a peace to be made—there is yet remaining the great task of bringing the men now in service home again and fitting them back into their civilian pursuits. We in selective service have not only a responsibility but an obligation to see this job through to a successful completion.

We may say that selective service has passed a milestone with the accomplishment of these two directed responsibilities. Though mobilization has been decreasing in momentum and scope, there is at this time a gradual increasing of demobilization activity. Today we must describe our status as one of mobilization-demobilization—two distinct activities though closely related and simultaneously in operation. In each activity selective service has been given a tremendous responsibility.

Casualties in the armed forces are unfortunately occurring and men are being discharged from the services daily. They must be replaced. This requires that the normal procurement work of selective service continue. A constant supply of new manpower must be made available for the armed forces. Calls may increase or decrease as the needs vary. As the procurement agency, we must remain organized and ready to fill these monthly calls for men.

This mobilization-demobilization movement, which has in fact existed since the beginning of our operation is today in an almost balanced position. With the progress of the war toward victory we shall find the demobilization factor eventually reaching the major proportion.

Several months ago the Army announced its partial demobilization plan to be placed into effect following the defeat of Germany and prior to the defeat of Japan. The plan was well received, it was prepared with the cooperation and approval of the men in service. It contemplates the continued selection of men by selective service.

The demobilization occurring today, though not large in any sense, provides a sample of the task to come. Approximately 50,000 men are presently being separated to civil life from the armed forces each month. Over half of these are by reason of disability. Today the need for men in both industry and agriculture is great and job opportunities are plentiful. These conditions simplify the work for those engaged in returning the veteran to civilian livelihood. As time progresses, however, we may expect increased activity and the introduction of new complications.

It therefore becomes imperative that we in selective service turn our attention to this great job of demobilization and the part we must take in connection with the veteran who is homeward bound. In section 8 (g) of the Selective Training and Service Act, Congress provided that the Director of Selective Service shall establish a division with adequate facilities to render aid in the replacement in their former positions of or in securing positions for those who return from our victorious armed forces. In compliance with this direction of Congress there has been established in the Selective Service National Headquarters a Veterans' Personnel Division.

The Congress, in the Servicemen's Readjustment Act of 1944, the G. I. bill of rights as it is more commonly referred to, created a Veterans Placement Service Board naming the Director of Selective Service as a member. Other members are the Administrator of Veterans' Affairs, who is the Chairman, and the Chairman of the War Manpower Commission. In this act, the Congress declared its intent that there should be an effective job counseling and employment placement service for veterans so as to provide them with a maximum of job opportunity in the field of gainful employment.

Within the recently established Office of War Mobilization and Reconversion was placed the Retraining and Reemployment Administration, which was established to have general supervision and direction of the activities of all existing executive agencies (except the Veterans Administration) relating to retraining, reemployment, vocational education, and vocational rehabilitation. This was done in an effort to coordinate these activities and avoid overlapping functions of such agencies. Selective service also has membership representation on the advisory council of the Retraining and Reemployment Administration.

Congress well recognized the magnitude of the problem when it legislated on the subject and it wisely named existing agencies to play an active part. Besides selective service, other governmental agencies concerned with the reemployment problem include the Veterans Administration, the United States Employment Service, the War Food Administration, the Railroad Retirement Board, and the Civil Service Commission. This tremendous job will be great enough for the fullest use of all of these agencies. Through their coordinated efforts—and the assistance of each and every one of our citizens back home—there is every reason for confidence that our efforts will meet with success.

Congress recognized the employment problem as having two parts: (1) The veteran who wants his old job back, and (2) the veteran who never had a job, who does not want the one he did have, or whose job has disappeared since he went away.

The Selective Service System has been given a responsibility in both fields.

The initial responsibility, that of giving aid to restore veterans to their former positions, has been accepted in full by the Selective Service System. In carrying out the second part, that of obtaining new positions for the veterans, the services of the aforementioned agencies of Government are being utilized.

As for the veteran who wants his old job back, the law provided that he is entitled to reinstatement in his former position or in one of like seniority, status, and pay, provided (1) such a position was in the employ of a private employer, the United States Government, its territories or possessions, or the District of Columbia; (2) such position was not a temporary one; (3) he left the position subsequent to May 1, 1940, to enter upon active military or naval service in the land or naval forces of the United States; (4) he satisfactorily completed his period of training and service and received a certificate to that effect; (5) he is still qualified to perform the duties of such position; (6) he makes application for reemployment within 40 days after he is relieved from service; and (7) if such a position is in the employ of a private employer, the employer's circumstances have not so changed as to make it impossible or unreasonable to reinstate the veteran to such position or to a position of like seniority, status, and pay.

Other measures are provided by law to protect the veteran after he has been restored to his old job. When he goes back onto the pay roll, the law provides that (1) he shall be considered as having been on furlough or leave of absence during his period of service; (2) he shall be restored without loss of seniority; (3) he shall be entitled to participate in insurance or other benefits offered by the employer pursuant to established rules and practices relating to employees on leave of absence or furlough in effect with the employer at the time such person entered military or naval service; and (4) he shall not be discharged from such position without cause for 1 year after restoration.

To carry these provisions into effect the Selective Service System established in its national headquarters a veterans' personnel division, which will provide for the operation of the reemployment phase of the problem nationally.

In each state, the State director of selective service is organizing and supervising the program. The selective service local boards, 6,443 of them located throughout the Nation, of whose records we are so proud, are carrying it into effect in line with the decentralized operation of the entire Selective Service System.

To follow the case of an individual veteran who is being discharged, this is how the program works:

First, under the Army's demobilization program, the veteran is sent to an Army separation center geographically located near his home. He will be informed there of his rights and privileges as a veteran.

Before separation from the service, he will be instructed to report within 10 days to his selective service local board. If he had not registered with a local board before entering the service, he is required by law now to register. However, he may call upon any local board for aid in getting his old job back, or in finding a new one.

The reemployment committeemen attached to each local board will also assist the veteran in obtaining reinstatement in his former job or may refer him to the proper agency for aid in obtaining a new one. These public-spirited citizens who have knowledge of the veteran's abilities, an appreciation of the employment situation within their own local communities, and who are personally acquainted with many of the employers, understand employment problems and job possibilities. Both local board members and the reemployment committeemen will be available to aid the veteran. Both are peculiarly well fitted for the task.

It is not anticipated that every veteran will need assistance. It is to be hoped, and is confidently expected, that many of our returning servicemen will be accepted at once, and without question, back into their old jobs.

But we do appreciate that some misunderstandings may arise between the returned veteran and his former employer concerning reinstatement. The circumstances of both necessarily will have changed during the intervening years, and in some cases these changes will have been drastic. Whether such changes are sufficient to deprive a veteran of the rights which the Congress meant to confer must, of necessity, depend upon the facts in each case.

It is anticipated that employers will meet the problem in a spirit of fair play; that they will appreciate fully the sacrifices made by the veteran, and will not take advantage of a technicality in an attempt to evade responsibility to the veteran.

If a misunderstanding arises, the local board or its reemployment committeemen will make every effort, through personal contact, to reach an agreement mutually satisfactory to the employer and the veteran. This must be done without sacrificing any of the veteran's rights which Congress intended him to have. In endeavoring to avoid misunderstandings, local boards will have numerous agencies upon which to call for assistance, such as veterans' organizations, labor, civic, community, or post-war planning groups, veterans' service committees, and others, many of which are represented here tonight.

Certainly, everything will be done to reinstate the veterans by amicable means. If all of these are exhausted without success, then it obviously will be necessary to resort to legal procedure as provided in the law.

You who are cooperating in this work, both from selective service and from other agencies, can be counted upon, I know, to give your wholehearted and sympathetic consideration to each case and to use your best ability to properly relocate the veteran back again in the community.

While demobilization is today progressing at a relatively slow rate, it can be expected to increase in momentum with the end of the war in Europe and the inauguration of the Army demobilization plan. It may also be expected that at this same time the return of war workers to civilian production pursuits also will be greatly increased. It is therefore imperative that the machinery to foster the return of the veteran to his old job or to aid him in obtaining a new one be functioning at the best.

When victory comes, each and every citizen must be prepared to pay the tremendous debt owed these servicemen. We must not fail to realize the magnitude of this responsibility. In this work there will be adequate opportunity for the wholehearted cooperation of all who will assist.

Jobs must be created by the people who hire men—the employers. We can act only as a go-between to place the man in a job. It is the duty of all our 130,000,000 citizens to join wholeheartedly in supplying and making those jobs available.

Service clubs, churches, employment agencies, labor, and veterans' organizations, governmental agencies, chambers of commerce—all must lend a hand in this tremendous job of relocation. It is fine to learn of your plans and programs to avoid duplication of effort, and to avoid early disinterest, for it will not be an easy job. Through the coordinated efforts of all the agencies responsible and the assistance of each and every one of our citizens at home, there is every reason for confidence that the efforts will be successful.

Reports from the far-flung battle fronts are encouraging. The prospect of victory in Europe has brought much discussion concerning peacetime military training for our American youth. Congress already has had under consideration legislation for such training. The President has expressed his ideas on the subject. There is a concerted movement in this direction aimed to provide preparedness to insure a permanent peace.

I am definitely in favor of peacetime universal military training. The benefits to be derived from such a program are manifold, not the least of which is the future imperative requisite for preparedness. This Nation must never again allow itself to revert to the status of unpreparedness prevalent 10 years ago. Today's warfare has changed in a manner that the risk of unpreparedness is tantamount to courting disaster. Our wealth unprotected offers too great a temptation to aggressor nations. Not all nations in this world understand or follow the philosophies of ownership and fair play that are so basic with us. Our national security requires armament and manpower in adequate quantities and of the most currently scientific type to protect us from future aggression. America must never again take chances.

There are at the same time many other good results which will follow the institution of a system of universal military training. Selective service operation and manpower procurement has uncovered shocking facts concerning the physical condition of great numbers of our young manhood. Nearly one-fourth of the young men in this Nation have been found to be physically unfit for service in our armed forces. Much of this unfitness is unnecessary and a reflection upon the record of our Nation in other respects. Past and present physical training measures have been inadequate. Perhaps there have been too many cases of thousands of persons watching a few boys exercise—such as we have in today's sports arenas.

Peacetime military training should be designed to provide physical education and training for all in the age group. Many of the defects found among rejected registrants undoubtedly could have been avoided through training and education or could be easily remedied. Let it not be forgotten that the physical training and physical education of young men will in turn be passed on down to their children at a much earlier age and serve to build a healthier and stronger youth in America.

In addition, peacetime military training will provide a true lesson in Americanism by bringing together young men of like ages from all walks of life. They will live together, work together, train and play in the same atmosphere—a circumstance which will bring a true understanding of each other's problems and a mutual feeling of responsibility for the Nation's welfare.

After this war America is to be a greater world leader than ever before. America must remain strong and virile. It must set an example to all people. Through preparedness America must protect her position and possessions. She must also take a leading part in preserving peace throughout this world.

Duties and Rights

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. PLUMLEY. Mr. Speaker, under consent heretofore granted, I am including two speeches I recently made in Vermont, one to the members of the Vermont House of Representatives on Thursday, the 25th, concerning which the journal of that house records:

Hon. CHARLES A. PLUMLEY, Congressman-at-large from Vermont, was introduced by the speaker. Following the introductory remarks, Congressman PLUMLEY spoke briefly, as follows:

"Mr. Speaker, in order to get here for Friday night, I had to leave Washington yesterday afternoon. I am no dog and have no priority as a Member of Congress. They say in Washington that Office of Defense Transportation (O. D. T.) stands for 'Our Dog Travels,' while O. P. A. means 'Our Pup Aviates.'

"Seriously, Mr. Speaker, our duties are obvious.

"A lot of water has flowed under the bridge (but, incidentally, not over any dam on the West River) since last we met on a similar occasion. We are just getting into the toughest part of the fighting in the shooting and killing war. The toughest days for us on the home front are ahead of us. The days of readjustment to normal peacetime activities will be full of problems for which we can make no present plan because we do not know for what to plan or how long the war will last or to what extent our resources will be exhausted; nor can we appreciate the extent and magnitude of the demands that will be made upon us not only to police but to help to feed and clothe and rehabilitate the stricken nations as they crawl out from under the Hitler heel and back into the sunlight of their greatest opportunity.

"Yet we are in this fight for an unconditional surrender which means nothing less than a complete victory. There shall be no halfway business this time. We propose to establish and to maintain a perpetual peace. For this we fight—or else in vain.

"In this war even more is at stake than our existence as a nation. We are engaged in a struggle that challenges the fundamental values upon which our civilization is built. Its transmission to our sons and daughters, its preservation, depend upon our victory in this struggle.

"So all those things essential to that victory must come first. No effort we can contribute to that end should be considered a sacrifice. What must be done will be done, but unless we voluntarily cooperate we will have to submit to governmental regimentation and direction, which none of us like, many of us resent, and all of us protest. 'The more we police ourselves, the less we will be policed.'

"Whatever will assure and hasten victory must have first place in any statement of American policy.

"Without victory, our aims, and the underlying values upon which they are based, will be extinguished, blotted out by the opposing aims and values proclaimed by our enemies.

"The needs of our fighting men must be put first. For, unless we win the war, the national aims and policies of the United States will cease to have meaning in the world.

"Let us face the future with calm confidence—confidence in our ability and determination to accomplish the purpose to which we have dedicated ourselves. We must not be unmindful of the awful price we are paying in our effort to save civilization, for that is our responsibility.

"Out of the travail of these days of sweat and blood and tears will be born a better day for 'in Today already walks Tomorrow.'"

After the address, on motion of Mr. Ogden of Landgrove, the remarks of Mr. PLUMLEY were ordered printed in the journal of January 26, 1945.

On motion of Mr. Adams of Marlboro, the House adjourned.

The other was delivered at a banquet held by the Vermont Dairymen's Association at Burlington on the evening of Friday, January 26, as follows:

THE RIGHTS OF STATES

Members of the Vermont Dairymen's Association and guests, these are awe-full days (spelled a-w-e-f-u-l-l) in the history of the States, the Nation, and the world. To be able to play our part in deciding what shall be done to discharge our duty and to determine our destiny is an honor not to be lightly appreciated.

Representatives of the rugged individualists of Vermont should not forget that there is a group in this country determined to destroy ancient landmarks, to federalize and to centralize government even to the extent

of stripping the States of their sovereign powers.

It follows that if the representatives of the States in their legislatures assembled do not stop trading for privilege by wasting the powers and prerogatives of the States in deals for more Federal funds, and otherwise, they will further Federal control, depredation, and destruction, and encourage the complete confiscation of the rights reserved to the States, which are the people. It is important that we know our rights, and more important that, knowing them, we dare to maintain them.

This is a time when tyranny would destroy human rights everywhere and humanity has risen in arms to save those rights, to win them for itself and for posterity. We should not gain a thing to win a war or establish a peace at the cost and the loss of those very fundamentals for which we fight.

With these rights go obligations and the insistence that only when the rights of the States are respected are our own individual rights made secure.

The right to speak and to print, the right to assemble and petition, the right to worship as our conscience bids, the right to be secure against despotic invasion of person or property, the right to a fair trial under the law—these rights are so common that we scarcely stop to realize that they are the things, among others, for which we fight and to lose them is to lose all.

Eternal vigilance still is the price of liberty. The essence of authority lies in the consent of the governed. We cannot afford to trade liberty for license, or our rights for a mess of pottage.

The excessive encroachment of the power of centralized government under the guise of idealistic social planning is a threat to the States which they must resist or be a part of the all-inclusive State. The easiest way out found in surrender does not fit the idea or ideals of Vermont or Vermonters. The consummation of the plans of such a concentrated political power must be resisted at any price if we are to preserve, conserve, and save the sovereign States.

Vermont will never assent to the proposition that the Federal Government has the right to wipe out or drown one State by virtue of assumption of an authority acquired and exercised under duress of centralized government to save another.

Huge Government hand-outs are only the measure of the amount of money taken from the taxpayer and the magnitude of the debt made larger by this alleged generosity.

The average man and woman, the people, at plane plants, tank plants, factories, machine shops, on the farm, the office, the hospital, and at home have proved we Americans can out-dream, out-think, out-work, out-produce, out-invent, out-prosper, and out-fight any country in the world. We must not forget that the centralized government cannot give us a dime we did not earn and turn over to it as a tribute to ourselves.

If we continue to maintain our self-respect, individuality, and the rights for which we fight, we can enjoy and can assure to posterity such a life of abundance and real liberty as no people on earth has ever before enjoyed.

This war is far from won. Starry-eyed idealism, indifference, indecision, weakness in the face of veteran diplomacy cannot take the place of stern necessity. We have talked too much, too soon. We must work and fight, not talk, to be victorious.

To secure conditions which we hope may obtain following the defeat of our enemies we must overcome difficulties far greater than are generally recognized by an effort which must be gigantic, requiring the full pouring out of all our intelligence, our energies, our resources, our blood and treasure. This is no time to believe anything else.

Our first business is to win this war, and every law enacted by this assembly should be based on that concept—wisely—as should every bill which Congress seriously considers. The road we have yet to travel to peace is slick and slippery, rough and rugged, and bloody, and it will be hard going to reach the goal we have set before us.

When victory comes we will be confronted with the most serious situation which has ever confronted civilization. Oppressed by problems, irresolute, uncertain of our way, we shall stand at the crossroads, the turning point.

If history is to be our guide, we must have a definite policy. We should not (as of old) expect somebody representing us to sit down at the council table with representatives of other governments, skilled in diplomacy, to negotiate our terms of peace. The fate of the world will be at stake, and at such a table no final settlement leading to an enduring peace will or can be determined without our concurrence. The people must be heard. Their wishes must be the basis of all negotiations.

Of course, spoils will be equitably divided—or at least divided—and the power positions of the signatories to the Atlantic Charter will be decided, but in the fracas perpetual peace might fly out the window as the last delegate signs his name. That is what we must prepare to prevent, and it is for us, the greatest nation in the world, to fight for such a peace as we demand and shall have if it takes all we have to give, for not to insure a durable peace would be a wicked waste of all we have contributed to that end and would be to have fought the war in vain.

That is the problem which confronts Vermonters right here in the Vermont Legislature, at the base of the pyramid of the people's government, to the solution of which problem all of us are called upon to contribute our best thought and judgment.

Unless the people are to be heard, a precarious and insecure result will obtain in a lot of highly colored words leading only to World War No. 3. We must have the vision and the courage to strip the words to the bone, to throw into the discard the beautiful phrases and illusive hopes of idealism. We must be practical. Vermonters are.

If we are to go on as a democratic-republican government the rights of the States must be preserved. What we have done and accomplished due to the wisdom of the founders is based upon the preservation of the rights of the States, united, to make a strong federal government from whose tentacles the States are to be protected because of the rights they reserved to themselves for the preservation of which we are responsible.

As I have said before, I emphasize the fact that this is the country which has given the world its pattern for self-government, which has championed the rights of the individual, and has responded with its blood and treasure to the cries for help of distressed peoples.

It is in the spirit of these ideals that individual rights have been temporarily surrendered to hasten victory. But this sacrifice implies no willingness to change—no conversion to any creed of socialized control.

For the youth of America—the returning fighting man—deserving of the opportunities traditionally his, this must again be a country free of unnecessary restraints; where business is encouraged by government, and where a man can build, brick upon brick, the structure of his own well-being.

What do the youth who are fighting and dying for us expect of us and for themselves? Let me answer that question by reading you what they say:

"We'll be home again someday. Back home where not just us but everyone will understand how and why this war was fought and won. * * * Back home where all of us will know we bought and paid for peace with something more than bonds and tears and blood and long years of sacrifice. * * * Back home where everyone must know this war will have no meaning, this victory will be hollow, this peace will not endure unless the power that won the war, the power that made our country great, the power of men and women working together to destroy can become the power to create. Unless the power to rub cities out becomes the power to put new cities up. Unless the power to take life becomes the power to give life. Unless the power to liberate men in foreign lands becomes the power to free ourselves, to give to every man a boundless opportunity to dream, to work, to grow, to make his life, to make his America what he wants it to be.

"That's what this war is being fought for. That's what victory will mean to us. That's what we'll come home for."

All of us owe to those who have fought to preserve it, a strong, a vital, a growing America, where every man and every woman will have the freedom and the opportunity to make his or her dreams come true. That is the challenge which confronts us.

The initiative of men, their enterprise, the inspiration of thought, the determination to be free, flower in full only in the security of those fundamental rights for which we fight. Those rights that made our fathers freemen and have kept us so, "if they are not now the more carefully preserved," said John Elliot, "will render us to posterity less free, less worthy, than our fathers." All that is needed in order that Democracy shall survive," said Calvin Coolidge, "is for us to give all and to do all that we think America is worth."

"Tomorrow the world" was a Nazi boast which meant a world to rule under regimentation. We say "Tomorrow one world" and that a free world in which men can live and trade and prosper together.

"These things shall be—a loftier race
Than e'er the world hath known—shall rise
With flame of freedom in their souls,
And light of knowledge in their eyes."

The Ward Ruling

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. DONDERO. Mr. Speaker, under leave granted by the House to extend my remarks in the CONGRESSIONAL RECORD, I include herein an editorial from the Washington Star of January 29, 1945, relating to the Ward decision.

I wish especially to call attention to the statement made by Chairman Davis, of the War Larbor Board, that the "whole plan of peaceful settlement of wartime labor disputes will collapse" if the decision of Judge Sullivan in the Montgomery Ward case is permitted to stand.

The average citizen will consider it more than an oversight or a mere incident that when one James C. Petrillo defied the War Labor Board and the President there was no outburst of fear from Chairman Davis that the "whole plan will collapse." In fact, the public has not even heard a whisper of complaint because of such defiance on the part of a labor leader, but the whole structure of peaceful settlement will collapse if a ruling which faces an employer is permitted to remain on the record.

That measure of justice and administration will ultimately destroy all free enterprise in this country.

The editorial follows:

THE WARD RULING

The thing that stands out in Judge Phillip L. Sullivan's ruling in the Montgomery Ward case is the unequivocal notice to Government officials that they may not take the law into their own hands and override the rights of citizens merely because, at the moment, it seems expedient or desirable to do so.

On this point Judge Sullivan, who was placed on the bench by President Roosevelt, declared: "The constitutional guaranties that protect the sacred rights, liberties, and property of American citizens, from the humblest to the most exalted, still remain inviolate. These rights may not be transgressed with impunity nor be disregarded because of expediency."

That is a reassertion of the concept that ours is a government of law, not of men. And it has an especial timeliness now because of the tendency of some administrative officials to distort the laws, or to stretch the statutory and constitutional powers of the President to cover the doing of whatever, in their judgment, needs to be done. This tendency is a dangerous one, and Judge Sullivan's ruling, whatever its fate on appeal, should have a thoroughly desirable restraining influence.

When that has been said, however, the fact remains that the decision may seriously undermine the none-too-stable machinery that has been set up to deal with wartime labor disputes. Chairman Davis, of the War Labor Board, says that, barring reversal of the decision or appropriate congressional action, the "whole plan of peaceful settlement of wartime labor disputes will collapse." It may be noted that Mr. Davis displayed no such alarm when James C. Petrillo, in a comparable situation, was permitted to defy the board and the President with impunity. The W. L. B. took that defiance in stride, and so did the President. But employer defiance, in their opinion, is another matter, and unfortunately there is at least some reason to believe that they are right.

If Montgomery Ward should remain immune to wartime controls, it seems reasonable to anticipate strikes that would spread into war plants. That ought not to be so if there were a proper respect for the law and the courts, but the probabilities are that the strikes would occur. There are irresponsible elements among labor, as there are among employers, who would exploit this ruling for their own selfish purposes, and at this juncture of the war we cannot afford to ignore that danger.

Judge Sullivan's ruling confirms, first, what was already established—that W. L. B. orders are merely informatory or at most advisory. There is no legal obligation on anyone to obey them. But beyond this he has also ruled that neither the War Labor Disputes Act nor the Constitution gives the President any power to seize the business properties of Montgomery Ward in the circumstances of this case.

The court's reasoning is persuasive, especially as to the invalidity of the steps taken under the disputes act. There remains, of course, the right of appeal and the Government undoubtedly will exhaust that remedy, being especially interested, presumably, in securing an authoritative ruling as to the extent of the President's wartime constitutional powers as Commander in Chief.

But so far as the Montgomery Ward matter is concerned, the more desirable remedy lies in an appeal to Congress. Throughout this proceeding the Government has stoutly maintained that Congress intended to grant power to seize an establishment like Montgomery Ward. If the Government was in earnest in that contention, the logical course, it would seem, would be to ask Congress to amend the law to remove all doubt as to the extent of the power granted.

Spain Is America's Problem

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. COFFEE. Mr. Speaker, on Monday, January 22, 1945, I introduced House Resolution 100, expressing the will of Congress that this country should forthwith sever diplomatic relations with Franco Fascist Spain. Because I think it pertinent and pointed to explain the purposes underlying this resolution and the reasons justifying its introduction, I am inserting herein below, with the consent of my colleagues, a speech delivered by me on January 2, 1945, at Madison Square Garden, New York City.

This speech was given before an audience of 18,000 people. There is tremendous interest in the subject matter throughout the country. The Madison Square Garden mass meeting was sponsored by the Nation Associates, publishers of the weekly newspaper, the Nation, together with a group of civic, political, and labor organizations.

I am proud that I was invited to be the chief speaker at this notable gathering.

The speech is as follows:

The other night, late in the evening, I sat at the desk at my apartment in Washington, D. C., preparing my notes for this talk. My young son was home from his school in Virginia for the holidays. I thought, watching him, that he was fortunate to be well under military age, that at least he would not have to feel the brunt of this war as 11,000,000 other Americans are feeling it. I know that this is not supposed to be the way to think, but this is the way all fathers think of their sons these days.

And then, as I studied my notes, I wondered. Was my boy really fortunate? Could I truly tell him that this is, indeed, the last world war that will ever be waged? Could I tell him, in all honesty, that our generation was finally going to pass on to our sons what few other generations have ever left—a millennium of universal peace? Could I—with a possible third world war being generated in Spain today?

You know, the District of Columbia is not exactly the most cheerful place in which to be marooned for the holidays. It's every American's capital and no American's home. Believe it or not, that goes for Congressmen, too. I come from Tacoma, in the State of Washington, which is about as far away from New York as you can get and still be in the United States. It's an awfully long way from the District of Columbia, too. When you're away, you do things to try to recapture what you used to do at home. I picked up the old books my father used to read to us when I was a kid back in Tacoma. And a few minutes after my young son went off to sleep, I found something in one of these old books. I found myself reading the Old Testament, reading Jeremiah's Lamentations for another world which like ours today, had to pass through purgatory on earth.

And there I came to the nineteenth verse of the second chapter, and I read it again and again, and it was like a great voice from the past speaking to this world at war.

"Arise," pleaded Jeremiah, "Arise, cry out in the night! In the beginning of the watches pour out thine heart like water before the face of the Lord! Lift up thy hands toward Him for the life of thy young children, that cry out for hunger in the top of every street!"

Yes, this meeting tonight is a meeting of those Americans who can no longer be still. This is a meeting of those Americans who, seeing the world's great anguish and its grief, arise to cry out in the night. To cry out against the forces that made this war, against the forces who would bring upon our heads a Third World War.

Yours are the voices that must be heard in the halls of Congress, in the White House, in No. 10 Downing Street in London, in the Pardo Palace of Madrid, and in the guerrilla encampments in the hills that face Madrid. For the voices here tonight are the true voices of the American people, and these voices must be heard now, in a mighty cry—while there is still time to cry out into the night.

We meet tonight as allies of the democratic peoples of Spain, and we meet in a hall which echoed to the heroic words of the Spanish people during the years 1936 to 1939. Perhaps some of you still remember how, in 1936, the people of New York filled this very hall to greet the first delegation of spokesmen for the Popular Front Government of Spain. I remember only too clearly how these spokesmen, Mme. Isabella Palencia, Father Luis Sarasola, and Senor Marcelino Domingo, carried the message of the Spanish people to North America.

I recall how this pioneer delegation from embattled Spain pleaded for our aid; how for night after night they told new American audiences that the fighting in the streets of Madrid was the start of the Axis war against the free world; how they pledged that if we aided them then, the Spanish people would come to our side when we were attacked by their German and Italian invaders.

Later, to these Spanish voices, were added the voices of Americans who had gone to Spain to fight the Nazi monster, and who returned, wounded, to tell us of what they had seen. They, too, were voices crying in the night. The Spaniards and the Americans told us that if Madrid fell, Paris and London—and Pearl Harbor—were next. Here at Madison Square Garden, and at hundreds of similar meetings throughout the United States and Canada, the rafters rung with the cry of the Spanish Republic—the cry: "Make Madrid the Tomb of Fascism."

Perhaps our voices were not strong enough.

Before our eyes, we saw Madrid suffer another fate. As our friend, Allan Chase, wrote in one of his books on Spain, "Madrid, which was to have become the tomb of Fascism, became, instead, its womb."

I know that it is a hard thing to say, but these are hard times, when only cowards refuse to face facts. For the fate of Spain, we have no one to blame but ourselves.

We, who saw; we, who knew; we, who understood—did we really fight hard enough?

There is, of course, no honor high enough for those few thousand gallant American men and boys (they call them premature anti-Fascists in some nasty Washington circles today) who made their way to Spain and fought and suffered in the ranks of the Abraham Lincoln Brigade. They more than did their best to stop the third world war before it hit their native land. Never in the history of our Nation has a group of Americans fought so heroically and received so little recognition from our own people as have the men of the Lincoln Brigade. I am

indeed moved tonight to know that among the organizations sponsoring this meeting is included the veterans of the Abraham Lincoln Brigade. They, of all Americans, did their share.

But what of the rest of us, the Americans who stayed home? We sometimes went to meetings for Spain on Friday, but we always went to the movies on Saturday and to the ball game on Sunday. Many of us even went through the motions of really doing our share; we signed petitions, we contributed a few dollars to the old North American Committee to Aid Spanish Democracy, we bought a book or two, we even watched Gypsy Rose Lee strip for Spain at rallies run by the entertainment industry.

And then, when this proved to be not enough, we showered all of the blame for the Spanish tragedy on the appeasers. We blamed the Chamberlains and the Daladiers and the Hoares and the Bullits and the Dunns. What a convenient and easy way this was to absolve ourselves for our own sins.

The appeasers were—and are—all we claimed they were. Those who survive, at any rate. But our country happens to be a democracy, and because it is a real democracy, we have only ourselves to blame for the appeasement policies which led to this war, and for our present highly dangerous policies toward Axis Spain.

Our Congress is a pretty accurate barometer of what the people really want. Colonel McCormick found this out in Illinois recently, when nearly every one of his favorite candidates and incumbents were swamped by the people. Martin Dies found this out in Texas. Gerald Nye and Hamilton Fish felt the will of the people too. So did I. This year, running for the fifth time, I ran not only as one active in the liberal bloc in the House, but also as the leader of the congressional fight against Franco, and I am both proud and happy to tell you that I not only received one of the largest majorities of my political career, but also one of the largest majorities on the Pacific coast. One of my campaign issues was my promise to continue to fight for a break in relations with the Franco regime, and this is one promise the people of my district will not let me break, even if I should dream of weakening.

I have talked about Spain with many Congressmen, and believe me, they feel just the way you and I do about it. Let the people in their districts back home offer to back up their Congressmen, and you'll see how quickly even the most timid Representatives and Senators will stand up and aim a shaft at Hitler's weak Spanish underbelly. Let there be 100 meetings like this one all over the country during the next 6 weeks, and out of these meetings, let there come a flood of letters and post cards asking Members of Congress to fight for a break with Franco—and the appeasers will run for cover quicker than you can say "premature anti-Fascist."

The Congress is your servant. Through the Congress you can make your will felt. Through the Congress you can determine your own foreign policy. Don't just take my word for it. Try it, and see for yourself. If you don't try it, don't blame the State Department or the British Foreign Office or the Sultan of Sulu if the appeasement of Franco continues.

There is one thing you can do tonight, while this meeting is still fresh in your mind. You can write a letter to your own Congressman and ask him whether he intends to support the Coffee resolution for a break with Franco.

Last June in the seventy-eighth session of Congress, I introduced this resolution. And before this month is over, I give you my pledge that I will again put it before the brand new Seventy-ninth Congress. Some of you may have read the complete text of the resolution; if you haven't, drop me a line in Washington, and I'll send it to you. The resolution makes two proposals, and these I would like to read to you now. They read:

"*Resolved*, That the House of Representatives of the United States urge it upon the President of the United States that it is the will of the American people, expressed through their elected representatives, that the Government of the United States can speed our victory and guarantee a lasting peace by immediately breaking all diplomatic relations with the Nazi-Falangist Government of Spain; and be it further

"*Resolved*, That the House of Representatives of the United States urge it upon the President of the United States that it is the will of the American people, expressed through their elected representatives, that the breaking of diplomatic relations with the Axis Government of Spain should be followed by the appointment of a military commission, which will be charged with the task of getting arms, ammunition, and medical supplies to the heroic republican guerrilla armies of Spain when their revolt, timed to weaken the Nazi armies in their moment of greatest crisis, creates in Spain one of the active and decisive battlefields of this global war."

Well, this resolution is now before your Congress. Does it express your sentiments? What are you going to do about backing it up?

I think that the program of this resolution is the minimum program on which all Americans can agree in relation to Spain. It is a program which, while it will aid the people of Spain, is primarily designed to aid and protect the people of the United States.

We have much more than an ordinary moral responsibility in Spain. Our military security, our political stability, and our economic well-being in the post-war world are all intimately tied up to the fate of Spain. Let Spain emerge from this war as a free, nonimperialistic, people's republic, and both our security and our markets to the South will not be threatened. Let Spain remain, in one guise or another, a government of the German cartels—and we face a third world war for the control of Latin America.

In the past 2 years, I have studied dozens of reports, prepared by Spaniards inside of Spain, and smuggled out via the Spanish republican underground. These reports, among other things, contain a detailed running account of how completely the German financiers and industrialists have taken over Spain.

The Germans control the coal and copper and mercury and iron and wolfram mines of Spain. The Germans control the shipbuilding industry in the Basque provinces. The Germans control the heavy industry of Catalonia. The Germans control the wine and olive industries of the southern provinces. The Germans have been building, without a let-up, chemical and pharmaceutical factories all over Spain since 1939. The Germans have built fish fertilizer factories in the Spanish Canaries, canning plants in Bilbao, and arms factories in dozens of Spanish towns and cities.

Until the liberation of France, Spanish industry and Spanish agriculture poured its wealth into the German war machine via trains that crossed France. Today German war factories on Spanish soil are sending arms and munitions via Spanish ships to those German garrisons still fighting us in French coastal areas under their control. What of tomorrow?

I'll tell you what will happen in that tomorrow, when the Germans are driven out of the French ports and when the armies of the United Nations finally crush the Nazi monster in Berlin itself. Tomorrow the German cartel masters, the men who inflicted Hitler and nazism upon the world, will find themselves back in business in Spain—unless we help the Spanish people throw them into the sea.

Spain is a rich country. Spain is an industrial Midas, whose lavish resources have never really been tapped. Spain has everything a nation needs with which to forge a powerful industrial bastion. Spain is rich in potential hydroelectric power, has plenty of sea water—and the combination of electric power and sea water equals magnesium, the key to the light-metals industry of the future.

A post-war Spain controlled by the German cartels would be a powerful industrial and political base of operations against one main target: The United States of America. Through Spain, the German cartels would strive to keep us out of the Latin-American markets by fostering the rise of fascism and the continuance of the economic status quo in South America.

The spread of fascism in Latin America means the rise of militarism. Also, since fascism is, when you get right down to it, the declaration of war against the common man at home, fascism in South America means the continuance of poverty. Great Americans like Henry Wallace and the late Wendell Willkie talked themselves hoarse in their campaigns to tell us all that depressions hit us when our poorer neighbors lack the money to buy what we have to sell. I don't think that I have to belabor this point for you. The whole purpose of our good-neighbor policy is to raise the standards of living in Latin America—and not for completely unselfish motives. There's nothing really wrong with enlightened selfishness, when it produces results like the good-neighbor policy, and Teheran, and Dumbarton Oaks, and, let's not forget it, lend-lease.

But the Fascists of Latin America can't afford to see democracy develop at home, can't afford to see the common man get a more just return for his labors. It is with the wealthy and powerful Fascists of Latin America that the German cartel masters, who control Spain, have been and are today cementing alliances.

The guiding genius of the battle for Spain, the man who planned and ran its military and political strategy, was Nazi Gen. Wilhelm von Faupel. He is today the real ruler of Spain, the man who hands the puppet Franco his orders from the Nazi high command. In 1938, during the Pan American Conference in Lima General von Faupel traveled from the Spanish front to Berlin, where he delivered a speech before the German Academy. And in this speech General von Faupel, of Hitler's Wehrmacht, minced no words. He said:

"A victory for Fascist Spain will cement our relations with Latin America and will be a rude shock to the good-neighbor policy of President Roosevelt."

General von Faupel knew what he was talking about. And so do the unfortunate people of Argentina and Bolivia and other Nazi-Falangist infested nations of Latin America.

We at home have made tremendous technological advances during the war years. An individual worker can now produce about 40 percent more goods than he could before the war. When the war ends we will need expanded foreign markets, and particularly expanded Latin-American markets, as desparately as we now need to see the end of fascism. Our only hope for increased markets in Latin America is the free and unhampered development of democracy below our borders.

This is the one thing which the Germans who control Spain today aim to prevent. This is one thing they will be able to prevent if they retain their control of Spain.

There are many ways open for the Germans to retain their control of Spain when the war ends. It is quite obvious by now that they will have to drop Franco. This traitor has served their purpose; today the name of Francisco Franco is repulsive, even to men of the stripe of the former Samuel

Hoare, now Lord Templewood, Lord knows why.

But there are other men who call themselves Spaniards who would suit the Germans quite as well as fronts for their Spanish enterprise. There is a young man named Juan de Bourbon, the scion of a notorious and profligate family. He can read and write, and, as proof that he can write, I call your attention to the fact that he signed his name to card No. 7 in the Falange Party when that Iberian branch of the Nazi Party was in its infancy.

This Mr. Bourbon, who has no visible means of income, was the son of an unemployed king. His late father used to be King of Spain, but in April 1931 the good people of Spain went to the ballot boxes and their collective decision went something like this: "Alfonso, until today you've been both a bum and a king, but from today on you're just a bum." If there are any historians here tonight I think they will back me up.

Well, so the Bourbons, what with Poppa losing his job, went on the town with the rest of the international unemployed royalty set. Every once in a while they'd meet in Biarritz, or Paris, and while none of them—the Hapsburgs and the Bourbons and the rest—toiled or spun or even tried to earn an honest dollar, they'd discuss the problems of the world. They'd say to each other, over their champagne and caviar, that this is one hell of a world, and that some day strong men like Hitler and Mussolini would put an end to the silly idea that the common peoples have the right to determine their own destinies. And on that day, the Bourbons and the rest of the international white-trash set would sigh, on that day they could go home and go on being kings again.

Well, I know something about the Spanish people. I know that if the Germans ever do bring young Bourbon to Spain and put him on the throne, Lloyds of London is going to take an awful shellacking if they issue any insurance on Mr. Bourbon's life.

There are safer ways for the Germans to hang on in Spain. We have seen two examples of what I mean in action recently—in Greece and in Belgium. There may be others.

The Germans are clever enough to know that if they create an ostensibly anti-Fascist government in Spain, then their control is most secure. Who will head this government? There are some traitors, men who deserted the Spanish Republic when the war started in 1936 for example, who might come forward as "neutrals" who will offer to prevent an "extremist" regime in Spain. And what do they really mean by an "extremist regime"? That's easy—a true and honest republic of the people, which will confiscate the holdings of the Germans and their Falangist collaborators inside of Spain.

The Germans fear the Spanish people; they will seek at all costs to avoid a free election of the people. The Spanish underground has given the Germans good cause for grave alarm.

The Spanish underground, with its guerrilla armies, its saboteurs, its newspapers, its radios, and its intelligence services, is a very real thing. Many a British flier, whose plane was shot down over Spanish ports while he was chasing a Nazi submarine into a Spanish base, owes his life and his freedom today to those units of the Spanish underground who found him and healed his wounds and smuggled him back to the British lines. The widow of many a German sentry, killed while guarding a Nazi radio station along the Spanish coast, knows that the Spanish underground is not the myth certain exiles have tried to say it was.

If this war has taught us anything, it is that the peoples' movements of resistance in all the occupied lands of Europe and Asia can neither be denied nor ignored. The Spanish resistance groups are no exception. They are bearing the brunt of the fighting against the Germans now; they will have to bear the bitterest part of the fighting and the dying in the battles once again to establish in Spain the Republic of the people's choice. It is for this reason that, in my resolution, I asked that we follow up our break in diplomatic relations with Axis Spain by sending arms and munitions to the fighting men and women of the Spanish underground.

During the Spanish phase of this World War, the armies of the Spanish Republic were fighting our battle. Instead of selling them arms, we weakened them by an arms embargo that denied them arms. One of the results of our mistake was the spread of the war to Pearl Harbor.

Today, the same armies of the Spanish Republic, formed as guerrilla units of the Spanish underground, are still fighting our battle. We must not repeat our former and fatal mistake. We must send them arms when they beseech our help. If we fail them again, one of the results of our new mistake will be a third world war fought primarily in the Western Hemisphere.

Can we shirk this responsibility? Can we sit still and let it happen again?

Friends, the job is in your hands. Arise and cry out into the night. This time you must make your voices heard, you must make them ring in the Halls of Congress until every Representative from every district, every Senator from every State, will know that we, the American people, are determined to erase the crime of Spain. And when they hear your voices, they will be eager, and able, to obey your mandate.

The New Congress

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. MASON. Mr. Speaker, the following brief editorial about the duties and responsibilities that face this present Congress is so concise and to the point that I include it as a part of my remarks for the serious consideration of my colleagues on both sides of the aisle. I agree fully with the sentiments expressed in this editorial and promise on my part to be guided, in my attitude toward public questions and in my vote upon the same, by the thought expressed in this editorial:

THE NEW CONGRESS

To the Members of the new Congress we should like to offer not good luck, but good wishes, and the hope that they will employ wisely the considerable accumulation of intelligence which they represent.

Certainly none of our preceding 78 Congresses has had greater need of wisdom, high ethics, and responsible statesmanship. No other Congress has had greater need to approach its tasks with the proud but humbling consciousness that it is an instrument of the whole people and an equal partner with the President in Government.

Too often in the past that partnership has been interpreted as complete subservience to White House wishes by one group, and opposition for opposition's sake by another. But the job facing the Seventy-ninth Congress calls for considerably higher motives.

The people have made their wishes reasonably clear as to what sort of a world and country they want after the war. The administration is likewise making clear what is required of the people in war if those wishes are to be attained. It is the duty of the new Congress to translate those mandates into laws and recommendations through thinking that is national and international rather than regional; and American rather than partisan.

Traffic in Marihuana Increases

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. COCHRAN. Mr. Speaker, Chief Coordinator of Enforcement of the Treasury Department, Elmer L. Irey, in a statement just issued shows marihuana peddlers are increasing. He further describes the activities of Treasury agents in apprehending offenders.

Under permission granted me, I include this release as part of my remarks:

Traffic in marihuana became an increasingly serious enforcement problem during 1944, Secretary Morgenthau reported today, with seizures of the weed by Treasury narcotics and customs officers larger than in the previous year, and the illicit traffic in some instances reaching the proportions of well-financed national and international conspiracies.

Reports to Elmer L. Irey, Coordinator of Enforcement, indicated that New York City was the focal point of this traffic, with Treasury agents breaking up four major gangs supplying the eastern metropolis. Numerous arrests were made in other population centers, some seizures being measured in terms of many pounds, rather than in ounces, as is ordinarily the case.

Captures of opium and its derivatives declined moderately, but a reappearance of heroin in moderate quantities was reported. This prepared drug has been practically nonexistent in underworld channels in recent years.

But while opium seizures were declining, the Treasury officers still were called upon to match wits against international gangsters operating against a back-drop of double-crossing and violence that accounted for at least two murders. One of the most spectacular incidents involved a Bureau of Narcotics undercover agent who at great personal danger infiltrated himself into a remnant of the old Black Toni Parmagini gang in California. The Treasury man found himself actually chosen as overnight custodian of a fortune in dope by gangsters who feared a double cross from fellow conspirators on the distribution end.

The officer ruefully saw the drugs turned over to the buyers the next morning, unable to act lest he expose the Government's hand and enable the mob leaders to escape. His feelings were mollified 2 days later, when he learned that fellow agents, following through, had quietly arrested the runner as he stepped from a train in Chicago, the drugs in a suitcase. With the evidence gathered by the undercover officer and other customs and narcotics agents, the leaders subsequently were rounded up. Two of the mobsters drew 10- and 20-year prison terms.

The dangers inherent in marihuana use were demonstrated dramatically during the

year with the sentencing of Carl Murphy, an Oklahoma City, Okla., bellhop, to 10 years in prison for the slaying, while under the influence of the weed, of a Federal building guard. The slaying culminated a series of brawls in which Murphy participated, and of which he professed to have no recollection after the effects of the weed wore off. Four others were sentenced in this case as the suppliers of marihuana.

H. J. Anslinger, Commissioner of Narcotics, said this case is but one of many in the files of the Bureau that involve crimes of violence carried out by persons under the influence of the drug. He warned against complacency on the part of the public toward the marihuana problem. He pointed out that while not all persons always display violent reactions to marihuana, there are many instances of persons who, like Murphy, appear of mild and harmless temperament, displaying maniacal characteristics after using the weed.

Large quantities of the weed were seized in the four cases involving gangs supplying New York City. Sentences ranging from 15 months to 4 years in prison were given four persons convicted of selling marihuana to workmen in four different Detroit war plants.

The joint customs-narcotics investigation in which the undercover agent figured prominently had its origin some 2 years ago. In May 1942 narcotics agents started looking into activities of the so-called One Hundred and Seventh Street Mob, formerly headed by "Lucky" Luciano, and composed of some of the most notorious hoodlums in New York City. Several arrests were made in eastern States, and it was learned that certain members of this gang had gone to the Bahamas in an effort to obtain drugs. They were not particularly successful due to double-crossing proclivities of some of the group.

This phase of the investigation resulted in indictment in New York of 17 persons.

Since it appeared the major supply source of the gang was Mexican opium and heroin, and the New Yorkers were dealing with members of the old Black Toni Parmagini gang in California, the Treasury officers shifted their emphasis to the west coast. Willie Levin, former partner of Parmagini, and just released from a 17-year prison sentence, was the first big game snared and was given a new 10-year sentence for fresh narcotics trafficking. Several lesser lights were nabbed.

The seller in Mexico was identified as Enrique Diarte, a notorious smuggler. Two of his runners were arrested and 20 ounces of pure heroin seized, a rare catch of great value in illicit channels. Diarte kept to the Mexican side of the border; but in November 1944 was found near Tijuana, murdered. He had been shot through the heart, his throat cut, and his skull crushed. Mexican officers arrested Frank Drbe, one-time associate of Diarte, himself a notorious narcotics smuggler, and charged him with the slaying.

Previously, one of the principal California members of the gang apparently had been taken for a ride under bizarre circumstances. This hoodlum, known as "Big Nose" Charlie LaGaipa had been under intense surveillance by Treasury agents. However, during an interval of a few hours when this surveillance was incomplete due to the manpower shortage handicapping the enforcement agencies, Charlie disappeared. Police subsequently found his automobile, abandoned, with traces of human tissue plastered on the instrument panel. No further trace of him has been found.

In the meantime, the Italian-speaking Treasury agent and his fellow officers had been busy assembling evidence. The transaction witnessed by the undercover officer involved 622 ounces of smoking opium and 8 ounces of heroin. The runner taking it east, Joseph Tocco, alias "The Eye," was arrested in Chicago, and the dope seized, one of the largest such consignments taken in recent years. He was removed to California, tried, and sentenced to 10 years imprisonment, and Sam Maugeri, his supplier, was sentenced to 20 years in prison. One member of the ring still is at large.

Other joint narcotics-customs investigations broke up large-scale drug-smuggling gangs operating through Phoenix and Nogales, Ariz., and one channeling dope from El Paso to New Jersey. The Government of Mexico is cooperating with United States officers in combating this traffic, and made numerous arrests within its own borders.

Congressional Broadcasting

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. COFFEE. Mr. Speaker, recently there appeared in the Seattle Post-Intelligencer an editorial urging the wisdom of properly handled broadcasting of congressional and legislative proceedings.

Senator PEPPER and I have introduced identical bills in the Senate and House of Representatives, which would effectuate this objective.

Because sentiments contained in the editorial are of profound interest to the country, I am inserting herewith such editorial, which is as follows:

SOLONS ON THE AIR

For many years Ward Coley, of the Seattle Building Service Employees Union, has been an indefatigable worker for a pet project—the broadcasting of legislative proceedings.

Within recent weeks there have come two evidences that his campaign is beginning to bear fruit.

One is the introduction of resolutions in both Houses of Congress which propose, in brief, that each House shall set up the apparatus for recording all speeches and other proceedings, and make these recordings available, at cost, to any radio stations which desire to use them.

The more recent step is the introduction of a bill at Olympia, calling for the direct broadcasting of proceedings of the State legislature.

It is probable that most citizens will continue to get their information about what is happening in Congress and in State legislatures through newspapers. This fact should not interfere with the desire of any groups or individual citizens to hear exactly what happens when a measure in which they are particularly interested is under consideration. And daily attendance in the galleries, in both Washington and Olympia, is evidence that many persons are interested in getting first-hand views of the general course of legislation.

There are many technical and other difficulties to be surmounted before complete broadcasting of legislative proceedings can be arranged, either from Washington or Olympia. But undoubtedly there is much more than a germ of merit in the proposal. Whatever form the development may take (and there are many possibilities short of complete broadcasts) the tendency will be to interest more people in the details of legislation—and to make legislators more careful of what they do and say, and thus improve the quality of legislation.

Black-Market Traders

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. COCHRAN. Mr. Speaker, the various Treasury Department agencies have been most active in apprehending black-market traders.

Under the permission granted me, I include as part of my remarks a statement issued by Ch..f Coordinator of Enforcement, Elmer L. Irey. It follows:

Treasury agencies during 1944 struck at black-market traders in war-scarce commodities, effecting some 1,000 arrests of persons charged with violations in which the Department has an enforcement interest.

The now virtually smashed black market in liquor, the counterfeiting of ration stamps, the illegal diversion of sugar, and attempts to export controlled commodities illegally were particular targets of Treasury investigators working in close cooperation with the Office of Price Administration, the Foreign Economic Administration, and other wartime agencies.

Secretary Morgenthau, summarizing the year's activities of his investigative units, cited these highlights in the Department's drive against wartime chiselers:

The United States Secret Service, assisting the Office of Price Administration, developed evidence resulting in more than 200 arrests in ration-coupon-counterfeiting cases, chiefly gasoline and sugar, and seized printing plants and bogus coupons representing many millions of gallons of motor fuel. The Service made more than 1,800 arrests in Government check-forgery cases, and its effective work against money counterfeiters brought losses to the public from bogus money to a new low.

The Alcohol Tax Unit of the Bureau of Internal Revenue, also working with O. P. A., made nearly 4,000 investigations of liquor price-ceiling violations, resulting in indictments against 650 persons and seizure of black-market liquor worth $340,000. The Unit in cooperation with O. P. A. also investigated diversion of sugar, running into millions of pounds, into illicit distilling, and seized nearly 8,000 stills, mostly small plants in the Southeastern States' moonshine area.

The Intelligence Unit of the Bureau of Internal Revenue instituted investigations into income-tax evasion by black-market operators who neglected to report their illegal gains to the Government. In other tax investigations during the year, the unit turned up a record-breaking potential gain to the Government in the form of recommended additional assessments totaling $73,000,000 and reported conviction of 70 persons in criminal cases.

Customs officers at ports and borders made numerous arrests involving seizures of restricted goods, and smashed a large-scale attempt to drain badly needed used car stocks into the lucrative Mexican market.

Foreign Funds Control Investigative Section continued to ferret out assets of enemy and "black list" nationals concealed in this country. In one case freezing $280,000 sent into the country under evasive circumstances by a resident of Turkey; and in another case blocking further transactions in previously unreported assets totaling $500,000 belonging to a group residing in France.

Frank J. Wilson, Chief of the Secret Service, reported to Elmer L. Irey, Coordinator of Enforcement, that his agents participated in one bogus gasoline coupon case involving

a potential 20,000,000 gallons, and another in which coupons representing more than 15,000,000 gallons were seized.

The larger haul was made at Woodside, N. Y., when Secret Service officers and O. P. A. agents seized a complete plant for counterfeiting gasoline ration coupons, including a printing press, plates, 45,000 sheets of paper, and large quantities of partially completed stamps. Three persons were arrested.

The other case also resulted in capture, in New York City, of a printing press, plates, and equipment, including facilities for making shoe coupons as well as gasoline coupons. Two alleged operators of the plant were arrested. A similar enterprise broken up in Meriden, Conn., by the Secret Service, O. P. A. agents, and police involved a potential million-gallon diversion, and brought a year and a half in prison for the principal.

With the arrest of 11 persons in Buffalo, Rochester, and Syracuse, N. Y., the Service nipped in the bud a plot to flood the country with counterfeit $5 Internal Revenue automobile-use stamps and counterfeit gasoline coupons. This case featured effective use of undercover agents who worked their way into the gang. The counterfeiting plant and equipment were seized.

Stewart Berkshire, head of the Alcohol Tax Unit, reported that the courts had dealt out heavy fines and in some cases substantial prison terms in black-market liquor cases coming to trial during the year. Convictions already have been obtained in cases involving nearly 400 individuals. The Equitable Trading Corporation, New York City, and Hyman Karlin, owner, were fined $100,000, and Karlin sentenced to 30 days in jail. Distribution of large quantities of whisky in the South and in the State of Ohio at above-ceiling prices was alleged.

Fines totaling $55,000 were levied against the Connecticut Importing Co. and three individuals of Hartford, on charges of falsification of records in the disposition of liquor.

Isidore Fried, general sales manager of the Hercules Liquor Products Co., Brooklyn, received an 18-month sentence and was fined $56,000.

In Wilkes County, N. C., one of the most prolific moonshine counties in the country, O. P. A. and Alcohol Tax investigators traced 2,000,000 pounds of sugar that had been obtained illegally by merchants during a 15-month period and diverted to illicit distillers. Seven persons were convicted and fines were assessed totaling $14,200, with several suspended from trading in sugar for various periods.

Similar suspensions were invoked against 11 merchants in northern Georgia for diversions effected by counterfeit sugar stamps.

In Miami, Fla., in December, 8..000 pounds of sugar, 3 trucks, 2 trailers, and an automobile were seized and 7 persons were arrested for having obtained sugar on counterfeit stamps. This sugar was intended for illicit distilleries in northern Georgia.

In Anderson, S. C., 3 persons drew prison sentences of a year to a year and a half for handling counterfeit sugar stamps. In Hagerstown, Md., 3 persons were convicted on similar charges. In Cocke County, Tenn., moonshiners had paid 50 cents each for counterfeit sugar stamps, and had thus purchased 31,000 pounds of sugar. Sixteen persons, including several merchants, were convicted. A similar case in Cookeville, Tenn., involved 10,000 pounds of sugar and brought 3 arrests.

The Secret Service joined O. P. A. and alcohol tax agents in investigating sugar-stamp counterfeiting activities.

Culminating one of the largest illicit distilling conspiracies of recent years, Charles Tourine, alias "The Blade," and 25 codefendants were sentenced at Newark, N. J., to a total of 35 years in prison.

The volume of non-tax-paid liquor traffic, as measured by the amount of mash seized at stills, increased 57 percent over 1943, but was far less than the years prior to the effective date of sugar rationing.

Premium Price or Subsidy Plan for Copper, Lead, and Zinc Pays Nation Dividend of 1,000 Percent on Metal Subsidy Investment—Savings to Government and Taxpayers in 3 Years Amount to $2,000,000,000—Government Outlay Less Than $175,000,000

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. PATMAN. Mr. Speaker, when a Government agency invests its funds and gets them back with interest, that is good news. When an agency makes an investment upon which the return is tenfold or a dozenfold, that is either a miracle or signifies management and foresight of the highest type.

Such a happening has taken place, however, and it is of that investment that I wish to speak today. I point with pride at the results of the premium price or subsidy plan for nonferrous metals, specifically copper, lead, and zinc.

This premium price or subsidy plan of the administration's for metals was initiated in February 1942 as a joint action of three Government agencies—the Metals Reserve Company, the Office of Price Administration, and the predecessor agency of the War Production Board, the Office of Production Management. This program it is estimated has saved this Nation and its taxpayers the stupendous sum of approximately $2,000,000,000; and has done this in return for a cash investment by the Government of less than $175,000,000.

SUBSIDIES PAID NOT LOSSES BUT PROFITS

The other day, in perusing the last report of the Reconstruction Finance Corporation and its subsidiaries, I was struck by a statement which described the subsidy payments made by the Metals Reserve Company to mining companies as a loss suffered by the agency. I searched for the story behind this statement and soon came to the conclusion that it should have classified these payments, not as a loss, but as a partial profit to the Government on its investment in this direction. The conservative bookkeeping procedure of the R. F. C. would probably not permit it to set this item up on the books as an asset, but, in truth, these payments by that office, which aggregate nearly $175,000,000, are not a loss but a profit to the Government.

In order to satisfy my curiosity on this point and to secure sufficient data to justify my claim that this is a profit and not a loss, I have checked with officials of both the mining industry and the Government and have developed the following very gratifying information:

First. The premium price plan for nonferrous metals has saved the Government and the Nation a direct, probable recovery of $402,000,000 in the last 3 years in the cost of these raw materials alone. This is brought about by using these subsidy payments in lieu of an over-all price increase for these metals which would have otherwise been required.

Second. In addition, a further sum, variously estimated between $1,500,000,000 and $2,000,000,000, has been saved in the cost of the finished and civilian products manufactured from these three metals.

Third. In World War No. 1, the average price of copper in 1917, a peak year of production and use, was in excess of 29 cents per pound. Today, copper costs us 12 cents per pound despite the much greater demand for the metal in the gigantic war effort of today.

Fourth. Lead and zinc, though used in smaller quantities than copper, sell today at correspondingly lower prices than they did in World War No. 1.

Fifth. Our imports of copper and other non-ferrous metals cannot command higher prices than those permitted for our domestic production.

Sixth. Strikes, work stoppages and labor disputes in the mines and smelters which produce these three subsidized metals are a thing of the past—ample proof that labor, industry and Government can work hand in hand for the war effort whenever sensible formulas are devised and put into effect which protect the interest of all three parties.

I have it on the highest authority from leaders in the industry and in Government that this particular program has served to prevent which might have well been inflation of the most explosive type in the mining and smelting industry. Without this program, I am told, we would not have been able to avoid serious wage disputes, crippling production shortages and all of the uncertainty which accompanies a situation where adequate supplies of critical materials cannot be ascertained and counted on in advance of actual use.

CONSERVATIVE FIGURES SHOW ENORMOUS SAVINGS

At my request, the Office of Price Administration has prepared some charts on this subject. One of these tabulations shows the actual amount of premiums disbursed by the Government in connection with the production of each one of these three metals; the other tabulation shows the provable, computable savings to the Nation—on a conservative basis—in reference to the metals themselves before use for fabrication purposes. I feel that these charts are conservatively computed because, for example, 17 cents per pound is used as the possible comparative price which copper might have sold for in the absence of this premium plan whereas, during the last war, copper actually sold as high as 37 cents a pound during 1917 and averaged, as stated, more than 29 cents a pound during that year. If we had used the 1917 average figures the estimated savings of today

would run into many, many billions of dollars.

I endeavored also to have prepared tabulations which would show the savings to the Nation in the cost of finished products which are made from these three metals, but found that the preparation of that additional data would involve untold research, much time of valuable employees, and would impose too great a burden on industry at this time. However, from responsible sources in both industry and Government, I get information which convinces me that the savings to both governmental and civilian purchasers of these finished products is at least $1,500,000,000. Beyond this, there is the additional saving in scrap metal costs which follow the lower costs of the basic metals themselves.

METAL COST IN 45,000-TON BATTLESHIP

Perhaps the most graphic example I can give of the vast savings which accrue because of this program is shown in the case of the cost of the metal which goes into a 45,000-ton battleship. One of these fighting monsters, for example, contains 1,535,000 pounds of copper or copper products, 2,746,000 pounds of lead or lead products, and 210,200 pounds of zinc or zinc products. In addition, the steel or steel products used in the construction of the vessel require an investment of 63,000 tons of carbon steel, alloy steel, and heavy armor plates.

If we desire to compare the cost of these metals to us today with their cost during World War No. 1, we find the following:

Forty-five-thousand-ton-battleship example

	World War No. 1 cost	World War No. 2 cost
Copper (1,535,000 pounds)	$448,066.50	$184,200.00
Lead (2,746,200 pounds)	254,033.50	178,603.09
Zinc (210,200 pounds)	28,902.50	17,341.50
Steel (63,000 tons)	6,564,600.00	2,532,600.00
Total	7,295,602.50	2,912,744.50

Thus, because of this subsidy to copper, lead, and zinc producers and because of the lower cost of steel under present price-control regulations, the Government is able to buy these essential metals and metal products today at a cost of 40 percent of what they might cost if prices of World War No. 1 prevailed today.

COPPER SUBSIDY

When World War No. 2 commenced, copper was a very critical material. The three copper-producing companies that were producing practically all the copper could well afford to continue to produce copper for 12 cents per pound. There were a lot of copper mines, however, that could be opened up and more copper produced if 20 or 25 or 30 cents per pound could be paid instead of the 12 cents.

Therefore, the Government did not only what was good sense but good business when it adopted the policy of freezing the price of copper at 12 cents per pound to all companies that could produce it for that amount, and only allowed the increased price to those operating high-cost mines where it was absolutely necessary to get copper production. In this way the Government caused copper production to be increased about 10 percent, which was all that it was possible for it to be increased, by paying the high price in only those cases where there was a high cost of operation. The same thing was done in reference to lead and zinc.

Although the price of many commodities have increased during this war, the price of the principal things, like steel, aluminum, plate glass, cement, and other items, have not increased one cent a ton in 5 years up to the end of 1944. By reason of these prices being frozen, it has saved the American taxpayers tens of billions of dollars. In fact, if we had paid the same prices for things necessary for the Government to buy and to use in this war as were paid during World War No. 1, when we had no price controls, it would have cost the Government $80,000,000,000 more during this war up to the end of December 1944. In other words, if prices had not been frozen or held down, the national debt today would be $80,000,000,000 more than it is.

The interest on this $80,000,000,000 for 1 year at average Government rates is more than enough to pay the entire cost of the stabilization and price-control programs since war was declared. In addition to this, the consumers of America have saved more than $50,000,000,000.

Few of us have stopped to realize the magnificent job which has been done in the field of this single industry in the Government's drive to ward off inflation. If the Office of Price Administration had never done anything but confine its efforts to the devising of this premium price plan for metals, it has justified its existence many times over. The savings to the Government and to the Nation as a whole under the operations of this particular subsidy program have been sufficient to date to reimburse the Government for the operating costs and expenses of a score of O. P. A.'s.

In conclusion, I should like to submit the two tables prepared for me in this connection by the Office of Price Administration. These tables are self-explanatory and are as follows:

TABLE I.—*Savings from premium-price plan for copper, lead, and zinc (production, cost, and savings data)*

	Production (tons)	Cost at present ceiling prices	Premiums paid	Total cost	Total cost at premium price levels	Savings
1942:						
Copper	988,094	$237,142,560	$10,301,645	$247,444,205	$335,951,960	$88,507,755
Lead	452,533	58,829,290	4,381,293	63,210,583	83,718,605	20,508,022
Zinc	696,248	114,880,920	11,202,771	126,083,691	153,174,560	27,090,869
Total		410,852,770	25,885,709	436,738,479	572,845,125	136,106,646
1943:						
Copper	1,090,795	261,790,800	24,723,528	286,514,328	370,870,300	84,355,972
Lead	453,113	58,904,690	10,219,037	69,123,727	83,825,905	14,702,178
Zinc	744,196	122,792,340	33,255,812	156,048,152	204,653,900	48,605,748
Total		443,487,830	68,198,377	511,686,207	659,350,105	147,663,898
1944:						
Copper	972,000	233,280,000	24,800,964	258,080,964	330,480,000	72,399,036
Lead	409,953	53,293,890	13,547,147	66,841,037	75,841,305	9,000,268
Zinc	715,808	118,608,320	41,986,205	160,094,525	196,847,200	36,752,675
Total		404,682,210	80,334,316	485,016,526	603,168,505	118,151,979

NOTES

Production figures are from Bureau of Mines reports.

Cost at present ceiling prices is computed by multiplying production, converted to pounds, by ceiling prices of 12 cents for copper, 6½ cents for lead, 8¼ cents for zinc.

Premiums paid are computed on the basis of production data. The figures given are somewhat greater than Metals Reserve Company figures which are based on disbursements. The difference between the 2 sets of figures arises mainly because disbursements necessarily are made some time after the production for which they are paid. Furthermore, quota adjustments are made effective as of the first of the month in which application for adjustment is received, so that the "liability" for premium payments at any date is generally larger than the actual disbursements made up to that date. The figures given for premiums paid in 1944 include estimates made by us for the months of November and December.

Total cost is the sum of cost at present ceiling prices and premiums paid.

Total cost at premium price levels is computed by substituting premium prices at appropriate levels for present ceiling prices. The premium levels used are: For copper, 17 cents throughout; for lead, 9¼ cents throughout; for zinc, 11 cents in 1942, 13¾ cents in 1943 and 1944. These prices are believed to be more appropriate than those corresponding to the highest levels of premium payments.

Savings are computed by subtracting the figures for actual total cost from the figures for total cost at premium-price levels.

TABLE II.—*Summary of premiums paid and savings*

	Copper		Lead		Zinc		Total	
	Premiums paid	Savings	Premiums paid	Savings	Premiums paid	Savings	Premiums paid	Savings
1942	$10,301,600	$88,507,800	$4,381,300	$20,508,000	$11,202,800	$27,090,900	$25,885,700	$136,106,700
1943	24,723,500	84,356,000	10,219,000	14,702,200	33,255,800	48,605,700	68,198,300	147,663,900
1944	24,801,000	72,399,000	13,547,200	9,000,300	41,986,200	36,752,700	80,334,300	118,152,000
Total	59,826,100	245,262,800	28,147,500	44,210,500	86,477,800	112,449,300	174,418,300	401,922,600
Grand total in a round figure								402,000,000

The Day We Celebrate

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "The Day We Celebrate," before the New England Society of Charleston, S. C., Friday evening, December 22, 1944, by Alexander Guerry, D. C. L., vice chancelor and president of the University of the South:

"The central danger to the world today is that the barbarian will cut the web of history," wrote Herbert Agar in his last book, A Time for Greatness. At that time there was real danger that this would come about, for at that time it did seem that victory for Germany was more than a possibility as the armed might of the Nazis appeared to be almost invincible. And if the barbarian had won, certainly he would have cut the web of history.

What did Agar mean by this statement? The answer is clear and definite. The Nazis would cut the web of history by destroying all sense of values, all the great traditions and concepts of the human race, all the principles which have guided and governed the lives of men, and all the ideals for the realization of which man has struggled since the beginning of time.

Thus the Nazis would separate the present and the future from the past and would build a new civilization and a new order of things upon the abandonment and betrayal of truth and upon the destruction of the best and finest in human life. Without a doubt, if the Nazis had won or if they were to win, the world would live by a new code and our ideas of integrity, unselfishness, consideration for others, the dignity of life, liberty, justice, and right would be discredited and tossed aside. The world of today would be, therefore, different from the world of yesterday to a far greater degree morally than the world of the twentieth century is different from the world of the primitive man.

Agar does not suggest, of course, that the past binds or should bind the present and the future. This would be an unmitigated misfortune. But Mr. Agar knows, as all thoughtful men know, that the stream of history and the stream of truth and experience are the same and that out of his experience down through the ages and from the truth he has learned during the centuries, man may build the good life, a just, free, and enduring society. Certainly truth and experience give man the only opportunity, or to put it in different words, certainly without truth and experience man has no opportunity to achieve this goal.

There is, of course, little danger now that the barbarian, the Nazi, or the Fascist will cut the web of history. But there are other ways by which the web of history can be cut than by violent destruction on the part of victorious German armies and their defiance and hatred of the moral code, of all ideals and principles, and of truth itself. A people can cut the web of history by turning from the lessons of history, by forgetting or by being or remaining ignorant of the history and experience of men, by abandoning or forgetting the ideals and principles by which they have lived, by forsaking truth, and by attempting to build their social order on chance rather than on experience and the wisdom and faith and vision that come from experience and truth. This danger exists particularly in times of difficulty, uncertainty, and strife.

The day we celebrate is, of course, the day of the landing of the Pilgrims upon the shores of New England at Plymouth, Mass., on December 22, 1620. The event we celebrate is the daring journey of men, women, and children across the waters of the Atlantic Ocean, a fearful undertaking at that time. The significance of the day and event we acclaim is the realization that these Pilgrims on the Mayflower cared so deeply about the right to worship God according to the dictates of their conscience that they were willing to seek abodes in a new world across the sea in order to have for themselves the privilege of religious freedom. God was their creator, their father, their ruler, and their guide. It was of more concern to them to live in danger in America, according to the principles of life which were good and right in the eyes of God, than to remain in safety and comfort in England or Holland at a sacrifice of their convictions or their way of life.

If the people of this country ever cut the web of history to the extent that they forget or neglect the fundamental truths involved in the landing of the Pilgrims, we have brought upon ourselves the same sort of misfortune that Herbert Agar feared would befall mankind if Hitler won this war. We would be throwing away that which Mr. Agar thought might be taken away by force and terror. And any nation may do just that in the face of distress, perplexity, irritation, frustration, difficulty, or fear. It has happened before in the history of the countries of the world.

The fundamental truths in the story of the Pilgrims are the place of God in the life of man as his Creator and the importance of moral principle as the law by which men govern themselves and their affairs. These two ideas and ideals constitute actually the foundation and strength of a democracy and will constitute actually the foundation and strength of a free democracy and a free nation tomorrow and a thousand years from tomorrow, regardless of the changes that may take place.

The dignity of man, the dignity of life, is a concept which is the very essence of democracy. Freedom, justice, and the rights of man depend primarily upon the concept of the dignity of man and the dignity of life, the sacredness of individual human personality. As long as people believe in the inherent dignity of man and in the inviolability of man, they will preserve the rights of man. We may be sure of that.

As the rights of man rest upon the concept of the dignity of man, the concept of the dignity of man rests upon the conviction that men are the sons of God, that man is created by Almighty God in His image and is endowed by his Creator with a dignity and sacredness of life and, therefore, with certain inalienable rights. Take away the belief that man is of divine origin and that his life is linked with his divine Creator and gone is the lasting, permanent, and indestructible foundation of a sense of the dignity of man, gone is the security of the rights of man, such as freedom, justice, and opportunity, gone is the foundation of democracy.

The story of the Pilgrims, their journey to America, their life in the Colonies, their pioneering heroism and faith, their whole web of history should make us more aware and sure of a truth that ought to gleam with a brighter flame as the years go by.

In the novel, The Farm, by Louis Bromfield, one of the characters makes this statement: "There is the kingdom of God and the kingdom of man; and the latter in any form is a tyranny." And this is true because a nation must be ruled by spiritual ideals, by moral principle, by the moral law of God if it is to be free. The people of a country must seek to determine what they ought to do and what they will do out of their conscious knowledge and appreciation of moral principle.

The alternative to moral principle in the lives of men is might, force, the threat of force, expediency, or gain. Any of these results in tyranny. Right makes might, not might or power or influence or convenience and not the evil philosophy that the end justifies the means. A thing is never right because the state or a group or an individual does it or says it is right. A thing is never right solely because the end or objective appears good or worthy. An act is inherently right or wrong. When the measure of right ceases to be the ethical principle of right then freedom and all the ideals of democracy are in danger. Moral principle comes not from the state nor the group nor the individual but from God and is, therefore, above the state and the group and the individual and is never to be subordinated to them.

For this reason, a totalitarian state cannot be an ethical state, a state in which people try to determine out of their own conscience that which is right in principle and by principle, because the all-powerful state or the too powerful state considers that what the state does is the ultimate right and that the state should not yield or bend to principle if principle stands between the state and what it desires to do.

For this reason, an ethical state cannot be a totalitarian state. One is simply a contradiction of the other because people and nations are governed in the end by what is right as an ethical principle, by what is right as moral law, or by what is right as might or power or expediency or desire with regard both to internal affairs and international relations.

When the state of a group within the state grows so powerful or seemingly so powerful that whatever the state or group decides or decres or does becomes right in the eyes of the people, then the cause of democracy is lost and the cause of freedom is destroyed. Then the state becomes abruptly or gradually totalitarian or largely totalitarian and the government unlimited.

Government everywhere in the world is growing in the scope of its functions and activities. It is, therefore, increasingly difficult for government to be guided and restrained by moral principle or, for that matter, by political ideals that have their origin in moral principle as the great political ideals do. It is increasingly difficult for government to be guided and restrained by truth and experience because power and might in any and every sphere are impatient of any controls. All this applies to groups, parties, associations, blocs, organizations, and labor unions within the state, because with power and strength the group too often denies and defies any restraint. And this is happening too frequently in America today. Like the state, the group readily comes to believe that might is right, that the group has the right to do what it has the power to do and that the end justifies the means. And that, in the instance of the group as well as the state, is tyranny.

The guaranty of freedom, certainly one of the essential guaranties of freedom, in a democracy is moral principle, the ethical, moral ideal of right as the guiding influence by which men govern themselves and determine their affairs.

We are engaged in the greatest war in history to defeat aggressor nations, led by callous and cruel dictators, in order that we

might preserve freedom and justice in the world. We seem certain to win the war on the battlefields in spite of the present reverses. We want to make certain that as we win the war we shall preserve in the midst of the storm and stress of these days and the days to come a truly free America and a free world, the incentive and the reward of the battle itself for all of us and especially for our gallant, unselfish, and incredibly brave men and women on the firing line and in the combat zone.

One of the ways by which we can achieve this goal is to recall anew the story of the Pilgrims and to take our stand anew with the Pilgrims in the belief that man is the son of God and in the conviction that moral principle is and must be the governing influence for the citizen and the state. Thus the web of history gives us a stronger faith, a greater fortitude, and a clearer vision.

It is a great privilege for me to speak tonight to the New England Society of Charleston on the occasion of the society's one hundred and twenty-fifth anniversary dinner. I thank Dr. Way, your distinguished president for the past 27 years, for the compliment of this invitation. Congratulations and felicitations to the New England Society of Charleston on the continuity of a comradeship for a century and a quarter which has preserved in a particular manner the common heritage of those of New England ancestry in this city and the great ideals and traditions of this heritage.

The man I loved and admired above all men was my father. It is an honor, therefore, for me to be in the city in which he lived for 21 years when he served the people of his church and the citizens of this State as bishop of South Carolina. And it is a source of infinite joy for me to see this evening so many of his devoted friends who meant so much to both my father and mother during the days they dwelt in your midst.

Booth Tarkington on Peacetime Conscription

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1945

Mr. LUDLOW. Mr. Speaker, I wish to present to the House and the country a very interesting and thoughtful article written by a distinguished constituent of mine, Booth Tarkington.

It deals with a question of grave importance which calls for careful consideration by every American citizen—the question of whether or not, after the war, we shall or shall not have military training of all of our youth.

The author's views on this subject were broadcast by Station WFBM at Indianapolis on January 28 under the auspices of the Indiana Committee for Victory.

Mr. Tarkington's article, entitled "Let's Look Before We Leap," is as follows:

LET'S LOOK BEFORE WE LEAP

(By Booth Tarkington)

The American people are now making a decision that will alter our lives after the war far more than most of us have yet realized. For that reason we all ought to think it over pretty carefully before we let our Congress take the final action for us in the belief that it is what we want.

Such action will change every American's life even more than the war itself has changed it, because the war is a temporary condition; but the decision before you is for a permanent condition—the annual peacetime conscription of all American boys.

No matter what we like to think, this will make the United States a permanently warlike country, with every male citizen a trained soldier ready for active duty so long as he is competently fit to bear arms. The Gallup and other polls show that over 60 percent of all our people favor this measure, and that about 80 percent of the women favor it. I believe that such majorities are the results of offhand judgments rather than of a cool examination of the subject. If, on the other hand, you have thought the subject over deliberately, the change it will make in all our old ways of living is so profound—yes, and so risky—that perhaps it would be better to think it over again.

We should understand that the measure for peacetime conscription is entirely separate from the National Service Act or the work-or-fight bill; in fact, is not concerned at all with the operations of this present war that we are fighting. Nor has it anything to do with our dealings with Germany and Japan after we have beaten them. The peacetime conscription proposal is to take effect after this war is over and peace has been enforced upon Germany and Japan. It is not proposed that the peacetime conscripts are to take part in the contemplated future disciplining of those two defeated nations.

No; the conscripts are to form what some of the proponents of the measure call a citizens' army trained to fight in future wars. All able-bodied American boys who have lived to reach the age of 18 are to be forced to take a year of thorough military training, either at that age or before they become 23 years old. For the training year they would be soldiers under professional officers and would undergo the same sort of training that our boys have now in wartime. This would apply to about a million American boys a year, more or less, though the number would increase as our population grows larger.

Of course, at the end of the year the trainee would not be through with his military obligation, or free to dispose of the whole of his next year as he might see fit, because, unless his first year of training is to be thrown away, he would of course be recalled during the second year for supplementary training or a refresher course which would have to last at least 6 weeks or 2 months to prevent the soldierly experience of the first year from being thrown away. The same would apply to the third, fourth, and fifth years after his first year's training.

Probably, to make the best military use of our youth in this manner the supplementary trainings will extend for 6 years. At the end of 6 years we should thus have a conscript army of 6,000,000 men under arms, including those in supplementary training, together with the many thousands of professional officers we should have to maintain continuously for the training and annual maneuvers.

As a large professional army, navy, and air force, the Marines and the National Guard are to be maintained in addition to the conscript armies, as well as all the factories needed to keep pace with the scientific changes in the manufacture of weapons to be used by a personnel of this immensity, only a mathematical expert could calculate precisely what insignificant fraction of every working citizen's earnings the total national debt would leave for him and his family to live upon.

This, however, is a minor consideration. We're all willing to let the Government take all of our earnings if it is necessary for the survival of our country. The question therefore is simply, Is peacetime conscription necessary for that survival?

Broadly speaking, two types of our citizens oppose each other on the question and both are sincere, earnest, and patriotic. Nearly all of our militarily minded people are for the measure. You can see how they would be, of course. I indeed mean no disrespect to anybody when I call your attention to the fact that every businessman thinks that everybody ought to learn more about business; every dancing teacher thinks everybody ought to learn to dance, and so forth. Similarly, nearly all college presidents and university and prep school and high-school faculties oppose the measure. The soldier believes in soldiering. The educator believes in education and doesn't want it interrupted to the damage of educational institutions. In making up our minds we can listen to both opposing parties; but I am neither a soldier nor a professor. I am only suggesting that we look, and think, before we leap.

Some people feel that peacetime conscription would increase the good health of all these able-bodied boys who are to be trained for war. Maybe it would; but let's go into that a little. I formerly lived in two conscript countries, France and Italy, and paid various visits to another conscript country, Germany. I can testify that in general the conscripts didn't look healthier than our free boys at home did, and I believe that our boys were the better athletes. I also remember how generally the French and Italians and Germans disliked conscription but thought they had to have it, firstly, to make other countries afraid to attack them, and, secondly, to make sure of winning the war when war did come. To avoid conscription many boys gave up their homes, left their homes, left their own countries and became free American citizens. Those a little older and at work worried a great deal about having to break into their careers with the annual supplementary trainings. When war came, of course, it didn't make them healthier; it killed a great many of them. The advocates of conscription think it will avoid war by scaring other countries; but suppose we scare some other country into being as warlike as we are. We should then be like two gunmen who say they don't want any trouble with each other but are ready for it. When that happens, the shooting happens, too. Fear makes hate; peaceful countries don't like to be scared; they hate warlike countries. Let's think about this: Who is it that we are going to scare so thoroughly with our peacetime military power? Not any South American countries; we're doing our best to make them like us. We know that the country we're to overawe couldn't be Britain or France or China or Italy or Germany or Japan. We are now engaged with our allies in making Germany and Japan militarily helpless for at least a generation; and that is to be done by means of forces now in existence and those already provided for by our selective service. Therefore, that leaves only Russia as the country to be scared—or fought, if we scare her too much.

The conscriptionists don't say they mean Russia, of course; but if we take a good look around we'll see that there isn't anybody else for us to become hugely militarized against. Russia doesn't want to fight us. Russia just wants to get back to work and be let alone; but, of course, Russia would know that she's the only country we could be doing all this preparedness against, and she can do a lot more of that than we can because she has a population 50,000,000 larger than ours and can be just as scientific and productive, too. We might carefully think over the usefulness of raising a conscript army for the really timid purpose of overawing our present ally, a tremendous

country that thus far would like to hope to keep the peace with everybody when this war is ended.

Further considering the matter, we might see that history gives us a hint about peacetime conscription. We have had two World Wars. In the First World War three great peacetime conscription countries—Germany, Austria, and Russia—were so defeated that they burst into revolution. In the Second World War three peacetime conscription countries have been or are being defeated—Germany, Japan, and Italy.

Of all the countries involved in the two tremendous wars only two nations—the United States and Britain—are twice victorious. That is, the only victors both times are the two nonconscript countries. This may not absolutely prove anything; but it is worth quite a little of thinking over.

Switzerland is sometimes mentioned as a country for which conscription avoided war. The Swiss military power was not comparable to that of France, and if it had been on the plains of Poland, would of course, have been destroyed as was that of Poland. Therefore not the Swiss conscripts, but the Alps, saved Switzerland, though probably the mountains would not have served except for the fact that a neutral Switzerland was a convenience for Germany.

A good many people are for peacetime conscription because, they say, we got caught unarmed. They forget that we were not unarmed at Pearl Harbor, but tremendously armed there. Other people say they are for conscription because they were wrong in opposing our increased armament to get ready for this war, so they don't want to be wrong again. This is the same as believing that because we got into this war with a little army we ought to get into the coming peace with the biggest army in the world. To some thoughtful minds that might look like making sure of being wrong both times.

As I have said, conscription would alter the lives of all of us; but let us think of those whose lives would be by far the most changed—the boys themselves. Necessarily a boy's life is changed in wartime when conscription certainly is necessary for the country's survival; but this new measure is for conscription henceforth in times of peace when our boys, up to now, have always been free to lead their own lives and plan their futures as they wished and needed.

You realize of course that henceforth, with this measure in effect, the boys who are now children or in their early teens will not have any choice or be allowed to say yes or no to what's going to happen to them. When every boy's turn comes, if Congress passes the bill, it won't matter what he wants to do—he'll be taken from his family or his school or his college or his job, and in time of peace he'll be made over into a soldier. It won't matter what he feels or thinks about it, himself; he will not have a say. We older people, his fathers and mothers and kinsfolk, are now making the decision for him without his consent.

In fact, of course, the boys whose lives will be altered by peacetime conscription are still too young to know what they'll want to do when they reach the conscript age, and our decision now isn't going to give them a chance to decide for themselves. The measure is compulsory and if any boy objects when he reaches conscript age and refuses his year of training and the supplementary trainings, he'll be arrested and subject to the penalties of the law. These boys are human beings, and it's quite a responsibility for even fathers and mothers to make such a decision for a compelled future for their sons. There won't be any way out of it except by repeal of the law, and, as we've learned, repeals are pretty slow and difficult.

No, if by this decision the boys whose freedom in peacetime is taken from them now shall later look at us reproachfully and ask, "Why did you do this to me?" we can only say, "We thought there was no alternative."

Are we right in this? Is there no alternative? Are we compelled to compel all our boys henceforth to learn how to meet in mortal combat similarly trained millions of boys from Russia? Russia or any other country?

During the last political campaign all our leaders were telling us that Dumbarton Oaks was a magnificent beginning, but only a beginning, for the structure of permanent peace to be maintained by force—that is, by small armaments in all countries to act in conjunction against any aggressor. We can have that lasting peace. Do you want to throw it away and instead make ourselves into such a warlike power as shall have the fear, and consequently the hate, of all the other countries? Is that the way for us who have always called ourselves a peace-loving Nation?

There are about 2,000,000,000 people in the world, and, when Germany and Japan are beaten into knowing that warlikeness does not pay, all—all of us—will want permanent peace. What can defeat that universal longing? Our fears and our excitement can defeat it. Let us not decide in haste—lest we do what we do not know.

The Coal Shortage

EXTENSION OF REMARKS

OF

HON. EARL R. LEWIS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. LEWIS. Mr. Speaker, the daily newspapers are carrying announcements of shortage of coal in many areas of the country. From some of the news accounts one would gather that the shortage is due to the fact that we are not producing the coal at the mines.

In this connection, and on behalf of the mining industry, both labor and management, I should like to submit some statistics on the production of bituminous coal in 1944. The truth of the matter is that the bituminous coal industry, labor and management, have done a marvelous job of production in spite of the fact that over 40,000 coal miners have been taken from the mines into other essential industries or into the armed forces.

Under leave to extend my remarks, I include the following article which appeared in the Washington Star of January 30, 1945:

WHAT IS THE 1945 OUTLOOK FOR COAL?

In 1944, our third year of war, the bituminous coal industry produced the colossal output of 620,000,000 tons.

That's more coal than the record production mined in the previous year—which, in turn, topped all former records.

In fact, it's more coal than has ever been mined in any year in any country in history.

The story of how this vital wartime job was accomplished has a distinct bearing on the outlook for 1945.

It was done, first of all, with far fewer employees—because coal mining, essential as it is, has not been made a draft-exempt occupation, and many of the younger miners are with our country's fighting men.

It was done with a working force of patriotic men who put their backs into their jobs—who gladly gave up hard-earned vacations—who literally "dug in" and sweated to boost their production. Many of these miners were older men who gave up retirement and voluntarily went back into the mines.

It was done with the aid of mechanized production and safety equipment which the bituminous coal industry had previously provided at a cost of more than $400,000,000.

It was done with the industry's own money, without Government financial aid of any kind.

It was done finally, because of the very human, very enterprising, very American reason that it simply had to be done.

You'll want to know why so much coal was needed—and will be needed again this year:

In addition to heating 4 out of every 7 homes in the United States;

In addition to providing the source of nearly two-thirds of America's electrical energy for industrial and domestic power and light;

In addition to supplying the power for 94 percent of all America's locomotives;

In addition to all that—

Bituminous coal sinews the very arms and legs of America's war effort.

Into the making of every single ton of steel—for guns, ships, tanks, trucks, shells, bombs, and other vital war matériel—goes a ton and a half of bituminous coal. The wartime steel industry, alone, has to have 1,743,000 tons every week.

War chemicals and high explosives—for rockets, mines, and other ammunition—come from bituminous coal. It is also the base for 85 percent of all war plastics, and for hundreds of antiseptics, medicines, and drugs—including the life-saving sulfas.

And, without bituminous coal, the transportation of America's fighting forces and their supplies would well-nigh stop stock-still.

In fact, so very vital to the successful conduct of the war is the steady flow of bituminous coal that if it were to be interrupted even for only a few days, there's no telling where or how seriously it might cripple war production—or how long it might delay victory.

The industry pledges itself to do everything in its power to keep this steady flow uninterrupted. And we are confident that the miners, the public, and the Government will cooperate to make 1945 the record coal year which it "simply has got to be."

Letter From Chicago Negro Chamber of Commerce

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CHICAGO NEGRO CHAMBER
OF COMMERCE, INC.,
Chicago, Ill., January 16, 1945.

The Honorable WILLIAM R. ROWAN,
Representative in Congress,
Washington, D. C.

DEAR SIR: Reaction in Washington from the serious set-backs suffered by our armed forces on the west wall have resulted in

numerous conflicting rumors, regulations, and directives. Among the various regulations proposed is one to draft all IV-F's if they refuse to take jobs in essential industry.

In view of the fact that industry has not accepted the principles involved in F. E. P. C. regulations, we realize that such regulations can be very dangerous to the welfare of a large section of our citizens. With this in mind the members of the Chicago Negro Chamber of Commerce, at its regular meeting January 9, unanimously adopted the following resolution: "That any and all legislation adopted, or regulation promulgated for the use of manpower, provide for equal opportunity for all citizens of the United States regardless of race, color, or creed; and that no person be inducted in the armed forces or otherwise as a result of or penalty for not taking jobs in essential industry, where such industry discriminates against prospective inductee or inductees on account of race, creed, or color, and the Chicago Negro Chamber of Commerce calls upon you to take such action as is necessary to bring about this protection for our citizens."

We urge you to take immediate action in this matter so that the lives and welfare of many of your constituents may not be jeopardized.

We await an early reply.

Respectfully yours,

EDGAR A. HAWLEY,
Secretary.

Move to Eradicate Water Hyacinths

EXTENSION OF REMARKS

OF

HON. JAMES DOMENGEAUX

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. DOMENGEAUX. Mr. Speaker, I have become increasingly alarmed over a subject to which I previously called the attention of Members of Congress. I refer to the water hyacinth which is such a dangerous enemy to navigation, commerce, fish and wildlife, and health along the streams in Louisiana and some of the other Southern States.

Before resigning from the House last year in order to enter the military service, I urged that the permanent elimination of these hyacinths be made a post-war project. With my return to Congress I have resumed my efforts along this line. I intend to devote much time and energy to this purpose.

The fight against the hyacinth dates back many years, but during this period it has been confined to the clearing of streams for navigation. In this the United States engineers have carried on persistently and effectually. Their work has been vital, but because of the other factors involved in this problem, in addition to navigation, it is necessary that the fight be expanded. The greatest need exists for the eradication of this evil once and for all.

As far as I can ascertain no congressional report has been submitted on this subject since one in 1898 which recommended an appropriation for the use of crushing boats, log booms, and spraying. While the matter had been considered prior to 1897 the battle against the hyacinth appears to have had its real origin in that year when by congressional action a board of engineers was instructed to investigate the extent of the obstruction of navigable streams in Louisiana, Florida, and other South Atlantic and Gulf States by these plants and to determine means of removing them so far as they constituted a hindrance to interstate or foreign commerce. In a report the following year the board discussed various methods which had been employed with more or less success up to that time. Of the mechanical processes, that of crushing the plants by boat was considered the best. Mention was made of a successful experiment conducted by Assistant Engineer P. H. Thompson of Plaquemine, La. This called for the use of a saturated solution of salt with enough quicklime added to make a good spraying method. The cost of this plan was estimated at about 2 cents per square yard.

Down through the years, funds have been made available by the War Department for removal of hyacinths, the first such operations of the present authorized Federal project being carried out in 1900 by a mechanical crushing plant. In 1902 the use of chemicals was authorized and from then until 1936 the plants were controlled by spraying with a solution of arsenic and soda, by hand removal and by booms. The use of chemicals has since been abandoned and the process of removal by hand has been reduced to a minimum. In recent years the work has been carried on through utilization of the crushing plant, power-operated conveyors, and booms.

In an all-out war against this great plant menace, a systematic, far reaching and most carefully planned program is needed, based upon a study of the most practical method or methods of control. Primarily the growth must be combatted wherever it exists rather than confine the efforts at destruction to a relatively small area of infestation and then only insofar as navigation is concerned. Most important of all, the problem must be met at its very source.

Research indicates that until the seed fully matures in the flower, the hyacinth will not grow if transferred or planted. Therefore, attention should be centered on destroying the plant before it can blossom and deposit. This means carrying the fight into the smaller and feeder streams and into the swamps, a process which it is agreed will require considerable time and expense. The results, on the other hand, will be of such immense value that the trouble and cost will be more than justified. I know of no better investment and of no better post-war undertaking.

A study of the hyacinth problem also calls for consideration of other plant evils. I have particularly in mind the so-called alligator grass which has spread rapidly from waterways to invade much rich agricultural land along these streams. Where a combination of hyacinths and alligator grass exists, the situation is extremely bad. The expansion of the alligator grass is in itself a serious matter, but one I believe that can be solved satisfactorily along with the elimination of the hyacinth, under comprehensive planning.

It is interesting to note that the water hyacinth first found its way into this country when introduced as a rare and beautiful aquatic plant in the horticultural exhibit of the Cotton Exposition held in New Orleans in 1884. Little did those who viewed this delicate-covered flower realize that these bulbs, carried home as prized souvenirs to be planted in fish ponds, private lakes, and lagoons would in a comparatively short time become a scourge to the Southland.

Let us consider some of the most damaging effects of hyacinth infestation. Alone, or in a combination with alligator grass, it so completely blocks navigable streams that in numerous instances, equities in fishing camps and even permanent homes on lakes and bayous must be abandoned. To the fishing industry, which means so much to the Gulf section of Louisiana, the hyacinth is proving an immense handicap and a grave danger to further development. In many sections it prevents commercial fishing altogether. By blocking out the light it leads to destruction of fishing waters because underwater plants required for producing fish die without light and the fish, both commercial and game, starve or migrate. In a similar manner, food for valuable waterfowl is destroyed. Game and fish refuges and recreational facilities representing large investments of public and private funds are threatened with destruction unless the water hyacinth can be curbed. Agricultural welfare along waterways is also affected, and another concern is the danger to public health created by the obstruction and stagnation of these streams.

Feeling that my colleagues realize with me the seriousness of this condition and the urgent need for relief to protect the health and prosperity of the infested areas, I am pleased to report that a very definite and very important step is being taken in that direction. Working in collaboration with the Army engineers with whom I have recently conferred, I have presented through the Rivers and Harbors Committee of the House a resolution providing for a survey to determine the possibilities and cost of an eradication project. This resolution asks the Board of Engineers for Rivers and Harbors created under section 3 of the River and Harbor Act, approved June 13, 1902, to review the reports on water hyacinth obstructions submitted in House Document No. 91, Fifty-fifth Congress, third session, with a view to determining (a) whether any expansion of the scope of operations, or any change in the method now employed, for exterminating and removing the hyacinth plants and other marine vegetable growths from the waters of Louisiana and other Gulf Coast States is advisable at this time; (b) the nature and extent of the various public benefits that would accrue from such extermination and removal,

and (c) the amount of local cooperation that may be warranted by reason of the local benefits.

This action would be taken with the view of determining the estimated cost of permanently eliminating the hyacinth plants and other marine vegetable growths from these streams; and since the obstruction of these streams affects the fishing industry, agriculture, and health conditions, the resolution provides that the cooperation of the Fish and Wildlife Service of the Department of the Interior and of the Department of Agriculture and the United States Public Health Service be solicited.

I am confident that, with sufficient study, time, and funds, this menace to our national life and resources can be removed. We must keep in mind that aside from the benefits such a post-war project will bring to navigation, industry, and to the public in general, it will create a very large volume of employment, thus bringing immediate and substantial returns from the moment it is started. This is another very important angle to be considered.

I invite the support of Congress in bringing about and expediting this survey designed to provide the basis for something so urgently needed and so ideally adapted to the period following the war.

Lethargy of Home Front

EXTENSION OF REMARKS

OF

HON. EMORY H. PRICE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. PRICE of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Florida Times-Union:

LOCAL VETERAN HITS LETHARGY OF HOME FRONT—LT. JIMMY KNIGHT, HOLDER OF COMBAT COMMISSION, WRITES FROM ITALY

A fighting man's reaction to civilian indifference and lack of understanding is graphically told in a letter from Second Lt. Jimmy Knight, a Jacksonville soldier who has served 30 months overseas and has won a combat commission with a field artillery unit which has been almost continuously in action since the beginning of the Tunisian campaign.

Knight, who was a popular organist at the Florida Theater here for several years before he entered the Army as a private on March 31, 1942, is now in action on the Fifth Army front in Italy with the headquarters of a field artillery group. He is serving as adjutant of his command.

Lieutenant Knight has seen action in Tunisia, at the crossing of the Volturno River, at Cassino, the break-through of the Gustave Line, the Hitler Line, the capture of Rome, the crossing of the Arno, and the cracking of the Gothic line.

His artillery group ranks near the top of the list of American units for actual days in combat, and it has been cited by the French.

Written to his mother, Mrs. Ada Wilson of 1676 Canterbury Street, Lieutenant Knight's letter condemning indifference on the home front, follows in part:

"That brings me to one point in your letter of December 5, which is also apropos of your yen for a 5-day week. Darling, that sort of thing is completely incomprehensible to me. I myself am on tap several days during the week for 20 hours a day, and have worked 7 days a week, quite as a matter of course since August 1942. That sort of thing is far from uncommon. If at least 10 percent of war workers at home had put in a corresponding amount of time, there'd be no shortage of materials on the western front.

"Yes, you say; but how can a civilian work like that and still have any time to devote to his private life and interests? May I point out that we in the Army have neither a private life nor private interests. When people at home are hollering for 5-day weeks at a time when shortages exist on battlefields which are actually and definitely prolonging the war (I know this to be a fact), it makes you feel that the lack of understanding of the situation at home is so hopeless as to make any bridging of the gulf between civilian and soldier impossible.

"Yes; you say, but I'm not doing war work. True—and millions of others are not. But if the ones who aren't doing war work spent more hours and more days on their jobs, it would release more people from these nonessential jobs for war work. If your job goes on during your absence, it means in the long run, somebody who could be doing something else is helping to hold up your end of things.

"If you'll refer to the date of this letter, you'll note it is being written during the period of the German's big counteroffensive on the First Army front. As I write, very little information has been divulged, but it's a highly serious matter, any way you look at it. I'll quote a remark from the Stars and Stripes. The article says that civilian production has been frozen and output of war goods is being stepped up, as well as drafting of men in the late twenties and thirties increased. I was disgusted to read in the body of the article the following: 'High W. P. B. (War Production Board) officials said that current civilian production was at a greater over-all volume than normal peacetime output and that the new policy isn't going to work a hardship on anybody.' Ye gods. What sublime indifference!

"I've been overseas for so long that I can endure a few more—or a good many more—months over here. Being in combat isn't pleasant; it isn't any fun to be scared, as you often are; it gets pretty damn dull, and there are lots of other little unpleasantnesses connected with it. However, I don't consider them important. The main point is that even when things are 'quiet' there are always a few hundred boys getting killed; a few thousand whose future lives are wrecked or made more difficult by losing an arm or a leg, or by being horribly disfigured. If those things mean nothing to you, I don't know how I can get through to you; they aren't just words in a book, or a headline in a newspaper; they're happening every minute, every day, every week, all over Europe.

"In view of the above, I cannot feel the importance of not working a hardship on anybody back home. It might restore some of the moral fiber and toughness of spirit which were responsible for founding our country if a little hardship was endured by the home front. Please don't write me anything more about people finding it difficult to go on with their working schedules. I find mine rather difficult at times, and can refer you to thousands of lads within a 5-mile radius of where I am at the moment who find it difficult to go on with theirs. Most of them manage to—those who don't get killed.

"Darling, I don't mean to make any personal reflections in delivering such a long sermon on the necessity for full cooperation on the home front. I know a good bit of it is due to lack of information. The American newspapers are in some ways the worst in the world. Their predeliction for using phrases like 'smashed through' to describe an advance of a few hundred yards, bloodily and tortuously won, isn't calculated to make you feel what's really happening.

"The American armies are good—I think they're the best in the world in some ways. If the high command was prepared to make more sacrifices of human life, they could make it look a lot more spectacular. But you must always think of the individual who is out there getting shot at, who is under enemy artillery fire, who has mortars bursting around him, and who, in spite of the publicity about the Luftwaffe being swept from the skies, still has to duck a Jerry plane every now and then, think of that guy, he's the Army, until he moves forward, (and Lord! how slowly he has to move); all the rest of it doesn't mean a thing. Keep that one, scared, dirty, muddy, tired lad in your mind, and see if your own contribution is excessive in comparison.

"You see, soldiers are no different from anybody else; there's nothing about military training that makes them supermen; they react to situations with the same emotions as anyone else. It's just that they can't quit when it gets unpleasant. And unfortunately, it doesn't 'get' unpleasant, it stays that way.

"This thing will never be over unless all of us give our best, the Germans are putting out their best, and it's still damned good!

"I hope you'll remember all the things I've said in here for a long time. There will always be things to be fought for and fought against in this world, because there will always be injustice, selfishness, intolerance, and greed. Personally, I'm prepared to fight indefinitely; how about you?"

Hospitalization and Medical Care of Veterans

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. DOYLE. Mr. Speaker, under leave granted me heretofore to extend my remarks in the RECORD, I include statements by the vice commander, Costello Post, American Legion, Washington, D. C. These were all furnished me by Joseph Leib, vice commander, and I am pleased to present them at this time:

This world of global war is not only taking lives of thousands upon thousands of our ablest-bodied young men forever from us, but it has already left thousands, and will leave countless thousands more, no doubt, crippled and maimed and handicapped mentally and physically for life. This Nation in its honest, sincere, right conviction to fight in this war for the preservation of democracy in this Nation and in our world

obligations can do nothing less for these gallant men who come to our hospitals needing hospitalization, and to give them a maximum of the most modern hospitalization possible under the most pleasant conditions and circumstances possible. No hospital condition which is not frankly and clearly conducive to the speediest possible recovery and rebuilding of morale and the reparticipation of the veterans in our normal community life should be tolerated. Whatever facilities or measures are necessary for the most adequate care of all of our veterans wherever they are in the world must be furnished. Cost compared with lives of men cannot be considered. We can re-earn and replace the dollars, but we can never replace the men. I bespeak the utmost prompt and thoroughgoing sincere cooperation possible in this and all matters relating to our veterans and their hospitalization and care—not only at Washington, D. C., but wherever they are in such need. I am sure that great body of American nurses and doctors and assistants and all concerned will not knowingly have one son of a mother neglected nor uncared for in the finest possible manner. Anything less than this would be a shame and a disgrace to our Nation and an everlasting condemnation upon us all.

My distinguished son who recently gave his life as first lieutenant in the Army Air Corps in the performance of his duty, I observed in an Army base hospital during his 2 days of unconsciousness after the plane crash. Nothing was too good or too important or too necessary for him. He was my son. It makes a difference whose son we are talking about. From here on, more than ever before, I shall speak for and aid the sons of other mothers and fathers in hospitals and at the front, wherever they are. Therefore, more in a special manner, it is my pleasure to call these communications to the attention of Congress at this time.

The statement follows:

MOUNT ALTO, VOTELESS WASHINGTON, D. C., VETERANS' HOSPITAL, REFUSED ADDITIONAL BEDS—NOW DANGEROUSLY OVERCROWDED AND INADEQUATELY STAFFED—DISTRICT AMERICAN LEGION ORDERS INVESTIGATION

(By Joseph Leib, vice commander, Costello Post, the American Legion, Washington, D. C.)

There are merely 327 capacity beds at the veterans' hospital in Washington, D. C., known as Mount Alto. This number of beds is insufficient to care for World War No. 1 men, giving no consideration whatever to veterans of this war.

This disturbing fact is acknowledged by General Hines, Veterans' Administrator, in a letter to this post.

It is amusing to note that General Hines cunningly attempts to cover up this unfortunate situation by advising that a study is being made to set up a veterans' medical center in the National Capital. See how he endeavors to sidetrack the issue.

In this connection it must be pointed out, however, that General Hines has been talking about such a project for the past 12 years, yet nothing positive ever comes from his office outside of voluminous promises.

The fact remains that there are still only 327 capacity beds to care for the former soldiers of this vicinity. Many veteran leaders throughout the United States are voicing their disgust at the bureaucratic obstructionism, red tape, and simple inertia that emanates from the office of veterans affairs.

Under the policies of General Hines, many thousands of sick and disabled veterans have been deprived of urgent hospitalization and medical care.

It is a well-known fact that many veterans' hospitals are dangerously overcrowded and others have long waiting lists.

In line with these conditions needy and worthy veterans must wait months before obtaining admission to hospitalization.

Whom are they to turn to?

Our post recently addressed an inquiry to General Hines relative to the unfortunate condition at Mount Alto.

In the following correspondence the Administrator of Veterans' Affairs admits the amazing fact that no definite consideration or provision has been made for Mount Alto to accommodate the growing demand for hospitalization by veterans of both World Wars.

Think of it! With more than 1,167,000 servicemen of this war alone discharged as disability cases, and out of that total over 300,000 of them are drawing service-connected pensions, General Hines finds that there is no need to add additional beds at Mount Alto. All of these men are potential hospital cases. Many of them live in or near Washington.

The naked truth shows (the figures given by General Hines himself) that his administration has seen fit to add only 8,404 beds to its existing facilities throughout the United States since Pearl Harbor.

The mentioned communications and a resolution recently adopted by our post and unanimously endorsed by the executive committee of the American Legion, Department of the District of Columbia, on January 25, 1945, attests to the deplorable predicament that exists at Mount Alto.

Is it not time for Congress to take proper action?

The correspondence follows:

JANUARY 4, 1945.

Hon. FRANK T. HINES,
Administrator, Veterans' Administration, Washington D. C.

DEAR GENERAL HINES: I have been directed by the Vincent B. Costello Post, No. 15, American Legion, to address an inquiry to you as to whether or not any funds are now allocated for the expansion of present or erection of new veteran hospital facilities in or near the District of Columbia.

Your early reply to the above will be greatly appreciated.

Respectfully,

DAVID E. MILLER,
Adjutant, Vincent B. Costello Post, No. 15, American Legion.

VETERANS' ADMINISTRATION,
Washington, January 15, 1945.

Mr. DAVID E. MILLER,
Adjutant, Vincent B. Costello Post, No. 15, The American Legion, Washington, D. C.

MY DEAR MR. MILLER: I have received your letter dated January 4, 1945, which requests information regarding the hospital program of the Veterans' Administration.

There has recently been approved a program for additional construction covering our hospital requirements through June 30, 1946, and a request for an appropriation to accomplish these projects has recently been submitted.

While the expansion of veterans' hospital facilities in or near the District of Columbia is not provided, this program only represents the first increment of additional hospitals required for World War No. 2 cases, and consideration is being given to the establishment in this area of a modern medical center.

Very truly yours,

FRANK T. HINES,
Administrator.

The resolution:

Whereas members of this post have reported that the Veterans' Administration facility on Wisconsin Avenue, known as Mount Alto Hospital, Washington, D. C., is not able to provide care to which veterans in this vicinity are by law entitled; that the institution is understaffed and overcrowded; that veterans in need of hospital care cannot obtain such care; that the present buildings, besides being inadequate for the needs of this vicinity, are badly in need of repair; that the hospital has a general gloomy and poorhouse atmosphere not conducive to high morale or rapid recovery of patients; and

Whereas Mount Alto Hospital is the diagnostic center for the Veterans' Administration and therefore not strictly speaking a hospital for the care of veterans in this vicinity; and

Whereas we feel that it is a cardinal duty of the American Legion to see to it that adequate and competent hospital care under pleasant and comfortable conditions is made available to veterans in need of such care as provided by law: Therefore be it

Resolved by the Vincent B. Costello Post, No. 15, the American Legion, Department of the District of Columbia in regular meeting assembled this 2d day of January, 1945, That the executive committee of the department be urged to order a comprehensive survey to determine (a) the requirements of veterans in this vicinity for hospital care, including clinic facilities, (b) the extent to which and the manner in which such requirements are being met by existing Veterans' Administration facilities, and (c) what additional facilities or corrective measures are necessary to assure adequate care for all veterans; that a committee be appointed by the department commander to make this survey and that the committee be instructed to present its report to the department executive committee at the earliest practicable date, but in no case later than 1 month prior to the 1945 department convention.

Unanimously adopted, January 2, 1945.

THOMAS A. COSTELLO, *Commander.*

Unanimously approved, January 25, 1945, by the executive committee, American Legion, Department of the District of Columbia.

Latest Box Score on Twenty-second Amendment Shows No Change for Better—Arkansas Legislature Rescinds 1943 Action, but New Hampshire Joins Ranks of States Which Favor Amendment

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1945

Mr. PATMAN. Mr. Speaker, as I pointed out in my remarks to the House, on January 24, the State Legislature of Arkansas rescinded its former action taken in 1943 wherein it endorsed the proposed twenty-second amendment to the Federal Constitution. However,

with the discovery that the New Hampshire State Legislature adopted a resolution in 1943 favoring this amendment, the box score of States on this matter remains unchanged today.

I have been requested to again submit to the House an up-to-date chart showing the status of all resolutions offered or adopted which call for the adoption of this proposed twenty-second amendment. Based upon the latest information available to me as of January 31, 1945, the Nation-wide picture is as follows:

	Adopted	Resolution offered	Passed House	Passed Senate
Alabama	July 8, 1943		Yes	Yes.
Arizona		None		
Arkansas	1943 (rescinded 1945).[1]	1943	Yes (unanimous)	Yes (unanimous).
California		June 7, 1944	No vote taken	No vote taken.
Colorado		1943	No	No.
Connecticut		None		
Delaware	Apr. 22, 1943		Unanimous	Yes, 10 to 6.
Florida		None		
Georgia		do		
Idaho		do		
Illinois	1943		May 5, 1943	May 26, 1943.
Indiana	1943		Yes	Yes.
Iowa	1941		do	Do.
Kansas		None		
Kentucky	Mar. 20, 1944		Yes [2]	Do.
Louisiana		1944	No, tabled 54 to 22	Do.
Maine	1941		Apr. 17, 1941	Apr. 15, 1941.
Maryland		None		
Massachusetts	1941.[2]		Apr. 29, 1941	Apr. 24, 1941.
Michigan	1941		May 16, 1941	Apr. 29, 1941.
Minnesota		None		
Mississippi	1940		Apr. 29, 1940	Apr. 29, 1940.
Missouri		None		
Montana		1941	Killed in committee	
Nebraska		None		
Nevada		do		
New Hampshire	1943	do	Yes, Apr. 13, 1943	Yes, Apr. 22, 1943.
New Jersey	1944		Apr. 4, 1944	Feb. 25, 1944.
New Mexico		None		
New York		1944	Lost on vote	No vote.
North Carolina		None		
North Dakota		do		
Ohio		1944	Killed in committee	Yes.
Oklahoma		None		
Oregon		do		
Pennsylvania	Vetoed [3]	Mar. 31, 1943	Yes	Do.
Rhode Island	Mar. 15, 1940		do	Do.
South Carolina		Feb. 3, 1944	No vote	Recommitted.
South Dakota		None		
Tennessee		do		
Texas		1943	No	Yes.
Utah		None		
Vermont		do		
Virginia		1944	Yes	No.
Washington		None		
West Virgina		do		
Wisconsin	1943	Apr. 14, 1943	Yes, 44 to 34	Yes, 17 to 9.
Wyoming	1939		Yes	Yes.

[1] Adopted 1943 but rescinded 1945. [2] Rescinded by House. [3] Vetoed by Governor, June 7, 1943.

I have also been asked to summarize once more the disastrous results which would befall this Nation if this amendment should pass. If this amendment should become a part of our Constitution, it will result in the following:

First. The principle of "ability to pay" in Federal taxation will be discarded.

Second. Small business will be wrecked because big business will be able to keep so much of the huge profits that they make that little business will be unable to compete and will be quickly and easily crushed and destroyed.

Third. The Government will be unable to collect sufficient money under the restriction to provide for more than the payment of the interest on the national debt when the war is over. It is estimated that our national debt will be around three hundred billion when the war is over. If the interest rate is kept down to 2½ percent, the carrying charges will be $7,500,000,000 per annum. Therefore, it is very doubtful that the Government can raise more than enough to carry this enormous carrying charge on the national debt with this 25-percent restriction.

Fourth. Dependents of those who gave their lives for their country in this and other wars will no longer be able to receive relief from the Federal Government.

Fifth. There will be nothing left for the Federal Government to provide for those who can no longer carry on due to injuries and wounds received in battle while protecting our country in this and other wars.

Sixth. The aid for old-age assistance will have to be discontinued and much of the social-security program generally will be wrecked.

Seventh. There can be no soil-conservation payments to farmers.

Eighth. There can be no help by the Federal Government for construction of highways and roads; nor for the improvement of our rivers and harbors.

These are just a few of the benefits that will have to be stopped immediately if this amendment becomes effective.

LITTLE TAXPAYERS WOULD BE HARMED

In practice the 49,200,000 taxpayers in the lower brackets will not only not have their taxes reduced under this amendment, but their taxes will actually have to be increased to make up for the savings that will be granted to the few who now own and control so much of the wealth of the country.

A Letter From the Front

EXTENSION OF REMARKS

OF

HON. EMORY H. PRICE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. PRICE of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Jacksonville Journal of January 15, 1945:

By this time Mom, I know you've read about the ammunition shortage over here. They may be rationing gasoline and meat back home, but by God, they're rationing ammunition over here. The people back home want this war to finish up in a hurry—and God knows, the guys who are fighting it want to see the end soon. But unless you and 130,000,000 other Americans do something about the ammunition shortage there will be a lot more little white crosses planted where there should be nothing but clover.

Every round of ammunition—every shot that isn't fired over here is paid for in blood by somebody's son. There is only a pretty slim chance that you soon will have to shell out the price of a shot not fired but by God, somebody is paying that price and the payee is just as much an American as I am—maybe even a little more so because of the sacrifice he makes.

The guys over here are plenty sore about the situation, and it's high time that you folks back home start getting sore about it too.

The first time you hear somebody gripe about how the Allied armies have slowed down or cased up do me a favor Mom—just count to 10 very slowly and then knock hell out of him.

I don't want to scare you, Mom, but I do want to make you mad—and I hope that you make as many other people mad as possible. I guess I blew a little too much steam, Mom, but it is impossible to lay too much emphasis on the situation as it stands now.

ROBERT.

Missouri River Project

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, in no time since the beginning of statehood has a question of more far-reaching importance claimed the attention of its citizens than does the Missouri River project now before this Congress. By the utilization of the waters of the Missouri River in the semiarid areas of North Dakota, the State will have been made secure and henceforth this Congress will not be called upon in depressing drought periods for lavish appropriations for the people who live there.

Rather, by a program of well-organized irrigation, vast acres within the confines of this State may be watered by the

surplus waters of this river and on these lands can be grown various crops, conspicuous in them forage crops, feed for livestock, and Dakota is a livestock country. Never again after irrigation has been brought to the State will the Government have to move in and slaughter cattle in dry periods, because these areas watered by irrigation will serve as a bulwark against such conditions, and a permanent prosperity will come to the people of the State and the State will increase its contribution to the welfare of the Nation.

Mr. Speaker, I beg leave to include herewith a statement made by Col. Lynn C. Barnes, district manager of the United States Corps of Engineers, in an address to the members of the Engineers' Club of Minneapolis:

MISSOURI PROJECT LARGEST SINGLE PUBLIC WORKS PROJECT ON RECORD

The plan of the Army engineers for Missouri River Valley flood control will be the largest single engineering project ever attempted by man, Col. Lynn C. Barnes, district engineer, United States Corps of Engineers, St. Paul, told members of the Engineers' Club of Minneapolis at a meeting held last month. Cost of the series of dams and reservoirs to be constructed would be $410,000,000, he said, while total storage capacity of the reservoirs would be 72,000,000 acre-feet of water.

Highways, railway tracks, bridges and farm homes will have to be moved under the long-term plan to gain control of one of the most perplexing flood-control problems in history, Colonel Barnes said. In addition to control over floods the water in reservoirs could be used for irrigation, sanitation, and recreation purposes, the speaker pointed out.

Address at Birthday Celebration of Doctor Chaim Weizmann

EXTENSION OF REMARKS

OF

HON. AUGUSTUS W. BENNET

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. BENNET of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the birthday celebration of Doctor Chaim Weizmann, conducted under the auspices of American Friends of Palestine Histadrut, at the Biltmore Hotel, New York City, on January 23, 1945.

The address follows:

Mr. Chairman, ladies, and gentlemen, I am glad of the opportunity to be here this evening and to join in the tribute which you, in common with millions in various parts of the world, are paying tonight to Dr. Weizmann.

It has been my privilege to read quite a few articles concerning his tremendous achievements against odds, and I am sure that of all the things he has been able to accomplish, nothing would give him greater satisfaction than to have a part in bringing about, during the seventieth year of his useful life, the relief of his fellow Jews in Europe, from the unbelievable sufferings and privations which they have undergone.

Under his leadership, and with his inspiring example, it should be possible to rally to the support of such an effort, every right-thinking and intelligent person who is made aware of the situation.

Too often, however, we assume that everyone knows what has happened and is happening to the European Jews. Yet, how many people have actually read even a small part of the report of the War Refugee Board established by the President of the United States on January 22, 1944, which report was issued in November of last year. I have read it through, but still do not seem able to grasp the terrible import of the figures given, nor even if I grasped the figures, would I be able to adequately comprehend the terrible anguish through which even the living have passed.

Who would believe that in this age of presumed enlightenment and civilization somewhere in the neighborhood of 5,000,000 members of an old race with glorious traditions would be systematically exterminated? Yet, that is what we are told has been accomplished in the dark years which lie immediately behind us. That figure, if correct, represents approximately one-third of all the Jews in the world. And the report from which that figure is taken is so documented and detailed that it seems impossible to doubt the accuracy of the estimates.

Whole commmunities have disappeared, never to return. Complete families have ceased to exist. Entire sections of great cities are tenantless, their former occupants having been vaporized, so to speak, at one or another of the infamous prison camps such as that in the Birkenwald.

Fortunately, it appears possible that the continuing successes of Allied arms have brought, at least, a temporary cessation of most of the actual murders, although we cannot be sure that such is the case, and we may at any moment find that our hopes in this respect are unjustified.

The temptation to remove forever witnesses who could testify to some of the unspeakable Nazi crimes must be strong and the realization on the part of the Nazi leaders that their defeat is only a matter of time may well lead them to further acts of desperation which will still further decimate the thinned ranks of Europe's Jews.

But what of those who remain, and who would theoretically be free to return to their former homes after the last shot has been fired? Will they have any homes to which they can return? Will they be welcomed by their neighbors? Will they be able to endure the thoughts which must daily assault their minds in these old familiar surroundings, when they note the absence of so many of their relatives, friends, and neighbors and are compelled to imagine their fate?

I do not have the answer to those questions, but certainly, under the most favorable conditions, there will be hundreds of thousands who would want to do almost anything except go back to their homes.

The problem with which you and I are going to soon be faced is what to do with these people.

Fortunately there exists a precedent. For the past several years efforts have been made by many organizations, including the one of which I am about to speak, to bring about the rescue of these beleaguered people, and in a pitifully few instances the efforts have been rewarded with success.

The rescued people have, in many cases, been brought to Palestine where they found waiting to serve them and to help them rehabilitate themselves that great and unique organization known as the Histadrut. Under the peculiar conditions which exist in Palestine it might be fairly said that this group carries on for the Palestine Jews all those government functions related to the welfare of the citizenry which ordinarily would be the activity of a full-fledged government.

It is nonpolitical and includes in its ranks, I am told, every one of the major political ideologies prevalent in Jewish Palestine. It is powerful in its influence because half the Jewish population is included in the group in one way or another and because it possesses tremendous economic strength as a result of its many and diverse activities.

It operates cooperative colonies, industrial transport, and purchasing and sales cooperatives, building companies, port, harbor and fishing companies, and even air lines. In other words, its policies determine the framework within which the economic life of the country will develop.

Naturally, the plight of their coreligionists in Europe made an immediate and stirring appeal to the leaders of Histadrut, as did, also, the call of the United Nations to take up arms against the Hitler menace.

The Histadrut has furnished, I understand, approximately 80 percent of the Jewish recruits from Palestine and it supplements governmental allotments made to the families of these boys. The organization, while carrying on its normal functions has also mobilized labor battalions for war jobs, cared for sick and wounded soldiers, conducted rehabilitation activities, and produced tremendous quantities of material for the United Nations armies based in the Middle East.

With this history, Histadrut was naturally equipped to tackle the new problem raised by the thin stream of generally destitute refugees which soon commenced to flow from Europe by every available route. The leaders of Histadrut at once set up training schools for the new citizens, acquainting them with new means of earning a living well adapted to the new country. They set up a cooperative medical system which went to work to build up the physical strength of the refugees in order to equip them for the difficult tasks which a pioneer civilization always faces.

All of the diverse services of which Histadrut is proud were made immediately available.

Having planned to take care of the thin trickle, Histadrut then set about trying to swell the trickle into what might be called a flood. Hundreds of representatives were sent into the occupied countries of Europe to organize the transport of groups of Jews to places of safety. Tribute has been paid to the work of these courageous agents by Mr. Ira Hirschmann, the Middle East representative of the War Refugee Board, in a public statement, and it must be evident to everyone that their work was fraught with constant danger and hardship.

I am informed that in the 4 months period ending December 31, 1943, they succeeded in rescuing 11,200 Jews and I hope that the number rescued in 1944, of which I do not have an account, will be far larger.

To equip and maintain these representatives costs money and the self-respecting Histadrut taxed itself severely to make their work possible. Every member contributes $24 a year and, if I am correctly informed that the average per capita income of these members is not over $500 a year, it will be seen that the annual contribution represents approximately 5 percent of each individual's income for this one special activity alone, not counting the many others to which reference has been made.

It will be seen then, that there exists in Palestine under energetic, far-seeing and intelligent leadership an organization which, so far as its limited resources permit, is making it possible for thousands upon thousands of broken, beaten, and dispirited people to start life anew. But, after all, it must be realized that all the efforts and con-

tributions of Histadrut fall far short of providing for the thousands who still hopefully wait for a refuge in Jewish Palestine. An appeal is, therefore, to be made to Americans for help.

The other day, in the space of a very few minutes the Congress of the United States appropriated $1,500,000,000 for the use of the Navy in carrying on the war. The completion of the program contemplated by this appropriation will give us, it has been estimated, a fleet twice as large as any other in the world, and should render us safe for an indefinite period against any conceivable attack coming over the surface of the seas. Yet, this huge sum will, in my judgment, eventually avail us nothing if we do not supplement expenditures of that sort with vigorous and determined efforts to establish our moral leadership all over the world.

My mind goes back to the early days of the century when a handful of Chinese who called themselves "the Boxers" staged an abortive revolt which caused the loss of some American lives and property. In punishment, China was compelled to pay our Government some millions of dollars and in one of those great moments of imagination and vision which national leaders occasionally have, this money, instead of being deposited in the Treasury for general Government purposes, was set aside as a fund for the education and training in this country of Chinese students. No one will ever be able to measure the return which that modest investment has brought in the shape of good will and genuine friendship on the part of most of today's Chinese leaders.

With that example to guide us how can we fail to see the importance of making a similar investment in Palestine—a land which is still regarded as the Holy Land by two great religions? How can we help but realize, too, that the great experiment in Palestine is comparable in many respects to our own early struggle for freedom and independence?

From the standpoint of the numbers of people involved and the distance from our shores of the scene of action the situation might not be considered acute by the great mass of our people. But, the Jewish people have a tremendous claim upon our interest and support which is all out of proportion to their numbers.

The contributions made to American life and progress by the many great Jews who have given us the benefit of their talents throughout our history, are always before us. We should never forget that a Jew played a leading role in financing our Revolutionary War and died a pauper as a result.

Here is a golden opportunity for Americans to demonstrate that the weak, the defenseless, and the oppressed can count upon our friendship and support. Here is a chance for us to invest some portion of the national prosperity which currently exists.

What we do now for the people of Palestine will be noted by other struggling peoples and will enhance the reputation for generosity and interest in the underdog which we have usually possessed and always coveted.

I am idealist enough to believe that in the long run the creation of such a reputation, the knowledge that America is not always actuated by self-interest and that we are as anxious to help those from whom we can expect little of substance in return, as we are to please the great and powerful, will bring to us greater real security than the most powerful Navy that we can construct. And I hope that as a result of this meeting tonight, and of others which are presumably in progress elsewhere, Dr. Weizmann's dream will be realized within a measurable period of time and that we Americans will have made a contribution to the terrible problem about which we have been talking commensurate with our ability to help.

North Dakota Is O. K.

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, it seems to us who come into this Congress to represent the States of smaller populations that all too often our States are lost in the great program in their relationship to the large States with large populations and large delegations.

Many of the States of the 48 have populations below a million. My State of North Dakota is one of that group, yet with our limitations so far as population is concerned, we are making a great contribution to the Nation's welfare, so completely so that it is recognized in many sections of the Nation; and, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD an editorial from the Minneapolis Star-Journal, the most important metropolitan paper in close proximity to the State. It follows:

NORTH DAKOTA IS O. K.

For the second successive year, North Dakota farms have produced more than half a billion dollars in gross income, the alert Greater North Dakota Association reports in its review of 1944. That is an average of more than $7,250 for each of the 71,000 farms.

The State was first in the Nation in war-important flax production, first in barley, first in durum wheat, second in all wheat, third in potatoes.

North Dakota also produced 2,500,000 tons of lignite coal, has been developing its natural gas fields, and several companies are drilling for oil. The Federal Bureau of Mines is building a commercial-size pilot plant at Grand Forks to extract hydrogen gas and motor fuels from lignite.

The State is planning for peace in a practical way. County agents are developing community projects so farm boys, coming home from war, can get started on their own. In 67 business centers, definite post-war employment programs are progressing.

The Federal flood control bill, calling for large expenditures for the Missouri and Red Rivers, already has passed Congress, and there is prospect of much greater development of the Missouri in North Dakota with passage of the various plans now pending on Capitol Hill.

The State has contributed wonderfully to the war effort and the Greater North Dakota Association has more reason than ever to have faith in its slogan—North Dakota Is O. K.

Prayer of General Patton

EXTENSION OF REMARKS

OF

HON. DUDLEY G. ROE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. ROE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a prayer of Lt. Gen. George S. Patton, Jr., which was distributed to his men at the height of the German break-through back in December.

We have all admired General Patton's brilliant military achievements, and it must be consoling to those of us here who have loved ones on the battle front to know that this great leader places so much confidence in the great Creator of the universe.

The prayer follows:

Almighty and most merciful Father, we humbly beseech Thee, of Thy great goodness, to restrain these immoderate rains with which we have had to contend. Grant us fair weather for battle. Graciously hearken to us as soldiers who call upon Thee that, armed with Thy power, we may advance from victory to victory, crush the oppression and wickedness of our enemies, and establish Thy justice among men and nations. Amen.

Why Congress Is Cautious

EXTENSION OF REMARKS

OF

HON. BERKELEY L. BUNKER

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. BUNKER. Mr. Speaker, in my opinion this editorial from the Humboldt Star, published at Winnemucca, Nev., rather clearly and fairly states the case on H. R. 1752, known as the work-or-fight bill and which is now under consideration by this body.

WHY CONGRESS IS CAUTIOUS

It isn't fair to call Congressmen cowards because they are reluctant to rush through a law to draft labor. They're in a soul-trying spot.

Give the President every power he and the military leaders think necessary to win the war quickly at minimum cost in lives—that's easy to say. And Congress has given vast powers to draft fighters, spend money, control materials, wages, and prices, hold down nonessential business, and seize industries that fail to contribute fully to the war.

But these, say the President and the military leaders, have proved too little. They ask now for power to tell workers where to work and to make them work there.

Many sincere people believe that in war the Government should draft everything—fighters, workers, capital, property—in a grand total mobilization. That would be drastic. We think it would be disastrous after, if not during, the war. But at least drafted workers, like drafted fighters now, would not be earning profits for private employers. There would be no private employers and no profits. However, Congress has not been asked to authorize total mobilization of that sort.

Congress is asked to authorize a partial mobilization of civilians—possibly all men and women, except the very old and very young, but more probably men in the 18–45 age group who are not wanted in the armed services—so that from among them workers can be drafted for war jobs in privately owned industries.

This would not be work or fight. People who refused to work where ordered wouldn't be sent to fight; the armed forces don't want them as fighters. More likely, they would be

subjected to fines or jail sentences. Those who are urging Congress to act believe it wouldn't be necessary to invoke the penalties in many cases—that the mere threat of them would be enough to cause most people to go and work where ordered.

Maybe so. In any event, it would be compulsory work for private employers. And that would be something so new in the United States, so hard to reconcile with our traditions of individual freedom, so certain to create a whole host of baffling problems, that we don't blame Congressmen for their cautious attitude.

We accept military judgment as to what this country must produce to win the war even though that judgment has shown itself fallible at times. But how best to get the production wanted is a different matter, on which the generals and admirals are not necessarily wiser authorities than industrialists and labor leaders. And so one thing seems to us certain: Despite the President's call for prompt action now and no worry about the perfecting of details, Congress is going to think hard before it acts on a draft of labor.

If, meanwhile, the executive branch of Government will make better, firmer, more effective use of the great powers already granted, it can do much to improve the manpower situation. And if further improvement is then needed, its requests for additional power will carry weight with Congress and the people.

Address Under Auspices of Brooklyn Council of American-Soviet Friendship

EXTENSION OF REMARKS

OF

HON. AUGUSTUS W. BENNET

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. BENNET of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at a rally conducted under the auspices of Brooklyn Council of American-Soviet Friendship at the Academy of Music, Brooklyn, N. Y., on January 24, 1945.

The address follows:

Mr. Chairman, ladies and gentlemen, I feel a little reluctance in addressing this audience on the subject assigned to me, namely, the Fight Against Isolationism in Congress, because I am too new at the task of being a Representative in Congress to properly evaluate the situation which exists in Washington. And, in what I shall hereafter say, therefore, I would prefer to have you feel that I am speaking as an ordinary American citizen with such a citizen's reactions to the problem of American-Soviet relations.

The late Wendell Willkie once said something to the general effect that if a man did not feel right down in his belly that we Americans must and should have the friendliest possible relations with Russia, then such a man was not sincerely for international peace and good will.

I suppose that what he meant was that it is inevitable that Russia and the United States will emerge from this war immensely more powerful in relation to the rest of the world than we were before, and that in the foreseeable future we will be respectively the world's greatest military power and the possessor of the world's greatest navy. That being so, the two countries can be tremendous forces for good and can absolutely insure peace for an indefinite period if they work together, or, on the other hand, they can be responsible for another titanic struggle if they exert their tremendous powers and their overwhelming influence in opposite directions.

There seems to me every reason why the two countries should be able to work together. They have no common frontier; neither wants anything the other has except by way of exchange in the open market, and there is no history of past victories, defeats, or injustices, to embitter the peoples of the two countries against each other.

But international accord does not come by any process of logic. It comes through statesmanship, leadership, vision, and a realization on the part of the masses of the people that good relations are desirable and possible if each party does his part.

That is where the so-called isolationist doctrine comes in.

The word "isolationism" has been overworked and used to designate a great many different types of thinking, but in its most dangerous form, it means the belief, not only that we in America can exist under present conditions without friendly intercourse and some sort of working arrangement with other nations, but also that we possess some superior virtue, as a people, and should be suspicious of the character, trustworthiness, and motives of other nations.

Naturally, the fostering of such an attitude will not permit mutual good will and the teamwork which alone can create and maintain a peaceful world.

It is in the field of American-Soviet relations that isolationist thinking reaches its most dangerous depths. Our papers carry frequent utterances about the probability of war between the two countries, and opprobrious epithets are customarily employed by some of these people in connection with every reference to Russia, and its system of government. Naturally enough, an attitude of this sort on this side of the Pacific brings reaction in a like vein from some writers of the Soviet press who seem equally unaware of the necessity of temperate speech when discussing the inevitable points of difference between the customs, the people, and the Government of the two nations.

The task of those who believe as I do that we must make sacrifices, must adapt some of our thinking to new conditions and must, perhaps, depart from one or another of our traditional approaches to international relations if we are to have the cooperation of other sovereign peoples, is not made easier by reckless and ill-informed statements in the press of either country.

Every time one of these incidents occurs it gives ammunition to the large minority in this country whose views, though repudiated in the recent election, still hold sway over large segments of our population.

We who are in the forefront of the battle to insure a lasting peace cannot win unless the forces behind us are as fanatical in their zeal for a united effort to solve these problems which breed war, as are the forces which follow the leadership of those who think that peace can be preserved by keeping everyone at arms length.

Isolationism is not new. Those who preach that doctrine today are descendants of the agitators of 1787 who emphasized the differences of outlook, tradition, policy, and influence which existed among the 13 American Colonies seeking to "Form a more Perfect Union," rather than the urgent need for, at least, a try at united effort to solve the really vital problems of that day.

Fortunately, we had leaders then who were able to see the woods despite the trees. They knew that compromise was necessary. They possessed the energy and political skill to sell the idea to the people and the result was "The More Perfect Union," they had desired. The differences which the isolationists of those days stressed have been forgotten or eliminated.

One may well ask, what is the motive of those who try to set Russia, and, for that matter, Great Britain, against the United States and vice versa? Are they in any conceivable way helping the war effort? Are they improving the chances of bringing about the great series of compromises which any international agreement must naturally involve? Or, are they merely seeking to cater to what they suppose to be the temporary mood of the American voter, at the risk of destroying that same voter's hope of a lasting peace?

If they succeed in creating an atmosphere of suspicion and distrust which eventually defeats the effort to reap the only worthwhile fruit of victory, some form of international organization, it will be our fault. We will have failed to match the leadership, intelligence, political skill, and devotion to an ideal, which characterized the authors and supporters of the Constitution.

It should be the function of a group like this to use its influence to impress upon responsible leaders of both countries the need for educating the people of Russia and the United States in the history, traditions and culture of each other. And, a determined, well-directed and intelligent effort must also be made to bring about an understanding of the different systems of government under which the countries operate, the reasons why each has chosen its particular form, and the necessity for tolerance of the other fellow's viewpoint.

It is my hope that this organization has already dedicated itself to such a task and that before long we shall see a firm foundation laid for eternal friendship between the Soviet Union and the United States of America, two nations which, at the moment, hold the future prospects of the world for good or ill, in their grasp.

Russia and the Smaller European Nations

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following timely article by William Henry Chamberlin:

BY WHAT MORAL RIGHT?

(By William Henry Chamberlin)

A thick blanket of secrecy, censorship, and propaganda has obscured for most Americans the innumerable personal tragedies that have been the sequel to the Soviet overruning of large parts of eastern and southeastern Europe. The last despairing messages of Poland's underground patriots before they are shot or deported by the Lublin Quislings and their NKVD wardens do not sound very loud in the American consciousness. How much publicity has this message from General Mikhailovitch, whose Chetniks were fighting the Germans before Tito's Partisans were ever heard of, received in this country:

"The Serbs would rather perish than submit to Tito's command or accept communism. I appeal that I be permitted with my army to join any Allied army and fight the common enemy. Please appeal that an Anglo-American commission be sent immediately to Yugoslavia to see our suffering and our loyalty to the allied cause."

The prelude to this message was a record of attempted cooperation with the Red Army

and subsequent betrayal extremely similar to what has been happening in Poland. The Russian forces last autumn entered Yugoslavia from the east, in a Serb region where Marshal Tito had never won any political or military support.

Like the Polish underground forces, Mikhailovitch's men were eager to help the Red Army drive the Germans out of their country. The rewards of cooperation were the same. After utilizing the services of the Polish underground forces and of the Serb patriots the Soviet authorities disarmed their units, executed numbers of their officers, placed the soldiers in concentration camps. The details of this betrayal have been made known through Dr. Zivko Topalovich, veteran Yugoslav Socialist and president of the National Committee of Yugoslavia. No wonder American correspondents are not allowed to travel freely in that unhappy country.

Now and then a pure accident lifts a tiny corner of the blanket. During the last 2 years a group of young women has been taking training for relief and reconstruction work at Haverford College. As a preliminary job in this direction 2 of them, Fay Calkins and Laurie Page, went to Mexico to work in a relief camp for 1,400 Polish refugees. Strange as it must seem to our professional apologists for every act of the N. K. V. D., they did not find this camp filled with aristocrats, reactionaries, Fascists, landlords. Because they went there on an entirely humanitarian mission, without any element of national feeling or political bias, their description of what happened to the refugees before they escaped from the Soviet Union and found a refuge in Mexico is worth quoting:

"Most of them, on September 1, 1939, were small peasant farmers along the Polish-Russian border. On October 1, they were exiles, herded into cattle cars on a terrible 2-week trip to Siberia. Many of the children were lost on the way—the train just went on without them—and the ones who survived are now in orphanages like the one at Santa Rosa, not knowing whether they are real orphans, but unlikely ever to find their parents again.

"Those who completed the trip were sent, with many Russian peasants, to compulsory labor in mines, forests, factories, and farms. The hours were 6 a. m. to 6 p. m., and the wages 500 grams of heavy bread per day (if they were strong enough to work). A Polish peasant is a sturdy breed, but too many were not sturdy enough for this."

When I read this account of a tragedy that must have been repeated innumerable times in Soviet-occupied territory in eastern Poland and the Baltic States, I became extremely impatient with the untenable and contradictory position which a former Russian democratic leader, Alexander Kerensky, takes in regard to Stalin's annexationist policies. Defending Soviet annexationist claims which are a patent violation both of the Atlantic Charter and of non-aggression treaties which the Soviet Union concluded, at its own initiative, with all its western neighbors, Kerensky made a curiously unreal attempt to divide Stalin into two persons:

"I make a distinction between Stalin, the national leader, and Stalin, the leader of international communism."

But no such sophistry can provide an answer to the question which Kerensky, and other Russians who live in this country or in other foreign lands because they would be shot or arrested if they set foot in Soviet territory, must face. By what moral right can they consign millions of Poles, Ukrainians, White Russians, Letts, Lithuanians, Estonians to live under a regime so tyrannical that they could not live under it themselves?

There is sometimes an attempt to justify this contradictory position by reference to immutable Russian "historical" or "ethnological" rights, which must be maintained, regardless of the regime in Moscow. This does not stand any serious examination. There are almost no Russians in the annexed territory. For almost two decades the Soviet Government never hinted that its economic well-being or its strategic security were impaired by the voluntary relinquishment, in line with Lenin's principle of national self-determination, of these non-Russian border areas of the former Russian Empire.

Far from being unimportant, the type of regime in Moscow should be all-important in determining the attitude of Russian and foreign liberals and democrats in this question. Had Kerensky realized his ideal of establishing a democratic federative Russian republic, without an N. K. V. D., without a huge system of espionage and terror and forced labor, the whole issue would have been on a different plane and the Baltic republics might well have become voluntary members of such a federation.

An analogy will make the point clearer. So long as Germany was a republic, based on political democracy and respect for human rights, German democrats and liberals could quite properly have urged the inclusion of Austria, South Tyrol, the Saar, Danzig, and at least part of the Sudetenland in a German federation, assuming that the majority of the people in these regions desired union with Germany. From the moment when Hitler came into power the sole rational objective of every honest German liberal and democrat was to prevent the extension of that evil regime to any additional territory, German or non-German. Kerensky knows better than most Americans how formidably many points of similarity there are between Stalin's tyranny and Hitler's. The logical conclusion should not be obscured by an obsolete and misleading nationalism.

Address Under Auspices of Emergency Committee To Save the Jewish People of Europe

EXTENSION OF REMARKS

OF

HON. AUGUSTUS W. BENNET

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. BENNET of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at Orchestra Hall, Chicago, Ill., on January 27, 1945, under the auspices of the Emergency Committee To Save the Jewish People of Europe.

The address follows:

Mr. Chairman, ladies, and gentlemen, it is very flattering for a freshman Member of Congress from an Eastern State to be invited to make a trip to the Midwest for the purpose of addressing this great gathering of American citizens, and I am conscious of the fact that there are present tonight many people who know more than I do about the subject which I am to discuss, and who have contributed much more than I to the accomplishment of the purposes of the organization under whose sponsorship this meeting is held.

However, the New York branch of the committee invited me to address a similar gathering some time ago and did not have to recommend me to the Chicago branch if it did not wish to, so I suppose I can derive some assurance from the fact that I have been asked to come here tonight with full knowledge on the part of the committee of how much, or how little, I am likely to contribute.

The purpose of the committee which has invited me is, as I understand it, primarily to prove to the world that the Jewish people of occupied Europe can be saved.

Certainly no organization was needed to convince the American people that the Jewish people of occupied Europe ought to be saved and that there existed in Europe a situation unparalleled even in ancient and medieval times.

Yet, despite frequent newspaper and magazine articles on the subject, I doubt if anyone who has not actually read some of the reports prepared by the War Refugee Board can even begin to grasp what has happened.

Until one realizes that probably one-third of all the Jews in the world have been brutally and systematically exterminated by the Nazi regime, one cannot fully visualize the extent of this awful tragedy, and even then the bare figures showing the numbers put to death, or who have died of disease, malnutrition, and exposure, tell only a part of the story. They give no picture of the sufferings, both mental and physical, of those who remain and who must try to carry on.

We can only imagine what a task it will be to restore these persons, once they have been rescued from actual danger of persecution, to a position of usefulness in society.

I feel that it may be fairly said that this committee has succeeded in its primary objective, and that although a disappointingly small number have actually been siphoned out of occupied Europe, the publicity given those rescues, has convinced our people that the fight is far from hopeless, and that, in fact, it is partly won.

But after all, what does the word "saved" really mean? Does it mean merely kept alive, or does it have a greater significance encompassing actual restoration to health of mind and of body? If the latter, then this committee's objective is still far from attainment and there is every need for a continuance, and even an increase of the kind of work which this committee sponsors.

The job cannot be said to have been done until the beaten and discouraged remnants of Europe's Jews have been, not only removed from the shadow of the gas chamber and the gallows, but, in addition, have been located in a place or places where they are welcomed and enabled to become self-supporting and self-respecting. They must also be restored to a state of mind which will make them want to go ahead and fight for their futures and for the futures of their families.

If this is a proper and attainable objective, how can it be brought about?

To my mind, it can best be brought about by a Government-sponsored and probably Government-financed agency or board, similar in its general set-up to the War Refugee Board which was created in January 1944 and which is now, I understand, about to complete its labors.

I regard it as essential that such an agency should be Government sponsored and financed because in dealing with people like the Nazis who recognize only force, the prestige of the United States Government will be absolutely essential in compelling the Nazis to cooperate in any plan of emigration, or of resettlement, which may hereafter be agreed upon. Furthermore, sponsorship by the United States Government will be the best evidence of the fact, and I am sure it is a fact, that the rescue of the European Jews is an undertaking in which Americans of all races, creeds and colors are equally concerned, whereas, conduct of the rehabilitation operations by a privately financed agency, predominantly Jewish in its personnel and probably in its support, would lack such prestige.

Under such sponsorship the board could probably do, at least, the following:

(a) Ask for and secure the status of prisoners of war for those Jews still under Nazi control.

(b) Obtain the consent of the Nazis to the emigration of those Jews who wished to leave Germany and German-occupied territory.

(c) Arrange with neutral countries and other members of the United Nations for temporary asylum and support for the Jewish emigres without extending permanent citizenship in such countries.

(d) Provide for transportation of the emigres to such neutral or Allied countries and eventually to places of permanent abode, including Palestine.

(e) Collect data on atrocities already committed and make it abundantly clear to the Nazi rulers that the perpetrators of such atrocities and of any committed in the future will be relentlessly sought out and punished.

(f) Keep American public opinion fully informed so as to have continuous support for the Board's activities.

(g) Establish and maintain a rehabilitation program wherever refugees may be, with a view to acquainting them with new skills and new methods of earning a living suitable to the place which may be selected for their permanent abode.

(h) Provide for the reestablishment in their old homes of such Jews as wish to make a fresh start in the old lands, once the threat of persecution has been finally removed.

This may seem to be, and probably is, an ambitious program, but it is not beyond the abilities of groups like this, supported by the overwhelmingly favorable opinion of the American people. At any rate, I think it is a goal at which your efforts should be directed.

We in Congress have just appropriated $1,500,000,000 for the construction of additional ships and installations for our Navy which will result in giving us a Navy probably twice as powerful as any other now afloat, but in the long run our real security and hope for peace can come only through the creation in the minds of people everywhere of a realization that our country is not actuated by materialistic considerations, but that it is willing to stretch out its hands to help the most weak and defenseless of people from whom nothing substantial of a material nature can reasonably be expected in return.

Only in this way, through help to the surviving Jews and, of course, to other peoples in other parts of the world who have felt the oppressor's heel, can we establish and maintain that moral leadership, that reservoir of good will, which, in the last analysis, will be a more potent instrument of power than the fleets and armies which we can reasonably expect to assemble.

I congratulate this group upon the results already accomplished; I congratulate Senator Gillette on his outstanding humanitarian achievements, and I urge all within the sound of my voice, to press forward with undiminished, and even increased zeal, toward the eventual accomplishment of the objectives which I have mentioned.

Lest We Forget—Willkie Wins

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. PLUMLEY. Mr. Speaker, under unanimous consent heretofore granted, I am including in an extension of remarks a comment which appeared in Drew Pearson's Merry Go Round column in the Washington Post of date January 29 last, which runs as follows:

WILLKIE WINS AT INDIANAPOLIS

Sometimes a man who has fought all his life for certain goals and been defeated finally wins them in death. Many of the Republicans who attended the G. O. P. National Committee meeting in Indianapolis felt this about Wendell Willkie. What went on there in the closed-door sessions they considered a victory for him.

Two years ago, Willkie lost out at the 1942 national committee meeting when the Chicago Tribune isolationists elected Harrison Spangler, of Iowa. But this time, Willkie's old friends were stronger in death and won out in some significant backstage maneuvering.

Leader of the anti-isolationist group was Willkie's former campaign manager, shrewd Ralph Cake, of Oregon. Cake and Fred Baker, of Washington, discovered that the isolationists planned to put in their own secretary of the national committee. So they moved in with their own candidate, Mrs. Dudley F. Hay. Thereupon E. F. Colladay, national committeeman from the District of Columbia, went to Oregon's Baker, asked him to withdraw Mrs. Hay's nomination in the interests of party harmony. He tried to propose Mrs. Cooper B. Rhodes, of Washington, D. C., instead.

"I seem to remember a similar proposition 2 years ago," replied Baker, smilingly, "I won't go for it again." Result was Baker, Cake, and the Willkie forces won hands down.

LEST WE FORGET

And, Mr. Speaker, may I say that shortly after the death of Mr. Willkie I asked one of the recognized poets of the Nation, Mrs. Florence Alvord Dieterich, formerly of Vermont and now residing in the District, if she would write for me a tribute. She graciously responded by sending me the following sonnet, which, so far as I know, has never before appeared in print.

TRIBUTE TO WENDELL WILLKIE

Perhaps it is too soon to say how well
This man has lived, how great, how wide his sphere
Of influence upon the world, so near
Are we to troubled times in which he fell.
And yet we know he cast his shining spell
Around the earth and thousands will revere
His kindliness of soul, his vision clear
Of things he gladly gave his life to tell.

The world he left will deeply mourn his loss,
But all the things for which he stood will live;
His aims shall be our goal and we, across
The years, will learn how much he had to give
And freely gave. Then all the world shall say,
With lowered heads: "A great man passed this way."

—*Florence Alvord Dieterich.*

War Emergency "Big Inch" and "Little Big Inch" Pipe Lines

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. SNYDER. Mr. Speaker, the privilege of the House in granting me permission to extend my remarks in the RECORD is appreciated, and I wish to insert the statement of information and data just received from the management of the War Emergency Pipeline Director, through the Director of Supply and Transportation, Mr. George A. Wilson.

The construction of these 1,500-mile fuel-oil lines—24-inch pipe lines and 20-inch pipe-lines—will go down in this war effort as one of the outstanding major accomplishments, not only with reference to time building, but results. As things proved to be, it was most necessary to have these lines when they were completed and thus save thousands of lives of our boys on the battle fronts in Europe.

I here include the complete statement sent me by Mr. Wilson:

JANUARY 19, 1945.

Hon. J. BUELL SNYDER,
House of Representatives.

MY DEAR MR. SNYDER: In response to your recent request we are pleased to furnish the following statistical data with respect to the operation of the War Emergency Pipeline, Inc., and related information pertaining to the wartime domestic transportation of crude petroleum and petroleum products. The War Emergency Pipeline, Inc., comprises the 24-inch crude-oil pipe line known as the Big Inch and a 20-inch refined products pipe line known as the Little Big Inch.

The Big Inch crude-oil line originates at Longview, Tex., and extends to Phoenixville, Pa., at which point it branches into two 20-inch lines, one leading into the New York Harbor refining area and the other into the Philadelphia refining area. It has a rated annual carrying capacity of 315,000 barrels a day into Norris City, Ill., and 310,000 barrels a day from that point on to the east coast. Actual pumpings north from Longview during the past 3 months have been: October 320,654, November 315,814, December 316,652 barrels per day. Since this line originally began operation on December 31, 1942, it has pumped north from Longview in excess of 195,000,000 barrels of crude oil. Cost of construction of this line originally was estimated at $95,000,000, but actual cost was only approximately $78,000,000.

The Little Big Inch refined products line originates at Beaumont, Tex., at which point it is connected by a series of feeder lines with the principal refineries in the Texas-Louisiana Gulf coast area, and extends to New York harbor. It has an annual average throughput capacity of 225,000 barrels of gasoline a day. When operating on heating oil or similar heavier product, the throughput capacity is decreased to approximately 180,000 barrels a day. Actual pumpings north from Beaumont during the past 3 months have been—October 203,137, November 215,758, December 2[illegible],424 barrels per day. Since this line originally began operation on January 26, 1944, it has pumped north from Beaumont in excess of 63,000,000 barrels of refined petroleum products. Cost of construction of this line originally was estimated at $75,000,000, but actual cost probably will not exceed $66,000,000.

There are attached two detailed statements of construction and operating costs of the War Emergency Pipeline, Inc., as issued by Secretary of Commerce Jesse H. Jones on November 9, 1944. No more current detailed cost figures are available to this office at this time. If we assume that the total quantities of petroleum transported to date through the War Emergency Pipeline, Inc., had been shipped by tank car, we estimate that the additional cost to the Government because of the rail transportation would have been approximately $225,000,000 on the crude oil, plus approximately $100,000,000 on the re-

fined products. This estimate is based upon the differential between existing rail-freight rates and the direct gathering and operating costs by the War Emergency Pipelines as announced by Secretary Jones. At the same time, it must be borne in mind that during the present emergency and shortage of tanker transportation, the pipe lines have not displaced tank-car movement of equivalent quantities, as the total requirements for overland transportation of petroleum to the East coast continue to be so great as to fully occupy all available tank car, pipe line, inland waterway, and tanker capacity.

During the year 1944 deliveries of petroleum to the east coast by all modes of transportation averaged 1,712,129 barrels a day. Of this total, rail movement accounted for 645,113 barrels a day, pipe lines 662,599 barrels a day, inland waterways, barges, and Lake tankers 127,641 barrels a day, and oceangoing tankers 275,776 barrels a day. Particular mention should be made of the fact that, although inland waterways operations accounted for only a relatively small proportion of total deliveries of petroleum to the east coast from other areas, barges and other inland waterway equipment have been fully utilized in meeting other petroleum transportation requirements to which that equipment is better adapted. As evidence of this fact, according to data available in this office, the total volume of crude oil and petroleum products transported via inland waterway during 1944 averaged approximately 1,440,000 barrels a day. If more detailed data along these lines is desired, I suggest that it would be obtainable from the Office of Defense Transportation.

We trust that the foregoing provides you with the desired information.

Sincerely yours,

GEORGE A. WILSON,
Director of Supply and Transportation.

Twenty-four-inch line (Big Inch)

CAPITAL COST

Cost of pipe line, right-of-way, and necessary buildings	$77,112,000

OPERATING COSTS

	Per barrel of oil transported
Cathering cost and cost of transporting the oil to Longview, Tex., has been approximately	$0.23
Operating cost for transporting the oil through the line—Longview to New York—approximately	.08
Depreciation and amortization of the investment in 20 years, including interest on working capital, approximately	.07
Total	.38

The foregoing can be compared with other methods of transportation as follows:

	Tank cars	*Tankers*
Gathering costs	$0.075	$0.176
Transportation	1.522	.430
Total	1.597	.606

The above is based on War Shipping Administration rates for tanker movements and current rail tariffs for rail movements.

Operating Statistics Through Sept. 30, 1944

	Barrels
Deliveries to Norris City and from there by rail, prior to completion of the eastern leg of the line	44,951,946
Deliveries to eastern seaboard via oil pipe line	110,726,371
Total	155,678,317

September 1944 Deliveries

	Barrels
Total	9,620,869
Daily average	320,695

Twenty-inch line (Little Big Inch)

CAPITAL COST

Cost of pipe line, right-of-way, and necessary buildings	$65,654,000

OPERATING COSTS

	Per barrel of products transported
Cost of delivering products to the line	$0.004
Operating cost of transporting products through the line—Gulf Coast to New York	.106
Depreciation and amortization of the investment in 20 years, including interest on working capital, approximately	.133
Total	.243

The above can be compared with other methods of transportation as follows:

	Tank cars	*Tankers*
Transportation	$1.74	$0.40

The foregoing is based on War Shipping Administration rates for tanker movements and current rail tariffs for rail movements.

Operating statistics through Sept. 30, 1944

	Barrels
Deliveries to Norris City, Ill., by pipe lines and then by rail, prior to completion of eastern leg of the line	183,189
Deliveries to eastern seaboard	37,217,756
Total	37,400,945

September 1944 deliveries

	Barrels
Total	6,228,256
Daily average	207,608

Paid for Holding the Pot

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include the following editorial from the Ingham County News, published at Mason, Mich.:

PAID FOR HOLDING THE POT

Bootlicking has paid off for Henry A. Wallace. Double-crossed by President Roosevelt at the Democratic National Convention, Wallace at once began the greatest marathon bootlicking job in history. Up and down, back and forth across the country went Wallace, stopping almost everywhere except Mason to shower praise upon the man who doublecrossed him, stooping to the lowest form of villification of the political opposition in order to cling to a public job. His bootlicking paid off. He has been rewarded with the job of Secretary of Commerce, displacing one of the able men in the Cabinet.

The Greeks had another word for it. They called it holding the chamber pot. One of the pupils of Epictetus asked the master about holding a chamber pot for another.

Epictetus replied, "To one man it is consistent with reason to hold a chamber pot for another, and to look to this only, that if he does not hold it, he will receive stripes, and he will not receive his food; but if he shall hold the pot, he will not suffer anything hard or disagreeable. But to another man not only does the holding of a chamber pot appear intolerable to himself, but intolerable also for him to allow another to do this office, for him. If you then ask me whether you should hold the chamber pot or not, I shall say to you that the receiving of food is worth more than the not receiving of it; and the being scourged is a greater indignity than not being scourged; so that if you measure your interests by these things, go and hold the chamber pot. 'But this,' you say, 'is not worthy of me.' Well, then it is you who must introduce this consideration into the inquiry, not I; for it is you who know yourself, how much you are worth to yourself, and at what price you sell yourself; for men sell themselves at various prices."

There's the difference between Henry Wallace and Jesse Jones. Wallace has spent a lifetime holding the pot for President Roosevelt. It is not beneath his dignity. It is only consistent with the Wallace character. Having another hold a pot for him or holding a pot for President Roosevelt is not consistent with the character of Jesse Jones. That's why Jesse Jones refused an ambassadorship proffered as a reward for giving up his job to Wallace.

Unity

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1945

Mr. MYERS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address entitled "Unity," delivered by the Vice President, at the Democratic Victory Dinner in Philadelphia, Pa., January 29, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

UNITY

It is a special pleasure to be here in Philadelphia, the cradle of American independence, to greet you and the Honorable FRANCIS J. MYERS, your distinguished new Senator, the outstanding result of Pennsylvania's most recent Declaration of Independence. Progressive statesmen of your great Commonwealth always have been among the leaders in the endless fight for freedom. I am sure that your junior Senator will become known as another champion of constructive liberalism from the Keystone State.

You industrious people of Pennsylvania have already accomplished a tremendous war task, thereby aiding the cause of liberty throughout the world. Your sons have fought valiantly to defeat powerful enemies on the battlefields. Your have produced the vital war materials which, by sheer weight, will ultimately crush the aggressors. Your farms, mines, and factories are providing America, and our fighting allies, with a substantial part of the modern supplies so essential for final victory. Today, in addition to your heroic men and valuable materials, America needs your moral and spiritual strength to help guide suffering humanity to a sound and lasting peace.

More than ever before, the world must have statesmen with vision—wise and tolerant men, who can rise above all local and petty prejudices, and serve mankind in the light of lasting interests. America needs statesmen like Benjamin Franklin, the kindly humanitarian from Philadelphia, whose deep understanding, wise philosophy, and practical diplomacy, helped create and preserve our national independence. It was Franklin, the elder statesman, whose sound advice and

extensive experience inspired confidence and harmony among the founding fathers, making possible political agreement, resulting in that keystone of democracy, our great Constitution, adopted here in Philadelphia at Independence Hall.

This world of ours has been seriously ill for many years. In desperation, a few nations have turned to political quacks, who promised prompt and painless cures for all chronic ailments—at the expense of unsuspecting neighbors. The first effects of the prescribed patent medicine seemed most agreeable to these patients. They experienced an exalted feeling of grandeur—the intoxicating stimulation of easy military victories.

As this drug wore off, and the inevitable reaction took place, the disease spread so rapidly that the epidemic became critical, world-wide, and almost beyond control. Fortunately, this plague has been confined recently to shrinking zones of infection. Furthermore, after this major operation, despite all pessimistic predictions civilization will survive and surely improve. However, the period of convalescence for the world may well be long and painful.

No ordinary doctor can adequately treat such a deadly disease. Today, the world truly requires practical physicians, who can administer to the mind and spirit, as well as to physical wants. we need righteous leaders, like Dr. Franklin, tolerant men, who have the sympathetic understanding, so essential in a world of tragic intolerance.

It may be well to recall that Franklin was the first distinguished internationalist born on American soil. He was the first to obtain international recognition as a truly illustrious American. Franklin early acquired a deep appreciation of the lasting benefits, which may be derived from friends across the sea.

At one of the darkest hours of American history, the diplomat Franklin, despite his age, made another dangerous and difficult trip abroad. He finally induced France to extend lend-lease aid to poor, ill-equipped colonists, fighting for freedom against overwhelming odds. This assistance ultimately tipped the scales of fortune in favor of democratic Americans.

Today, America is again engaged in a desperate struggle for national existence. Again, the greatest danger to a conclusive victory lies in disunity. Hostile agents, operating throughout the world, know well that their only hope of averting a crushing defeat it to divide the forces of freedom. Unfortunately, certain unthinking people unconsciously play into the hands of the enemy, by stressing foreign and domestic disagreements, instead of concentrating on the one all-essential task—winning the war.

Various individuals still do not understand the seriousness of the world situation. In view of this, may I repeat Dr. Franklin's sage advice, given in another critical period of history:

"We must indeed all hang together, or, most assuredly, we shall all hang seperately."

It is hard to realize that, during this gigantic struggle for survival, a few Americans are actually asking why we fight. In the last 3 years, our fanatical opponents have killed and wounded hundreds of thousands of Americans—and yet people, living in safety and in relative comfort because of such sacrifices, have the effrontery to ask, "What are we fighting for?" As a veteran of the First World War, I am positive that our armed forces on all battle fronts know very definitely why they fight. Fortunately, the overwhelming majority of Americans also know that we fight for the fundamental right to continue our way of life, in fact, for life itself.

Even apart from basic American ideals, recent events in all Axis-occupied countries should be more than sufficient reason for our fighting, if merely to keep similar horrors from our own shores. Again history repeats itself, Americans must fight for freedom—or lose it.

It seems obvious that some people, who question our fighting ideals, are not really sincere. Certain critics merely hope to embarrass the administration in the delicate task of conducting our foreign relations. Others still dream about a return to isolation, even though the possibility of such an existence died with Pearl Harbor, and surely should have been buried with the first robot bomb that crossed the English Channel. Unfortunately, the former group deliberately place their interest above that of our country; the latter blindly yearn for a lost world which can never be revived.

Even more dangerous to our national morale, and to the war effort, are the enemy-sponsored whispers of dissension and defeatism. Such verbal saboteurs stress the differences between the Allies, magnify any disagreements and constantly strive to create lasting dissensions, which might result in a military deadlock. Consciously or unconsciously, people who cause or emphasize disagreements, at home or abroad, render real service to the Axis. Those who give rise to doubts if America should continue this costly and bloody struggle, act as agents of appeasement. In fact, a few newspapers and destructive critics should look to Dr. Goebbels for compensation. Their propaganda value to the enemy, especially in war-time, is priceless.

Freedom of speech and of the press are among the most cherished heritages of democracy for which we fight. Still, practically every virtue, if carried to excess, can become a vice. If free speech is used unwisely, creating disastrous disunity during this world-wide struggle, it might ultimately lead to international chaos and the death of all freedom.

As an ardent advocate of freedom of speech and of the press, I feel impelled to caution Americans, and to appeal for the most careful use of self-restraint. Common sense requires moderation in the exercise of our individual rights. As long as hostilities last no loyal American should speak or act in any way which would give aid or comfort to the enemy. This should be a duty for all of us.

Honest differences of opinion will always exist, among men and nations, as long as humanity moves along the hard road of progress. In fact, all progress grew out of disagreements relative to the existing practices. However, in wartime, unnecessary disagreements should be subordinated in the interest of national and international unity.

Let us, therefore, concentrate on the all-important task before us—defeat our deadly opponents on the field of battle. That is the first step, otherwise all plans for future progress become mere idle dreams. Even violent partisans must admit that it would be more than tragic to lose a war while fighting over details of a peace not yet achieved. First things must come first.

All Americans should support our fighting men to the utmost, which means also to stop wordy sniping at our allies. Even the worst blunders, made by any of the United Nations, fade into relative insignificance when compared with the conduct of our enemies.

The entire world is watching America these days. Upon our fateful decisions may depend the future peace and prosperity of all mankind. Our progressive statesmen will continue to lead America along the path of further social progress, complete military victory, and a lasting peace under the guidance of our great President, Franklin Delano Roosevelt.

Although gratifying progress has been made, this global war is not yet won. In the final stretch, all remaining belligerents will exert themselves to the utmost. We must all brace ourselves for the hard ordeal ahead.

All Americans should realize that we must win the war decisively, otherwise everything is lost. Any appeasement, or compromise, before victory would be fatal. The world has become far too small for ruthless aggressors to exist among freedom-loving people. If America and democracy is to survive, Germany and Japan must be defeated in battle, and, thereby, taught to respect the rights of other nations.

After our troops march through the avenues of Berlin and the streets of Tokyo, there still remains the complicated task of social and moral rehabilitation of millions long taught a foreign and dangerous code of ethics. The reeducation of these oppressed people may be difficult indeed. Being raised on the vicious doctrine of world domination, they must gradually learn to appreciate the progressive ideals of international peace and order. Yet for the victors to rely upon force alone would be futile. Any order, which hopes to survive, must ultimately appeal to the minds of men. Enlightened world-wide education may be the lost key to lasting peace. However, such a program requires time, and tolerance.

During the heat of battle, Americans have shown their ability to make tremendous sacrifices for victory, both on the home front and the battle front. As complete triumph slowly appears on the horizon, the crucial struggles are yet to come. These may not be in some jungle swamp, or Alpine pass, but rather around the peace conference table, and in the countless subsequent meetings for adjustments, which peace and progress demand.

The tragic failures of Versailles, and all that followed, remain as beacon lights to warn us of the dangers ahead. The world has already paid far too high a price in blood on the battlefield to lose victory in the halls of diplomacy. The supreme sacrifice of our departed heroes demands that our statesmen and our people highly resolve that such conditions never again be permitted to develop. A few ambitious aggressors must not be allowed to cause chaos on earth and untold misery to millions of innocent people.

In this shrinking world no nation can live safely alone—no more than you or I can completely divorce ourselves from essential contact with society. Civilization, of necessity, means interdependence. For mutual protection, law-abiding citizens organized to suppress antisocial individuals. In similar fashion, peace-loving nations must band together in some acceptable form of organization for the preservation of human progress.

Wars have become far too devastating and destructive to accept them with any air of indifference. The entire world has already paid far too high a price to tolerate the view that wars just happen. Wars do not just happen. They are the result of deliberate acts of otherwise rational human beings, and they simply must be checked if long-suffering humanity is to survive.

As the world conflict grows in scope and intensity, we hear more and more about plans for the world of tomorrow. The tragic disillusionment following our high idealism during the First World War makes us Americans especially anxious to avoid another catastrophe at this time. We know that civilization simply cannot stand the destructive calamity of modern warfare every quarter of a century.

On the complicated problem of achieving a just and durable peace, too much thought cannot be spent. However, the pressing task still before us, which must not be delayed, is achieving military victory. That grim undertaking depends primarily upon deeds and not words.

By their heroic deeds the brave men of our armed forces, from the jungles of the Pacific to the banks of the Rhine, already are shaping the world of tomorrow. These strong arms and stout hearts defend more than our wealth and freedom, for our very national existence is at stake. Our debt to them increases steadily. Our gratitude will be eternal.

Thousands of our brave fighting men will never return. The least we can do in respect

to these heroes is to make sure that no selfish group will ever again be permitted to plunge the entire world into war. America's heroic dead would not want empty honors in bronze nor statues of marble. The only monument worthy of their great sacrifice is a much better world—a world blessed with just and lasting peace.

Address of George J. Chryssikos

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by George J. Chryssikos, Esq., at the naturalization proceedings held in the Court of Common Pleas of Hudson County, Jersey City, N. J., January 22, 1945:

My new fellow citizens, a great many years ago I stood before the bench of the court in the same position as you are today. Several decades ago I took the oath of allegiance to the United States. I received my naturalization papers and became an American citizen. Like you, I was not privileged to be born in this country. Almost 40 years of enjoyment of the rights of American citizenship have reinforced my convictions that beyond doubt this is the best country in the whole world. I am proud to be an American citizen. Together with all other citizens I am grateful to the founders of this Republic because they made America a free country and placed the Constitution of the United States between me and all those who would deprive me of my rights. Whether in my home, or on the streets, or in a public conveyance, or at my place of work, or in this courtroom, I breathe the air of freedom.

This day is one of the most important in your life. You have crossed the bridge which separated you from the citizens of the greatest and safest democracy in the world. Today you have really entered the United States of America spiritually as well as physically.

From now on the Government of the United States is your Government—which means your servant and your protector. To many of you this is a novel experience, because not all governments are servants of the people. There are governments, we know, which consider the people as their servants and impose their arbitrary might on all except a chosen few. There are governments which, instead of protecting the people, subject them to all kinds of abuses.

As American citizens you are entitled and even expected to exercise control over the acts of the Government, to see that its three branches—the executive, the legislative, and the judicial—live up to their obligations, which include the promotion of the common welfare of the people, the safeguarding and perpetuation of the Republic, the inviolability of its laws, and the protection of the rights of the individual.

At fixed intervals you will be called to the polls to express with your fellow citizens in a decisive way your opinion regarding the administration of national, State, county, or municipal affairs by those in power. Your votes will be a factor in the popular verdict which decides the fate of every administration in this free country.

America has adopted you, trusting that you will contribute to its welfare and to its strength with the loyal performance of your duties as well as the exercise of your rights as citizens. It is of the utmost importance to your new country and to you that the ideals of rights and duties are completely balanced in your conscience. This essential balance will be effected if you realize that your private welfare lies in the welfare of the country.

Your adopted country is now fighting for its very existence. It is fighting for its freeedom, for its rights and for its place in the world as a great Nation. Its enemies are your enemies. Their success in this war would mean that you, as American citizens, would have to submit to their dictates, to accept whatever fate their savage selfishness, their greediness, and their hatred of freedom would reduce you to. To defend your rights so threatened, you, your sons, and your daughters, your brothers and your sisters, must defend the country to the utmost of your power. You must be ready to do all that the safety of America and its future requires. You must accept cheerfully every sacrifice which is required of you for the complete and final defeat of the enemies of the United States. The war which this country, allied with the United Nations is waging against Germany and Japan is the supreme test of the loyalty which you have solemnly sworn to the American flag. Victory over our common enemies must be your most fervent wish. Its achievement must ever be the common aim of all those who take pride in calling themselves American citizens.

Millions of American men are now called upon to shed their blood, it may be to give their lives, in defense of our country. We on the home front must bear with courage and fortitude whatever our chosen representatives and public officers, in the exercise of their wisdom, ordain as necessary for the welfare and safety of our fighting men and women, whose particular needs must come first. Our individual interests must remain secondary to the general interests of our country. In this time of great emergency, every citizen is called upon to contribute his might to the prosecution of the war. When victory comes, each of us will then have the opportunity to receive his individual share of the great bounty of our glorious country; but let us remember, this share will, of course, be measured by the degree of the personal contribution that you and I have made to the welfare of our Nation.

Did the President Violate a Federal Statute?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. HOFFMAN. Mr. Speaker, section 249 of chapter 8 entitled "Federal Corrupt Practices," of title 2 of the United States Code reads as follows:

SEC. 249. Promises or pledges by candidate.

It is unlawful for any candidate to directly or indirectly promise or pledge the appointment, or the use of his influence or support for the appointment of any person to any public or private position or employment, for the purpose of procuring support in his candidacy.

Section 61b of title 18 of the United States Code, entitled "Criminal Code and Criminal Procedure," reads as follows:

SEC. 61b. Political activity—Promise of employment—Compensation or other benefit.

It shall be unlawful for any person, directly or indirectly, to promise any employment, position, work, compensation, or other benefit, provided for or made possible in whole or in part by any act of Congress, to any person as consideration, favor, or reward for any political activity or for the support of or opposition to any candidate or any political party in any election.

In his letter to Jesse Jones, the then Secretary of Commerce, written on January 20, 1945, the President frankly stated that he was appointing Henry Wallace Secretary of Commerce in return for his political services during the last campaign; that as his reward for political service rendered Mr. Wallace could have almost any job he thought he was qualified to hold.

The only remaining question is, Had the President at any time prior to the election promised Mr. Wallace that he would give him a political job if Mr. Wallace supported the administration during the pending campaign?

Official and political as well as commercial business is transacted by agreement which may be either verbal, written, or implied, or by a combination of two or all three.

If the President promised a job with the administration in return for political support, then both sections were violated by him when he sent in the nomination of Mr. Wallace.

The President admits in his letter to Jones that he had promised Mr. Wallace a job as a reward for support during the campaign, but he says that the promise was made at the end of the campaign.

Let us look at the evidence which might indicate that prior to, or during, the campaign the President promised Mr. Wallace a job.

In 1940 Mr. Roosevelt refused to accept a Presidential nomination unless Wallace was made his running mate—Arthur Krock, New York Times, July 12, 1944. That is proof that at that time Mr. Roosevelt wanted Mr. Wallace's support.

When the Democratic National Convention was being held in Chicago in July of 1944, Mr. Roosevelt, in writing, stated that if he was a delegate he would vote to nominate Mr. Wallace as a Vice Presidential candidate of the party, but he added that he did not wish to appear in any way as dictating to the convention. At that convention, notwithstanding the backing of Sidney Hillman, Mr. Wallace was defeated.

Thereafter—quoting James B. Reston, New York Times, August 11—the President "reassured Vice President Henry A. Wallace that he wants him to have an important place in the Government if the Roosevelt administration is returned to office in November. Mr. Roosevelt is said to have sent a message to Mr. Wallace congratulating him on his fight for the Democratic Vice Presidential nomination and telling him that so long as the present administration remained in office an important post would be open to him."

That communication, if it meant anything, meant that if—and I emphasize the if—the Roosevelt administration won the election, that so long as it continued in office, a political job would be open to Mr. Wallace.

Now, does anyone doubt but that after the Chicago convention was over, after Mr. Roosevelt and Mr. TRUMAN had been nominated, the President desired the support of Mr. Wallace during the coming campaign? I think not.

Thereafter Mr. Wallace, who must have been disappointed because of the President's failure to go all-out for him at the Chicago convention, apparently was reassured and went out and campaigned vigorously for the fourth term. Was he then relying upon an express or an implied promise that if he campaigned for the administration he would get a job if it won the election?

The President won the election and on January 20, 1945, Mr. Roosevelt wrote the then Secretary of Commerce, Jesse Jones, these words:

> Henry Wallace deserves almost any service which he believes he can satisfactorily perform. I told him this at the end of the campaign, in which he displayed the utmost devotion to our cause, traveling almost incessantly and working for the success of the ticket in a great many parts of the country. Though not on the ticket himself, he gave of his utmost toward the victory which ensued.

That letter made it clear that the appointment was made as the result of a promise. Is not the only link needed to complete the chain of evidence supporting the theory that the appointment was the fulfillment of a promise made before the service was rendered rather than after, supplied by the President's statement as set forth in Mr. Reston's dispatch to the New York Times which was published on August 11, 1944, and which has been quoted?

If the President was correctly quoted, after the convention had been held, after Mr. Wallace had been refused the Vice Presidential nomination, and before the campaigning had fairly begun, and when he needed his support, the President not only told Mr. Wallace that he wanted him "to have an important place in the Government if the Roosevelt administration was returned to power" but for good measure and as a promise he added, "so long as the present administration remained in office an important post would be open to him."

Was not that an implied promise that if Mr. Wallace supported the fourth-term candidate and the fourth term candidate won, Wallace would get an appointment?

Does anyone think for one moment that if Mr. Wallace had sulked in his tent, or opposed the administration, he would have received an appointment?

Did not the President intend to tell and did he not give Mr. Wallace to understand that, if he was a good boy and worked hard during the campaign, he would get a job if the administration won and did not Mr. Wallace so understand it?

Let each individual judge for himself after considering the facts whether Mr. Wallace campaigned for the fourth term in reliance upon a promise, express or implied, that, if the administration won at the November election, he would be given an important political job.

Government by Tyranny

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. REED of New York. Mr. Speaker, now that those in high executive positions connive and scheme to circumvent the plain statutory mandates of Congress, there is little that remains of freedom under law.

The directive issued by General Hershey to the State directors on January 3, 1945, and by them transmitted to the draft boards of this country, was in its very inception a diabolical fraud and a deliberate swindle. It has already deprived thousands of their legal rights under the Tydings amendment. There were woven into this directive of January 3 statements purporting to be made by high officials, including the Chief Executive, calculated to misrepresent and deceive the draft boards of the Nation with respect to the Tydings amendment.

It is a clear case of the executive department seeking to do by indirection what could not legally be done under the terms of the law. The directive was so framed that the draft boards were led to believe that this directive was a Presidential order and, therefore, superior to existing law, and that this dictatorial edict carried with it power great enough to nullify all rights of registrants under the plain terms of the Tydings amendment, and an order of such force and effect as to deprive registrants of the right to appeal. Is it possible that the appointment to a Cabinet position in payment of a political debt can carry with it the assumption that the Executive could or would in like manner seek to punish the producers of food because the election returns from rural districts were not satisfactory to the Chief Executive? Just how far is this utter disregard of existing law to be carried? The reports coming in from the rural districts, and especially from the dairy sections of the country, indicate that even the second directive issued by General Hershey is being disregarded by some draft boards.

The food situation that is now developing is serious, but this raid upon the farm labor necessary to produce food during the coming year will present a ghastly situation. There seems to be a deliberate attempt to reduce the people to supplicants and serfs. The letters now coming to the desk present a deplorable condition with reference to abandoned farms, sale of large herds of dairy cattle, and the resultant lowering of morale among those who have worked with inadequate help, without the necessary machinery to replace help, and long hours of labor, often 15 hours a day, to meet the demand for more food.

There may be little that Congress can do to stem the tide of totalitarian tendencies, especially when its laws are overridden and treated with contempt, but it would seem as though the Congress could rise above partisan politics, assert its independence and self-respect, and throw the fear of God into those who are deliberately attempting to destroy the effectiveness of Congress.

What is the effect of a tyrannical government upon a citizen? Let one of the fathers of our Federal Constitution speak:

> A person of a very different description appears in view—pale, trembling, emaciated, faltering in his steps, not daring to look upward, but, with marked anxiety, rolling his eager eyes on every side. Who is he? He is the slave of * * * a tyrannical government. He is afraid to act, to speak, or look. He knows that his actions and his words, however guarded, may be construed to be criminal; he knows that even his looks and countenance may be considered as the signs and evidences of treacherous thoughts and treasonable conspiracies; and he knows that the suspicion of his masters, upon any of these points, may be fatal; for he knows that he is at the mercy of those who, upon the slightest suspicion, may seize or hang him—who may do whatever they please with him, and with all those who are dear to him. What effect must this man's situation produce upon his mind and temper? Can his views be great or exalted? No. Such views, instead of being encouraged, would give offence; and he is well aware what would follow. Can openness and candor beam from his soul? No. Such light would be hateful to his masters; it must be extinguished.

Letter From W. C. NeSmith

EXTENSION OF REMARKS

OF

HON. EMORY H. PRICE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. PRICE of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JACKSONVILLE, FLA., *January 26, 1945.*

Hon. EMORY H. PRICE,
Washington, D. C.

GENTLEMEN: I have read something of the study now being made to determine what can be done to improve the operation of the Congress. It therefore seems an appropriate time to offer for your consideration an idea which I believe would be of great value to the Congress in its relations with the executive branch of the Government.

I would provide three coordinators for each department or major independent bureau of the Federal Government. These coordinators to have terms of office similar to the Comptroller General but staggered so that no two terms would expire at the same time.

In each department or bureau, one coordinator would be selected by the department or bureau head, one selected by the Senate committee dealing with affairs of that department or bureau, and the third selected

by the House committee on the affairs of that office.

For the purpose of studying the procedure and making recommendations for improvements, the coordinators would have access to all functions and all records of the department or bureau to which assigned.

Each would work independently of the other two and would use his own discretion as to the phase of the work he would study at any particular time.

Once per week, each would file a written report on his activities and include any recommendations he may have ready to offer.

The reports would be made in triplicate with the department or bureau head, the Senate committee, and the House committee each getting one.

At intervals of 3 or 6 months, the department or bureau head would be required to make a written report to the Senate and House committees stating what action had been taken on the various recommendations, and if no action, his reasons why not.

These reports to be made public unless a majority of the Senate committee and a majority of the House committee vote otherwise on specific reports.

The historian, Dr. Charles A. Beard, after years of studying our system of government, concludes that the founding fathers intended Congress to be the dominant branch of the Government. Whatever may be the individual opinion on that question, surely no one can deny that the Members of the Congress are entitled to full and complete information relative to the operations of the various branches of the Government. Otherwise, how can the Congress be expected to intelligently legislate for these governmental operations?

Perhaps my impression is incorrect, but it seems that the present system falls far short of supplying Congress with all the information which it needs. In the first place, does not most of the information come from the heads of the departments or bureaus, and, without casting any reflection on them, is it not natural for them to present information which will support their policies rather than to present information that would be detrimental to their policies? In the second place, with the departments and bureaus so large, can the head of the department or bureau know all that goes on in his part of the Government or know all the places where improvement might be made?

These coordinators would not have the power to change or interfere with any function of the department or bureau to which assigned, but would devote full time to research and reports thereon. They should therefore be of inestimable value in keeping a constant flow of information going to the proper congressional committees. These reports should be of value to the department heads, too, since this way they could learn about matters under their jurisdiction which might otherwise escape their notice and would have an opportunity to act before making their reports to the committees of Congress.

I would have the coordinators make written reports weekly, because it is human for the best of men to relax. They would be less likely to do so if they had to turn in a written record of their activities. This reasoning would also apply to the reports required from the department heads to the committees of Congress. Department heads would be more apt to act and less apt to procrastinate on matters requiring such a written report.

Objection might be raised to these coordinators having access to all the records of the department or bureau to which assigned because of such matters as military secrets and state secrets which involve the Nation's welfare. Is it logical to believe that these coordinators would be less patriotic and less concerned about the Nation's welfare than the heads of departments would be? Should a coordinator err in judgment about some matter, the report still need not go beyond the two congressional committees concerned. If it were a matter of grave importance, surely its suppression could be justified to a majority of each of the two committees concerned. Granting that the two committees could also make an error in judgment by not suppressing such a report, what are the chances of that as weighed against the chances of error in the other direction with, perhaps one or two men making the decision?

Selection of the coordinators in the manner outlined seemed the most desirable because it would give each of the three parties to whom the reports would be made an opportunity to pick the kind of person believed to be best qualified for the job. If this should raise the question of appointive power, perhaps that could be met by making it mandatory that the President appoint those selected by the various parties.

Respectfully yours,

W. C. NESMITH.

Veterans' Discharge Insignia

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1945

Mr. RABAUT. Mr. Speaker, a situation has arisen which, I believe, deserves the widespread publicity it is receiving. I refer to the general attitude and public indifference toward the veterans' discharge insignia.

The lapel button given to the men and women who have been honorably discharged from the service is being criticized by both the public and the ex-servicemen themselves. The design is insignificant and has merited no recognition from the public. The veteran himself feels the emblem lacks distinction and in a majority of cases he fails even to apply for one.

Then, there is the recent case in Detroit where a veteran of Gaudalcanal was publicly ridiculed because outwardly he appeared physically fit and several factory workers thought he should be in the Army. When he showed them his button one of them sneered, "How'd he get that thing, for regular attendance at a race track?" Another remarked, "It's one of those production pins they give you for raising chickens." The veteran pocketed his emblem and has not worn it since.

It has been revealed that only a small percentage of the ex-service men and women have availed themselves of the right to wear the button. Out of several hundred thousand who have been returned to civilian life, only 14,182 have applied for the emblem. Many have expressed an open dislike for it, some stating that it should be bigger and more distinctive.

A reporter of the Detroit Free Press showed a card to scores of persons in Detroit on which was a discharge button between an ordinary patriotic pin that may be purchased in any jewelry store and another which had been bought in a Japanese novelty store. Only one recognized the insigne which marks the returned soldier. He should have. He had one himself.

On February 5 the Detroit district association of the American Legion will discuss the problem in a meeting. In the meantime, public officials, Legionnaires, and many others were united in the protest that a grateful Government owes these men at least a recognizable emblem symbolic of devotion and service.

Legislation Providing for Abolition of Pauper's Oath for Veterans—Medal of Honor for Billy Mitchell—Abolition of Age Limit for Railroad Employees Introduced

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. MORRISON. Mr. Speaker, I am introducing three bills today and would like to call their contents to the attention of the Members of this House. The first of these bills provides for amending the present veterans' legislation so as to abolish the so-called pauper's oath for all veterans applying for hospitalization, the contents of this bill being, and I quote:

SEC. 6. In addition to the pensions provided in this title the Administrator of Veterans' Affairs is hereby authorized under such limitations as he may prescribe, and within the limits of existing Veterans Administration facilities, to furnish to men discharged from the Army, Navy, Marine Corps, or Coast Guard for disabilities incurred in line of duty or to those in receipt of pension for service-connected disability, and to veterans of any war, including the Boxer Rebellion and the Philippine Insurrection, domiciliary care where they are suffering with permanent disabilities, tuberculosis, or neuropsychiatric ailments and medical and hospital treatment for diseases or injuries: *Provided*, That any veteran of any war who was not dishonorably discharged, suffering from disability, disease, or defect, who is in need of hospitalization or domiciliary care, shall be furnished necessary hospitalization or domiciliary care (including transportation) in any Veterans Administration facility, wthin the limitations existing in such facilities, irrespective of whether the disability, disease, or defect was due to service.

SEC. 7. The Administrator of Veterans' Affairs shall not require any applicant for hospital treatment or domiciliary care to make any statement, written or oral, with respect to the value of the real or personal property owned by such applicant.

The second bill I am introducing provides for amending the present Railroad Retirement Act so as to give retirement

pay to any railroad employee who has completed 30 years of railroad service, regardless of age. The present law as it now stands provides that, in addition to 30 years' service, the employee must have also reached the age of 65 years. This bill would eliminate any age limitation.

There are other benefits concerning compensation for injury provided for in this bill, which I also quote, as follows:

ANNUITIES

SEC. 1 (a) The following-described individuals, if they shall have been employees on or after the enactment date, shall, subject to the conditions set forth in subsections (b), (c), and (d) be eligible for annuities after they shall have ceased to render compensated service to any person, whether or not an employer as defined in section 1 (a) (but with the right to engage in other employment to the extent not prohibited by subsection (d)):

1. Individuals, without regard to age, who on or after the enactment date shall have completed 30 years of service.

2. Individuals who on or after the enactment date shall be 50 years of age or over and either (a) have completed 20 years of service or (b) have become totally and permanently disabled for regular employment for hire, but the annuity of such individuals shall be reduced one one-hundred-and-eightieth for each calendar month that they are under age 65 when the annuity begins to accrue.

3. Individuals, without regard to age, who on or after the enactment date are totally and permanently disabled for regular employment for hire and shall have completed 20 years of service.

SEC. 2. The amendments made by the first section of this act shall not be applicable with respect to annuities for any period prior to the date of enactment of this act.

The third bill provides for authorizing the President of the United States to award posthumously in the name of Congress the Medal of Honor to William Mitchell. This bill in the last session of Congress was passed by the Military Affairs Committee of the Senate and the Senate itself by unanimous vote. I feel sure that there is no man who ever served this Nation as a hero whose memory is more entitled to this honor than the late Billy Mitchell.

Birthday Message From the President of the United States

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1945

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a message from the President read by Mrs. Franklin D. Roosevelt in a broadcast from the White House in connection with the observance of the President's birthday.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

I am sorry that wartime circumstances make it impossible for me to talk with you personally tonight on my birthday. I have asked Mrs. Roosevelt to read this brief message in my behalf to the many millions of Americans who contribute to the fight against infantile paralysis.

This year, if I had a birthday cake, there would be 63 candles on it. But the years they represent seem very few to me tonight because your great generosity has made this day a testament to youth—a promise to our children that the bright tomorrow for which we fight throughout the world will not be dimmed by the shadow of infantile paralysis at home.

The success of the 1945 March of Dimes in the campaign against infantile paralysis does not come as a surprise to me. We are a nation of free people, and free people know how to go over the top—whether it's a Nazi wall, a Japanese island fortress, a production goal, a bond drive, or a stream of silver dimes. The reason for these achievements is no military secret. It is the determination of the many to work as one for the common good. It is such unity which is the essence of our democracy.

Our national concern for the handicapped and the infirm is one of our national characteristics. Indeed, it caused our enemies to laugh at us as soft. "Decadent" was the word they used. But not any more. They are learning—and learning the hard way—that there are many things we are mighty tough about.

We will never tolerate a force that destroys the life, the happiness, the free future of our children, any more than we will tolerate the continuance on earth of the brutalities and barbarities of the Nazis or of the Japanese war lords.

We combat this evil enemy of disease at home just as unremittingly as we fight our evil enemies abroad.

Our work over the past decade in fighting infantile paralysis was put to its most rigorous test during this past year. The 1944 epidemic was the worst our country has experienced since 1916. But this time we were prepared with a Nation-wide network of defense that your dimes and dollars enabled us to build. Wherever and whenever an outbreak occurred, the National Foundation for Infantile Paralysis and its community chapters, sprang into activity. Almost overnight afflicted areas were provided with trained personnel, supplies, and equipment.

Tonight we are able to report that because of your cooperation, the very best in medical care and treatment has been assured for everyone—for the boys and girls, for the men and women—stricken by this disease. All of them have greater hope and confidence today—because they know you are with them and giving them powerful support in their fight.

Yes, we can well be proud of the work of the National Foundation and its chapters. But as any fighting man will tell you, we cannot rest on defense alone. No matter how efficient and immediate the treatment is, it does not take the place of prevention and cure. We must continue to devote our attention ever more to attack. We must give our scientists and research workers the necessary equipment to find this invidious enemy, to corner and destroy him. The task is not an easy one. The mystery shrouding the infantile paralysis virus is not readily penetrated. But we will persist—and we will triumph.

There is no yardstick long enough to measure the happiness our children give us. Whatever we can contribute to promote our children's health is an investment in our country's future. It is an assertion of our American birthright to life, liberty, and the pursuit of happiness.

Citations by the Kiwanis Club to Certain New York Newspapers

EXTENSION OF REMARKS

OF

HON. ALBERT W. HAWKES

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1945

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech I made in New York City, on October 4, in behalf of the Kiwanis Club of New York, in presenting a citation from that club to the New York Herald Tribune, the New York Times, the Sun, and the World-Telegram.

I also ask consent to have included in the Appendix of the RECORD the address made by Mr. Nicholas Roosevelt, assistant to the publisher of the New York Times, in accepting the citation on behalf of the Times, the Herald Tribune, the Sun, and the World-Telegram.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. ALBERT W. HAWKES, OF NEW JERSEY

In presenting this citation on behalf of the Kiwanis Club of New York to the New York Herald Tribune, the New York Times, the Sun, and the World-Telegram, I wish to call attention to the magnificent work that has been done by these papers and the press in general during this greatest of all wars. The liberties of a people are almost directly in proportion to the real freedom of the press, and thank God, we still have real freedom of the press in the United States of America, and it will continue if the owners of the newspapers are courageous enough to accept the responsibilities and the attacks which may be made upon them from various sources because of the fact that they speak as free agents of a free people.

We all appreciate how great the casualties of war are on the battlefield and at the battle front, but few of us appreciate the terrific casualty which occurs off the battlefield.

The newspapers made their full contribution both on and off the battlefield. Nineteen correspondents of newspapers, press associations, radio networks, and syndicates have been killed during World War No. 2. More than 41,000 newspaper employees are serving in the armed forces.

Daily and weekly newspapers throughout the United States and Canada have served a threefold purpose in the Second World War.

1. They have kept the people informed with accentuations at the right time, which has helped materially to keep the morale of people high.

2. They have kept the Government vigilant and alert both in the account of war and the correction of errors. Open criticism fairly given for constructive purposes has helped to accomplish this.

3. Newspapers have stimulated the people themselves and kept them vigorous and alert, and all of the papers represented here today have worked to make the people cooperative with the Government's worthy war measures.

In my opinion the newspapers have done a remarkable job in placing upon themselves voluntary censorship regulations. They have reported bad news with the good news,

but have refused in most cases to report news that would give aid and comfort to the enemy.

I shall not take your time to mention all of the problems that have faced the newspapers by way of increased cost from many directions, coupled with inability to get the necessary operating materials on time for regular procedure. Nor will I deal at length with the fact that they have carried on despite decreased advertising revenues in many cases. They have had the same troubles that industry has had in doing its job and they have suffered from the loss of manpower through the draft of personnel. The newspapers have given freely millions of inches of editorial and display space valued at millions of dollars to help in the various campaigns for scrap collection, sale of war bonds, promotion drives, and the recruiting of men and women both for the services and for industry.

The newspapers are just as much a part of the free enterprise system as is any plant or business in the country.

The newspapers, coupled with radio, magazines, and other methods of free and uncontrolled communications, are really the lifeblood of a free people. Anything that attacks or destroys the freedom of the press and freedom of speech, as well as freedom of assembly for legitimate purposes in keeping with the Constitution of the United States—is inimical to the interests of our American freedoms. Too often people say, when one segment of our free life is attacked, let them take care of themselves. Many fail to realize that the destruction of freedom in one segment of our American life is a menace to the freedom in all other segments of our American life.

The newspapers can and should help mold individual character in such a way as to increase the national character which can be no higher than the composite of the individual character of our citizens.

The newspapers have a real personality and that is why we choose this or that paper for our regular reading of the news. We like the personality and character of a given newspaper, just as we like the character and personality of an individual. The very fact that these men here have worked for more than one of the papers, who receive this citation today, shows that newspapers cross the breed of thinking, just the same as human beings in the United States have crossed their breed and produced a sturdy race of people.

The newspapers, coupled with the radio, magazines, and other methods of freedom of expression, are the guardians of the liberty of the people. They protect the peoples' rights and free government, in my opinion, quite as much as the elected representatives of the people. They are the watchdogs of the representatives, and if they keep their character of news on a high standard, then I will guarantee the standard of the representatives of the people will be higher in any country which has a fine press than in a country which has a press and radio system which is conducted on a lower standard of national interest and welfare.

The Senators and Congressmen prove the great value of the work done by the newspapers, as is evidenced by the reading of many articles and editorials both in the House and the Senate and the insertions in the Appendix of the RECORD of these articles and editorials which are the results of the findings of a free press interested in good government.

No newspaper will always please all of its readers. Some will please all of them part of the time, and part of them all of the time, but none will please all of them all of the time. However, a good newspaper must please a substantial part of the people most of the time, and all of its readers a majority of the time if it is to keep up and increase its circulation. After all, the circulation of a newspaper is the verdict of the people on the performance of that newspaper.

I never forgot the statement of Charles Coburn, the actor, who is beloved by millions of people, when he said in answer to the charge that the producers of plays and the actors had let the stage sink to a low level. He said, "It is not the producers nor the actors who control the standard of the stage. The public at the box office determine the standard of the stage, and so long as they will pay four times as much to see a vulgar show as they are willing to pay to see a fine Shakespearean play, the standard will be just where the public keep it by their support at the box office." I leave this thought with you—the standard on which the newspapers function in delivering the news to the public is likewise determined by the support that the public gives to one method of the presentation of the news as compared with another method or presentation of the news. You gentlemen and the newspapers you represent are doing a fine job in setting a high standard for news presentation and I congratulate you. Let us all remember that you hold in your hands a very great part in the destiny of the United States of America, and through it as a leader in the world, you have a large responsibility in connection with the making of a fair, sound, and just peace which, God knows, all right thinking people have sought for hundreds of years, and today after this horrible war cherish above all other earthly accomplishments.

I now take pleasure in reading the citation which is presented by the New York Kiwanis Club to the newspapers represented by each of you four gentlemen, and I congratulate you on the conduct which merited this presentation.

ADDRESS OF NICHOLAS ROOSEVELT, ASSISTANT TO THE PUBLISHER, THE NEW YORK TIMES

THE RESPONSIBILITY OF THE PRESS TO THE PUBLIC

Mr. Stringfellow, president of the Kiwanis Club, and Senator HAWKES, in the name of the New York Times, I want to thank the Kiwanis Club for this fine citation. The Times is proud that the Kiwanis Club has felt that it deserves this honor. The Times has always striven, and will continue to strive, for the highest standards of accuracy and fair play in journalism. I think that I speak in the name of all four papers which are represented here when I say that we who are in newspaper work are keenly aware of the responsibility which we have to the public. It is something very real of which I am sure every principal editor and publisher is unceasingly conscious. A responsibility exists—and a very real one. But as I look back over the 20 years that I have spent on the staff of the New York Times and the New York Herald Tribune, I am of the opinion that this responsibility is rather different from what it is popularly supposed to be. I have often been asked why the press—or the New York Times or the Herald Tribune—does not do more to help a particularly worthy cause. I have been asked why certain newspapers devote so much space to the funnies instead of using their great influence to be educational. I have been told with complete positiveness that the newspapers of the country are merely the tools of the advertisers. In fact, on at least one occasion, the President of the United States deliberately charged that the policies of newspapers were formed in the counting room—the implication being that the news columns and the papers' policies were for sale.

Now I don't mean to pretend that never has a newspaper editor or publisher allowed himself to be led astray by greed or prejudice or pressure. But I do maintain that the leading papers in this country are run by men of character and principle and that these men look upon their work as in a sense a public service. Their constant preoccupation is to turn out newspapers that are accurate, fair, and honest.

Before going further into detail, let us stop to consider some of the functions of a newspaper.

The first and foremost function is to obtain and disseminate the news. This process should not be confused with the dissemination of opinion or interpretation of the news. That is why, in the best newspapers, the editorial page and the views and prejudices of the editor or publisher are rigidly separated from the work of gathering and writing of the news. I know, of course, that this is not always the case. You and I know at least two papers in this city which do not hesitate to color the news to further the prejudices of the publisher and a third which, though it calls itself a newspaper, makes no pretense to present the news and, instead, fills its pages from beginning to end with bitter expressions of prejudices and partisanship dressed up as if they represented news rather than views.

This separation of views from news is becoming basic in all good journalism. This does not mean that modern newspapers withhold expressing views—far from it. But these views, either in the form of editorials or of signed columns, are not allowed to influence the presentation of news in the news columns. In fact, very often you will find a conflict between the views of some of the columnists and of the editorial writers. I happen to like this myself—but I call your attention to the very important fact that the first and main function of a newspaper is to present the news. Expression of opinion, like articles which are designed to entertain, are only auxiliary functions of newspapers.

Too often the public fails to realize the nature of the task of obtaining news. News, as the word implies, is something new, something of interest to many persons, often something out of the ordinary. It implies events such as a fire or a train wreck or a wedding or a death or a hurricane or the opening of a new subway line. It includes important statements by officials, speeches by candidates for office, and a host of other things. The opening of a new and particularly good movie may be news. So is a world series baseball game. There is news of music and of art and of business events—many fields which have a special interest to special groups.

A good editor not only must balance the bill of fare so that readers with different interests find in their paper the kind of news which is of special interest to them, but he must also be editorially on guard against views, prejudices, or deliberate misinformation dressed up as news. The public does not realize how often efforts are made by interested persons to hold back important items of news or to attempt to have news stories colored to further their own interests. As a matter of fact, a whole profession has grown up which has as its principal objective to see that particular stories are so presented to the press that they are favorable to particular clients. It is no secret that good editors scrutinize particularly closely material sent them by press agents.

A good editor devotes much of his time to sifting the news from propaganda—to evaluating the accuracy of reports or stories or statements or "canned" copy. The good editor also takes all possible pains to verify and to check up. He instills in his reporters the importance of accuracy. He will not

tolerate prejudice or opinion injected into a news story by a reporter.

Again, I must insist I am talking about the best newspapers in this country. It is a subject close to me not only because I have worked on two of the greatest newspapers in this country, but because it was my good fortune during my earlier connection with the New York Times—from 1923 to 1930—to see a lot of the late Adolph S. Ochs, who made the Times what it is today, and of his great managing editor, Carr Van Anda. I don't think that the American people are aware of the debt which they owe to these two men. Their influence during more than a quarter of a century did more than anything else to turn American journalism away from the partisanship and prejudice that had characterized it in the nineteenth century.

Mr. Ochs, when he bought the New York Times, had a great idea—an ideal—to show that a paper which placed accuracy and fairness above all else could appeal to the American people and could be successful. Mr. Van Anda not only gave substance to Mr. Ochs' ideal but himself possessed an uncanny ability to detect sham, to see what lay under false fronts and to sense efforts of interested persons to distort or hide important aspects of news. Mr. Van Anda's mind was like a steel trap—without passion (but not without compassion), penetrating, searching, appraising, striking at roots and causes instead of being deceived by appearance. In addition, he had a genius for organizing the mechanical end of news coverage and seemed to be able to divine when and where an important news story would break. I am not detracting from the magnificent contribution of other members of the Times staff when I say that these two men were chiefly responsible for giving the New York Times its reputation for reliability, fairness, and accuracy. By its example, the Times strengthened the hands of many other editors and publishers throughout the country who knew in their hearts that accuracy and truthfulness are the keystones of good journalism.

I need hardly tell you, however, that eternal striving for accuracy and truth is not the only task which an editor faces. He has with him night and day the problem of the competition for space. Not only do his advertisers want more space, and his special feature sections, as well as his main news section, but he is faced with the problem of dividing up the available space between different stories. When something particularly important and spectacular occurs in the war, for instance, it is sure to take space that might otherwise have gone to an important local story. There are no hard and fast rules to govern an editor in allotting space. He has to use his judgment. Inevitably he makes mistakes. Often he is criticized for not having played up a particular story more prominently. But, if you read both the Herald Tribune and the Times—and, as one who has worked for and admires both papers, I can only say I hope you do—you have, I am sure, often been struck with the fact that time and again these two papers have at least insofar as their front pages are concerned played up the same news stories in about the same position. In other words, the editors of these two papers have very much the same evaluation of what constitutes important news.

I mentioned the advertisers as among those competing for space. In this connection, you may be interested to know that Mr. Ochs always took the position that an advertisement, if it is good, has news value—that is, it tells the reader something which he is interested to know. The better papers, as you know, have long fought for higher standards of accuracy in advertising copy and have resisted the efforts of unscrupulous persons to attempt to sell goods by misrepresentation, exaggeration, or deception.

You have heard a lot in recent years about freedom of the press. You have doubtless heard it said that such-and-such a paper should not be permitted to print the kind of things it prints or that the papers should be compelled to print certain statements or official documents. Very probably, if you are a New Dealer, you have felt that the paper published under the eagle eye of my old friend and colleague, Wilbur Forrest, should not be allowed to criticize F. D. R. as severely as it sometimes has.

This desire to suppress news or views you don't like is probably only normal, but it shows a lack of understanding of the value as well as the significance of freedom of expression. The moment Government steps in and tells a newspaper editor or a broadcaster, "You may not say this, because we who speak for the Government do not think it is good for the people to hear it," the death of democracy is at hand. As that great apostle of liberty, the late Justice Oliver Wendell Holmes, put it, "We should be eternally vigilant against attempts to check the expression of opinions that we loathe and believe to be fraught with death."

Freedom of the press is, as a matter of fact, inseparable from freedom of speech and freedom of the air. It includes the right to denounce evildoing even if it be in the seats of the mighty, and to criticize the acts and policies of those in office. It implies freedom to read and freedom to hear—freedoms, mark well, which the dictators have ruthlessly suppressed. Its very essence is freedom to think and freedom to hold and communicate an opinion. But these freedoms mean freedom from Government control and regulation and should not be confused with editorial policy or with the moral obligations of an editor to present facts accurately.

The right of freedom of expression belongs to all the people, and not merely to a single group, whether it be newspaper owners, the officers of the Government, or the spokesmen for a political party. Newspaper publishers and editors, of course, are vitally interested in freedom of the press, because this freedom directly affects their livelihood. But the press is only a channel through which people may be informed of what is happening in the world and in their particular community, and through which opinions about these things may be aired. If the people are deprived of a free press and are given, instead, a press which is controlled by the Government, they are denied one of the most important mediums of free expression and constructive criticism of public affairs. This is why freedom of the press has always been resented by wrong doers, feared by weaklings, and abolished by dictators.

I am sure that most of you in this room will agree with me when I say that the greatest potential enemy of freedom of all kinds is government. Americans have so long taken their freedoms for granted that they have lost sight of the fact that these freedoms were won only as the result of a long struggle against governments which only grudgingly and reluctantly admitted that people had a right to be free. We are too prone to look back only to the Revolution, the Constitution, and the founding of the Republic and to forget the long struggle during the preceding centuries which made possible the establishment on this continent of a free society of free men. One of the wisest remarks ever made by the late President Woodrow Wilson was, "The history of liberty is a history of limitations of governmental power, not the increase of it." Beginning as far back as the days of Henry VIII—as a matter of fact, going back even to the days of the revolt against King John—a succession of determined liberal-minded individuals fought to curtail the powers of the King of England and of his representatives on this continent to govern men arbitrarily. They fought for justice, not only as an ideal but as a very practical restraint on the arbitrary powers of the King and his henchmen. They fought to make it impossible for government to throw men into prison without due cause. They fought to make it impossible for those in authority to deprive men of life except after a fair trial and for due cause. They fought to prevent the King's henchmen from seizing their property.

Here on this side of the ocean the great struggle for freedom of conscience out of which grew not only freedom of expression but also the freedom of the human mind to explore new ideas without fear or prejudice began with the fight which a valiant young minister freshly arrived from England, Roger Williams, conducted against the theocracy which governed the little colony of Massachusetts Bay with an iron hand 300 years or more ago. Roger Williams not only was the first to proclaim publicly that the religious leaders had no right to use the civil government to enforce their personal wishes and prejudices, but he founded a new colony in Rhode Island which, from the very beginning, insisted on the separation of church and state. This, mind you, was done at a time when such separation was unthinkable. Out of Williams' assertion that the church had no right to compel men to worship in a particular way grew the idea that government itself had no right to coerce men and to control their lives and deal with them arbitrarily. In time we on this side of the water developed the idea of a government of laws—the idea that there were such things as laws which stood above rulers as well as the government. If you study the history of the Revolution and the Constitutional Convention, you will see that inherent in the thinking of the leaders of those days was the idea that rulers had to be held in restraint and that government was made for the people rather than that the people were the creatures of the state.

This idea became firmly entrenched in American and British political thought. Unfortunately, in the last few decades here and elsewhere throughout the world, the tendency to exalt the state has grown greatly. I noticed only last Monday that General De Gaulle has come out for a planned economy for France. This is another one of those reasonable-sounding phrases which advocates of state supremacy use in order to calm the fears of the descending numbers of liberals left in the world.

Make no mistake about it. When government plans and directs the economic activities of a people it must either have the power to enforce its plans or it will fail. Now, governments do not like to fail. The experience in other countries—including this one here—has been that as government imposes economic regulations—which is a form of economic planning—it has an apparently irresistible tendency to pile one regulation on another and to reach out for more and more power. Once government controls economic life, it is inevitable that it will seek to control opinion, because the more it controls, the more it will be criticized, and the more its powers will be resented and restricted.

The only protection we have against such control is a free press. And when I say free press, I mean also a free radio. Because editors and publishers are more keenly aware of the value of freedom of expression than is the average layman, they are more alert to smoke out any attempts to muzzle freedom of expression. In so doing, they are performing a public service.

I think I speak for the other three gentlemen of the press at this table when I say that we are deeply conscious of our responsibilities to the public. And I know that they will agree with me that, if we were not, we would soon be told about it. I know of no

occupation in the United States, even including politics, in which so much gratuitous advice is given and so many frank slams, as the newspaper business. Every one of my friends in other lines of work knows better than I do how a newspaper should be run, and he rarely hesitates to enlighten me fully about our shortcomings.

Even though from time to time we may feel that some of the slams are undeserved, and occasionally we may get a little hot under the collar, we know that they represent a keen interest in our work. Incidentally, very often our friends help us to retain our balance. An alert public demands an alert press. Whenever you find a newspaperman who is not alert or who doesn't care what his readers think or say, it is a safe bet that the newspaper which he represents or publishes or edits has ceased to be of real value to the community.

Textile Industries Under Federal Control

EXTENSION OF REMARKS
OF
HON. EDWARD V. ROBERTSON
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Thursday, Feoruary 1, 1945

Mr. ROBERTSON. Mr. President, much interest has been aroused among the textile and woolen industries by virtue of a combined order issued by the W. P. B. and the O. P. A. regarding civilian clothing. I ask unanimous consent that an editorial appearing in the Herald News of Passaic, N. J., on Friday, January 26, 1945, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ALL TEXTILE INDUSTRIES NOW UNDER NEW FEDERAL CONTROLS

Civilian clothing has been in short and irregular supply for several months, particularly those items of infants', children's, and women's apparel which normally move in the lower price range.

As the textile shortage has grown steadily more acute, the Government control agencies have tried increasingly drastic measures of priority and allocation to prevent real hardship in homes of the people.

Now these experimental measures have been abandoned in favor of a sweeping new order to be administered jointly by W. P. B. and O. P. A., which will control all textiles—cotton, wool, and rayon—from the spindle and loom through the retail stores.

How will this new plan work? First, the textile mills may employ only a limited number of workers—according to the "employment ceiling" fixed by the War Manpower Commission. This means that total production is limited for each mill.

Next, W. P. B. sets aside a certain percentage of each mill's production for military and lend-lease. The remaining percentage is available for the civilian markets.

But, under the new arrangement, this civilian allocation is not to move by the normal processes of free enterprise. Instead, W. P. B. will give priority certificates to certain selected garment makers, who agree in advance to use the fabrics only for the precise type and quality of garments specified by W. P. B. and O. P. A.

In return for these fabric priorities, the garment makers agree to sell their product at O. P. A. ceiling prices only to those wholesalers designated by W. P. B.'s Office of Civilian Requirements as being in greatest need for stocks of clothing.

But the wholesaler must agree, before winning his priority, to sell the garments only to those retailers designated by the Office of Civilian Requirements, so that the cities suffering the most acute need for clothing may have first call on the limited factory output set aside for civilians.

In return for his priorities, the retailer also agrees to sell his garments at O. P. A. ceiling prices.

The significance of this new program hardly could be overstated. These textile controls represent the first vertical application of Government controls in a basic industry, from raw materials to retail selling—through the mill, the converter, the wholesaler, jobber, and retailer.

This means that Washington now will tell the textile mill what type, grade, and quality of cloth it may produce; next it will tell the garment makers what type, grade, and quality of apparel they may produce; next it will tell the garment makers where to ship their goods; finally it will tell the wholesalers who is to get first call on the limited retail supply. All through these processes, the Government holds the whiphand of compulsion over every segment of the textile industry, for without priorities nothing may be shipped.

It is too early to tell how well this sweeping program of managed economy will work out. All we know at the moment is that the new textile orders represent the first complete application of national socialism in the United States, along lines perfected by the totalitarian governments of Italy, Germany, Japan, and Russia.

It will be interesting to see if the mechanics of compulsion and regimentation perfected by the dictatorships can be applied successfully to a nation founded and grown great in the inspirations and traditions of freedom.

If we may judge by history and experience in other fields, this new attempt to uproot the last lingering forms of free enterprise within the textile industry will result ultimately, not in more and better clothing, but in ever more distressing scarcities.

We venture the humble opinion that national socialism will not work well in America—in textiles, or in any other product.

Tributes to the Late Senator Francis Maloney

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1945

Mr. McMAHON. Mr. President, I ask unanimous consent to have inserted in the RECORD a resolution passed by the City Council of New Britain, Conn., concerning the death of Senator Francis Maloney.

I also ask unanimous consent to insert four editorials from Connecticut newspapers on the same subject.

There being no objection, the resolution and editorials were ordered to be printed in the RECORD, as follows:

To His Honor, the Mayor, and the Common Council of the City of New Britain:

The undersigned recommend that the following be accepted and adopted:

"*Resolved*, That the Common Council of the City of New Britain hereby records, on behalf of this body and of the citizens of New Britain, their deep sorrow upon the untimely death of Francis T. Maloney, senior Senator from Connecticut, and their recognition and appreciation of his long and unfaltering service for his fellow men, with a recognition that his passing leaves a loss in the State of Connecticut that will not easily be filled or forgotten; and

Resolved further, That the city clerk be and he is hereby authorized to send a copy of this resolution to Mrs. Francis T. Maloney, to the city of Meriden, and to the junior Senator from Connecticut for inclusion in the CONGRESSIONAL RECORD.

Charles J. Prestia, Vincent Kotowski, John J. Valentine, Matthew J. Avitabile, Frank W. Chase, Henry L. Connor, John J. Storey, Arthur J. Kallberg, Robert H. Hausman, Adam P. Kwider, William E. Attwood, Jr., John A. Bednarz, Robert H. Stabert, William G. Gibney, Kenneth A. Larson.

Attest:
[SEAL] HARRY E. SCHEUY,
Town and City Clerk.

[From the Hartford (Conn.) Times of January 19, 1945]

DEATH DRAMATIZES NEED

It is a striking coincidence that the National Planning Association released its proposals for lightening the burdens and increasing the efficiency of the Congress on the very day that Senator Francis Maloney died, patently a victim of the overwork which the existing organization imposes.

The tragic death of the Senator who had assumed leadership in the upper House of the movement for reform may prove a more potent force for it than any living effort he could have made. Certainly his death is notice both to the House and to the Senate of the great need of that for which the Senator was preparing to fight as strenuously as he had for anything in his career.

The National Planning Association, which retained the services of Robert Heller, a business management consultant of Cleveland, has reduced its recommendations to 14 specific items. Some of these have directly to do with lightening the burdens on Congressmen and Senators, enabling them to work more efficiently and to give more attention to important matters through relieving them of need to attend to lesser ones.

Some of the recommendations go to the heart of the difficulty about Congress. It is proposed, for instance, to reduce the number of committees from 33 in the Senate and 47 in the House to about 15 in each case. With fewer committees, no Member need serve on so many or hold so many chairmanships.

It is proposed to give individual Members larger personal staffs, to establish a Congressional Service Bureau and expand the Legislative Reference Service of the Library of Congress. One of the staff additions for each Member would be a high-caliber assistant, paid at least $7,500 to $10,000 a year and thus be capable of relieving his chief of much detail. Congressional committees would be adequately staffed, including experts in various fields.

These are the particular recommendations which, if adopted, would improve the ability of Congress to function and which would put at their disposal services which would enable Members the better to deal with the subjects before them. It is significant that the Senator who was striving the hardest in this direction and who had been most articulate about the inability of a Member to spread himself over the activities of numerous committees should have fallen a victim to the very thing of which he was complaining.

The Washington Post commented upon this matter following Senator Maloney's death. It paid high tribute to him for his "freedom from narrow partisanship and political sectarianism" and for his "great talent for mediation." It called him "one of the chief proponents of an efficient Congress" and asserted that "his death is, in fact, proof of the need of such modernization." It called Senator Maloney "a conscientious statesman who took his committee assignments very seriously" and said the burden of presiding over one senatorial committee and serving on four others as well as two special committees, one joint committee and several commissions "undoubtedly helped to wear him down." "There are," it said, "too few men like him in our public life and his death is a very real loss to his State and to the Nation."

Even without such words, the death of Senator Maloney should cause the Senate, at least, if not also the House, to pay more attention to that for which he was striving both for the sake of efficiency and for the sake of Senators as individuals. The report of the National Planning Committee may or may not be the complete or even the best answer to the needs of the situation.

It is at least a starting point. It merits the early and serious consideration of both Houses.

[From the Norwalk (Conn.) Hour]

A WORK WELL DONE

Connecticut in general and his native Meriden in particular paid sorrowful tribute yesterday in last rites for Francis T. Maloney, United States Senator, whose death at a comparatively early age occurred early this week. The cosmopolitan gathering at the mass celebrated in his honor yesterday in Meriden was significant; honors were paid by all walks of life to the man who made a humble beginning—as counterman in a Meriden lunchwagon—and won a United States Senatorship at the climax of his career.

Much has been said of Frank Maloney, of his ability, his energy, his persistence. But probably his outstanding characteristic was his sincere concern for the well-being of his fellow men. Throughout his years at the National Capital, he was a true representative of the people who elected him to office. He appreciated the responsibility of that office and was true to his trust.

It has been said that overwork in execution of his responsibilities in high public office was a factor in the breakdown of his health. That may well have been, because he did not spare himself in the least in getting things done—the way folks back home wanted them done.

Frank Maloney's earthly career has ended. He has entered the greater field—the eternal realm—finding there the reward that comes of honest, helpful service to fellow men.

[From the Bridgeport Herald of January 21, 1945]

WAR CASUALTY

Those two words, highest tribute that can be paid to a private citizen or public official at a time like this, were the only ones that came to the minds of Governor Baldwin, a Republican, and Lieutenant Governor Snow, a Democrat, when they learned that United States Senator Francis T. Maloney had succumbed to a heart condition, and none can dispute the accuracy of that description.

The best editorials that could be written on the United States Senator from Meriden were composed extemporaneously on the floors of the house and senate in Hartford a short while after the final bulletin reached Capitol Hill.

There spoke men and women who, time and again, had disagreed with Senator Maloney's actions, but never had questioned his motives.

If ever it was truly said of a public official that "he wore no man's collar," it was said of Frank Maloney. He had opposed President Roosevelt on many important issues, notably that of the Supreme Court bill of 1937, but the President thought enough of Senator Maloney to offer him, even at a much later date, the national chairmanship of the Democratic Party.

That fact alone confirms the statement of the eloquent Representative Philip J. Sullivan, of Enfield, who said Senator Maloney's "outstanding characteristic was courage."

J. D.

[From the Hartford Courant of January 17, 1945]

FRANCIS MALONEY

Not in recent years has there been a United States Senator of more all-round usefulness than Francis Maloney, of Connecticut, whose untimely death near the close of his fiftieth year makes it hard to realize that his earthly tasks are done.

First elected to the Senate in 1934, after having served a single term in the House, and reelected in 1940, Mr. Maloney gave little evidence of any close affiliation with the Democratic Party. Aside from a brief interval at the beginning of his Senate service, when he went along with the general policies of the New Deal, he gave little consideration to the political aspects of public questions, voting about as often with the minority as with the Democratic majority.

He regarded himself as being first of all a representative not alone of the people of his own State but of the whole United States. In this he exemplified to a marked degree the sentiment once expressed by a distinguished Senator of Vermont, George F. Edmunds, who, when the Sherman Antitrust Act was under debate in 1890, said: "The citizens of the State of Vermont are no more my constituents than the citizens of the State of Colorado, for a Senator of the United States, although elected (as was then the case) by the legislature of the State from which he comes, becomes a Senator of the United States, and every human being within the broad boundaries of the Republic, from the shore of the stormy sea on the east to the tranquil one on the west, is my constituent." But like Edmunds, Senator Maloney was faithful to the needs and interests of his own State as the circumstances would permit.

To serve his constituency with complete fidelity and without distinction as to party was Senator Maloney's earnest endeavor, and none can say that he did not admirably succeed in so doing. He would have come up for reelection in November 1946, and no matter how worthy might be the Republican candidate opposing him, it would have been found no easy task to convince the voters that he should be displaced. Precious few Senators ever find themselves in such an enviable position.

Webster once described the Senate as composed of equals, "of men of individual honor and personal character, and of absolute independence." The Senate may have lost something of its independence as a result of the seventeenth amendment, which provides for the election of its Members by popular vote instead of by the State legislatures; but if so, Senator Maloney was not one to lose his. It was intended by the authors of the Constitution that the Senate should be the citadel of liberty, and as such this Senator from Connecticut strove to keep it by raising his voice whenever he thought the rightful liberties of the people were being assailed. And his could be a most eloquent and persuasive voice, whether it was heard in the Senate or at public gatherings.

One of Senator Maloney's last and most constructive acts was to introduce a measure looking to the reorganization of the Congress by reducing the number of its committees and preventing any overlapping of their activities. The project was one very close to his heart and his colleagues could pay no better tribute to him than by adopting the general program he had so patiently worked out.

For the State and the Nation to be deprived of "Frank" Maloney at the very height of his career is a loss that will be genuinely felt, not only by those who knew him as a friend but by those who had formed a just appreciation of his fine qualities as an unselfish public servant, never sparing himself in the discharge of his duties and responsibilities.

Nomination of Henry A. Wallace To Be Secretary of Commerce

EXTENSION OF REMARKS

OF

HON. ABE MURDOCK

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1945

Mr. MURDOCK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from my home-town paper, the Beaver Press, a very small paper published in a very small town, Beaver City, Utah. The editorial is written in connection with the nomination of Mr. Wallace to be Secretary of Commerce, which indicates to me that the common, ordinary people are giving much time, thought, and attention to this subject.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FIGHT NOW SHIFTS TO WASHINGTON

The age-old fight between the left and the right goes on, and for the time being has shifted to the Halls of Congress, where the disciples of Mammon are banding together and girding to prevent a friend of the common people—a man who, if given the opportunity, will make the 60,000,000 post-war jobs promised by the President more than idle talk. The supporters of big business and big profits for the few, and depression and want for the great majority of Americans, are determined to see that if the nomination of Henry A. Wallace for Secretary of Commerce is sustained, the office will be stripped of all financial powers which have been held by Jesse H. Jones during his tenure in office.

There is far more to this nomination than a political plum for a faithful worker. Its roots go much deeper than that. It is just one facet of the age-old fight between decency and deception; between special privilege and justice; between Christian concepts and the money changers. They charge that Wallace is incapable of handling important financial responsibilities because he is in the wrong gang, so to speak. He was not born with a silver or gold spoon in his mouth and might not channel Reconstruction Finance Corporation funds to the right people. You will recall the precedent that was established in early days of the Corporation when $90,000,000 was allocated to the banking chain of Vice President Charles Dawes while the farmers, workers, and other common people were left to shift for themselves in one of the worst depressions this country has ever endured. They fear he might do something to ease the labor situation by making post-war jobs;

that he might have too much interest in and consideration for the soldiers, farmers, and workers of the country, and not enough interest in bigger and better profits for the big boys who feel that they own these United States.

The President's nomination of Mr. Wallace was not primarily to reward Mr. Wallace for his political services, as they try to make it appear. If he receives the appointment, he will earn all he gets out of the position by the persecution and unjust criticism that will be heaped upon him by the interests and their hired stooges.

What the President probably had in mind was to do a good turn for the workers, farmers, and all of the common people of America, and perhaps in so doing he was discharging a political obligation at that, for certainly it was not the wealthy class nor their hired help that elected Mr. Roosevelt to a fourth term in office. It is a fact that the President on more than one occasion has made it plain that he aims to steer a course just a little to the left of center of the road. The left, you know, represents the common people; the right is the special privilege and wealthy class. And since this is supposed to be a democracy it is presumed that the greatest good for the greatest number should be the objective.

If the wealthy and ambitious elements of our society could get a true perspective of the future trends in this country, they might save themselves, as well as the country at large, a lot of misery; and they might be glad to adopt a more liberal policy. We shudder to think what will happen after this war if they try to squeeze the servicemen, workers, farmers, and common people of this country back into the sodden conditions of the past, now that we all have seen the productive capacity of this Nation. There is no longer any excuse for poverty and want in America. If it comes it will be because selfish and conniving persons bring it about, and the consequences will be upon their heads.

A man like Henry A. Wallace in a key position may quite possibly go a long way toward averting such a catastrophe. The common people of this country want Mr. Wallace in the position for which he has been nominated by the President.

Airplane Accidents

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1945

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD numerous communications I have received dealing with the matter of military airplane accidents in response to my remarks in the Senate on that subject last week.

There being no objection, the communications were ordered to be printed in the RECORD, as follows:

MADISON, WIS., *January 14, 1945.*

MY DEAR SENATOR: While not one one-hundredth the urgency for controlling plane safety, as the railroads, vessels, etc., for auto massacre reduction, yet your act for plane investigation is highly accreditable. The ever gross deficiency of plane massacre is lack of landing gear to allow safe landing on average open areas. Such would save 50 percent of all such landing carnage. Firestone's Wright Field proved tests of belt gears for 120 m. p. h. landings, of 1942, testings, outmoded enlarged auto wheels. Belt gears would have saved 10,000 crew lives and $1,000,000,000 of war planes to date. See file of 1940 No. 37-244-100 National Inventor's Council for another type. Will C. A. A., T. Wright, Administrator, longer delay safety gear improvements?

Truly yours,

EDWARD BANSCHBACH.

NEW YORK, N. Y., *January 15, 1945.*

Senator WILLIAM LANGER,
United States Senate,
Washington, D. C.

DEAR SIR: I read with deep interest that you called recently for an early report by the Senate War Investigating Committee on its inquiry into military plane accidents.

The record of Army plane crashes and casualties in the United States is appalling, and certainly something is wrong somewhere.

If through your efforts this serious situation can be corrected and crashes and casualties considerably reduced, you will have the everlasting gratitude of thousands of parents of boys in training in the air force.

From my own bit of observation I am led to think that one of the reasons for these crashes is that the training is rushed through too fast. The course is tough and I know that combat conditions will be even tougher, but as it is the boys are often tired and worn out when they go on their training missions. I know that flying for combat training requires the closest application, and therefore ample resting periods should be provided.

Of course this is only my own observation and reasoning, and I may be entirely wrong.

I do hope, however, for the good of the boys and the service, that you will follow this matter through to a successful conclusion.

Yours very respectfully,

SOL PELLMAN.

POLAR BEAR ASSOCIATION,
Rhinelander, Wis., January 29, 1945.

Hon. WILLIAM LANGER,
United States Senate,
Washington, D.C.

DEAR SENATOR LANGER: My attention has just been called to your address before the Senate on January 11, 1945, in regard to the letter from Mr. Joe Leib.

I know Mr. Leib very well, and know that he is sincere in his effort to right some of the wrongs that have been a scandal in the Air Corps. I have worked with Mr. Leib on the matter of the war training service and the civilian pilot training program—a program where after we have spent some 273 millions of the taxpayers' money we still have some 7,303 former flying instructors now learning to fly at a further expense to the taxpayers. I know that you know something about this problem, for I have copies of letter that you have writen about W. T. S.

Keep the good work up, and then when some of the new bills come up in this Congress to right the scandal of W. T. S. and C. P. T. please give us your support. At the present time in the House there are bills coming through to help out some of the poor devils, who, after 3 years of some sort of service, are still no place. I call your attention to the article from the Tale Spinner—53,000 hours of flying time in one barracks—and the men are now going through ground school and preflight. The men are being washed out for reasons too numerous to mention, but a few are failure in math, color vision, when the positive orders of General Arnold was that no man could be certified to cadet schools unless he had passed his physical; now, when the boys are hooked new physicals are given them just in order to get rid of them.

It might interest you to know that on April 28 of 1944 I made arrangements for Mr. Joe Leib to tell his story to the aviation commission of the American Legion in Washington; in spite of my 25 years with the Legion, I never saw a person get a more rotten deal than Leib did from this so-called veterans' organization that is supposed to be interested in the war effort. Naturally nothing was done, for the two top rankers of the aviation commission owned and operated airports—these men were not going to stick their neck out when new C. P. T. programs might come through. Mr. H. V. Kaltenborn on October 20, 1943, also exposed this death rate in the Air Corps in training programs—84 men killed and 55 planes destroyed in 1 month in Florida alone. Yet before this Legion committee Leib was "kissed out" and nothing was done about his report. Keep your good work up and help on the W. T. S. legislation when it comes through; you have not seen any scandal until you dig into the W. T. S. program and its waste of the public funds.

Sincerely yours,

BRADLEY R. TAYLOR.

CHICAGO LODGE NO. 4, BENEVOLENT AND PROTECTIVE ORDER OF ELKS,
Chicago, January 23, 1945.

Senator WILLIAM LANGER,
United States Senate,
Washington, D. C.

Honorable SIR: An article appeared in the Chicago Tribune last week quite clearly covering your activity in running down the causes of the many crack-ups in the air since the beginning of the World War.

If I can get to Washington in time, I can, no doubt, be of service to you. In brief, reliable information has come to me that many of these crack-ups are caused by hot box. The plane is buzzing along at 200 to 500 miles per hour, but before landing, the pilot slowly reduces the speed so as to land safely. During the high-speed trip from New York to San Francisco, the viscosity is ground out of the oil in the bearings in the propeller shaft, and the bearing metals have become a molten mass of hot metal. When the pilot slows down to a landing speed, this molten mass of hot metals freeze and the nose dive is inevitable.

Briefly, I have perfected a bearing—the King broken-contact, frictionless, oilless, air-cooled bearing which makes hot box impossible. I don't use oil, but I use air instead for lubrication and by this friction reduction, cut down power production cost 29 percent, adding at least one-fourth to present airplane radius.

As soon as I can get to Washington, I hope to get you and Senator KILGORE, of West Virginia, to join and work out the real solution.

Please send me what information you have and greatly oblige.

Yours truly,

J. FRANK KING.

NEW YORK, *January 22, 1945.*

Senator WILLIAM LANGER,
Senate Building,
Washington, D. C.

MY DEAR SENATOR: I have noticed that you are interested in getting an early report on the facts of military airplane accidents. In this connection, I would suggest that the inquiry before it is completed look into the possibility of a large number of these accidents being due to the use of gasoline containing tetraethyl lead.

This chemical is the chief ingredient in high octane gasoline as made by present systems today, and tests have shown that it has a very corrosive and deleterious effect

on the motor. Not only that, it has a tendency to deposit metallic lead in the tubes leading from the tanks to the motor, clogging them up and thus preventing gasoline from getting into the engine and causing the engine to cease functioning, resulting in a crash.

Lead has been shown to be the cause of cracked cylinder heads, broken valves, burnt-out spark plugs, and many other causes of engine failure. Reports of partial investigation bear this out, and it would be interesting to know just what role the use of leaded gasoline has played in the destruction of over 17,000 planes on the home front.

I would be glad to place any information I may have at your disposal.

Very truly yours,

BERNARD ORMONT.

NEW YORK, N. Y., *January 13, 1945.*

DEAR SENATOR LANGER: I have just concluded reading your remarks re airplane accidents in the CONGRESSIONAL RECORD for January 11.

As a professional safety engineer associated with the National Safety Council, American Society of Safety Engineers, and similar organizations, I very much appreciate your efforts to get the report out of the pigeonhole it seems to be buried in.

The Air Forces have a most thorough and comprehensive safety program for all personnel. What good is it all if the planes they assume to be safe are in poor condition before they have a chance to practice safety in flying? I wonder how many lives could have been saved if some selfishness and greed were not dominant?

You have my hearty endorsement to pursue the objective of seeing that the report is published so the people can see what transpires.

With best wishes, I remain

Sincerely,

MELVIN W. MORGAN,
A. S. S. E.

Industrial Conditions in the South

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1945

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials commenting on a recent speech by Hon. James A. Farley in Birmingham, Ala., regarding industrial conditions in the South.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Willimantic (Conn.) Chronicle of December 7, 1944]

DON'T "BUY BUSINESS"

James A. Farley, former Postmaster General, recently spoke in Birmingham, Ala., advising the people of the South to balance their agriculture with industry and to make it possible for the people, through increased incomes, to satisfy their wants and their needs.

In addition, Mr. Farley urged that no effort be made to buy business, declaring that "I am not one who would advocate giving free sites to industries, years of tax exemption, special concessions and franchises, guarantee of roads and highways, waterworks, etc."

The New Yorker puts his finger on one of the rackets of modern industrial progress. Very often a community is faced with demands from a prospective industry that it provide, free of charge, certain essentials which are the legitimate expense of business. The people proposing the new enterprise are anxious to get as much as they can for nothing and are adept in playing one community against another. As localities bid against each other, the net result is the loss of considerable revenue and the donation of considerable public funds.

Mr. Farley asserts that real legitimate business does not ask, does not expect, and would not have these baubles hung in front of their faces. He adds that "the business that demands these is worth looking into—it savors too much of speculation and too little of permanency; it rings too much of theory and too little of practice; it's long on hope and short on know-how."

We thoroughly approve the sentiments expressed by Mr. Farley and give them publicity. Nevertheless, we have no illusions that what he says will persuade industry-hungry localities from attempting to "buy business." In the long run, however, we are convinced that there is no net gain.

[From America for December 23, 1944]

WASHINGTON FRONT

The CONGRESSIONAL RECORD for December 11 reprinted a number of editorials commenting on Mr. James A. Farley's recent address before the Alabama State Chamber of Commerce at Birmingham. It was a speech which caused wide repercussions in the South and is likely also to cause ripples in Washington.

Speaking as a businessman and not as a politician, Mr. Farley made several excellent points. His main one was that what the South as a region needs is a balanced economy of industry and agriculture, and therefore a great increase of industrial development. He warned, however, against the sad old policy of luring industries down South by specious promises of tax exemptions, free sites, special franchises, and lax labor laws.

He did, on the other hand, stress some of the South's natural advantages in a competitive economy: low production costs due to climate, involving cheaper housing and saving of fuel, abundant raw materials and water power close at hand, and a large potential home market with the increase of purchasing power. Mr. Farley's exhortations are likely to become prophecies after the war.

On the whole, Mr. Farley enjoyed a good press. But some of the editorials expressed the old fear of industrial slavery if the expansion is to be controlled by northern capital, and there was also a faint hint that wage slavery might follow in its wake.

What was surprising, and symptomatic, about the comment was its lack of political awareness. Mr. Farley spoke not as a politician, but he could not but be conscious of the political revolution which he was also advocating. This observer has remarked before that a large increase of industrial workers in the South, with the C. I. O. organizing them, is likely to change the whole face of the Democratic Party there. A semi-feudal agrarian civilization will largely disappear, and the workers' elected representatives will legislate quite differently.

This change will affect not only the Federal Congress, but also the State legislatures. Thus industrialization may prove a blessing for the southern workers, in the form of enlightened State legislation for wages, conditions, and union recognition.

REV. WILFRID PARSONS.

Mobilization of Civilian Manpower

EXTENSION OF REMARKS

OF

HON. HOWARD E. CAMPBELL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. CAMPBELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I offer the following commentary on legislation we are now discussing:

In most of the discussion thus far it has been brought out at some point that what we all want is to win the war, win it quickly and with as little loss of life as possible. In that, I think we all agree.

Next, we do not want those in the armed forces overseas to feel that we are "letting them down." In that, we all agree, too.

What we do not agree on, however, is the solution. Shall it be the good old American way or shall it be the Old World method?

Now as to the armed forces overseas. Shall we say to them, yes, we are sorry, but we have let you down—the only way we can get your fathers, mothers, wives, sweethearts, brothers, and sisters to help you by producing war materials is to draft them under penalty of fine or imprisonment and then it will not be motivated by a desire to help you as much as for self-preservation. Would not that be a sorry message for them to receive and would not it be a bright and encouraging one for the enemy to use to build up morale and to stiffen their resistance with resultant additional loss of life and suffering by our armed forces. In the May bill, H. R. 1752, you can have that.

By contrast visualize, if you will, the effect of a voluntary, earnest, honest, and anxious desire to make the necessary war materials under the Barrett bill, H. R. 1803. In the first place the efficiency of a volunteer worker, would without question, far surpass that of the worker chained to a job by a must order—he will do more work and do it better because he wants to. Then, too, we would not be broadcasting to the world a most unfair and terrible indictment of American industry and labor, which has shown its superiority over forced labor and which is not responsible for the cut-backs which have caused such shortage as we may now have.

Up until last fall we were led to believe by those in authority who should know, that not only had industry and labor done a magnificent job in producing war materials, but also that war contracts at that time could be and, in fact, were being canceled because of surpluses, and, further, that sales and disposition of such material were being made.

Let us face this question squarely and fearlessly; let those in the armed forces overseas know that we are back of them 100 percent—let our enemies know we are back of the war effort 100 percent—that industry and labor are back of it 100 percent, not because we have to be for

fear of fine or imprisonment, but because we, as good Americans, want to be.

Under the Barrett bill, H. R. 1803, you would have done just that and in the American way.

I supported the Barrett bill, H. R. 1803, because it is our way of doing things and because it answers the pleas of all who have spoken thus far, to assure the boys on the far-flung fronts that we are back of them because we want to be, and that we will produce.

The True Facts About the Drafting of Farm Help

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. O'KONSKI. Mr. Speaker, the farmers of America are now in a turmoil as a result of Director Byrnes' irresponsible directive taking farming out of the essential class and resulting in the further drain of farm help from what little remains. If this attempt to draft farm help continues, it means that in my district there will be a wholesale selling of farms and stock. This is true all over the Nation. If more farm help is drafted, in 6 months this Nation will regret that it happened.

Members of Congress are opposed to this new order by Director Byrnes. They feel it is a direct violation of the Tydings amendment passed years ago to protect production on farms. Members of Congress surmised that there would be trouble ahead, so they took no chances. They enacted into law the Tydings amendment, which reads as follows:

> Every registrant found by a selective-service local board to be necessary to and regularly engaged in an agricultural occupation or endeavor essential to the war effort shall be deferred from training and service in the land and naval forces so long as he remains so engaged and until such time as a satisfactory replacement can be obtained.

This regulation is law. It is still on our lawbooks. Under this amendment every farm boy who is needed on the farm is deferrable. There should be no question about it. The words are plain, and there can be no misunderstanding about it whatever. Under this law, a farmer should be able to rest easy and know that his help is protected from the draft. No attempt has ever been made to change this law.

But there are those in high places in Washington who pay no attention to the law. Director Byrnes ignored the law when speaking for the President. He wrote a letter to General Hershey of the Selective Service as follows:

> I have reported these facts to the President. He has found that the further deferment of all men now deferred in the 18 through 25 age group because of agricultural occupation is not as essential to the best interest of our war effort as is the urgent and more essential need of the Army and Navy for young men.

In other words, Director Byrnes told the draft boards that farming is no longer an essential industry and that all farm help should be drafted into service. For whom did Byrnes speak? Certainly not for Congress. He never once consulted Congress. He did this after a conference with the President. Congress was shocked that Director Byrnes ignored the Tydings amendment. In fact, he asked General Hershey to tell the draft boards to forget the Tydings amendment. This was done. Orders went to the State and local draft boards to draft farm help.

But Congress protested in no uncertain terms. They protested to the President, to Director Byrnes, and to General Hershey. These men were reminded that the Tydings amendment is still a law and that violation of the law was asked for in ordering local draft boards to draft more and all farm help.

As a result of the protest by Congress, General Hershey was forced to send a telegram to all State draft boards as follows:

> Questions of interpretation of State directors advice No. 288 have been brought to my attention by Members of Congress and by others.
>
> The directive of January 3, 1945, State directors advice 288, did not change or modify in any manner the Tydings amendment. The opinions and findings contained in State directors advice No. 288 were for the consideration of the local boards in determining the classifications of registrants in the age group 18 through 25.
>
> Section 5K of the Selective Training and Service Act, known as the Tydings amendment, places upon each local board the responsibility to determine, subject to appeal in the case of the individual registrant, whether or not the registrant meets the requirements prescribed by this section.
>
> Notify all local boards immediately.

So that is how matters now stand. The buck has now been passed to the local draft boards. I urge all farmers in my district whose boys are about to be drafted to insist on the protection offered them by the Tydings amendment. Should your appeal fail there, go before the district appeal board. It is the spirit and will of Congress enacted into law that there be no further draining of farm help. It is unfortunate indeed that Director Byrnes stirred up this mess.

A Bell for Springfield

EXTENSION OF REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. CLASON. Mr. Speaker, Springfield, Mass., the largest city in the district which I have the honor to represent in Congress, is noted for a great many things, not the least of which is that it is the home of the Springfield Armory, now daily turning out thousands of Garand rifles for our fighting men.

Always a leader in movements for civic betterment, Springfield has recently distinguished itself by originating the Springfield plan, a long-time program of education for democratic citizenship, which has attracted Nation-wide interest and admiration.

Now Springfield has again won the commendatory notice of the country and the plaudits of one of our leading magazines for the publication of a booklet, Our Home Town, which the Ladies Home Journal for February 1945 calls "a new and hopeful step in municipal reporting."

Under leave to extend my remarks, I ask permission to include the following editorial from the Ladies Home Journal commenting on the booklet:

A BELL FOR SPRINGFIELD

Most of us in America grew up in small towns where everybody knew almost everybody else. From that symbolic home town to the modern city of uprooted and indifferent millions is a far cry, a long jump in citizenship. But citizens must grow with their town; if we are going to have any part in shaping new growth, we must know at least in what direction we are heading and how far we have gone.

Our Home Town, a pocket-size booklet published by Springfield, Mass., is a new and hopeful step in municipal reporting, graphically revealing how the city is governed and what that government means to Springfield dwellers.

"Are you a registered voter?"—for instance—is a pointed paragraph on where and why the citizen should vote.

In each of the articles on city departments, expenditures for the past 3 years are given. Two full-page charts show where the money came from and how it was used, making the relation between taxation and services plain.

An outsider can hardly fail to be impressed by Springfield's up-and-coming virtue, but not because it is extolled in Our Home Town. Strictly reportorial, and minus glowing phrases, the booklet acquaints its readers admirably with the ins and outs of the city hall network. At Your Service, on the back cover, is a handy check list of often-used city services, with telephone numbers.

Springfield citizens have worked 2 years on the study that went into this report. Copies are given free to any citizen on request.

Community surveys have been made before, and in too many sad cases have collected dust into oblivion. But any town that really wants to know itself, and where it is going, can profit by Springfield's example.

Report of My Visit to the European Theater of Operations Against Germany

EXTENSION OF REMARKS

OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. HARNESS of Indiana. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following report, written by

me under special arrangements with the Scripps-Howard newspapers, and published within recent days in the papers of that chain.

The report covers in a general way the impressions gained during the month in which I visited, in company with other members of the Committee on Military Affairs, the American armies waging war against Germany in the British Isles, Belgium, France, and the Mediterranean area:

With other members of the House Committee on Military Affairs, I spent a month with the men and women of our Armies waging war on Germany. I saw and talked with them in the British Isles, Belgium, France, Italy, and north Africa. I saw General Eisenhower and the Supreme Headquarters Allied Expeditionary Force, the general staff of allied operations in Europe, to us the now well-known symbol, SHAEF.

Our group visited with Generals Spaatz, Doolittle, and Eaker, who head our Air Forces in Europe and the Mediterranean; General Lee, commanding officer of Communications Zone, the supply service; General Vaughn, Supply Commander in Great Britain; General Bradley, and Generals Patton and Clark of our Third and Fifth Armies. I had the real personal thrill, too, of seeing Kepner, Saylor, Hawley, Thrasner, and Plank, all natives of my own State of Indiana, and all general officers who are doing big jobs in these operations.

I saw bomber and fighter groups in England, France, and Italy grimly whittling away the Luftwaffe and carrying destruction to the enemy. I witnessed the briefing of heavy bomber and fighter pilots; watched them take off long before daylight on their mission; and listened to these wonderful youngsters as they one by one contributed their bits to the final official story of the mission. I visited with infantry, artillery, and armored elements of our great combat teams right up in the lines where they are slugging it out with the Nazi armies.

Then behind all this, I saw, at least in outline, the amazing activities of the Army Service Forces, stretching from our own shores right to the combat units, which mounted these gigantic operations, transported them, and are now literally moving mountains of supplies which keep these operations rolling.

Thirty days' travel through an organization so complex, so diversified, and so widely spread is barely time to form the most general impressions. Furthermore, although I saw the raw edges of war in infantry trenches in 1917-18; and although my committee work has enabled me to keep in quite close touch with the Army throughout this war, I frankly do not pose as a military expert. What follows is intended as nothing more than personal observation and opinion gained during this trip.

We at home have been fortunate in the scope and thoroughness of the reporting which has so far come out of this war. Practically all of it has been skillful and courageous. No little of it, such as that by Ernie Pyle, has been epic. Still, I came home with the conviction that even the finest reporting cannot convey to us the awfulness and immensity of the war; the magnitude of the grim, dirty job our Army is doing; the magnificent spirit of our fighting men and women in the face of danger, grinding exertion, and heartbreaking hardship. The picture seemed too big for the imagination. It is even hard to believe and to understand when you see it.

As an example, we all knew that for more than 2 years before the invasion of the continent last June we were piling up troops, supplies, and equipment in the British Isles. Even so, I was not prepared for what I found there. That base, providentially provided by Britain's bulldog tenacity, is still an armed camp bulging with American troops; a vast supply dump, from water front clear to the remote interior, of everything fighting armies use, from shoe laces and buttons right on up to trucks, armored vehicles, and huge tanks. This despite the fact that we have been moving vast armies onto the continent and for more than 7 months pouring torrents of these accumulated supplies after them. There is ample evidence of the countless miracles of staff work plus back-breaking effort by the Army Service Forces.

Following the path of the invaders across the English Channel to the beaches, the military miracles become more incredible. Those beaches were heavily mined; and with diabolical cleverness the Nazis had placed piling, water mines, and barbed wire entanglements off every potential landing spot to prevent ship-borne troops from reaching shore. Behind all this was an elaborate system of almost indestructible pillboxes and gun emplacements, all placed to pour destruction upon any invaders. Looking over these defenses, even after they had been breached, an observer would almost be forced to say that Nazi propaganda erred on the side of conservatism in describing the slaughter which would certainly result if any force should attack Hitler's Atlantic wall.

But one of the most incredible phases of the invasion was still to follow. Nazi strategy accepted the possibility of an allied landing on the continent; and it displaced mobile forces to concentrate against such preliminary breaches and throw them back into the sea. But the German planners figured that the invaders could supply only the most limited forces over open beaches. They stuck to the old military formula which says an overwater invasion in force cannot be mounted without deep-water harbors and dock facilities to handle his ships. That is why they set up defenses in the Atlantic and English Channel ports of France which still hold out against us, but disposed their mobile reserves along the coast to deal with only a very limited allied invasion force over open beaches.

Allied commanders, estimating that the defenders would figure the defense problems exactly as they did, prepared to create harbor and docking facilities where none existed. To the confusion of the defenders, they painstakingly constructed the component parts of breakwaters and docks; and towed them piece-meal to French beaches. Within a matter of hours after we hit the beaches, deep-water ships were dumping cargoes and men on the French mainland. Before the Nazis fully realized what sustained force had hit Normandy, the allies were ripping across the peninsula; and our tactical air forces were blasting German lines of communications so effectively in every direction that there was just no way to contain the rampaging invaders.

How effective that single bit of allied planning and painstaking preparation has been, only the final history of this war will tell. But the story of the man-made harbors is by no means complete with the Normandy campaign. The strange fact is that our entire conquest of northern and central France, the entire disruption of Germany's defenses west of the Siegfried line, was mounted primarily through the Omaha and Utah beaches, two of those amazing man-made harbors which the Germans, with all of their perfection of detail, including estimates of the improbable, had not been able to imagine.

Earlier I spoke of Providence and British tenacity providing us the hopping-off spot for this European invasion. A little more should be said for our British allies. We Americans and the British people still seem to rub each other the wrong way.

But fighting personnel now in the islands, or previously stationed there, has a new slant on the British people. Our men and women who have lived and fought with them may not like them personally, but they have a new respect for British patience, steadfastness, and courage in the face of hardships and miseries which would sap the fighting spirit of any but the most dogged people. While there is no way to compare British production methods with those by which we achieve our own home-front miracles here, our forces abroad have come to appreciate the magnitude of the British war effort. Due credit is given also for Britain's scientific contribution to the war in such developments as the portable harbors, radar, and the Bailey bridge.

The Bailey bridge, as a single item of engineering achievement, is worth a volume of praise and credit. Over the many months before the invasion and during the battle for France the Allied air forces thoroughly devastated communication and transportation in northern France. Communication centers were wiped out. French railways became a mass of wreckage. Scarcely an important railway or highway bridge was left intact. But the destruction which immobilized Nazi defenses and helped trap Germans by the hundreds of thousands became a headache for our own supply services when our forces broke through and began the race across France. Here our American engineers found that the British-designed Bailey bridge was far better than anything in our manual.

The invasion, the conquest of Normandy, the break-through, and the subsequent envelopment of central and northern France will, I believe, stand out prominently among the most brilliant achievements in all military history. Going over it personally in detail, digging beneath the accounts of the amazing exploits of the tactical or combat units involved, the advance to the west wall shows up as the supreme achievement in planning and logistics. General Patton and other qualified officers on the spot told me that our eastward thrust toward Germany stopped not because of organized Nazi resistance but because our speeding combat teams simply had to wait for their supply lines to catch up. The main German forces were disposed along the coast line. We had destroyed and captured vast numbers of the enemy. We had shattered his defenses and outflanked him. And we apparently needed only to pierce his Siegfried line before he withdrew his shattered forces and reformed them there.

But we could not, apparently, quite keep the supply lines open for such a breakneck advance. It was a nice try which missed by inches, and which might have ended all Nazi resistance in the west months ago. What might have been had we had just one open port, or just one more artificial harbor, or even just a little hotter supply service, will always remain a matter of conjecture. As it was, the Nazis managed to pull the remnants of their defeated western forces behind the west wall, and to regroup and reinforce them for the fanatical stand which is now prolonging the European war.

Speaking entirely my own opinions, I believe the invasion, the liberation of France and Belgium, and the general assault on Germany have proceeded ahead of schedule. If this further disappoints those of us at home who 3 or 4 months ago had been encouraged to expect a German collapse in 1944, it should be remembered that errors in the timetable were political, rather than military. There was a presidential campaign in progress last fall, and some office seekers can be careless with their implications. My impressions, gained from discussions with many different responsible officers, are that these men all hoped more fervently than we here at home that the German collapse would come last fall. I think they did everything humanly possible with the means at their command to force that break. But after meeting them and seeing something of their problems, I am sure none of them will be rash enough now to make any predictions.

Moving south along the battle lines, we crossed from southern France into the Italian theater. For the past 7 months, incidentally, we have been inclined to forget the Italian operations because the larger struggle on the western front has absorbed our attention.

Lt. Gen. Mark Clark and his American Fifth Army are still accomplishing more than could be expected of them, although I came away from this theater, frankly, wondering just what we do expect of our armed forces there. Looking at the terrain over which these brave men have fought and scrabbled out gains northward, I wonder if there is any place on earth more perfectly suited for defense. If our soldiers are not swimming swollen rivers to get at the enemy, they are trying to scale mountains against positions where you feel sure a single Nazi could stand off an entire company.

This is indeed our forgotten Army, struggling doggedly on against impossible conditions, and manned with combat elements which fight on weeks and even months beyond any reasonable tour of front line service. Moving on south in Italy, however, I got a much brighter picture of the war during a visit with the Fifteenth Air Force.

These boys are daily topping the Alps to devastate southern Germany and her rapidly dwindling Balkan hegemony. In some respects their job is toughest of any of our European air forces. They are still flying extremely long missions over dangerous open water, more dangerous mountains, and the most concentrated antiaircraft defenses. Theirs is a routine of death in the air, sweat and toil at the bases. But at least in the matter of creature comforts on the ground, they have about the best deal I saw anywhere on the trip.

With typical American initiative and energy, the men of the Fifteenth have taken advantage of their surroundings. They have quarried much of the native chalk-soft white stone to build surprisingly comfortable quarters. They have appropriated a big dry cave formed where the natives of the area have quarried this same stone, and built into it an amazing recreation area bearing the proud title "Rockefeller Center."

As compared with the men of the Eighth Air Force in England, who are often quartered in tents, and who fight and work in chilling rain, fog, and mud, the Fifteenth is indeed fortunate. As compared with the ground and service forces in western Europe, or even of the Fifth Army farther up the peninsula, who slog through an everlasting sea of mud and freeze in one of the worst of all recorded European winters, these Fifteenth Air Force boys are enjoying a touch of paradise.

No army in history ever carried the same supply load that ours does. Our troops are the best equipped, best fed, best cared for. We spare nothing to keep our fighting men healthy, happy, and effective, to protect them against injury, and to restore them if disabled. If an extra ton of explosives or another 100 gallons of gas will prevent just one casualty, we gladly spend it. Our allies are often amazed at the scope and thoroughness of our services for our personnel, at our lavish expenditure of matériel, but we consider it the best possible investment.

Nothing better illustrates this than our medical service, which is nothing short of miraculous. The spirit of the Medical Corps is best typified by its corpsmen. Unarmed, and protected only by their insignia, they go wherever an American soldier goes. Among men to whom bravery is commonplace the corpsmen are deeply respected. Infantrymen, who get a small bonus for combat service, think so much of the men with the red cross arm bands that the combat pay in many units is pooled and shared equally with the medics, who so far have not been similarly rewarded.

The same spirit shows through our whole medical service. If a wounded man has a spark of life in him, the corpsmen will ignore their own safety to keep that spark alive and bring him back to a field station. Doctors and nurses at the station may be numb with fatigue, but they will fight to sustain that life and get the man on back to a general hospital, probably by plane. Our evacuation of casualties by air is an epic story in itself. All of this is a huge investment, probably not even approximated in any other army. But it pays rich dividends, as proved by the amazing percentages of wounded men who live and who return to active duty. I visited field and general hospitals all the way from England down into Italy and have nothing but praise and admiration for the inspired service the men and women of the medical corps are rendering.

Looking at our supply problems as they are influenced by our allies and the peoples in liberated territory, however, I came home wondering if American warmth and generosity are not costing us dearly in many ways. For instance, one air force burns up in an average day a million gallons of gasoline, every drop of which we laboriously produce, refine, and ship from American sources. Our allies, particularly Great Britain, have huge oil resources and largely idle refinery capacity just a few hundred miles away, at the eastern end of the Mediterranean.

Why drain our own resources and ship gas five times as far when it should take very little field development and technical improvement of refineries to get that gas right in the Mediterranean basin? Could not American armies in western Europe be supplied from the same sources? In fact, when you look at this problem as one of extended supply lines, you will find that these eastern oil fields are much nearer England, our farthest western operating base, than the American oil fields which are powering this war.

Much that I saw in the liberated countries also does not quite seem to make sense. Seeing how the British Isles are actually on bare subsistence rations, I was prepared to see real suffering on the continent. There is actual hardship in southern Italy, but probably because that area can scarcely produce its own foodstuff in normal times. But the French and Belgians seemed to be faring even better than the people of England. What shortages I noted were in the cities, where failure of transportation, rather than of production, seemed to be the trouble. Remember that Allied air war completely disrupted communications in western Europe prior to liberation. The demands of our armies upon the available transport also rank above requirements of the native population.

So as much as one-third of our supply energies are now being diverted from our fighting forces to supply specific areas, and our troops are limited accordingly. But why, after these several months, have we not found a way to take this responsibility off the Army's back?

We here at home have glowed with vicarious satisfaction at the reports of almost hysterical welcome accorded our forces by the people in liberated territory. The fact is that I found these people anything but enthusiastic about our arrival and presence in their midst. Particularly does this seem true in areas through which we have had to do hard fighting, because we have so often completely devastated these areas. Allied air forces started the destruction months ago, and what bombardments missed, our artillery and armored forces have since often destroyed.

The Nazis make fortresses of the towns and cities and we simply have to blast them out, building by building. I saw whole villages where hardly one stone stood on top of another when our bombardment ended.

These conquered people apparently had come to accept, or at least to tolerate, the Germans, who, contrary to reports, had done a fair job of selling the subjected people into passive acceptance of the German superstate. Even though the Nazis had exacted heavy tribute, they had not apparently stripped these areas to the degree we had been led to imagine. And when Germany took from these people, she apparently left a paper credit on the Reich which cleverly gave the subjects a neat stake in German victory. We take the blame for blasting whole cities out of existence, and for discomfiting people who had settled into a routine which we considered slavery, but which they had come to accept as at least endurable.

Native governments have not been helpful to our cause. At best, they have been unstable and unreliable. At worst, they deliberately create conditions for which we ultimately take all the blame. We ship in supplies to be distributed by responsible authorities. These authorities often release an absolute minimum for legal distribution through controlled channels. Then they actually divert these American supplies into personally controlled and promoted black markets. The rich and the political favorites prosper; the poor suffer, and America gets the blame. I understand that actual suffering among the people has frequently led to riots in Rome.

Native governments in the liberated areas have been unable or unwilling to give our Armies any real help in restoring order and civilian law. As a result, great quantities of supplies intended for our troops are stolen. Whole convoys have been hi-jacked, drivers murdered and trucks spirited away. And because the governments have been recognized, the Armies are helpless to take real punitive measures against the offenders.

A few months ago the arm-chair strategists and the political campaigners had the European war won. Lately, the story is that shortage of critical supplies actually threatens our war effort. That is true, particularly in certain categories. We are short in heavy ammunition, and you could readily understand why if you ever watched an American artillery battery in action burning up the stuff. We are short in heavy-duty tires, as you can also readily understand if you remember the repeated warnings over the past year or more that we still have not learned how to make good truck tires from synthetic rubber, and that our tire plants are short of manpower.

My over-all impression of supply, however, is that it is adequate. Adequate, however, is hardly good enough in a life-and-death war. If we are going to fix our production schedules in terms of certainty, we must provide for the worst conditions we can imagine befalling our Armies.

About the time we accepted the idea that our shortage of cigarettes at home was due to heavy deliveries for our troops, we began to hear that the fighting men also were going without smokes. Combat outfits have been low—as low as four packs per week. And when the front-line soldiers went under these restrictions, the authorities made similar cuts all through the service as a matter of equal justice. But the trouble was less with available stocks than with shortage of transport. Ammunition, medical supplies and absolute necessities went up the line ahead of cigarettes, so soldiers have sometimes been short on smokes.

There is, also, a neat black market angle to cigarette rationing in the Army. Our own Government helped shove our troops into the black market by paying men in the currency of the occupied country. Troops in France receive French francs on an exchange rate which makes their pay worth just about 20 cents on the dollar for anything they buy directly from French markets. The idea

definitely is not the Army's. It is our Government's arrangement with foreign governments, arrived at to help stabilize foreign currencies. There is little real need for an American soldier ever to go into a foreign market for anything, for the Army furnishes all his real needs, and sends the post exchanges along to provide the knick knacks.

But all that does not curb the American instinct for shopping. Soldiers soon found that in cash deals the exchange arrangement was costing them five for one. But when it came to barter, their American sources, including the PX, had many advantages to offer. Cigarettes, soap, candy, etc., were powerful swapping commodities on the local markets. Hence the urgent need for rationing among the troops. This also helps to explain the background of the ugly reports of wholesale thievery and blackmarketing by a few American soldiers in France.

Nowhere in our newspapers, however, have I ever seen a report of the way our Government has cooperated to rig foreign exchange, injurious in small ways to our troops. This is just one of dozens of ways, large and small, in which I found that censorship has screened out much of the real meat of the European war. For the same reason, I found that Americans abroad had no real conception of what was going on here at home. We have unequaled reporting facilities to channel the complete, uncolored news both ways, but I honestly believe that a too literal and too subjective censorship is largely at fault for the fact that we do not know more nearly what this war is really like.

Being an ex-infantryman myself, I simply must say a word for the doughboys of this war. We started out to try the experiment of bombing an enemy into submission or, at least, of softening him up to the point where ground forces merely had to parade in and take over. We really threw tremendous resources and effort into that experiment. I want to avoid carefully any reflection on our Air Forces in saying that we failed. But we have simply been forced to conclude that air power so far cannot reduce an enemy to submission.

Some glib airman said a mouthful when he remarked that the Infantry at least buries its own dead. Air power may devastate a country and soften it up tremendously, but ground forces still have to go in and occupy the territory. London itself ought to be the classic proof. Here is a city devastated beyond all description, yet functioning in a surprisingly normal way. To a much greater degree we certainly have devastated German cities and industrial areas by air and sapped the German ability and will to resist. But the ground forces must deliver the killing blow. The simple, unsung infantryman, wading in mud and snow to his belly, seeking cover wherever he can find it, freezing in open fox holes, will be the man who finally looks down the Nazi's throat and yanks the gun out of his hands.

He can't do it without the artillery and armored units which are indispensable parts of his combat team. He probably could not do it without the tactical air power which has taken the Luftwaffe off his back and tremendously eased his own advance. But this war is proving that the Infantry is still the "queen of battles."

This has been largely about the planning, the skill, and the technique of warfare. But actually the lump in my throat from this trip is for just the people in this Army. As I saw them in Europe, they are in fine physical condition on the average, in spite of the terrific hardships they are enduring. Whether I talked with veteran officers, nurses, and WAC's, or kids out on the line, everyone wanted to ask questions about home, rather than answer questions about the war. I saw no one who wasn't thinking about home and longing to get back to it. But that desire apparently in no way dampens the firm determination to finish off the Nazis so thoroughly there will be no lingering doubt about who is superman. This may be hard to believe, but my own impression is that very few of these men and women, given the opportunity to decide voluntarily, would walk off and leave their team mates to finish the job without them.

You get that feeling of team spirit from the cocky conviction, often expressed, that the particular soldier's outfit is the best so-and-so gang in any man's army. It's there in the obvious agony of ground crews sweating it out until their last plane is counted in on the return from a mission. It shows in the blanched faces of wounded men who are more concerned about their outfit than their own welfare; and in the attitude of doctors and nurses dizzy from fatigue and loss of sleep, but still driving themselves to perform miracles. It is the thing that keeps line outfits delivering fantastic performances long past the point of all reasonable estimates of human endurance.

Above everything else in this experience I brought back a fierce, choking pride in the men and women who are the heart, the muscle, and the guts of this war machine. I wish I could conclude this report with an editorial truly expressing their irrepressible and unquenchable spirit. If we could catch just a fraction of that spirit here on the home front, I think our toughest problem would be a push-over.

Letter of Hon. Robert L. Owen

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from former United States Senator Robert L. Owen:

WASHINGTON, D. C., *January 31, 1945.*

Mr. FRANK J. BOUDINOT,

Washington, D. C.

MY DEAR FRANK: The World Language Foundation was organized by my friends in order to invite the cooperation of those who desired to participate in establishing the new world of mutual international understanding, a new world of benevolence, intelligence, peace, good will, and international cooperation.

You know, of course, that Sequoyah over a hundred years ago established the Cherokee phonetic, syllabic alphabet, which could be learned in a few days and which the Cherokees have used ever since to write and print the Cherokee language. It was Sequoyah who inspired me to devise an alphabet, making it strictly phonetic and stenographic. I have given it thousands of hours of study. It has been perfected. It has been submitted to hundreds of linguists. It has the approval of some of the ablest linguists in the world. It has been fully explained in Senate Documents 49, 133, and 250, of the Seventy-eighth Congress. In Senate Document 250 will be found quotations from some of these linguists, including Rev. Frank C. Laubach, Ph. D., who has established special phonetic alphabets in 84 nationalities covering the Dutch Archipelago, India, Africa, the Latin-American republics, southwestern Asia, and the islands of the Caribbean—Jamacia, Santo Domingo, Haiti, and Puerto Rico.

I have also quoted Prof. Mario A. Pei, professor of French and romance languages, Columbia University, New York City, whose modern works on teaching the languages of the world are unsurpassed. Professor Pei had 60 experts in many languages cooperating with him in these valuable publications teaching the world how to speak many languages.

In Senate Document 250, which I send you by separate mail, you will find these evidences of endorsements of experts in many languages, including Chinese, Japanese, and Russian. You will find also two pages written in Spanish and English. This Spanish-English book puts in four vertical columns, first, the Spanish word or phrase as printed, second, the Spanish word or phrase in the global alphabet, third, the English equivalent written in the global alphabet, fourth, the English as currently printed.

With the global alphabet, an American can correctly pronounce the Spanish and the Spanish correctly pronounced the English.

The reason why English is not already a world language is because it is impossible for a foreigner within any reasonable time to learn how to pronounce English as currently printed, because many English words are spelled with silent letters and the same letters have multiple meanings.

The global alphabet, which will be employed by the World Language Foundation, can be used to write any language in the world at high speed with the pen and can be pronounced at sight intelligibly by anyone who knows the global alphabet. The global alphabet can be learned in a day, and the trouble of spelling vanishes with the global alphabet, as it is strictly phonetic. The people of all languages can be taught to speak English through the printed word and make themselves understood within 90 days by learning 15 or 20 words a day. These words are in a book form where the memory can be constantly refreshed, at will, by using a little volume that fits in the pocket. These books can be sold at 25 cents apiece to cover cost and distribution or can be given away by those who wish to make English a world language.

So far, I have financed all expenses of this project out of my private funds.

It is my hope that my friends and the friends of world peace, based on world understanding and world good will, will support the World Language Foundation by contributions great enough to supply the world with these volumes, and make the World Language Foundation self-supporting at the same time. Dr. Laubach suggests that $5,000,000 would be sufficient to perform the miracle of abolishing illiteracy throughout the world. Ten millions will do it twice as fast.

The Moro method of "each one teach one" will be employed. This method is that any person who learns the global alphabet is in honor bound to teach it to one other person, at least. By this method, I am informed, the Moros speedily abolished illiteracy among several million people in the Philippines.

There are 30 or 40 leading languages in the world and several thousand dialects. Over 60 percent of the people of the world do not read or write any language. They are ignorant of the printed word and the vast knowledge contained in it. They suffer from poverty and exploitation because of their ignorance.

In my opinion, the human race is fundamentally good at heart, and gladly gives good will and service to those who are friendly to them. I believe in the doctrine expressed in the sentiment.

"Be noble, and the nobility that lies in other men, sleeping but never dead, will rise in majesty to meet your own."

In 3 days I enter my ninetieth year in perfect health and in possession of my faculties. For every single day of a long life I have been fed, clothed, and sheltered by God's little messengers. My gratitude to them for their friendship and affection is deep and sincere.

I know that men are fundamentally good. I know that the people of the United States have hundreds of thousands of churches from one end of this land to the other, which continually and hourly through the radio, teach the fatherhood of God and the brotherhood of man. In addition to these organizations, there are hundreds of thousands of brotherhoods and fraternal orders teaching the same doctrines of brotherhood. I, myself, have been affiliated with many fraternal orders, beginning with the A. T. O.; life membership, Master Mason, Lodge No. 28, Muskogee, Okla.; life membership of the Elks; life membership of the Scottish Rite, thirty-second; member of the Woodmen of the World and the Moose. I know these men with whom I have been affiliated. I know they are good fundamentally. I reflect over the fidelity of the men engaged in our public service who administer the mails with hardly one error in a thousand. I know the fine service of those who conduct our railways and assure our people of safe transit. I refuse to think ill of the people of the world in spite of the blunders of leaders who lead brave men into war and mutual destruction.

The colossal tragedies of the present war have impressed the whole world with the importance of human brotherhood.

I rejoice that I have been permitted to give the world a mechanism in the global alphabet by which a world language can be established quickly and cheaply, a world language through which by the printed word knowledge of every human acivity can be conveyed.

When the world has a world language, the broadcasting stations of the whole world can instantaneously convey to them the knowledge necessary for multiplied production.

I believe my effort to serve mankind in this manner will be appreciated by the American people, and I hope to be invited to use the radio to explain this matter more fully and to have those who sympathize with me use the public press and radio as a means of instructing the people.

With the global alphabet, people can easily write phonetic English three or more times as fast with the pen as the current English script. This saving of time is important. They can read books three times as fast in global as in current English. That which is much more important, they can learn to write and read English phonetically in a few days or weeks, saving 5 or 10 years required to learn to spell current English.

Time is life, and saving time is of supreme importance. Books printed in global English require only half as much paper as current English books. Global books require only half the transportation and storage costs.

I have not forgotten that the last legislative assembly named you the principal chief of the Cherokee Nation, and I am glad to have your approval.

With kind regards,

ROBERT L. OWEN.

National Service Act

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I include the following address which I delivered over Station WHN on the program, Congressional Record of the Air:

Ladies and gentlemen, I am grateful for this opportunity to discuss with you the proposed national service bill, which embraces a pressing question now facing our Nation. That question is, Should Congress pass legislation which would put every man in America between the ages of 18 and 45 at the mercy of some Government official he may never have seen before?

The proposal is innocently labeled "A bill to amend the Selective Training and Service Act of 1940." Actually, it is a bill to establish authoritative control over the individual citizen, to put every man in the age limit to which I have referred under bondage to a bureaucrat. It could properly be called a bill to conscript free labor. The next move might well be to conscript free capital. This would be only one move from totalitarianism, which we are sacrificing so much to avoid.

Under the terms of this bill, if you are between 18 and 45 years of age, you could be told that your present work was not essential, you could be uprooted from the city, town, or hamlet in which you now live, and commanded—not requested—you could be commanded to take a job in an industry far from your home and friends. And—mind you—in effect you could be told to join a union—not any union but a particular union. Is not this dangerous delegation of power? And—remember—power once delegated may not be easily regained.

In addition, under terms of this bill as it is now written drastic penalties could be applied against you if you refused to make the move which the authorities might demand of you, and, if your employer does not obey, sanctions can be applied against him.

It seems hardly necessary to point out that this harsh and far-reaching bill, with all its important ramifications, is not necessary today. The War Manpower Commission now has well-nigh airtight control over every man between 18 and 45 registered under selective service. It has ample power to induct men between 18 and 45 who do not move into essential industry. Actually, no additional legislation is required to immediately apply the work or fight principle—a principle which the administration failed to apply when given the power and also the duty to do so in the National Selective Service Act of 1940. And there lies the responsibility. Any work stoppages, strikes, or otherwise, any slow-down, any loafing, any idleness by those able to work, or any manpower hoarding could have been, and could now be, prevented by the application of the work-or-fight principle which the President has the power and the duty to apply and when the fighting men and women return they will hold this administration responsible for the failure to do so. Let's not now be deceived. This legislation has another purpose. The President and his administrators also have the power to penalize effectively any business in America that violates either the letter or the spirit of these Government regulations. Any existing difficulties are purely problems of administration and not want of power.

Congress in the past 4 years has given to the President and his administrators the greatest amount of power in the history of this Nation or any nation with representative government in the history of the world, yet they continue to ask for more power. They want the power to tell you whether or not you can move from town to town, where and when you can work at what pay, and for what purpose. Power feeds on itself and is never sated.

This legislation, I repeat, is unnecessary. Every announced purpose of this bill can be accomplished without granting any further authority. Senator MEAD, a Democratic Senator from New York, admitted as much just a week ago when he stood on the floor of the Senate and recited at length a story of manpower hoarding, waste, and inefficiency at the Norfolk Navy Yard. Every one of you listeners could tell other stories of wasted manpower. Every Congressman gets reports every day of new manpower wastes, hoarding, or misuse, both by private industries handling war contracts and by the Government itself. Senator WILLIS, Republican of Indiana, recently said that hoarding of manpower by the Government has reached scandalous proportions and there was not one person who challenged him. They did not challenge him because they could not. You know, and I know, that we have the most spendthrift administration—in money, men, and materials—in the history of our Nation.

This so-called work-or-fight legislation is not needed, I repeat again, and I can give you the highest authority to which many of you will listen. That authority is the President himself. As late as last October, after reciting the miracles of production which free labor and free industry had produced in this country, he pointed out that every gun and every tank and every bit of ammunition was being delivered on time, down to the last bullet. If this was true then, it is true now?

The last two Congresses gave the War Department and the Navy Department more money than they asked. We appropriated in these two Congresses the greatest amounts of money ever contemplated by the most liberal-minded economist in this Nation. Production records have been and are now at fantastic levels. The war production of this Nation has been one of the miracles of the ages. Although we have won every battle against the Japs and Germans for 3 years, the bureaucrats say we must give the President more power.

In the late political campaign, we were assured that everything was going fine and that all was being done that could be done. Nothing more was asked and nothing new was contemplated. Yet, within 2 weeks after Mr. Roosevelt's election to a fourth term, we were confronted with a propaganda campaign of unprecedented scope. We were told that men were dying because of a shortage of shells, that others would suffer for lack of equipment, and now we are told that our boys are freezing on the western front for lack of clothes.

If you will forgive a personal reference, I might say that I have been on that western front where our boys are fighting and dying today. I served all through World War No. 1 and I know both the climatic conditions of France and the tenacity and fighting spirit of the Germans. I would say no word, make no move, that would cause any man on that front to suffer, for I know what kind of enemy they are fighting against, what conditions they face.

Yet, this issue of labor conscription, no matter what the propaganda campaign surrounding it has developed, is not an issue affecting our men abroad. They will get their weapons and they will get their clothing, in the future as in the past, regardless of this legislation. Free American industry and free American labor will see to that. If this legislation were needed the administration should have requested it 3 years ago, not now after a miracle in production has been performed—and, yes, after the power of our enemies has begun to wane. Confidence in this proposal is not inspired by the statement made at the Lenin Memorial meeting at Madison Square Garden, January 13, by Mr. Earl Browder, that national-service legislation is "the way Lenin taught us to face and solve our problems."

This manpower conscription bill hidden under the euphonious title of "national manpower bill," is not to meet any exigency of this war. The plans for this act were laid prior to 1936. The plan was made and provided for in the 1936 revision of the national industrial mobilization plan. There you will find it if you wish. And the plan to continue these powers beyond the war was written into the 1939 revision of the industrial mobilization plan, and you will find it there under section F, of Post-war Adjustment title.

When freedom was an issue, the American people have never faltered, they have never failed. And freedom is an issue in this legislation. Already we are bound down by the greatest number of restrictions in our history. Shall we pass laws giving the same men who have misused the other powers more power? I say "No," and I think I speak for many besides myself, both in Congress and in the Nation.

This legislation is not needed, I repeat, and it is not needed because the manpower problem, as Paul V. McNutt, War Manpower Commissioner, has pointed out again and again, is not a national problem, but a local problem ever changing to reflect military strategy and requirements, and needs not a nation-wide regimentation such as provided in a national blanket law which reduces incentive and efficiency. It needs intensified, immediate action in the specific areas where the shortages exist by the War Manpower Commission under the authority which it now possesses. If you were to take a map of this country and dot the towns with critical industries that need manpower now, you would see quickly that only certain communities, certain cities, are hard hit. You would see what Mr. McNutt had in mind when he said that manpower problems are local problems. More people were employed in December and production was at a higher point than at any time since the war began. Any lags in production were principally in special lines where requirements had been changed to meet changes in military strategy or errors in estimates and planning. A W. P. B. release of last Monday shows that "in second half of 1944, output in every one of the critical programs showed a substantial gain, ranging upward from 20 percent for tires and trucks to over 150 percent for aircraft and mortars, and 200 percent for rockets."

Why, then, as Senator MEAD so forcefully asked the other day, enact blanket legislation that will touch 100,000,000 people just to get at a few? I say sincerely that I believe present powers already in the hands of this administration, if used properly and adequately, would pull us through with guns and tanks and bullets to spare. Thomas Jefferson once said: "Eternal vigilance is the price of liberty." We here in America have given our best to the war—we will continue to give our best. But we do not want to give up unnecessarily more liberties to men who have shown what they have in mind. They want to make over America—make it over in such a way that our men will not recognize it when they return home. They must not succeed. We must not let them succeed.

Remember, that power once lodged in the hands of a bureau may be used against you.

If Congress Only Understood

EXTENSION OF REMARKS

OF

HON. W. O. BURGIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. BURGIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article from Beasley's Farm and Home Weekly of Charlotte, N. C.:

IF CONGRESS ONLY UNDERSTOOD—NOW HAS OPPORTUNITY TO BEGIN SOLVING GREATEST OF QUESTIONS

(By the Editor)

A subcommittee of the House of Representatives charged with investigation of the Government land holdings states that 24 percent of the land of continental United States is now under Government title.

This 24 percent of land area amounts to 455,171,125 acres. In addition to this, the committee states that if land now owned by the Government in Alaska, Hawaii, Puerto Rico, and the Virgin Islands be added it would show that 36 percent of all American possessions is Government owned. In North Carolina a million and three-quarters acres, or 5 percent of the whole, is held by Government title. This does not include land in possession of the States, which must in some cases be considerable.

While much of this land must have been in Government hands for some time as leftovers from settlement of the Western States, and much of it is in park reservations, a great deal of it has been acquired for war purposes. The House subcommittee, working on the matter for some time, is charged with making recommendations as to how all land not now needed by the Government is to be returned to private ownership.

Legislation already passed by the House provides that steps be taken to determine which lands are suitable for homestead entry, and that existing laws be amended to grant the same homestead preference rights to veterans of the present war as extended to veterans of other wars.

Of the many blind policies that our Government has pursued through the years none has been more blind and disastrous than that by which the public lands have been disposed of. And now, when unusual circumstances have placed so much land back in Government ownership, there is a chance to rectify the mistake to some degree. But the present Congress is as blind as all former Congresses have been. Not a foot of the land now owned by the Government should be returned to private ownership, but every foot of it not needed by the Government should be placed in private use.

If Congress could once fully understand the difference between private ownership and private use, it would see the rare opportunity which it now has of taking an immensely forward step in public policy. Countless millions of acres of public land were given to railroads and were given to private citizens under the homestead laws. Millions of these acres have passed out of the private ownership of recipients or their heirs and are held out of use for speculative purchases. Huge acreages have been monopolized by corporations and other owners upon a speculative market which keeps the price so high that it cannot be bought by actual users. Land capitalization is a fictitious value which operates to create tenants on farms, deserted farms, absentee ownership, and slums in the cities. We are now squalling about slums and lack of housing, about people not using the land, about absentee ownership, about the rise in land price, yet neither Congress nor anyone else will go to the root of the matter, which is that land held out of use for higher prices makes all usable land so high that small owners cannot obtain it, and that rent creates an economic burden which adds to the cost of living of every person that breathes. This burden is so great upon all that the benefits of the smaller number who profit by it are wiped out when the whole economic and social scale is considered.

And now while we are pondering the question we find that it is so little understood that the Mayor of New York proposes to tax rents in order to subsidize the transportation system of New York. This is not a proposition to tax the owners of real estate but to put a 2-percent tax upon the payer of rents, to be collected by the landlord and turned over to the city in the manner of a sales tax. This is insanity gone wilder. The rent payer has already paid to the landlord a profitable rate on values which the landlord never created, and yet a mayor of a great city, supposed to be wrestling with the housing problem, and a city filled with slums, comes forward with this scheme, which ought to be branded as a move to increase the slums.

But how could the Government return the land in question to private use without returning it to private ownership? That would be easy. The Government owns the land and it has been paid for. Let the Government retain the title and establish a system of ground rent by which anyone who wanted to actually use the land could be given indefinite possession merely by paying a small ground rent. He would himself make all the improvements which he would own just as securely and indefinitely as if he had title to the land. The Government would be under contract to let him use the land, either himself or his assigns forever, so long as it was actually used and the ground rent paid. If he chose to sell his improvements, including soil improvements, he could do so and the Government contract would go with the sale to the new owner. The only irrevocable condition would be that the man who held the ground rental contract would be compelled to use the land.

With the land the Government now owns and with additional purchases that might be necessary, every returning soldier could be given a home site, to be his for actual use as completely as if he had paid thousands of dollars for it. This system would take the place of the old homestead way of disposing of public lands but would be a vast improvement. The old homestead system did not guarantee use of land as the new system would. But keeping the land in use by those to whom it was rented would be but a small part of the general social benefit. The greatest benefit would be in keeping down the speculative value of land, a system under which land gravitates from small ownership to large or absentee ownership.

We once had great frontiers in this country, free land or nearly free land, to be taken up. Woodrow Wilson and others bemoaned the vanishing of the frontiers. Now the frontiers are here, right in every State in the Union. They consist of unused land. Land of every kind and location, farm land, forest land, vacant city lots. But all this land is so highly capitalized that men of moderate means cannot buy it and make the improvements.

There is enough vacant land in a short radius of every city or town in the country for every town or city worker to have a home and garden. But he can't buy the land and build the house. The Government is using all kinds of expediency to get people to own homes and farms; all expensive and in the long run futile efforts. By one sensible and logical and practical system it could reopen the frontiers in every State in the Union and give every man who desired it a chance to secure his own home site with no financial outlay, and secure it as certainly as if he had thousands to pay for it.

But Congress will not see this. They will piddle along with the old homestead system, appropriate money to build housing projects in cities which private parties would do profitably if they were freed from the cost of land, hire people to go back to the land where they would gladly go of their own accord if they had a chance. Congress looks upon the land question like it does upon tariff and oleomargarine. A tariff benefits some people; Congress will not see the great evil it does to all other people. A tax on oleomargarine benefits butter makers, so Congress will not see that it injures others. Land speculation benefits the speculators and Congress cannot or will not see that it injures the whole social and economic fabric.

International Cooperation for Peace

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. CARNAHAN. Mr. Speaker, the democratic, peace-loving nations of the world again face the problem of international cooperation in the interest of a just and an enduring peace. For the United States to refuse to make a fair and sincere contribution to international understanding and cooperation will be to break faith with those who have sacrificed so heavily to what we trust has been the cause of freedom. If we must again attempt to settle our international differences on the field of battle then World War No. 2, like World War No. 1, will have been another fruitless try at establishing enough order and peace in the world to permit the democratic concept of freedom to survive.

The military victories of the democratic alies in 1918 gave the victors the first real chance to make a concerted try for permanent peace. The military victories of 1918 also thrust upon the democracies the obligation of passing on to succeeding generations the gains so dearly bought by world-wide conflict. We had the chance but for what seemed perhaps to be good reasoning to some of the national leaders of that period the victors let the real victory slip so easily from their fingers and almost before the smoke of battle had cleared we were drinking only the bitter dregs of defeat. Again in the span of life in the same generation the free governments of the world are called upon to do again, and at a greater sacrifice, the same military job which was accomplished in World War No. 1. When the democracies again stand victorious on the far-flung battle fronts of the world they will hold in their hands the second chance for a try at enduring peace. Much will be at stake again this time. Will it be another fumble and World War No. 3, or may we expect an honest attempt to maintain order and peace?

Is it reasonable to expect enduring peace or must we always be looking for the next world conflict. Are there really any bases for international understanding and world order? If there are none then peace is of course an empty illusion.

In my humble opinion today the bases for international understanding and cooperation far outnumber the excuses for international disagreements. I earnestly recommend that the average citizens of the free groups turn their attention to emphasizing similarities with other free neighbors. Let us learn to appreciate and develop the habit of defending our likenesses, and resent being pointed out as being peculiarly different. If we are basically very different from other freedom-loving peoples we are peculiar indeed.

Man in that slow struggle up through the years has constantly planned and worked to overcome the countless limitations which surround him and which withheld from him that abundant life which he has known should be his. In the material or physical realm achievements have been phenomenal. In the realm of health, medicine, and surgery we have come from the days when pain, disease, and death were attributed to the vengeance of an angry god to a medical science which approaches the miraculous. In the realm of economics we have come the long road from the time when man had just what he could gather during the day with his own hands with no method of keeping any of what he had to enrich his life tomorrow to our complex economy of today. Would anyone argue that the more abundant life made possible by these gains is or should be restricted to certain racial or national groups? And would anyone insist that only certain racial and national groups are capable of taking enriched living from these advances? Happiness as a result of the abundance of peace, order, and justice knows no racial or national boundaries, and our responses to improve conditions in these realms are approaching similar patterns. This is as it should be, for civilization advances as we discover, accept, and share the better response patterns. In the realms of the material, health, economics, and other realms, we know and readily recognize that we have not attained ultimate goals. The future holds undreamed of progress and we confidently expect tomorrow to be better than today.

How about the realm of social controls or government? In this sphere we have also traversed a long road from the time when each individual was a supreme government unit to the nationalistic patterns of today. In my opinion, we are now at that place in the realm of government where some important dynamic choices must be made. Then, nationally, we should ask, Is government by a democratic unit which must continue to be one of a group of ever-conflicting democracies the best that we can expect in social control?

In all other areas of man's victorious conquest of his limitations we look ahead. We know that the steps taken today will enrich the world tomorrow and progress is not limited by national barriers. But in Government have we reached the ultimate goal? Is there no more progress? Is this it? In my opinion it will soon be necessary for us as a free nation to decide whether or not we will take the next step toward the perpetuation of the democratic ideal which fosters free and abundant living. This step is international cooperation and organization. Failure to take this step would leave us with only the very limited sphere of progress confined to internal refinement. Failure to take this step will also perpetuate that element of unrestricted conflict which may reasonably be expected, if continued, to wreck civilization itself. The chance for international planning will be the fruits of military victory and a fair and sincere trial at international understanding is the only payment the democracies can make for the sacrifices which this second chance has cost mankind.

In recent years needless national conflict for power and favored position has retarded desirable social controls and has piled high the junk heap of civilization with perfectly good tools of progress. Woodrow Wilson's League of Nations was thrown among the rubbish.

International organization must, of course, be the result of compromises with the knowledge that improvement is always the trend. No nation should expect everything it desires. Our own Constitution is strong because of its original compromises and it has gained strength through later changes. As our States retain their identities in a national union so may the free nations of the world retain their identities in an international pattern. Let us approach the task of helping to build a better world with an open mind and heart. Let us approach the task free from selfish reservations. Let us approach the task with a firm reliance on divine providence to guide us and the other free peoples of the world to an international understanding which will establish order and justice in a future peaceful world.

Poland, Russia, and Our Honor

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. O'KONSKI. Mr. Speaker, it has become necessary to remind ourselves that there are those in high places who are tempted to forsake the principles which brought us into this present war. If we in Congress permit those in high places to turn their backs upon these honorable principles, our sacrifice of a million boys will have been in vain. If we permit these principles to be lost, we might save for a time almost everything except our honor and our souls.

These principles were first crystal clear when we entered the Battle of Britain. By saving Britain we saved the principles for which we were fighting. Now with dramatic suddenness we see before us the Battle of Poland. It is not a military battle; it need never be so. It is but a diplomatic battle, but a battle that must be won, because in the Battle of Poland is interwoven all the principles for which we entered this global war. The Battle of Poland has become a test of the sincerity of the United Nations. The Battle of Poland is a test of the all-important question, Just what is it we are fighting for in this war?

The entire world today has its eyes on Poland. The conflict between Russia and Poland does not concern the Curzon line. Gentlemen of the House, do not be deceived so easily. The Battle of Poland does not concern the frontiers of Poland. The question is not, Shall Poland's eastern border be shifted westward? Nor is the question one of losing some territory in the East for a gain of some territory in the West. The question simply is, Shall Poland exist?

It is most important that should Poland lose this diplomatic battle with Russia all Europe, yes all the world, loses

just as heavily. Without a free Poland there can be no free Europe or a free world. That is why in 1939 England and France went to war. That is why in 1941 we went to war. The threat to Polish freedom is a threat to freedom all over the world. The world has been set afire as a result of Munich. It will again be set afire and freedom will die with Poland if she is permitted to die.

It is well to note that Poland today is a testing ground not only of our sincerity in this war but also a testing ground to find out if freedom is secure. The threat to Poland's freedom is the first step of a projected program to threaten freedom in every country all over the world. If communism has its way in Poland we are giving Russia a green light to proceed elsewhere. The freedom of all liberty-loving people all over the world is at stake in the Battle of Poland.

It is now time for America to speak out. It is now time to show our hand. It is now time to answer the question: Just for what purpose are our sons being killed? It is now time to prove our sincerity. Our honor is at stake in the Battle of Poland. Shall we sit idly by watching Poland crushed by the merciless monster of communism, knowing full well that some day soon all Europe too will be crushed the same way? What kind of peace will it be to live in constant dread of the spread of communism?

The fate of Poland will determine whether this war has been won or lost. Speak up America. Your conscience and your honor is at stake. Is America going to permit another Munich of appeasement? Is America going to rescue millions of Europeans from the beast of nazi-ism and embrace them in the arms of the beast of communism?

So that the true facts of the Battle of Poland can be made known, I am reciting a complete story with factual material. I urge fellow Members to study these facts and urge positive action by our leaders now before it becomes too late. Are we fighting for freedom? Well, Poland is freedom. If Poland is lost, freedom is lost. In the Battle of Poland our honor is at stake. Wake up America and act now before it is too late.

WHAT IS IT ALL ABOUT?

What is the real issue in the Polish-Soviet controversy that has become paramount in importance for the United Nations?

The Soviet Union makes two principal demands on Poland: 1. That Poland cede to the Soviet Union all her eastern territories up to the so-called Curzon Line. 2. That Poland, once liberated from the German occupation, establish a government friendly to Soviet Russia.

Once these demands are satisfied, the friends of Moscow claim that unity among the Allies would be restored and the Polish-Soviet relations would achieve an edifying degree of friendliness.

Why, then, does the Polish Government oppose so vigorously these Russian demands?

TERRITORIAL DEMANDS OF THE SOVIET UNION

1. What Is Eastern Poland?

The Soviet Union claims for Russia the territory, delimited in the east by the Treaty of Riga, concluded between Poland, Russia, and the Ukraine on March 18, 1921. In the west the territory in question stretches as far as the so-called, erroneously, Curzon Line. As a matter of fact, this line does not deviate much from the line of Poland's fourth partition, concluded by the Ribbentrop-Molotov agreement of September 28, 1939. At present this partition has been attributed to a more trustworthy authority, that of the British statesman, although Lord Curzon never intended to settle Poland's frontier along this line.

What is this territory that the Soviet Union demands?

Is it a small patch of land, insignificant in size? No. It is not, for it has an area of 70,000 square miles and constitutes 46.5 percent of the total area of Poland. It is larger in size than Illinois or Missouri, and four European countries put together—Belgium, Holland, Denmark, and Latvia—would comfortably fit into this mileage.

Is it a depopulated, desolate land? By no means. In 1931 it was inhabited by 10,734,000 people, and in 1939 its population was nearly 12,000,000, or 33.1 percent of the total Polish population. More people live in eastern Poland than in Pennsylvania, second largest State of the Union, and more than in Australia and New Zealand put together.

Is this territory as poor and worthless as Mr. Churchill stated in his speech of December 15, 1944? Quite the contrary. The "most desolated region" of the Polesie marshes which Mr. Churchill matched against "the beauty of the ancient seaport of Danzig" constitutes no more than 20 percent of the whole territory coveted by the Soviet Union. The eastern territories gave to Poland much more than the Polesie marshes; it contributed 90 percent of Poland's natural gas, 63 percent of Poland's oil, one of Europe's richest potassium mines, Poland's sole deposits of phosphates and ozocerite, 50 percent of the Polish forests, 42 percent of Poland's water power, 40 percent of the total arable land, orchards, and gardens, 63 percent of Poland's meadows and pastures. It is also in the eastern part of the country that two wealthy cities of an ancient Polish culture, Wilno and Lwów, are located.

The eastern territories contribute to the agricultural production of Poland as follows:

	Percent
Wheat	45
Rye	28
Oats	38
Barley	36
Vegetables	45
Potatoes	33
Hemp	61
Flax	78
Maize	98
Tobacco	80

2. Historical considerations

Why should eastern Poland be given to Soviet Russia?

On the ground of historical considerations? But these do not speak for Russia.

(a) The southern part of Eastern Poland, the so-called Eastern Galicia, with an area of 23,583 square miles, has never belonged to Russia; only once in its history was it held by the Russians, during the period of Russia's friendship with Nazi Germany, between September 1939 and June 1941.

(b) The rest of the territory claimed by Russia today formed a part of the Tzarist Empire only during the times of partitions—1772–1918—when Poland, divided between Germany, Russia, and Austria, was erased from the map of Europe.

If these partitions were to form the basis for any territorial demands on historical grounds, Warsaw should also be included, for the Polish capital had suffered with the rest of the country 123 years of the Tzarist yoke. But the partitions were condemned by the world. Jefferson called the partitions of Poland a crime; President Wilson, "one of the greatest crimes of history." Even the Soviet Government had formally condemned and annulled the partitions by the decree of the People's Commissars signed by Lenin on August 28, 1919. This decree read:

"All agreements and acts concluded by the Government of the former Russian Empire with the Governments of the Kingdom of Prussia and the Austro-Hungarian Empire in connection with the partitions of Poland, are annulled forever by the present revolution, in view of the fact that they are contrary to the principle of the self-determination of peoples, and to revolutionary sense of law of the Russian nation, which recognizes the inalienable right of the Polish nation to independence and unity."

Any change in the Polish-Soviet frontier, if made, cannot be justified on historical grounds.

3. Ethnographic considera'ions

On the ground of ethnographic considerations? But these also do not speak for Russia. According to the census of 1931—the last Polish census—100,000 Russians or less than 1 percent of the population of Eastern Poland, lived in the territories claimed by Soviet Russia.

It is quite true that the populat.on of this territory, as in all the borderlands in Europe (Alsace and Lorraine, Schleswig, Macedonia, Fiume, Tyrol, Sudatenland, etc.) is ethnically mixed. But it is equally true that the Poles there form the largest single national group, and, together with the Jewish group, constitute over 45 percent of the population.

One should also remember that although many Ukrainians and White Ruthenians live in Eastern Poland, it is most doubtful—to say the least—whether they would want to be incorporated into the communist set-up of the Soviet Union. Before the war Communism made only very insignificart headway among the Ukrainians. The Ukrainian Quarterly asserts that "there was hardly another country in Europe where anti-Communist feelings were stronger."

The best proof that the union with Soviet Russia was not the heart's desire of these people may be found in the attitude of the Soviet Government toward the Ukrainians in Poland, and in the attitude of the Ukrainians in Poland toward the Soviet Union.

When eastern Poland was incorporated into Soviet Russia in 1939, mass deportations into the depths of Russia began almost immediately. Among those arrested and deported there was a large number of Ukrainians. It was at this time that the Ukrainian-American Institute in Pittsburgh wired to the Soviet Embassy in Washington as follows:

"The history of your government's cruel and bloody liquidation of the people of Soviet Ukrainian territory marks one of the blackest pages in modern history.

"Your government stands guilty of deliberately planning the starvation and annihilation of millions of innocent men, women, and children during the years of 1932 and 1933.

"The Ukrainian people throughout the world, as well as all civilized nations, will hold your government strictly responsible for your government's treatment of our brothers in eastern Galicia."

The leading organ of the Ukrainian National Alliance in the United States of America, Svoboda, wrote:

"Anyone familiar with the attitude of not only the Ukrainian but also the Polish and Jewish populations of that territory toward Russian communism, will agree with the author of these lines that in a free election the number of votes for the incorporation of that territory into Soviet Russia would not amount to more than 10 percent of the total votes, and most probably less."

While speaking of ethnographic considerations, it is pertinent to mention the composition of population in the two largest cities of Eastern Poland: Lwów and Wilno.

Lwów is the capital of southeastern Poland with a population of 312,200 inhabitants. The Poles constitute 63.5 percent of Lwów's

population, the Jews 24.1 percent, the Ukrainians 11.2 percent, and the Russians 0.2 percent.

Wilno—in the northeastern part of Poland—has a population of 195,100. Of these 65.9 percent are Poles, 28 percent Jews, 3.8 percent Russians, 0.9 percent White Ruthenians, and 0.8 Lithuanians.

It would be indeed a queer application of the principle of self-determination if we should overlook the wishes of the largest national groups in order to cater to the wishes of minorities who had not even been asked what their wishes were.

4. Cultural considerations

On the grounds of cultural considerations? Most emphatically—no! Despite over a century of Russian rule western civilization and Polish culture, so foreign to the culture and civilization of Russia, still permeates these areas.

The Poles in these territories exerted a far greater influence than their numbers would seem to warrant. How well-liked and trusted they were was made obvious in 1906, when the first only democratic elections to the Duma took place. Notwithstanding Russian domination, these elections returned only 3 Russian representatives out of the 17 who were to represent the province; the rest were Polish.

Eastern Poland produced such outstanding Poles as Kosciusko and Pulaski, who fought for America's independence; King John Sobieski, who in the seventeenth century rescued Vienna, and with it all of Europe from the Moslem invasion; Jozef Pilsudski, leader of the nation during and after World War No. 1; Ignacy Paderewski, famous pianist; Joseph Conrad—Konrad Korzeniowski—author of many brilliant novels written in English; Wroblewski and Olszewski, two scientists who were the first to liquefy air; Adam Mickiewicz and Juljusz Slowacki, Poland's two greatest poets, and scores of others.

No cultural considerations can therefore speak in favor of incorporating eastern Poland into Soviet Russia.

5. Strategic reasons

Because of strategic necessity?

Strategic arguments are repeatedly advanced nowadays to speak together with the demands for Russia's security in favor of partitioning Poland and incorporating her eastern territories in the Soviet Union. Mr. Churchill, in his recent speech, has also been guilty of this misrepresentation:

"Twice in our lifetime Russia has been violently assaulted by Germany, many millions of Russians have been slain, and vast tracts of Russian soil have been devastated as a result of repeated German aggression. Russia has the right of reassurance against future attacks from the west."

One might conclude from this statement that it was Poland which had facilitated the German invasion of Russia. In reality it was quite the contrary; Russia was twice attacked by Germany in this century, but this occurred both times at a time when Poland did not exist on the map of Europe (1914 and 1941). While Poland did exist as an independent state in 1939, she took upon herself the whole brunt of the Nazi aggression, and would have defended herself much more efficiently were it not for the stab in the back the Red Armies dealt Poland on September 17, 1939.

So much for Russian security in the west. That the annexation of eastern Poland plays no role here was clearly shown in 1941, when Hitler's army pushed unimpeded across this territory in but a few days, without fighting any major engagements.

To avoid a new German attack in the future, Soviet Russia should aim not at partitioning Poland, but at disarming and controlling Germany and establishing close relations with the other United Nations, and among them, with Poland.

6. Moral considerations

Then, there are still—last but by no means least—moral considerations. They were also mentioned by Mr. Churchill, that eloquent pleader for a change in frontiers. The Soviet Army is liberating Poland from the Germans, and therefore Poland should repay Russia for their help with a half of Polish territory. "That is the great gift that they—the Poles—have to give to Russia," Prime Minister Churchill said.

This is a bill which but one party presents. Poland may present another bill, and a much more convincing one to those whose thinking is unbiased.

Poland did not passively wait for her liberation. Poland had fought valiantly for full 5 weeks in 1939, taking upon herself the whole German might at the very outset of the war; Poland's fall was indeed precipitated by Soviet aggression from the east.

Poland fought in the defense of Norway and France in 1940, at a time when oil and grain flowed from Russia to Germany.

Poland fought for England during the Battle of Britain, when every eighth German plane shot down over London was accounted for by the Polish airmen. Has this bill been paid in Mr. Churchill's speech?

Poland fought in the defense of Suez Canal and Egypt because the treaty between Poland and Great Britain—August 25, 1939—provided for the mutual assistance in case of an aggression. Poland has faithfully fulfilled her obligations resulting from the treaty.

Poland fought in Italy and after D-day—in France, in Belgium, and in Holland—for she believed that peace is indivisible and that fighting the Germans anywhere in the world was a battle for freedom and independence.

Poland, the land without a Quisling, had fought unceasingly at home ever since 1939, waging guerilla warfare, organizing sabotage and diversion. These activities increased in 1944 with the Soviet armies approaching Polish soil. The divisions of the Polish home army took part in liberating eastern Poland, in liberating Lwow and Wilno. Despite the lack of any assistance and help whatsoever they engaged the Germans in open fighting in the streets of Warsaw on August 1, 1944, and fought them for 63 days, long, hopeless days.

Poland's losses in this war amount to nearly 18 percent of her total population. No other country has had to bear such terrific losses, not even Soviet Russia. To whom should Poland present her bill and in what amount?

The reward that is being prepared for Poland today will rob her of half her territory, the very soil in whose defense Poland has suffered so much and fought so valiantly.

7. Pre-war Polish-Soviet frontier

The Polish-Soviet frontier as of 1939 was established by the Treaty of Riga—March 18, 1921—much further to the west than the line which had been suggested by the Russians themselves in Lenin's proposal of January 29, 1920, and in their answer to Lord Curzon's note of July 11, 1918. By the terms of the treaty Poland gave up 120,000 square miles of her prepartition territory, despite the fact that the Soviet Government had denounced formally the partitions of Poland. By the terms of the treaty 1,500,000 Poles were left in Russia, while only 150,000 Russians remained in Poland.

At the time of peace negotiations the Russian delegation opposed strongly Polish financial and reparational claims, while agreeing readily to the frontier line as proposed by the Polish delegation.

The Treaty of Riga was a compromise. It was not a solution thrust upon a weak Russia by a strong Poland as some would have it. Strong Poland? What nonsense! How could she be strong, regaining her independence after more than a century of nonexistence and foreign oppression? How could she be strong emerging from the turmoil of the war with an army of 4,000 men?

In the course of 18 years (1921–39) the frontier as established by the Treaty of Riga was never questioned, not even once, by the Soviet Union. On the contrary, the Treaty of Riga has been reaffirmed more than once by the Russians, notably in 1923, when the U. S. S. R. emerged from the original R. S. F. S. R.

Is Poland's title to her eastern territories debatable? It did not seem so when the conference of ambassadors representing the principal allied and associated powers—Great Britain, France, Italy, and Japan—recognized the Polish-Soviet frontier on March 15, 1923, and when 3 weeks later, on April 5, 1923, the United States of America joined in extending its recognition also.

It did not seem debatable, either, at the time when none of the allied governments recognized the Soviet occupation of eastern Poland. The State Department and the British Foreign Office made it quite clear in their statements that their Governments stand by policy of nonrecognition of territory taken by conquest. Such a policy is in accordance with the principles formulated in the Atlantic Charter.

8. Territorial compensations

As a compensation for the territories east of Curzon line, the Soviet Government offers Poland the belt of land stretching along Poland's western frontier, carved out of Germany up to the River Oder and Neisse, and a part of East Prussia (without, however, the largest town and port of Koenigsberg).

Certain necessary corrections and alterations have to be made in the Polish-German frontier and undoubtedly will be decided upon by the peace conference. But to think of a country as of a wheelbarrow which may be pushed around at will, to the east or to the west—is to deal a blow to the deepest feelings and instincts of this country's people. No nation will ever understand or condone such an approach to the territorial questions. And it's even more true in case of the ancient Polish nation, proud of the thousand years of its national history.

The establishment of the proposed Polish-German frontier on the River Oder would, besides, burst wide open the grave problem of 7,000,000 people who would become an obnoxious German minority group. We do not propose here to discuss all the implications of this problem, but we cannot fail to mention it and to signal its gravity.

9. Conclusions

There can be no argument, whether advanced by the Soviet Union or by those who support Russian policy which would justify the partitioning of Poland. Should this partition be carried out by force of arms and maintained with Russian bayonets—a wrong will have been perpetrated, and—keenly felt as it will be by the Polish nation—it will provide the worst possible basis for the future relations between the neighbor countries and the seeds of new grave complications in that part of Europe.

The Polish-Soviet conflict, however, is not limited to the territorial dispute alone. Much greater issues are involved in this conflict, much greater problems are at stake.

SOVIET DEMANDS FOR A FRIENDLY POLISH GOVERNMENT

Soviet demands for the establishment in Poland of a friendly government would seem to imply that up to this time the Polish Government's attitude toward Russia have been hostile.

1. The attitude of the Polish Government toward Soviet Russia

Nothing is further from the truth. The three premiers who have headed the Polish Government from the moment of the outbreak of this war (Gen. W. Sikorski, S.

Mikolajczyk, and T. Arciszewski), on many occasions have stressed their readiness to cooperate with the Soviet Union, basing their relationship on a good-neighbor policy and on close collaboration in war as well as in peace.

This readiness was not limited alone to statements by the Polish premiers and those head Polish foreign policy. It also found expression in many acts of good will. All the more worthy notice, since they occurred after the Soviets had broken the Polish-Russian nonaggression pact, still in force, after the occupation of half of Poland's territory by the Soviet Army, after the partitioning of Poland by Germany and Russia, and after innumerable wrongs which the Soviets inflicted upon the population of the occupied provinces (over a million people deported deep into Russia, arrests, death sentences, compulsory deprivation of citizenship, etc.).

The good will of the Polish Government was clearly demonstrated in their acts of: The signing of the Polish-Russian Treaty of July 30, 1941, by which act the Polish Government proclaimed its readiness to let bygones be bygones and to forget the wrongs done by the Soviets; the signing of the declaration of friendly cooperation between Poland and Russia on December 4, 1941; the formation of military units of Poles deported to Russia.

After a year this army, when it became impossible to obtain supplies of food and ammunition from the Soviet authorities, was evacuated to territories remaining under the protection of the western Allies. For the past year this army has been fighting in Italy, where it has distinguished itself by its conquests of Monte Cassino and Ancona.

The Soviet Government did not deem it necessary to stand by their declarations or to fulfill the obligations arising from treaties they had signed. In April 1943 they broke of diplomatic relations with the Polish Government.

As a pretext for breaking relations, the Soviets took exception to the fact that the Polish Government applied to the International Red Cross to investigate the mysterious Katyn massacre of 10,000 Polish officers who had been Russian prisoners of war since 1939.

Even after the break of diplomatic relations the Polish Government continued its policy of good will and declared its readiness to discuss all outstanding questions with the Soviets for the sake of Allied unity and common victory. Their readiness was expressed not in official declarations only but through following acts:

1. The Polish Home Army received an order from the Polish Government to cooperate militarily with the approaching Red Army, and it actually did cooperate with the Russians in liberating Wilno and Lwow, and in fighting in the district of Kielce and in Warsaw.

2. The Polish Prime Minister, Mikolajczyk, twice went to Moscow hoping to end the dispute.

These visits did not bring about reconciliation for the simple reason that the Soviet Government, having other plans in mind, did not seek a true reconciliation. Most telling in this respect was the Soviet refusal to accept the United States offer of mediation in Polish-Russian dispute, January 26, 1944.

The story of the Polish Commander in Chief, Gen. Kazimierz Sosnkowski, illustrates well the fact that it is not this or that particular member of the Polish Government whom the Soviets object to, but the very thought of reconciliation with an independent Poland which is distasteful to the Soviet leaders.

Throughout 1944 the Soviet press carried violent attacks against General Sosnkowski. When finally the President of the Polish Republic relieved the general of his duties as Commander in Chief of the Polish Forces (in August 1944) and appointed to the post Gen. Tadeusz Komorowski (the heroic General "Bor" of the Warsaw Insurrection)—the campaign was immediately switched to the new Polish Commander. A personification of the Polish spirit of patriotism and resistance, General Bor of legendary fame, whose bravery was truly an inspiration for all freedom-loving peoples—was described by the Soviets and Soviet agents as a "traitor to his nation" and statements were made that should Bor fall into Soviet hands he would be brought to trial as a war criminal for causing the deaths of thousands of people in the Warsaw fighting.

From the above facts it should be quite clear that the Polish Government not only omitted nothing that could restore friendly relations between Poland and Russia, but yet did more than could be expected or demanded of Poland after the tragic years of 1939–41.

Unfortunately, two parties are needed for a harmonious relationship. The Soviet Union cannot boast of a single act of friendliness or cooperation on its part.

2. The legal status of the Polish Government

The status of the Polish Government is occasionally questioned by Soviet sources and their recipients abroad, and the issued raised of the legality of the Polish Government.

In connection with these charges, the following statements are in order:

Poland's present government is established in accordance with the Polish constitution. This constitution was binding before the outbreak of the war and could be amended or changed only by a parliament freely elected by the people of a free and independent Poland.

The continuity of government in the legal sense of the term, has been kept by Poland throughout the war. Prof. P. E. Oppenheim, prominent in the field of international law, declared that the Polish Prime Minister and the Ministers of his cabinet "were appointed by the new President of the republic, all in accordance with the constitution. Hence the continuity of the Polish Republic is preserved."

Due to the foreign occupation of Poland, neither the President nor the Government can carry on their work in their home country, and therefore London became the temporary seat of the Polish Government.

The Polish Government is recognized by all the United Nations (except Russia) and by all neutral governments. The attitude of the United States Government is typical in this respect. On October 2, 1939, Secretary of State Cordell Hull issued a statement to the effect that the United States continued to "regard the Government of Poland as in existence in accordance with the provisions of the constitution of Poland."

Many acts of the Soviets testify to the fact that even Soviet Russia herself regards the Polish Government in London as the only rightful Government of Poland. This has been affirmed by the fact that—

1. The Soviet Government had concluded several agreements with the Polish Government in exile during the period 1941–43.

2. Even after relations had been broken off, the Soviet Government endeavored to induce the Polish Government to give up the eastern Polish territories. Accepting the Polish Government in London as a party to these parleys, the Soviets revealed that they considered that Government the legitimate trustee of the interests of the Polish nation.

3. Representative character of the Polish Government

When attempts to undermine the legal status of the Polish Government in exile failed, the Soviets endeavored to question at least the representative character of the Government. In the communique of the Soviet news agency TASS of March 1, 1943, we find the following phrase:

"'The present Polish ruling circles do not reflect in this matter the genuine opinion of the Polish people,' and the statement of the Soviet Government of January 11, 1944, charges that 'the émigré Polish Government is cut off from its people.'"

This charge—as many others previously quoted—is not true. Among all the governments in exile, the Polish Government undoubtedly has the closest contact with the nation it represents. This exceptionally close contact is a result of the following facts:

1. The Polish Government in exile maintains constant touch with Poland by means of radio and couriers, going both to Poland and from Poland (the Poles have established undoubtedly the best system of communication of all the exiled governments).

2. All the important decisions of the Polish Government in London, as well as its political program, are forwarded to Poland for the consideration of the Polish underground parliament—the Council of National Unity.

3. The Deputy Premier of the Polish Government remains in Poland and acts as the Government's delegate inside the occupied country. Three more leaders of the underground movement hold ministerial portfolios and, while working in Poland, are members of the London Cabinet.

4. The present Prime Minister, Tomasz Arciszewski, remained in German-occupied Poland until July 1944 (almost 5 years) and was one of the leaders of the Polish underground; the Minister of Interior, Zygmunt Berezowski, also reached London only recently, having left Poland in the spring of 1944. All together six members of the present Polish Government represent the underground.

There can be no question but that the Polish Nation obeys the Polish Government in London. The Soviets frequently complain of the obedience which people in Poland display with regard to the orders from the distant London Government. By the word "frequently" we mean whenever those orders do not wholly agree with Soviet plans.

The Warsaw insurrection in 1944 provides a moving example of the London Government's influence in Poland. The Warsaw insurrection had been ordered by the Polish home army, cooperating with the Government in exile, and was supported by the entire population. The battle lasted for over 2 months despite the lack of aid, despite the fact that the Soviet Government and its agents inside Poland did their best to minimize and ridicule the Warsaw battle in the eyes of the world and to prevent any help from reaching the people locked in mortal combat with the Germans.

4. Conclusions

Thus the Polish Government—temporarily in London—(a) is the only legal and rightful Government of the Polish Republic; (b) is most representative of the Polish Nation—insofar as this is at all possible in time of war; (c) is a government friendly to the Soviet Union, and sincerely desirous of establishing good neighborly relations with Russia, provided that there is an equal manifestation of good will on the part of the Soviet Union.

What does the present Soviet policy mean, therefore, and what lurks behind these Soviet attacks on the Polish Government?

THE REAL ASPECT OF SOVIET POLICY TOWARD POLAND

Annexation of half of Poland's territory is only a part of the Soviet program as regards Poland. Under the pretext of establishing a friendly government, Russia plans to liquidate Poland as an independent state.

Let us consider facts which have taken place during the past year and a half.

1. In Russia a group of Polish Communists and fellow travelers was formed, which under different names (Association of Polish Patriots, National Council, and finally Commit-

tee of National Liberation in Lublin) tries to create an impression that it represents the will of the Polish people.

By its very existence this group was at first intended as a threat to the legal Polish Government and in this way it hoped to influence their decisions. After this blackmail failed, the group sought to seize the governmental authority in Poland.

As to the character of this group it suffices to mention that during its initial activities it was headed by Wanda Wasilewska, a colonel in the Red Army and a member of the Supreme Soviet, and wife of the Soviet Vice Commissar of Foreign Affairs, A. Korneychuk.

At present Mrs. Wasilewska-Korneychuk has been succeeded by Mr. E. Bierut, who from 1921 has been a Soviet citizen and from the time of creation of the Comintern, an agent of that organization, whose duties were the survey of revolutionary movements in Eastern Europe (Poland, Austria, Czechoslovakia). On December 31, 1944, Mr. Bierut announced himself President of the Provisional Government in Lublin.

It goes without saying that the committee constitutes a puppet Soviet Government, whose aims run parallel with those the Germans have applied in forming governments of that type in Slovakia, Greece, Croatia, and Belgium.

2. While preoccupied with the formation of a Communist center in Poland, the Soviet authorities began to recruit the Poles remaining in Russia. They did not consent to the evacuation to the Middle East of several hundred thousands of Poles deported by them to Russia, and, under threat of starvation and imprisonment they forced these people to join the ranks of the Soviet-sponsored Polish Army.

After crossing the Polish frontier the Soviets supplemented these forces by a compulsory conscription of Polish citizens.

3. Having reached Polish territory, the Soviet Army was assisted by the Polish Home Army in liberating Wolyn, Wilno, Lwow, and several other Polish provinces.

Taking advantage of the fact that the commanders of the Polish Home Army, on orders, had reported and disclosed the strength of their units to the Red Army, the Soviet authorities began the liquidation of those units. Polish Home Army officers were arrested or shot (in June 1944 Premier Mikolajczyk disclosed that the Russians killed 23 leaders of the underground movement), the soldiers were disarmed and incorporated into units organized by the Soviets. In August 1944, 2,500 officers of the Polish Home Army were put in the ill-famed camp of Majdanek, near Lublin.

4. On August 1, 1944, the uprising in Warsaw began. The approach of the Soviet Army to the gates of Warsaw and the appeals of the Moscow radio stations determined the date of the uprising.

Having ascertained that the command of the uprising lay in the hands of the Polish home army, the Soviet authorities refused to help in any way the Poles in their fight against the Germans. This attitude was carried so far that during the first 6 weeks of the struggle the Soviet authorities denied landing rights on Russian shuttle bases to American bombers bringing help to Warsaw.

At the same time the Soviet Army halted their offensive on this sector of the front and the uprising died after 63 days of desperate struggle. Polish losses amounted to about 250,000 people.

5. The agrarian reform in Poland, now being so hastily carried out on territories occupied by the Soviet Army, is not only a proof of Soviet interference in Polish internal affairs, but also betrays the plan of introducing there the Communist system of land ownership.

Figures announced by the Lublin committee show that in eastern Poland land is being distributed among peasants in such small allotments that they do not allow the owner to organize his farm on a self-sufficiency basis (information bulletin of the Embassy of the Union of Soviet Socialist Republics, Washington, 1944, No. 130, speaks of holding of 3 hectares—7.4 acres). Besides, the impossibility of supplying the new farmers with indispensable farm machinery, tools, and livestock will necessitate common use of such tools and livestock belonging to the old landowners.

Therefore, instead of creating strong and self-sufficient farms, a new class of agrarian proletariat is being purposely created, one that is most easily influenced by any social revolutions.

A complete failure of the newly created farms will result from this division of land. Their difficulties will serve the Soviet authorities as the signal for the introduction of an "improved system" of farming, based on that existing in Russia. Common ownership of land, machinery, and livestock will replace private ownership.

This senseless division of land is therefore the first step toward the introduction in Poland of collective farming, similar to the kolchoz system in the Soviet Union.

It should be emphasized that the "agrarian reform" carried on in such a manner met with hostile attitude even of its beneficiaries. The Moscow and Lublin radios have often reported on "the sabotage of the reform."

As a result of his inability to win over the Polish peasants, the head of the Department of Agriculture and Agricultural Reforms of the Lublin Committee, Mr. Andrzej Witos was made to resign from his office at the beginning of August 1944.

CONCLUSION

It is the aim of these few remarks to warn American opinion against a misrepresentation of Polish issues.

This conflict is not an internal Polish squabble. Before the war only 2 percent of the people in Poland were Communists, and today also they constitute only an insignificant group of the Polish population. By abolishing all democratic rights this Communist group, backed by Soviet bayonets and the Soviet NKVD, aims at the liquidation of the Polish independent state.

The dispute over Poland's frontiers is not the essence of this conflict. The Soviet Government not only plans to take over half of Poland's territory, but also to place in Warsaw a Soviet puppet government.

It is, therefore, the very existence of Poland that is at stake, the very existence of a nation that first opposed German aggression and in whose defense this World War began.

There are other issues at stake: principles which we consider noble and worthy of defense even at the price of blood.

The division of Europe into spheres of influence, violation of the right of nations to independence, mockery of democratic ideals, means depreciation of war aims and a lowering of the morale, both at the front and at home.

If the principles of the Atlantic Charter and of democracy in national and international life are to be pushed aside in favor of the appeasement of a strong ally, and if we decide that might should dominate over right and, accordingly, accept the unilateral decisions of the great powers, the present war would lose all purpose and the final victory, all meaning.

It is time that the United States, who adhere to democratic principles, speak up in defense of these ideals, refusing to be dragged into the dangerous policy of expediency.

THE CURZON LINE

Up to the present moment the Curzon line was a purely academic question, of no importance from either legal or political point of view. The Soviet Government's declaration of January 11, 1944, brought the Curzon line to the fore and had given it a new importance, it maintained ever since.

In this connection it ought to be stressed that the Curzon line to which refers the Soviet declaration, had been suggested by the Supreme Allied Council on December 8, 1919, as a temporary eastern demarcation line of the area whose Polish character was absolutely unmistakable, and where the Polish Government was authorized to establish a permanent political administration.

The provisional character of this demarcation line should be borne in mind. Declaration of the supreme council emphasized it in following words:

"The rights that Poland may be able to establish over the territories situated to the east of the said line are expressly reserved."

The line of demarcation ran only through the territories which had belonged to the Russian Empire after the partitions of Poland. It ended at the frontier of Galacia, which had been a Province of Austria before the First World War.

On July 10, 1920, at the time of the victorious Bolshevik offensive, the Supreme Council exacted from Poland at Spa the consent for an armistice with Russia based on the line drawn on December 8, 1919:

"Accordingly, on July 11, Lloyd George and Curzon—and it is here that Lord Curzon's name became attached for the first time to the now famous Curzon line—dispatched a note to the Soviet government proposing that they reach an armistice with the Poles. The terms, said the note, should provide that the Polish Army immediately withdraw 'to the line provisionally laid down last year by the peace conference as the eastern boundary within which Poland was entitled to establish a Polish administration. This line runs approximately as follows. The note then traced briefly and very roughly a line coinciding with that of the Supreme Council declaration of December 8, from Grodno to the old Galician frontier, but then continuing down through Galicia west of Rawa Ruska, east of Przemysl to the Carpathians,' something about which the December 8 declaration had said nothing. Even worse, the note went on to say that the Russians should in return agree to stand 'at a distance of 50 kilometers to the east of this line. In eastern Galicia each army will stand on the line which they occupy at the date of the armistice.' * * * .

"The part of this line running through Galicia (following the division between west Galicia and east Galicia and thus leaving Lemberg on the Russian side) had certainly not been 'provisionally laid down as the eastern boundary within which Poland was entitled to establish a Polish administration,' since the Supreme Council had already awarded Poland a mandate over the whole of east Galicia. Moreover, the note itself, having traced this line through Galicia, added immediately that in 'eastern Galicia each army will stand on the line which they occupy at the date of armistice' and in mid-July the Poles, though retreating, were still reported as far to the east as Rovno, far beyond Lwow. It was a flat contradiction in terms."

One more point need be made here. The offer of mediation extended by the Supreme Council of the Allied and Associated Powers had been rejected by the Soviet Union—note of July 17, 1920—and even were it accepted, it was in no way concerned with the frontier problems of territorial settlement between

ETHNOGRAPHIC DATA ON EASTERN POLAND

The provinces of eastern Poland enclosed between the Curzon line (prolonged through Galicia) and the Polish-Soviet frontier have a population of 10,734,000 (according to 1931 census).

This population was divided as follows:

	Number	Percent
Poles	4,040,000	37.6
Ukrainians	4,010,000	37.4
White Ruthenians	894,000	8.3
Jews	850,000	7.9
Natives of Polesie	710,000	6.6
Russians	100,000	1.0
Lithuanians, Czechs, Germans, and others	134,000	1.2
Total	10,734,000	100.0

It is estimated that 8 years later, i. e., on August 31, 1939, the number of Polish citizens on the same territory increased to 11,807,000.

DEPORTATIONS

Immediately after the entry of Soviet troops into Poland, extensive arrests were carried out, embracing Polish state functionaries, judges, members of the police force and of local, both urban and rural autonomous authorities, university professors and school teachers, officials and employees of the state forest administration. The charge was counter-revolutionary activities. Arrests were followed by deportations to the interior of Russia.

The aim of these systematical arrests carried out throughout the whole area seemed to be a twofold one: The elimination of all people who might become, sooner or later, a source of inconvenience to the Soviet regime, and the establishment of such an atmosphere of terror that any resistance to the new ruler would be strangled on the spot.

People were not imprisoned for any actual transgression of the Soviet law, but in order to prevent such transgressions they might possibly feel inclined to commit.

After the establishment of temporary town committees which replaced the former Polish administration, the action of clearing of territory of the enemies of the people was even intensified.

Many thousands of arrests were carried out on simple denunciations; the population was terrorized. Landowners, all active members of noncommunistic Polish, Ukrainian, Jewish, and other parties, including leftist labor parties, members of the Polish Parliament, the last as well as the preceding ones, were arrested, likewise officers of the Polish Army, industrialists, bank employees, merchants, and tradesmen. Mass arrests occurred up to the outbreak of Russo-German hostilities in 1941, embracing members of the same professions, such as lawyers, physicians, railroad men, active social workers, trade-union leaders, directors of educational and cultural organizations, religious brotherhoods and societies, even school children and students. The total figure of Polish citizens deported to Russia amounted to about one and a half million people.

Men, as well as women and children, were transferred to 2,800 places in Russian polar regions, Siberia or central Asia, and forced to hard work. As a result, large numbers died and continue to die of starvation, sickness, and exposure.

The conditions of the deportations in closed cattle wagons outraged every humanitarian feeling. No previous warning had been given, so that people had no opportunity to prepare anything. In many cases families were split up for the transport, men, women, and children traveling separately. Very often they never got in touch again.

While prisoners sent to labor camps got a minimum of food and some kind of barracks to sleep in, those who were sent to special settlements found there, in many cases, neither food nor shelter. They were not employed in industry but worked in the forests and mines, at the construction of railways, and so forth. Work was compulsory for all, irrespective of age, sex, and physical conditions.

In many places the deportees did not receive any money for their hard labor. In others they received a meagre pay in cash, not sufficient even to buy the bread they were entitled to.

Mortality among deportees was very high. The harsh climate, bad housing, insufficient clothing and appalling unsanitary conditions, hard labor and blank starvation was very efficient in this sense. During the period up to July 1941 it may well be said that 25 percent of all the Polish citizens died and 35 percent of children; among babies mortality reached even 50 percent.

"PLEBISCITE" IN EASTERN POLAND

On October 6, 1939 Soviet military authorities published their decision to hold elections for the "National Assemblies" on October 22d, and to summon these assemblies in Lwow and Bialystok a few days later. Simultaneously they issued by-laws, according to which the elections were to be carried out by special "Committees for the Organization of Elections," largely composed of Soviet citizens and U. S. S. R. officials.

The electoral campaign, which immediately began, was extremely intense and carried out by "election experts brigades" brought from the U. S. S. R. for this purpose. They had at their disposal an army of agitators and Soviet officials. Since the number of Soviet troops at that time in Poland was estimated at 700,000 men, there was on the average one Red Army agitator to every 17 inhabitants.

Various measures were applied to induce the local population to take part in the elections. Local residents were individually visited by agitators, mostly Red Army men or armed Workers' Guards who tried to persuade them that it was in their interest to vote.

Refugees from western Poland who fled from Germans and happened to find themselves under Soviet invasion, were also encouraged to vote.

An atmosphere of terror was created through arrests and other repressions. In particular, any person acting against the instructions issued by Soviet propaganda, was exposed to immediate arrest and sentence for counterrevolutionary activities.

All existing organizations—cultural, religious, economic, social, sport and trade-unions, both Polish and Ukrainian, as well as Jewish and of other nationalities—were dissolved and their property handed over to newly created Communist organizations. The entire press was stamped out.

On the other hand, attempts were made at winning over at least a part of the population. The distribution of land and livestock served that purpose among peasants.

Electoral statutes for western Ukraine and western White Ruthenia set up one-mandate electoral districts and only those bodies which were controlled by Soviet administration were allowed to nominate candidates to the national assemblies, namely: (1) Temporary town committees; (2) peasant committees; (3) workers' guards, a Soviet auxiliary militia; (4) assemblies of workers of enterprises; and (5) intelligentsia assemblies.

The first two of these institutions were in fact administrative bodies set up by Soviet authorities and directed exclusively by Red Army officers.

Candidates nominated by those organizations were liable to registration with the regional election committees which had the means of eliminating any eventual opposition candidates, thus insuring the nomination only of candidates approved by the Soviet authorities.

According to Pravda of October 19 and 22, 1939, Nos. 292 and 293, in the northern part of Poland only 921 candidates for 629 mandates were registered, in the southern part about 1,500 for 1,495 mandates. Thus in each of the 1 mandate electoral districts only 1 candidate was nominated, and several districts of the northern part registered none at all. Only persons previously chosen by the Soviet authorities could become representatives of the local population to national assemblies.

Polish citizenship was not regarded as a necessary condition for nomination, nor was permanent residence. Therefore, very frequently Soviet citizens were elected, as for instance Soviet Commissar for Foreign Affairs Molotov and Marshal Voroshilov.

The period of preparation for the elections was very short, lasting only 12 days. So short a time obviously could not permit setting up of electoral boards, compiling lists of electors, especially when nonresident population was to be granted the right to vote.

The elections took place on October 22, 1939. Both terror and the propaganda campaign attained their peak. Electors were rounded up in their workshops or dragged out of their homes in columns to the voting places. Each of them was given a card bearing the printed name of the only candidate of the district. Numerous Soviet police agents were present in all electoral premises.

Taking into account the systematic terrorizing of the electors by means of campaign conducted against enemies of the people, it must be realized that both absence at the elections and voting against by placing the paper with the candidate's name deleted, demanded extreme courage, even heroism. Those who wished to vote against knew that they thus exposed themselves, their families and friends to an inevitable imprisonment and deportation. No better off were those who decided not to take part in the elections at all.

The result of the elections as published by the Soviet press are obviously not based on any factual data. According to these reports in the western white Ruthenia 76.71 percent of the entitled electors took part in the voting, out of which 90.67 percent voted for official candidates. The respective figures for the western Ukraine were: 92.83 percent and 90.93 percent.

But even according to these figures the officially published numbers of those who declined to vote: in western white Ruthenia 90,911 persons, in western Ukraine, 342,278 persons, and of voters who declined to support official candidates in western White Ruthenia 262,177 and in western Ukraine 401,843. These figures are relatively very high. Thus even according to Soviet official statistics 1,097,209 people consciously decided not to submit to the invaders.

It must be added that no neutral observers, no neutral press correspondents were admitted. In the counting of votes took part only representatives of the organizations mentioned above and representatives of the Soviet press.

What took place in Polish territory invaded by the Soviets had not even a form of a plebiscite as the population was not asked to what country they wanted to belong. They were simply ordered to "elect" representatives to the National Assembly without being told that these representatives would eventually decide the incorporation into the U. S. S. R.

Five days after the "elections" the so-called representatives of the local population met in Lwow and Bialystok to attend the sessions of the National Assemblies. The resolution expressing "the unanimous will of the Ukrainian Nation for the establishment of the Soviet authority on the whole territory of western Ukraine" was carried out in an unusual way. After reading the motion the chairman asked who was "against" it. The answer was given by a thunder of voices: "No; and none will ever be and if anyone is, we will wipe him out." (Pravda, October 29, 1939.)

A similar show took place in Bialystok as the western white Ruthenia was concerned.

Both assemblies passed further resolutions to sanction "ex post" the expropriation of private owners, already carried out by the Soviet authorities, and the nationalization of banks and big industry.

The elected delegations submitted a "request" to the previously summoned extraordinary session of the Supreme Council of the U. S. S. R. in Moscow asking for the incorporation of eastern Poland into the Soviet Union.

On October 1 and 2, 1939, the Supreme Council decided to consent to that "request" and thus the incorporation was achieved.

TREATY OF RIGA

The peace treaty signed at Riga was the expression of Poland's sincere desire for a lasting agreement with Russia. It was not a dictated peace, imposed on the enemy by the victor, but a freely negotiated treaty aiming at finding a solution which would afford equal protection to the interests of both countries and liquidate their age-old conflict. The goal of final peace could be reached only through compromise, and the Treaty of Riga was such a compromise. By this treaty Poland abandoned some 120,000 square miles of her prepartition territory, and left 1,500,000 Poles in Russia.

It should be remembered here that abundant evidence exists in Soviet sources, testifying to the fact that Poland could have obtained a frontier farther to the east without any difficulties:

1. The statement of the Council of the People's Commissars of January 28, 1920, reads:

Maintaining the last peace proposal made to Poland by the Commissars for Foreign Affairs on December 22, 1919, the Council of People's Commissars which is foreign to all aggressive policy, declares that the Red forces will not pass beyond the present lines of the front of Byelorussia, running close to the following points: Drysa, Dzisna, Polock, Parycko, the station of Ptycz, Bialokorowiczе.

In regard to the Ukranian front, the Council of People's Commissars declares in its own name and in the name of the Provisional Government of the Ukraine that the Soviet forces will not carry out military operations to the west of the occupied zones, close to the small towns of Cudnowa, Pilawa, Derazna, and the town of Bar.

Signed by Lenin, Chicherin, and Trotzky, this statement named a line which runs about 50 miles east of the Polish-Russian frontier as established by the Treaty of Riga.

2. The same point of view was expressed by the Russian spokesman, Julian Marchlewski, in his booklet published early in 1921.

3. Mr. Joffe, the head of the Russian delegation at the peace conference at Riga, declared that the territorial problems were not the greatest obstacle in the negotiations:

"The peace negotiations lasted several months and encountered considerable difficulties, especially in the settlement of economic and financial problems."

In his final speech, Mr. Joffe declared: "We have concluded a peace treaty giving full satisfaction to the vital, legitimate, and necessary interests of the Polish Nation."

4. The official Soviet historiography does not in the least consider the Riga Treaty as a defeat, but on the contrary a victory. In the Great Soviet Encyclopedia, an official publication of the Soviet Government, we find an article, Polish Soviet War in 1920 (p. 247, vol. 46; published in 1940). This article reads in part:

"On March 18, 1921, the peace treaty was signed. In accordance with its provisions, Poland kept Galicia and part of White Ruthenia. However, the new Polish-Soviet frontier meant for the White Poles much worse conditions in comparison to those which the Soviet Government suggested to Poland in order to maintain peace in April 1920. The frontier determined after the Polish-Soviet war runs 50 to 100 kilometers to the west of the line suggested at the beginning of the war. This means that Soviet Russia emerged victorious from this struggle against the forces of the counter-revolution."

The Treaty of Riga has not been questioned once in the course of the following years; on the contrary, it has been reaffirmed several times. In 1923, when Russia had adopted a new constitution, establishing the Union of Soviet Socialist Republics, it declared:

"The Soviet Union takes on itself the guarantee of execution of the Riga Treaty within the territorial bounds of the Soviet Republics which in their time were at war with Poland."

In 1932, on the occasion of signing the nonaggression pact, the treaty was again reaffirmed:

"The treaty of peace of March 1921 constitutes now, as in the past, the basis of reciprocal relations and undertakings."

In 1934, when the nonaggression pact was promulgated for the next 10 years, it was again stated:

"Each of the high contracting parties having again examined all the provisions of the peace treaty concluded at Riga on March 18, 1921, which constituted the basis of their mutual relations, declares that it has no obligations and is not bound by any declarations inconsistent with the provisions of the said treaty."

In the period 1921–39 the Polish-Soviet relations developed satisfactorily. Among many agreements and pacts concluded in this period the most important were:

I. A protocol signed in 1929 in Moscow provided:

"The treaty for the renunciation of war as an instrument of national policy, signed at Paris on August 27, 1928, shall come into force between the contracting parties after the ratification of the said Treaty of Paris of 1928 by the competent legislative bodies of the respective contracting parties." (The Kellogg Pact.)

II. On July 25, 1932, a nonaggression pact between Poland and Russia was signed in Moscow. On May 5, 1934, this pact was extended for a period of 10 years, that is, until December 31, 1945. The first two articles are particularly worth notice because of their clear construction and meaning:

"ARTICLE I. The two contracting parties, recording the fact that they have renounced war as an instrument of national policy, reciprocally undertake to refrain from taking aggressive action against or invading the territory of the other party, either alone or in conjunction with other powers. Any act of violence attacking integrity and inviolability of the territory or the political independence of the other contracting party shall be regarded as contrary to the undertakings contained in this article, even if such acts are committed without declaration of war and avoid all possible warlike manifestations.

"ART. II. Should one of the contracting parties be attacked by a third state or by a group of other states, the other contracting party undertakes not to give aid or assistance, either directly or indirectly, to the aggressor state during the whole period of the conflict."

Technically speaking this pact is still in force, with all its provisions.

III. In connection with this pact it is necessary to mention the convention for the definition of aggression signed in London on July 3, 1933. Both Poland and Russia were among the signatories. Article 2 of the convention read as follows:

"The aggressor in an international conflict shall * * * be considered to be that state which is the first to commit any of the following actions: (1) Declaration of war upon another state; (2) invasion by its armed forces, with or without a declaration of war, of the territory of another state; (3) attack by its land, naval, or air forces, with or without a declaration of war, on the territory, vessels, or aircraft of another state; (4) naval blockade of the coasts or ports of another state; (5) provision of support to armed bands formed in its territory which have invaded the territory of another state, or refusal, notwithstanding the request of the invaded state, to take, in its own territory, all the measures in its power to deprive those bands of all assistance or protection."

The convention goes on to state in article 3, that "no political, military, economic, or other considerations may serve as an excuse for the aggression." A provision of paramount significance is the discussion of the Polish-Soviet relations.

IV. Polish-Soviet commercial agreement was signed on February 19, 1939. On this occasion again Mr. Molotov emphasized the good neighborly relations existing between Poland and the Soviet Union, and pointed out that the Soviet Union had endorsed the cause of peace and outlawed aggression.

As late as in June 1939, the newly appointed Soviet Ambassador to Poland, presenting his credentials, spoke of the close and fruitful cooperation of Poland and the Soviets as an important factor in the consolidation of universal peace, and emphasized that the aim of Soviets' foreign policy was to have peaceful and friendly relations with all countries and in the first place with Russia's neighbors.

Besides the above-mentioned important agreements and pacts, some 12 other agreements have been concluded in the period between 1921–1939, regulating the relations of the two neighbor countries.

In accordance with the spirit and the letter of all these agreements, Poland had persistently refused taking part in any anti-Soviet blocs or plans. In 1937, Mr. Beck, the Polish Minister for Foreign Affairs, sent the following instruction to all Polish diplomatic missions abroad:

"So far no proposals to join the Italo-German-Japanese protocol (anti-Comintern pact) have been received by Poland. In any case, Poland could not be a party to that protocol in view of her special position as neighbor of the U. S. S. R., as well as her objection in principle to the formation of any bloc.

"If inquiries are made on this subject, please reply in the above sense."

In view of Poland's consistently friendly policy, the signing of the German-Russian non-aggression pact of August 23, 1939, came as a shock. This pact definitely slammed the door on peace and opened the new era in the history of the world, and particularly in the history of the Polish-Soviet relations. This new era began on September 17, 1939, with a military invasion of Poland by the Soviet Army.

UNITED STATES AND GREAT BRITAIN ON POLAND'S FRONTIERS

After annexation of the three Baltic republics, Estonia, Latvia, and Lithuania, by the Soviet Union, the Under Secretary of State, Mr. Sumner Welles declared:

"The policy of the Government is universally known. The people of the United States are opposed to predatory activities no matter whether they are carried on by the use of force or by the threat of force. They are likewise opposed to any form of intervention on the part of the state, however powerful, in the domestic concerns of any other sovereign state, however weak.

"* * * The United States will continue to stand by these principles, because of the conviction of the American people that unless the doctrine in which these principles are inherent once again governs the relations between nations, the rule of reason, of justice,

and of law—in other words, the basis of modern civilization itself—cannot be preserved." (Department of State Bulletin, July 27, 1940.)

After the Polish-Soviet agreement was signed on July 30, 1941, Mr. Sumner Welles was quoted to have commented in the following way at a press conference:

"The United States' position toward Poland, he pointed out, was made clear immediately after that country was invaded. It was one of not recognizing any change in her status as a free, sovereign, and independent nation. That position, he added, is maintained and continued.

"His understanding of the Russian-Polish agreement was that it was in line with the United States' policy of nonrecognition of territory taken by conquest."

On the same day the following exchange of notes took place between the British Foreign Secretary Mr. Anthony Eden and the Polish Prime Minister, Gen. Wladyslaw Sikorski:

"On the occasion of the signature of the Polish-Soviet agreement of today, I desire to take this opportunity of informing you that in conformity with the provision of the agreement of mutual assistance between the United Kingdom and Poland of the 25th of August 1939, His Majesty's Government in the United Kingdom have entered into no undertakings toward the Union of Socialist Soviet Republics which affect the relations between that country and Poland. I also desire to assure you that His Majesty's Government do not recognize any territorial changes which have been effected in Poland since August 1939."

General Sikorski handed to Mr. Eden the following reply:

"The Polish Government takes note of your letter dated July 30 and desire to express its sincerest satisfaction at the statement that His Majesty's Government in the United Kingdom do not recognize any territorial changes which have been effected in Poland since August 1939. This corresponds with the view of the Polish Government which, as it has previously informed His Majesty's Government, has never recognized any territorial changes effected in Poland since the outbreak of the war."

DECLARATIONS OF POLISH PREMIERS ON POLISH-SOVIET RELATIONS

On July 30, 1941, the Polish Government signed an agreement with the Soviet Union. On this occasion the Polish Prime Minister Gen. Wladyslaw Sikorski broadcast as follows:

"When today Russia, in mortal combat with the German avalanche, takes the path of reconciliation with Poland and seeks common action against our common enemy, we approach this action ready to forget the bloody wrongs we have suffered at her hands. The future of the agreement just concluded will depend on the good will of the other party."

On December 4, 1941, during his visit to Moscow, General Sikorski stated:

"Both sides have agreed to let bygones be bygones. We are confident that the Russian people will remember that we rallied to their side in their hour of trial, that they will appreciate the good will and friendship of Poland; mutual respect for national sovereignty will make these relations durable. Recognizing realities and taking advantage of them, we shall do our best to fulfill our agreements of July and August 1941. Thus we shall demonstrate to the world at large, that international problems can be settled peacefully in the name of common sense and for the good of all."

The New York Times, May 5, 1943, printed the following statement by General Sikorski:

"The Polish Nation wants, of course, to continue its friendly relations with Soviet Russia and to base them on an alliance directed against Germany.

"However, it is difficult for me not to be reserved, even in the face of such a favorable declaration as that of Premier Stalin, at the very moment when the Polish Ambassador is leaving Russia and masses of the Polish population in the U. S. S. R. are left without the assistance and care of their government.

"Yet in spite of this and many other facts, the Polish Government is ready to give a positive answer to any Soviet initiative which will coincide with the interest of the Polish Republic as defined in the common Polish-Soviet declaration of December 4, 1941, and in my speech in London yesterday."

After the tragic death of General Sikorski, Mr. Stanislaw Mikolajczyk was nominated his successor as Polish Prime Minister. In his first address to the Polish National Council on July 27, 1944, Mr. Mikolajczyk declared:

"Understanding between Poland and Russia is a historic necessity for both our countries, but it is also a historic necessity for Europe as a whole, for on it will depend the consolidation of Europe. Europe regards the Polish question as a test case which will show what is to become of the European continent as a whole. Therefore Polish-Russian understanding must be honest, just, and permanent. Poland is necessary to Europe, just as a consolidated Europe is necessary to Poland."

The present Polish Prime Minister, Mr. Tomasz Arciszewski, addressed the Polish National Council on December 13, 1944, in the same tone:

"My government sincerely adheres to the policy of an understanding with the Soviet Union and desires to do everything in its power—continuing the efforts of previous governments—in order to bring about such an understanding, which could become a guaranty of a really friendly and lasting settlement of relations between two neighboring states. This understanding must be based on respect for the rights and vital interests of both sides. It must also be an understanding which will not evoke a feeling of injury and injustice among the Polish people."

The above declarations prove that the Polish Government has been and still is animated by the spirit of cooperation with the Soviet Russia. Obviously, such a cooperation cannot be based on one-sided concessions.

POLISH-SOVIET AGREEMENTS OF 1941

On June 23, 1941, 24 hours after Germany's attack on the Soviet Union, Gen. Wladyslaw Sikorski, the Premier of the Polish Government in exile broadcast on the London BBC Station. General Sikorski welcomed the new ally in the struggle against Germany and proclaimed Polish Government's willingness to forget the evils wrought in Poland in 1939–41 by the Soviet occupation, provided that these many wrongs will be remedied wherever possible, at least in their most painful aspects.

This generous gesture of a wronged nation made it possible to open the Polish-Soviet negotiations in order to liquidate the effects of the Soviet policy toward Poland between 1939 and 1941.

The negotiations, in which participated also British Foreign Office, lasted 5 weeks, and took place in London. Finally the Polish-Soviet agreement was signed by Gen. W. Sikorski for Poland, and by the Ambassador of the U. S. S. R. to Great Britain, Mr. Ivan Maiski, for the Soviet Union.

The Polish-Soviet agreement of July 30, 1941, reads as follows:

"(1) The Government of the U. S. S. R. recognizes the Soviet-German treaties of 1939 as to territorial changes in Poland as having lost their validity. The Polish Government declares that Poland is not bound by any agreement with any third power which is directed against the U. S. S. R.

"(2) Diplomatic relations will be restored between the two governments upon the signature of this agreement and an immediate exchange of ambassadors will be arranged.

"(3) The two governments mutually agree to render one another aid and support of all kind in the present war against Hitlerite Germany.

"(4) The Government of the U. S. S. R. expresses its consent to the formation on the territory of the U. S. S. R. of a Polish Army under a commander appointed by the Polish Government, in agreement with the Soviet Government. The Polish Army on the territory of the U. S. S. R. being subordinated—in an operational sense—to the Supreme Command of the U. S. S. R., in which the Polish Army will be represented. All details as to command, organization, and employment of this force will be settled in a subsequent agreement.

"(5) This agreement will come into force immediately upon its signature and without ratification. The present agreement is drawn up in two copies, each of them in the Russian and Polish languages. Both texts have equal force."

The following protocol is attached to the agreement:

"The Soviet Government grants an amnesty to all Polish citizens now detained on Soviet territory either as prisoners of war or on other sufficient grounds as from the resumption of diplomatic relations."

The text of the agreement was quite unequivocal. It canceled the Ribbentrop-Molotoff Pact of September 28, 1939, which had partitioned Poland between the two powers, and it restored the legal status as of pre-war. Nothing but ill will could interpret the agreement in any other way.

The declarations issued by the Under Secretary of State, Mr. Sumner Welles, and by the British Foreign Secretary, Mr. Anthony Eden, on July 30, 1941, bear witness to the fact that the agreement was thus interpreted not only by Poland and by the public opinion of the whole world, but also by the highest Allied authorities.

The Polish-Soviet agreement created a new political and military situation, and, once the diplomatic relations were reestablished between Poland and Russia, a number of other significant agreements followed. Among these should be mentioned: The Polish-Soviet military agreement of August 14, 1941, providing for the formation of an independent Polish Army on the Soviet soil, and the Polish-Soviet declaration of December 4, 1941, signed at Kremlin by General Sikorski and Marshal Stalin, and pledging the cooperation of both nations in their fight against Germany.

The text of this last declaration, animated by the spirit of good will, of friendly cooperation between Poland and U. S. S. R., is quoted below:

"(1) German Hitlerite imperialism is the worst enemy of mankind—no compromise with it is possible. Both states, jointly with Great Britain and other Allies, and with the support of the United States of America, will wage war until complete victory and final destruction of the German invaders.

"(2) Implementing the treaty concluded on July 30, 1941, both Governments will render each other during the war full military assistance, and troops of the Polish Republic located on the territory of the Soviet Union will wage war against the German bandits hand in hand with Soviet troops. In peacetime their relations will be based on good-neighborly collaboration, friendship, and mutual honest observance of the undertakings they have assumed.

"(3) After a victorious war and the appropriate punishment of the Hitlerite criminals it will be the task of the Allied states to insure a durable and just peace. This can be achieved only through a new organization of international relations on the basis of unification of the democratic countries in a durable alliance. Respect for international law, backed by the collective armed force of all the Allied states, must form the decisive factor in the creation of such an organization. Only under this condition can a Europe destroyed by the German bar-

barism be restored and a guaranty be created that the disaster caused by the Hitlerites will never be repeated."

The above agreements furnish sufficient evidence to prove the Polish Government's sincere desire to forget the tragic period of 1939-41, and to establish mutual relations based on good-neighbor policy.

FORMATION OF POLISH ARMY IN RUSSIA

Pursuant to the Polish-Russian agreement of July 30, 1941, a military agreement was signed on August 14, 1941, enabling the Polish authorities to organize a Polish Army on the Soviet territory. This army was to be formed of Poles deported from Poland to Russia after the signing of the Ribbentrop-Molotov pact, giving Russia eastern half of Poland. This army's equipment and armament was to be supplied by the Soviet authorities and by the Governments of the United States and Great Britain under lend-lease. It was to be an independent army, set up under its own commanders and its own jurisdiction. The Soviet authorities were to be responsible for the feeding of this army.

It was impossible to determine the size of this army in advance, as Polish war prisoners and deportees were scattered throughout the vast areas of the U. S. S. R. and no statistical data concerning these people were available. It was estimated, however, that they numbered about a million and a half.

The headquarters of the Polish Army were set up at Buzuluk, a small town 100 miles east of Rubyshev. When a circular was sent by the People's Commissariat of the Interior (NKVD) to all settlements, prisons, and labor camps, announcing to the Poles their release and the formation of a Polish Army on the Soviet territory, only few of them could ascertain where the Polish headquarters were situated. Without any instructions they began their pilgrimage in the direction of the central part of European Russia. Thousands of patriots arrived every day to join the Polish forces. By October 1941, 46,000 men had been already enrolled and the Polish authorities estimated that their army will reach 200,000 men. However, news had been received already at that stage that the Soviet high command had restricted rations for the Polish Army to 30,000. The cooperation of the Soviet military authorities with the Polish command began to deteriorate. The enlisted men had been placed in overcrowded camps with insufficient food and medical supplies. That Soviet decision was to turn out 16,000 men to shift for themselves or hire out as agricultural labor.

As a result of the Polish Embassy's intervention, and later, of General Sikorski's conversation with Premier Stalin on December 4, 1941, which culminated in a declaration of friendship and cooperation signed on December 4, 1941, this restriction was canceled and adequate supplies of food, arms, uniforms, equipment were promised.

Yet difficulties multiplied. The Soviet authorities refused to release Polish citizens, soldiers, and reservists still remaining in prisons and camps who were in best physical condition. Great numbers of Polish citizens drafted into Red Army and the so-called labor battalions, were not allowed to join the Polish Army. Polish citizens of Ukrainian, White Ruthenian, and Jewish nationality were refused traveling permits (without which it is impossible to move in the U. S. S. R.) to join the Polish ranks.

On the other hand, training of the recruits met with unsurmountable handicaps—the greatest of these was lack of Polish officers. Out of 100,000 Polish officers in Russian prisoner-of-war camps, only 406 reported to places where Polish military units were formed. Polish instructors had to be sent from the Middle East and Great Britain.

No lesser difficulty was that of the lack of armament, uniforms, and equipment. Of the 7 divisions organized in Russia, only one was equipped with small arms. All matériel essential to modern warfare was denied to Poles by the Soviet authorities. Other divisions, counting 13,000 men each, received only 200 rifles for guard duty.

All these difficulties were to be removed after General Sikorski's intervention. According to the agreement reached between General Sikorski and Premier Stalin in December 1941, the size of the Polish Army was determined as follows:

Ninety-six thousand men (6 divisions plus replacements) to remain in Russia, including a certain number of units of the Polish Women's Auxiliary Corps.

Twenty-five thousand men to be evacuated to the Middle East.

Two thousand sailors and airmen for replacement of Polish units in England (to be transferred there).

All in all, 123,000 Poles were to be recruited.

By March 1942, 70,000 men were gathered at the recruiting points and many thousands more, delayed by traveling dicculties, were expected to join the Polish Army when suddenly a new decision of the Soviet authorities has been announced. It said that food supplies for the Polish Army have been limited to 44,000 rations. The remainder of enlisted men was to be distributed to work on the nearby kolchoz farms. General Anders, commander in chief of the Polish forces in Russia, endeavored to change Premier Stalin's attitude, but without avail. In order to save the men the Soviet Government was unable to feed, both interested parties decided to evacuate them from Russia to Iran, the nearest country under Allied military command.

Half starved, without essential clothing, constantly exposed to the raging epidemic of typhus and other diseases resulting from lack of soap and medical supplies, 30,000 Polish soldiers were moved in April 1942 to the Middle East.

In July 1942 the Soviet authorities forbade further recruiting and closed the supply centers of the Polish Army. By the Soviet unilateral decision, all Poles of Jewish, Ukranian, Lithuanian, and White Ruthenian nationality were considered citizens of the Union of Soviet Socialist Republics, and were forbidden to join the ranks of the Polish Army. As recruiting was discontinued, Polish units in Russia could not develop into a great army which it would otherwise become. Needless to say, the loss was considerable not only to the Polish, but also to the United Nations' cause.

Finally, at the end of August 1942 the rest of the Polish Army, counting 40,000 men, was evacuated to Iran. At the same time 45,000 civilians, all of them relatives of the enlisted men, were moved to the Middle East. But most of their relatives remained in the Soviet Union. All interventions of the Polish Government for their release remained fruitless. Hundreds of thousands of Polish citizens are still in Russia.

It took a year for the Polish Army in the Middle East to regain military fitness and to undergo the necessary training. Since February 1944 this Army has been fighting in Italy. Its valor in capturing Monte Cassino and Ancona has brought it recognition and admiration of the whole world.

KATYN GRAVES

In the fall of 1939, when the resistance of Poland, fighting against hopeless odds, was broken, 181,000 soldiers were taken prisoners by the Red Army. Included were 12 generals, 69 colonels, 72 lieutenant colonels, 5,131 regular army officers, and 4,096 reserve officers.

Not all of these were taken in the field. The majority of the officers were seized after war operations had ceased. Soviet authorities simply ordered all Polish officers to report to a designated place; those who obeyed were arrested and deported.

After the Polish-Soviet agreement of July 30, 1941, was signed, the gates of camps and prisons were opened and Polish soldiers began reporting to the posts where detachments of Polish Army were forming. But within a few weeks a puzzling situation was apparent—among the arrivals were very few officers.

Inquiries set on foot immediately brought to light the following facts:

The circa 10,000 Polish officers captured by Russia in 1939 had been deported to 3 large military camps (Starobielsk, Kozielsk, and Ostaszkow), where they were confined till in the spring of 1940 these camps were liquidated. After that time they had, as far as could be learned, utterly vanished. From a total of 8,800 officers registered in the official records of these camps, only 406 reported to Polish recruiting centers.

For nearly 2 years the Polish Government and its officials in Russia carried on a series of conversations with Russian authorities, seeking to ascertain the fate of missing officers To all inquiries the Soviets invariably answered:

"We have released all officers and soldiers * * * if some of them have not reported, perhaps they went to German-occupied Poland or escaped to Manchuria."

On December 3, 1941, Polish Prime Minister, Gen. W. Sikorski, handed Stalin a list containing the names of 4,000 officers definitely known to have been held in the three camps and unaccounted for. Stalin, allegedly, was very much surprised.

On January 28, 1942, the Polish Government sent a long memorandum to Moscow, protesting that the Soviet Union had not carried out its pledged obligations, particularly with reference to the release of officers imprisoned at Starobielsk, Kozielsk, and Ostaszkow, who, it had been established with full certitude, were not now either in German-occupied Poland, or in German military camps.

Moscow delayed its reply to this note for 7 weeks. On March 15, 1942, came the reply assuring the Poles that the Soviet Union had strictly fulfilled the enactments of the agreement as to release of Polish prisoners of war.

All further Polish diplomatic interventions were fruitless.

So matters stood till on April 13, 1943, the Berlin radio made a startling announcement in Katyn forest near Smolensk a mass cemetery of Polish officers was found.

According to the German explanation, a group of Polish workers conscripted in 1942 for forced labor in the vicinity of Smolensk had learned from native peasants that on the ground where they were working there were mass graves of Polish war prisoners. The Poles had put up two wooden crosses on the spot indicated. This attracted the attention of the German officials, who ordered an investigation. The first opened grave contained bodies of 3,000 Polish officers. By April 16, a second grave had been discovered, which contained 1,500 more victims.

On April 17, 1943, the Polish Cabinet issued the following statement:

"There is not a single Pole anywhere who could fail to be deeply shocked by news received of the discovery near Smolensk in a common grave of the bodies of massacred Polish officers, news which is being given the widest publicity by German propaganda. The Polish Government has instructed its representatives at Geneva to request the International Red Cross to send a delegation to investigate on the spot the true state of affairs. It is to be desired that the findings of this organization to which is to be entrusted the task of clarifying the matter and of establishing the responsibility for it, should be issued without delay.

At the same time, however, the Polish Government, on behalf of the Polish nation, denies to the Germans the right to draw from a crime which they ascribe to others, arguments in their own defense. The profoundly hypocritical indignation of German

propaganda will not succeed in concealing from the world the many-repeated and still-continuing crimes committed against the Polish nation. It is not to enable the Germans to lay impudent claims or to appear in the light of defenders of Christianity and European civilization that Poland is fighting and enduring immeasurable sufferings. The Polish Government denies to whomever may be guilty of this crime the right to exploit it for political maneuvers."

The investigation of the International Red Cross was the only way to get at the truth. At this time the city of Smolensk was under German occupation, and neither the Polish nor any other United Nations Government could make an investigation there. The International Red Cross in Geneva is the official institution for the settlement of all matters connected with prisoners of war. The Board of the International Red Cross is composed of representatives of all civilized countries without regard to politics.

That is why it was not only the most suitable, but the only institution that could undertake the difficult task and perform it with complete impartiality.

Moreover, international precedents existed. In 1942 Great Britain had asked the International Red Cross to investigate cruelties committed by the Japanese in Shanghai and Hongkong.

The Polish request caused from the Moscow radio a blast against the Poles, accusing them to collaborating with Hitler.

On April 23, 1943, a reply from the Red Cross in Geneva was published, acceding in principle to the demands of Poland for the appointment of a commission of neutral experts to look into the circumstances of the Katyn massacre. The committee pointed out, however, that it could take this step only if so requested by all parties concerned, and then only under the terms of its memorandum to the belligerents of September 12, 1939.

Inasmuch as Russia refused her consent to the investigation, the Polish Government on May 1, 1943, withdrew its request.

It might seem as if this move on the part of the Poles for an impartial judgment would have been welcomed by Moscow as an opportunity to exonerate herself of guilt for the crime and to fix it elsewhere. Instead, alleging as her reason Poland's appeal to Geneva, on April 26, 1943, Russia broke off diplomatic relations with the Polish Government and took steps towards forming in Moscow the Union of Polish Patriots, a body made up of Polish Communists.

The medical commission convoked by the Germans and composed of representatives of neutral and German-occupied countries (Switzerland, Belgium, Denmark, Bulgaria, Finland, Italy, Czechoslovakia, Rumania, Slovakia, and Hungary) published a report to this effect that Polish officers have been murdered; they were shot in the head from the back at close range. The German-sponsored commission stated that shooting took place in the spring of 1940, that is at the time Smolensk was held by the Russians.

In September 1943, after the Katyn district was reoccupied by the Red Army, the Soviet Government appointed a special commission to conduct an investigation of the Katyn crime. No representatives of any allied institutions, not even of the Red Cross, were invited to participate in the investigation of the Soviet commission.

Upon the conclusion of this investigation Soviet authorities issued on January 22, 1944, a communiqué announcing that a commission established once and for all, that the Polish officers were killed by the Germans in August and September of 1941.

The only Polish report on the Katyn murder has been made by a Polish officer, a former Russian prisoner of war, who had been confined for a time, with the missing officers, but transferred elsewhere before the liquidation of the camps at Starobielsk, Kozielsk, and Ostaszkow.

This officer was ordered to carry on the search for the missing men. As mentioned before, the Polish inquiries brought no result. In his report the Polish officer wrote:

"Our anxiety was increased by a fact, the authenticity of which I, myself, have checked. Several months before the outbreak of the German-Soviet conflict, the Bolsheviks transferred a number of Polish staff officers, including Colonel Berling, to a new camp, and suggested to them that they organize a Polish army to fight against the Germans.

"Berling was willing, in principle, to accept the proposal. However, he set one condition: such an Army was to include all officers and men, irrespective of their political creed.

"A conference was held with Beria (Soviet Commissar of the N. K. V. D.) and Merkulov (the deputy chief of the N. K. V. D.). 'Of course,' they agreed. 'Poles of all political parties will be able to join the Army.' 'Well,' said Berling, 'we have excellent Army cadres in the camps of Starobielsk and Kozielsk.' Whereupon Merkulov replied with some constraint: 'No, not these men; we have made a great blunder in connection with them.' Three witnesses testified to hearing this remark of Merkulov."

The mystery of the Katyn murder has been presented on the evidence of these documents so far brought to light. It demands a definite explanation.

CONSTITUTIONAL CONTROVERSY

The Committee of National Liberation, formed by the Soviets in Lublin, took position that: (1) The Polish Constitution of 1935 was not legally binding, and that (2) in view of this, the previous constitution of 1921, should be brought back in force.

Before discussing the legal arguments supporting this assertion, it should be clearly realized what were the reasons prompting the Communists to take up the constitutional problem.

The Polish Government in London—subject today to vehement attacks of the Lublin puppets—was established in accordance with the provisions of the Polish Constitution, binding for the past decade. Since the legality of this government could not possibly be questioned, the Soviets resolved to attack the legality of the constitution itself. By attacking the way in which the constitution had been established, the Soviets and their agents tried to abolish the fundamental law which governed Poland for years.

It is a primitive trick to invalidate a constitution and cross out the past of a country, in order to knock the legal government off its feet. It would be equally senseless to dig out a minor error of procedure in the establishment of the Constitution of the United States in order to demand the obliteration of the entire historical past of the country.

The Polish constitutional history is rooted deeply in the past:

Of all the newly established countries (after 1918), Poland alone possessed a rich and proud tradition of having developed parliamentary and constitutional institutions. Even as far back as the beginning of the fifteenth century, that is 150 years before the proclamation of the English Habeas Corpus Act, Poland had given to its citizens the guarantee of freedom from arrest without warrant (Neminem Captivabimus nise jure victum), and the origin of the Polish Parliament may be found in the Polish fundamental act of 1505, which took its name of "Nihil Novi" from the first words of its text.

The first Parliament (Seym) of reborn Poland met as early as February 10, 1919, and the constitution was adopted on March 17, 1921, by the House of Representatives.

No sooner, however, did this constitution become operative than people became aware of the fact that the newly adopted constitution turned the helm of government over to Parliament, which, split up into a number of parties, became the arena for sterile political squabbles. It became obvious that the constitution did not meet the requirements of the young state and impeded its political stabilization. The nations at large saw clearly that Poland could not survive unless a strong executive authority was set up and the power of Parliament curtailed in favor of a strong and yet democratic government.

In February 1931, the draft of a new constitution was submitted to the Parliament by one of the political groups. It was referred to the committee on matters of constitution. After 3 years of careful study and diligent research of opinion of all the outstanding experts on political law, the committee submitted to the Parliament the draft of the new constitution. Although strongly attacked by the opposition parties, this draft passed through both the House of Representatives and the Senate, and finally, in accordance with the pertinent provisions of the law, it was duly promulgated on April 31, 1935, as the new Constitution of the Republic of Poland.

The most important feature of the new constitution was that it strengthened the executive branch of the Government.

Article 24 of the constitution reads:

"In the event of war, the term of the President's office shall be prolonged until 3 months after the conclusion of peace; the President of the Republic shall then, by a special act promulgated in the Official Gazette, appoint his successor, in case the office falls vacant before the conclusion of peace. Should the President's successor assume office, the term of his office shall expire at the end of 3 months after the conclusion of peace."

In accordance with this provision the retiring President Moscicki appointed as his successor Wladyslaw Raczkiewicz, the present Polish President, who was thus in a position to legally appoint the members of the Cabinet of the Polish Government-in exile. Due to the provisions of the April constitution the continuity of the Polish Government was preserved intact, even though Poland was overrun by the enemy.

The Lublin committee charges that the constitution of 1935 is not democratic enough. If it were possible today to gather the Polish Parliament for a legal and free debate, undoubtedly some of the constitutional provisions would be changed. The Lublin committee, making its vehement charges neglects to reveal that President Raczkiewicz, immediately following the assumption of his Presidential duties, declared that he will not take advantage of all the powers which the constitution grants to the President of Poland. Of his decision President Raczkiewicz notified the people of Poland in November 1939, in a broadcast from France to Poland:

"In the framework of the April constitution I have decided to exert the authority, granted to me by its provisions, in collaboration with the Prime Minister and his full agreement."

Thus the execution of the constitutional provisions has been democratized quite a few years before the Lublin committee came into being, on the initiative of the Polish Government.

In connection with this, Prime Minister Mikolajczyk declared in his address to the Polish National Council (July 27, 1943):

"The legal basis of our government is the constitution of the Polish Republic. In the future we shall undoubtedly endeavor to change some of its provisions, but today it is the legal basis for the activities of the state authorities and, in view of the impossibility of changing it outside Poland's frontiers, it must and will be recognized as such.

"However, the most important thing is that its fundamental provisions, especially in con-

nection with the President's declaration of November 30, 1939, will permit decrees to be issued in a democratic spirit and, what is more important, will permit the enactment of democratic electoral laws on the basis of which the nation will freely elect its representatives who will ultimately decide on the form of government in Poland and on the details of the democratic structure of the state.

"Proceeding with determination towards the development of legal provisions in a democratic spirit, we desire to put the government in the hands of our country in a legal manner as soon as possible. The future structure of the Polish state will be decided by Poland herself, expressing her will freely."

The constitutional issue was further elucidated by Prime Minister Mikolajczyk after his visit to Moscow in August 1944:

"Though the constitution of 1935 is still formally in force it has been applied in a democratic spirit even since 1939. Indeed, when it became obvious that a number of States, which were neutral in 1939 (and one of them had been the United States), were willing to recognize as a lawful Polish Government the only government which would be based on the constitution of 1935, we decided to consider everything in it which was not democratic as a dead letter, and to reply it in a strictly democratic sense.

"The declaration of this Government of 1939 and 1942, and the declaration of the political parties in Poland in 1943 show clearly that Poland is now treading along the path of true democracy based on freedom and social justice. In a nutshell, the constitutional dispute is but a pretext for the Home National Council, which represents only a small part of our people, to obtain the right to appoint a government of the Polish Republic. Such claims lack every formal or factual foundation."

THE LUBLIN COMMITTEE

In the wake of the Russian armies, bands of organizers moved into Poland. Carefully coached and instructed in Russia, they were to prepare ground in Poland for the Soviet reforms.

Most of these men worked with one of the two major organizations.

1. Union of Polish Patriots was organized in Moscow in 1943. It was headed by Wanda Wasilewska, a Soviet citizen by preference, not need, a colonel in the Red Army, and wife of Mr. Alexander Korneychuk, Soviet Vice Commissar for Foreign Affairs.

2. Polish Workers Party was formed by the Comintern as late as winter of 1941–42, to replace the the Polish Communist Party, which the Comintern dissolved in 1937 for Trotzkyist tendencies. The Polish Workers Party operated on the Polish territory occupied by the Germans, without, however, admitting its Communist affiliations. Should there be any doubt as to these affiliations in anyone's mind, one of the party's acts makes their stand clear: The Polish Workers Party was among the signatories of the Communist Party's resolution which had brought about the dissolution of the Comintern (summer, 1943).

Both the Union of Polish Patriots and the Polish Workers Party were blessed with a large number of the professional Communist agents, for the most part not Polish citizens, who had been working for many years in other countries promoting the Communist revolution. Eugeniusz Bierut (real name: Krasidebski) is one of those agents. Ever since 1921 Bierut is a Soviet citizen. This did not prevent him from being elected now President of the Provisional Polish Government in Lublin.

To camouflage these Communist agents, a certain number of non-Communists were introduced. Some of these non-Communists were forced to do it and were recruited from among the Poles who had been deported into Russia and, after the break-off of Polish-Russian diplomatic relations, left without any protection whatsoever. Others were possessed of greater ambitions than abilities and had a shady past behind them. To those, for instance, belonged Gen. Michal Rola-Zymierski, who had been convicted of bribery and dishonorably discharged from the Polish Army in 1928, and Wicenty Rzymowski, expelled from the Polish Academy of Literature for plagiarism. Such men could not hope for any positions of importance in normal conditions; riding high on the wave of sovietization of Poland, they attained today the positions of, respectively, the Commander in Chief of the Polish Army and the Minister of Culture and Arts. These portfolios, of course, could be given to men of such a stamp only by the Lublin puppet government.

To assure the proper political line, the Soviets have assigned to each of the minister a counsellor, chosen usually from among the Russian officials. Thus a counsellor to the Commander in Chief is a colonel of the Russian NKVD (the Soviet counterpart of Gestapo), Alexander Zawadski; a counselor to the Ministry of Information is the collaborator of the Moscow Pravda, Bielayev.

In the Polish territories taken from the Germans there exists neither freedom of speech nor assembly today. The press, the radio, and all the political and social organizations allowed to exist are only instruments to further Soviet aims.

To obscure the real situation and confuse the public opinion in the free countries of the world, a number of fake organizations was called to life. It is well worth notice that in these organizations the same names and the same people appear over and over again. Among these stooge organizations are:

1. Committee of National Liberation—which on December 31, 1944, was pleased to call itself Provisional Polish Government.
2. Home National Council.
3. The Council of National Defense.
4. Citizens' Initiative Committee.
5. Group of Polish Leftist Syndicalists.
6. The Democrtic Party (headed by the Communist, Haneman).

The number of these organizations will most probably multiply with each day. But it is most doubtful whether the number of their members will multiply, because the population gave to the puppets moving on Moscow strings neither their enthusiastic support nor confidence.

The unfriendly to the new regime attitude of the population was reflected upon several occasions:

1. The Soviets sponsored a recruitment, on voluntary basis, to the Polish Army of General Rola-Zymierski. This recruitment fell flat. Only 10 to 15 percent of the expected numbers reported for the service, and the Soviets then introduced compulsory draft, staging regular man-hunts in villages and in the forests to which the people fled as they had been doing in years past, under the German occupation.

2. The Lublin Committee stirred much publicity around the agrarian reform they had introduced in Poland. Actually this reform was boycotted by the Poles.

From time to time some of these organizations go, much to the surprise of the organizers, against the policy of the Lublin puppets. The most conspicuous illustration of this fact was the Congress of the Peasant Party called in Lublin in September 1944. This congress passed a resolution paying hommage to the Prime Minister of the Polish Government in London, Stanislaw Mikolajczyk. The resolution was immediately hushed by the Soviet authorities, but it reached London through the underground channels.

Another Lublin activity which had received wide publicity was an agreement concerning the exchange of population between the territories administered by the Lublin stooges and the Russian territories, east of so-called Curzon line. Queer as this exchange may seem, in view of the military operations which accounted for unsettled conditions, the agreement had one more peculiar feature—the population was exchanged in a one-way fashion. People were shipped into the depths of Russia, just as they had been in the course of the two tragic years of deportations, in 1939–41.

There is no doubt whatsoever that the Lublin committee is an imposed regime, owing its precarious existence only to the presence of the Soviet Army in Poland and to the terrifying efficiency of the Soviet secret police (NKVD) apparatus. The Lublin committee which had extended to themselves their own recognition as a Polish Government, could not find support among the people of Poland. The democratic freedoms, were they returned to the people, would sweep out of the Polish political life this small band of Soviet agents and stooges and career climbers of doubtful integrity.

The self-announced appointment of the Lublin committee as a Polish Government, met with a swift reply of the American Secretary of State, Edward J. Stettinius, who declared that the United States continues to recognize the Polish Government in London, as it had in the past, as the only rightful representative Government of Poland.

SOVIET ACTIVITIES IN POLAND (1943–44)

Soviet activities in Poland considerably preceded the entrance of the Red Army into Polish territory. As early as in 1942 Soviet planes dropped in eastern provinces of Poland detachments of parachutists whose task was to organize partisan units.

Partisan bands did not seek to engage the Germans. Quite the contrary. They raided and pillaged the homes of Polish country folk, whether manor house or cottage, the homes of the intellectual classes, and of the clergy. They robbed homes of everything useful, even compelling people to give up wearing apparel. They burned stores of grain and stacks of hay, although they knew—or because they knew—that this would increase the starvation of the population.

In eastern borderland, where the Germans have controlled the towns but never the countryside, partisan bands have boldly gone in and carried on recruiting. In cases where the inhabitants resisted compulsory induction into these bands, they were shot, sometimes in groups of 20 or 30 at a time. Another form of recruiting was to spread a report that the Polish Government has ordered an uprising but that the reactionary representatives in Poland refused to publish the order. Then they sent orders to young men to report at a given spot in a forest at a fixed time when they will be taken into the home army. On arrival the recruit heard a fine patriotic address, took the oath of allegiance, and then found himself listening to Communist political teachings.

The partisan units never coordinated their activities with the general plan of military operations carried on on a much wider scale by the Polish home army. Instead of bringing about major German losses, these operations evoked new and unnecessary repressions of the occupant directed against the helpless Polish population.

At the same time political agents were sent by the Soviet authorities to the German-occupied territories. They never disclosed their political character. Soviet political agents were instructed to creep into genuine Polish national organizations and gradually transform them into tools for the propaganda of Soviet doctrine.

The agents proceeded to set up groups of their own with names similar to those of the genuine Polish groups—names so similar that it is the easiest thing in the world to confuse one with the other. For example, long before the Comintern was dissolved by

order of the executive committee of that organization, the Polish Communist Party got orders to disband. One of the leading and most highly respected political parties in Poland, both of pre-war and present times, is that of the Socialists. In Polish it goes by the name of P. P. S. (Polish Socialist Party). What the political agents from Moscow did was to dissolve the Communist Party in Poland and to announce later the formation of a Polish Workers' Party (in Polish P. P. R.).

The intention here is perfectly clear. It was expected that, through confusion of P. P. S. and P. P. R., working people and peasants, who are utterly opposed to communism and the protection of the U. S. S. R., would be inveigled into the Bolshevik-sponsored party. For the P. P. R. is nothing but the Communist Party under another name.

The Soviet agents published some secret papers which were filed with articles denouncing the legal Polish Government in London and aimed at stirring up discord among Poles.

Help in the political field was given from the Soviet Union itself, where a Communist radio station, masking under the name of the Polish patriot Kosciusko, broadcast several times daily to Poland news that were exactly contrary to the broadcast in Polish from London.

The Soviet agents wasted no time to spread anti-American and anti-British propaganda. The Poles were told that they must beware of what the Americans and British tell them, that salvation will never come to Poland from the capitalist western countries, that there is no hope for Poland except from the Soviet Union.

In spite of all this and in accordance with their determination to subordinate every effort to the need of an all-out struggle with the German invaders, the Polish Government ordered their home army in Poland on October 25, 1943, and February 18, 1944, to disclose their identity to the advancing Soviet armies and to cooperate with them in the struggle against the Germans. Following these orders Polish units fought against the Germans and assisted the Red Army in liberating provinces of Volhynia, Tarnopol, Wilno, Nowogrodek, Polesie, Lwow, and Lublin.

It is to be regretted that this military cooperation was not met in the proper spirit by the Red Army.

As long as the battle against the Germans in Volhynia went on, the attitude of the Soviet commanders to the Polish forces was correct, and the Poles were even promised help in arms and ammunition. These promises were not kept. On the contrary, as the action in Volhynia was concluded, the attitude of the Soviet authorities underwent a radical change. The Polish officers were arrested, the soldiers disarmed and forced to join the Red Army. After a few days the reprisals became more severe. On March 9, 1944, the Soviet authorities executed the commander of the Polish home army in Luck and several Polish soldiers were hanged there on the same day. Six days later, the Commander of the home forces in the Kiwerce region—Volhynia—was shot. At the end of that month a number of other officers and men of the home army, who divulged their identity to the Soviet authorities on orders of the Polish Government in London and who fought side by side with the Soviet armies, were executed.

Three battalions of the Polish home army cooperated with a Soviet division in its battles along the river Wilja and in the Rudnicka Forest (south of Wilno). Four Polish brigades took part in the battle for the city of Wilno. Other Polish detachments were engaged in mopping up operations in the Provinces of Wilno and Nowogrodek. Everywhere Polish commanders of these units were praised by the Soviet officers who, as in Volhynia, promised them help, arms, and even artillery. But again, as soon as the battle was over, the Soviet attitude was radically changed. On July 19, 1944, the Soviet authorities arrested the staff of the Home Army in the districts of Wilno and Nowogrodek and the Polish forces were disarmed. These officers and most of their soldiers were deported to an unknown destination.

As a rule reprisals followed as soon as the battle was ended. This action was justified by the alleged anti-Soviet attitude of the Polish soldiers which found its expression in their service in the home army or in their participation in the activities in the Polish underground. The Soviet authorities considered every form of cooperation with the Polish Government in London as a crime.

In Majdanek, near Lublin, where ill-famed German concentration camp was situated, the Soviet authorities detained in August 1944 about 2,500 officers and soldiers of the home army. Further, 200 Polish officers and noncoms have been deported to Kiev. Mass arrests have been made in the districts of Radom, Brzesc on Bug, Zamosc, Biala Podlaska, Tomaszow Lubelski, Minsk, Mazowiecki, Rzeszow, and Bialystok. The behavior of the Soviet authorities is identical both east and west of the so-called Curzon line.

In the light of these facts the true meaning of the Soviet policy toward Poland is revealed.

Good will exists only on the Polish side. The Soviets aim at premeditated annihilation of all organizational centers which fight for a free and independent Poland.

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. SHAFER. Mr. Speaker, I have given this bill, and the arguments advanced in its behalf, the most earnest consideration of which I am capable. I approached it with the utmost sympathy. I strove to find in it one logical reason why I should vote for it.

I have not been able to find that reason. I shall therefore vote against it.

The arguments advanced for the bill hinge largely upon statements made by General Marshall and Admiral King. I can find no statement by either of these gentlemen in behalf of this particular bill. And I can find no statement by anyone which would show conclusively that the bill is necessary or even desirable from the standpoint of the prosecution of the war.

I can see many arguments which can be proven that the enactment of this bill would be harmful to our effort to win a speedy and complete victory against all of our enemies.

This measure as it stands seems to me to fit the description of Justice Frankfurter when he said that all laws do not mean what they say. There must be something behind this bill or it would not have been advanced. But what that something is has not been revealed.

I warn the Congress that if this bill is passed the hidden reason will be revealed and it will startle the Nation.

We are deluged with figures in behalf of this bill, but the figures do not make sense. It would be thought from these figures that unless this bill were passed the Selective Service System would cease to function. That is not so. The Selective Service System goes on daily providing men needed for the armed forces.
